The Organized Militia of to-day, created under the Dick Act, is an entirely different organization from the militia of former days. It is better organized, disciplined, and trained, and in such States as New York, Massachusetts, and Wisconsin it has reached a high degree of efficiency. However efficient they may be, their use is still limited by the provisions of the Constitution. They can still refuse to go beyond the border, and the disastrous dual control still exists.

Assuming that other States should follow the example of the States mentioned and bring their militia up to their standard—and that it should be decided by the Supreme Court that the militia could be used outside the confines of the United States—they would still fail to answer the purpose for which they were intended because of the smallness of their number. With 90,000,000 of people to draw from, they have not over 120,000 members. This is due to the unpopularity of the militia service. As is shown above, the States have absolute control of the militia when not in the service of the United States, and can therefore use them to suppress domestic riots and disorders, which is the most disagreeable work a soldier is ever called upon to do.

The performance of this duty necessitates calling them out at any time, causing its members to leave their work or business, often at a time they can ill afford it. If they remain away any length of time, they usually lose their salaries, if not their positions, for few employers can afford to have men absent when their services are needed, much less pay them while they are away. It is a well-known fact throughout the militia service that after organizations have been on strike and riot duty they soon lose many of their members, and the work of enlisting and training men has to be started anew.

Though I have tried to show that the trained citizen soldiers needed can not be supplied by the militia, yet I believe they should be given every possible encouragement. It is only fair that they should be paid when they reach a prescribed standard of efficiency, as they keep the military spirit of our people alive, and in time of war these organizations will be the nucleus around which we will build our great Volunteer Army.

THE PROPOSED NATIONAL ARMY.

Under the section of the Constitution giving Congress the power to raise and support armies it is possible for them to provide any kind of force they may deem necessary. To properly defend this country we need an army of citizen soldiers; and as the militia is unsuited, Congress could, under the power given it, create one of its own—one that will be absolutely under its control.

If such an army should be raised, it should primarily be used for the purpose of national defense, and only in rare cases should it be available for other purposes, and then when there is no Regular Army on hand. The law creating such an army should be explicit on this subject, for if it is not it will languish, just as the militia is languishing to-day from the same cause.

When men give their time and energy to perfecting themselves in the military art they should be paid. No military force will ever become efficient unless they are. The pay of the officers should be large enough for them to provide themselves with decent uniforms and equipment, but should not be large enough for any man to live on; for if $50 monthly salary is sufficient for some men, it will find many $50 men attempting to obtain the position of officers for the salary alone, which would be unfortunate and would be a potent factor in killing an organization. In a force of this kind the men needed for officers should be the best in the community, who will serve for the love of country and not for the few dollars paid as salary. Provided they are qualified, first sergeants, quartermaster sergeants, and cooks should be given pay as in the Regular Army, for if these men know their duties it will relieve the officers from the burden of petty details and will give them more time to be devoted to the training of their men. No company in the Regular Army could get along without trained men in these positions, and if it is so in their case it is doubly so in the case of citizen soldiers. These men could also be used as instructors when they are not performing their other duties. Men who are willing to furnish motor cycles or horses should also be paid for their use, and additional pay should be given to encourage marksmanship.

ORGANIZATION OF THE NATIONAL ARMY.

To make a force of this kind a real national army, a portion of it should be raised in each congressional district. By this means military instruction will be evenly divided over the Nation and such money as is spent on it will be equally distributed. I have selected 600 as the proper number, as this amount corresponds to a complete organization of a battalion at war strength.

The organization of a force of this kind should be left to the President, as has been done when volunteers are called, with the same restrictions that the units shall be organized as provided by law for the units of the Regular Army. If this should be done, the force raised, when combined with the Regular Army, should be perfectly balanced in all its parts. If an arm or corps of the Regular Army should be deficient in men or units, they could be supplied by the National Army. As an example, the Coast Artillery is now short officers and men. The numbers needed could easily be supplied from the congressional districts along the coasts, and a contemplated increase of that arm would not be necessary. This power would also allow the President to organize aeroplane companies, and infantry regiments mounted on motor cycles—such organizations here mentioned are being used to a great extent in the war now raging.

The President should also have the power to organize the troops in brigades, divisions, and higher units when deemed necessary, this for the purpose of drill and training if for nothing else. If he were allowed to detail colonels for this duty, he could find out whether they were competent or not, and when making permanent appointments in the Regular Army he would know what kind of a man he was selecting. Men who have fine records do not always make good generals, and there is no way under our present system of knowing until it is too late. Citizen colonels should be available for this duty as well as the colonels of the Regular Army, for they should be given the opportunity in time of peace to show whether they are fit to be put in command of brigades in time of war.

To get the best results from citizen soldiers the officers placed over them should know their duties, otherwise it will be the blind leading the blind. As a rule field officers of such a force should be trained officers of the Regular Army, though where civilians are found competent they should be given the preference.

In his book Gen. Grant stated that if he had had the power at the outbreak of the Civil War he would have disbanded the Regular Army and appointed the officers over the Volunteers. This is what the South virtually did during the Civil War. As the officers of the old Army joined the Confederacy they were given commands of regiments or higher units, and much of their early successes can be charged to this. In the North the idea seemed to be prevalent that officers of the Regular Army should not be placed over the Volunteers. Those that did get Volunteer commissions got them through their State governors. The result was that many of the regiments and most of the brigades and divisions of the South had trained officers over them, while the North did not. This condition caused Gen. Grant to make the comments quoted above. Trained officers are as necessary now as they were then, and if a citizen army is to be brought to a high degree of efficiency it will be necessary to have as field officers men who are learned in the military art.

The Army as here outlined can not be raised in a day, month, or year, but if it is gone at thoroughly and systematically, it being explained to the people that it is intended primarily for the country's defense and not to quell strikes and disorders, it can be raised, and in time will become a force that will be a credit to the Nation. Though opposed to militarism and a large standing Army, our people are really imbued with a military spirit. This is shown by the fact that most private schools are military, as it appeals to the parents as well as to the boy. In addition, many people of prominence take pride in their military titles, whether earned on the battle field or not. The glitter of the uniform always appeals to the public, and no parade is considered complete without the militia or Regular Army taking part.

The organizing of this Army will not be an easy task, and the men placed on this duty should not only be men of ability but men of tact. The officers selected should not only be men of probity, but should be those who have influence in the community. Advantage should be taken of clubs or organizations already formed, and special effort should be made to raise companies among the factories, stores, and shops that employ large numbers of men. By this method cooperation of employers, as well as employees, would have to be gained. As an example,

suppose we go to Gimbel's store in New York, and get the head of that firm interested, and he encourages his employees to join, it being explained to them that the men, except for maneuvers, would be ordered out only in a great crisis. Say we call the company Gimbel's Light Infantry, a name which the employer, as well as the employee, would be proud of, just as Col. Astor was proud that his name was given the Astor Battery. If this could be done in one store, many others would follow suit, and we would have companies at Macy's, Altman's, and other large stores, battalions at the Ford automobile plant and at the General Electric Works, while the steel works at Pittsburgh and Gary would probably raise regiments.

I know many will say such a course is undignified, but they forget that what we are after is men who are willing to serve, and that anything that is honorable should be done to accomplish this purpose. No one would object in time of war if companies were raised by the great stores or factories throughout the country; in fact, they would be lauded to the skies for their patriotism; so why may it not be done in time of peace when we are preparing for war?

SPECIAL DETACHMENTS AND STAFF OFFICERS.

To continue this organizing, whenever it is learned that a man is running an aeroplane for business or pleasure, he should be sought out and offered a commission. Such men are bold, the kind we want for work of this description. They will be competent, for when he takes up this work he either becomes an expert or is killed trying. If this were done, instead of having a small aviation corps we would have one of respectable size, for most men who go into the business of flying aeroplanes would be glad to receive a commission, even although it entailed some study of military work. Doubtless most of these men would volunteer their services in time of war, but they would not have the knowledge required of a military aviator, as they would have if their services were obtained in time of peace. In organizing regiments of motor cyclists a great field would be opened. Men mounted on these machines would be a great factor in time of war. We have none in our Army, yet the Middle West is teeming with men who could be organized into mounted infantry regiments. Most men who ride motor cycles own them, for they can rarely be rented, and they are usually young and fearless, as this sport does not lend itself to the old and timid. In many cities they are already organized into clubs, and if it were explained to them that they were wanted in the Army, that they would be paid for the use of their machines when at maneuvers, and that they would rarely ever be called out to suppress riots or strikes, many would join. If there should not be enough in one place to organize a company, enlist what you could, as distance in their case is a small factor. The cavalry could be organized in counties given to horse raising, signal troops among the telegraph and wireless operators, engineers from those permanently engaged in construction work, and hospital corps from the numerous hospital workers. The pay, though small, will attract many, for $3 to $5 a month added to a man's salary of $30 to $50 per month will mean much.

One of the greatest troubles in time of war is to find men who are competent and honest enough to inspect the enormous amount of clothing, commissaries, and other supplies needed. These men should be selected in time of peace, commissioned in the National Army, and assigned the work they will have to perform in time of war. The expert buyer of shoes could be selected now, as could the buyer of automobiles, horses, wagons, boats, underclothes, and foodstuffs. There are hundreds of competent and honorable men in the country who would be glad to have a commission, knowing that they could do something for their country in case of need. As it is now, if we went to war the work would have to be done by an officer who would know little about it and who would be needed elsewhere or be left to men appointed on the spur of the moment, who might or might not be honest and competent.

In time of peace a wonderful transportation corps could be organized among the high railroad officials of this country. Men who are heads of the trunk-line passenger associations could be commissioned as colonels and their assistants in lesser grades. In case of war these men could act in a dual capacity, serving the Government and the railroads at the same time without ever leaving their desks. In this way the railroad system would not be disorganized and better service would be rendered the Army.

EQUIPMENT AND TRAINING.

Though necessary in the cities, large halls or armories would not be necessary in the country or small towns if each man could be issued his equipment like it is done in Switzerland or Servia. This we have never done, because we are afraid to trust our people for fear of loss or neglect. Probably some of it would be lost or neglected, but if the man is made responsible the loss could be made good from his monthly salary. Unless men are allowed to keep their arms we will never be able to organize citizen soldiers in the country, where there are thousands of young men willing to join—a field that is practically untouched. Many think that nothing can be accomplished in this line unless there are enough to form a company. This is a fallacy. All that is needed is enough for a squad. Enough squads in an adjoining locality could be formed together as a company for administration. Of course they would be assembled for drill at every opportunity, which might not occur until the training or maneuver period. I know objection will be raised that these men will not be properly drilled or instructed. True, they will know little about company drill, but they could be taught their squad drill and could be given far better instruction in patrolling, which is one of the most important duties of a soldier in time of war and one where his initiative and intelligence will be brought into play. Little of this kind of instruction can be given companies formed in cities. Take my own city of Oswego, N. Y., as an example. Here there is a company where practically all the men are from the urban population, though there are thriving villages all around it from which it is impossible to draw men, due entirely to the lack of transportation. If men were allowed to keep their equipments, there is no doubt that squads could be organized in all of these places. If the company had a paid first sergeant, quartermaster sergeant, and cooks who could be sent out at different times to instruct these squads—meeting at some house or barn nearest the central point—it would not be long before they would be well trained. It will be seen that the problem of transportation is simplified, for instead of eight men coming to the city it would mean only one man going to the country. It is not necessary for the troops to have a complete supply of uniforms issued them, and all they would need would be a campaign hat, woolen shirt, breeches, leggings. At the headquarters of the company there should be kept one pair of shoes, sweater, two suits underclothes, stockings, pea-jacket overcoat, blankets, shelter halves, and so forth, to be used during the training or maneuver period. At the headquarters of a regiment should be kept the additional tentage and equipment; also such additional clothing as would be needed in a campaign.

CONCLUSION.

It is realized that this National Army will be lacking much in drill and discipline, but it should be as good as the citizen soldiers of other countries and should be better if we make an effort to reach the earnest and intelligent men. To make this force a success we will have to cut away much red tape. But when we have put it into effect, if we ever do, we will find that a large share in the defense of the country will be taken by the National Army.

Facts and Figures on the Food Question.

EXTENSION OF REMARKS

OF

HON. JOHN R. FARR,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. FARR. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include certain facts and figures on the food question furnished by the Department of Agriculture to Chairman LEVER, of the Committee on Agriculture, in response to a resolution offered by me on January 9.

The matter referred to is as follows:

DEPARTMENT OF AGRICULTURE,
Washington, January 19, 1915.

Hon. A. F. LEVER,
Chairman Committee on Agriculture, House of Representatives.

SIR: In anticipation of the adoption of House resolution 701, Sixty-third Congress, third session, submitted by Mr. FARR on January 9, 1915, I have had prepared and submit herewith the following tabular statements:

Table I: Production in the United States of corn, wheat, oats, and rye, 1904–1914.

Table II: Production of wheat flour, corn meal, rye flour, and preparations of cereals for table food in the United States, 1904–1914.

Table III: Number of cattle, sheep, and swine in the United States, 1904–1914.

Table IV: Production of various meats in the United States, 1904 and 1909; and number of slaughtered animals inspected by the United States Department of Agriculture, 1904–1915.

Table V: Estimated consumption, net exports, and production of corn, wheat, oats, and rye for the United States, 1904–1914.

Table VI: Rough estimate of meat consumption in the United States, 1904–1914.

Table VII: Cash prices per bushel for wheat in Chicago, Ill., on the first business day in December, 1904–1914.

The information set forth in these tabular statements cover the questions raised in the numbered paragraphs of the resolution, except the sixth. This department has no data from which it can estimate "the residue or surplus, if any, of the yield, production, or manufacture, as the case may be, of each of said articles, after deducting the quantity consumed in and the quantity exported from the United States, in each of the years from 1904 to 1914, inclusive," nor is it known where such information can be obtained.

Respectfully,

CARL VROOMAN,
Acting Secretary.

TABLE I.—*Production in the United States of corn, wheat, oats, and rye, 1904–1914.*

Rural Credits.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 23, 1915.

Mr. LAFFERTY. Mr. Speaker, I have listened with much interest to the many speeches that have been made upon the subject of rural credits during the general debate upon the Agricultural appropriation bill. As no actual legislation upon this subject is contemplated by Congress for at least several months to come, gentlemen are now, of course, merely expressing their views. It seems, also, that quite a number of gentlemen have introduced bills providing for rural credits, some of which are supposed to have at least the partial approval of the administration and some of which only represent the individual judgment of the Member introducing the same.

The Moss-Fletcher bill, for example, is not only supposed to reflect the views of the administration, but is said to have the approval of the "commission" that went to Europe in 1913 to examine into the question of rural credits there. The Bulkley-Hollis bill goes a little further and provides that the Federal Government shall lend its aid by purchasing a limited amount of the farm-mortgage debentures each year, thereby giving other investors confidence in the system.

There is not a great deal of difference between the Moss-Fletcher bill and the Bulkley-Hollis bill. Both bills contemplate the organization of one local land-mortgage bank in each county, one State land-mortgage bank in each State, and one central land-mortgage bank, all of these banks to be affiliated together in one system. The local bank is to loan direct to the farmer and take a first mortgage, and upon a group of these mortgages is to issue debentures or bonds. The affiliated banks higher up will "guarantee" these debentures or bonds and sell them upon the open market. They will draw a much lower rate of interest than farmers are now paying. At least, it is contemplated that by this system of affiliation and guaranty the securities will be salable in the money markets bearing rates of interest much lower than farmers are now forced to pay when acting singly and alone.

Both bills limit the profits of the county, State, and central banks to a very modest amount and provide that all excess profits shall go into a fund to reduce the interest charges of the farmers borrowing through the system. To that extent it is a mutual benefit association. Both bills provide that the farmers themselves may own stock in the local bank, and that the local banks combined shall own the stock in the 48 State banks, and the 48 State banks shall own the stock in the one central bank.

All the Government has to do with the matter in the one case is to authorize by law the organization of the land-mortgage banks and to exempt its debentures or bonds from the payment of taxes, and in the other case it provides that the Government shall buy a limited quantity of the land-mortgage bonds each year, in order to lend Government sanction to the plan in such a way as to encourage other investors to buy the bonds.

The gentleman from Arkansas [Mr. CARAWAY] has spoken ably upon his bill, which varies from the others in that he provides that the county and State banks and the central banks shall be cut out and the Government shall undertake to bring the borrower and the lender together and shall guarantee the loan made to the farmer. The Caraway bill provides that any farmer desiring a loan may apply to the local postmaster, who shall appoint a committee to appraise the land. After the Government is satisfied as to the value of the land, based upon the report of the postmaster and this committee, and is satisfied as to the title, based upon an abstract furnished by the applicant, the Government offers to guarantee the desired loan and offers it on the market.

The Caraway bill provides that no one except an actual resident upon the land shall have this aid of the Government, thus cutting out absentee landlords and speculators. It provides against consolidation of lands in the hands of speculators, bearing low-interest-bearing Government-guaranteed loans, by making such loans immediately due and payable when lands bearing more than a certain amount shall fall into the hands of one man. The Caraway bill has much to its credit.

The gentleman from New York [Mr. PATTEN] spoke interestingly, but cautioned us that we ought not to expect too much from any rural-credit system. He said no miracles would be wrought. He said lower interest rates might be obtained, and probably would be, by such a law as that proposed in the Moss-Fletcher bill, to which he seemed to give his preference. The distinguished minority leader [Mr. MANN] asked the gentleman from New York [Mr. PATTEN] if it would be practical to have the Government guarantee the payment of the securities put out by whatever system of land mortgages may be adopted. The minority leader [Mr. MANN] said he was sure many people would be glad to invest in securities so guaranteed, if paying 5 per cent, and many others would be glad to so invest if the securities paid interest of 5½ per cent. The gentleman from New York did not seem to think that the Government should guarantee the payment of the securities, but should only go as far as is provided in the Moss-Fletcher bill.

To my mind it is very doubtful whether the farmers are going to get much lower rates of interest than they are now getting through either the Moss-Fletcher bill or the Bulkley-Hollister bill. They would get lower rates of interest through the Caraway bill, cutting out the profits of the complicated series of land-mortgage banks altogether and placing the mortgage securities upon the market guaranteed by the Government.

It must be apparent that in no case is the farmer going to be given much help, unless the Government does something more than merely authorize the organization of land-mortgage banks. The farmers could organize such banks without an act of Congress, at least in each State. I very much fear that the expense of all the intervening land-mortgage banks, extending from Washington to every township and county in the Union, would be so heavy as to increase rather than diminish the present cost of farm loans, unless, indeed, the debentures or bonds should ultimately be sold with a guarantee of the Government that they would be paid.

And if the Government is going to guarantee that the farmer will pay his loan to the private lender when due, why should not the Government make the loan direct? In the latter case the Government would be getting the profits of the loan, with no added responsibility. It seems to be contemplated that these

loans will be made, even when guaranteed by the Government, at from 5 to 5½ per cent interest. If that be true, the Government could make millions in profits per year by making the loans direct, for the Government can borrow all the money it desires for 3½ per cent.

For the reasons here given, I favor a law providing for direct Government aid to the farmers in the matter of rural credits. For two years I have had a bill pending here which so provides. My bill goes even further than this and provides that the Government shall issue gold Treasury notes against the farm mortgages held by it, thereby saving to the Government the necessity of borrowing the money it loans to the farmers. This latter system would yield enough profits to the Government each year to build a trunk line of railroad from New York to San Francisco.

New Zealand is already loaning direct to the farmers at 1 per cent in excess of the rate at which the New Zealand Government can borrow in the open market, and it has been found that this 1 per cent margin has accumulated millions of profits in the public treasury of New Zealand.

America can at least do as well as New Zealand. We should not be ashamed to profit by the example of that country. One of our greatest reforms, the Australian ballot, was borrowed only a few years ago from New Zealand's sister colony of Australia.

A British member of Parliament, the Hon. J. R. Macdonald, recently said that New Zealand had avoided a serious Socialist Party because Mr. Seddon had led the Liberal Party into the Socialistic fold. I presume the law for direct loans to farmers was one of the provisions to which Mr. Macdonald referred. But if it is socialistic, what of it, if it is a success and if it gives to the farmers lower rates of interest and at the same time gives a profit to the Government? If our Government is better able to act as fiscal agent and hold these securities than is any private corporation, why not let our Government serve us? We are ready to lay down our lives for our Government in time of war, and our children will be equally as patriotic, so why not let the Government do something for us in time of peace?

The truth is that no one would be hurt by direct Government loans to the farmers except the big money loaners of Wall Street. But the Wall Street crowd have great political power, and they are now carrying on a propaganda to defeat genuine direct rural credits in America. In my opinion, they will not succeed; but we, the common people, have one of the biggest fights on our hands we have had for some time. I call upon all honest, patriotic men and women to help in this fight. It will last for several years, and the backslide toward standpattism of last November will encourage the money power to renewed efforts to defeat a genuine rural-credit law.

The matter of credits is one of the least understood questions in the world. In America, for example (and the same is true in proportion in all other countries), we have a per capita circulating medium, gold, silver, and paper, of $35 per person, or $3,500,000,000 in the United States. Yet, the farmers and small home owners alone have borrowed $8,000,000,000, or nearly three times our total stock of money. How is it possible? It is only done by loaning the same dollar over and over again. It is estimated that every dollar in the United States is now loaned at least 8 times. The bankers are simply walking on a tight rope all the time with a balancing pole, deposits being on one end and loans on the other. They are supposed to balance each other. But as for actual cash no bank in the United States could pay anything like the amount of its deposits if called upon suddenly to do so.

The commercial banks are making the cash of America work overtime, in order that they may collect interest eight times from each dollar. Then when the slightest flurry comes they call in all available loans and times get hard. No matter how much property you have you can't get money in such a stringency.

Yet the bankers pronounce as "economically unsound" any law which proposes to give to our Government the power to issue agricultural asset currency. Such currency would be secured by real estate of double the value of every dollar put out, and would be the soundest money in the world. It would relieve our present financial stringency, and would prevent the possibility of a stringency in the future. It would not create "cheap money" as they claim, but every dollar would be backed by property of double value to guarantee its redemption in gold upon demand. It would have the effect of creating a much larger volume of money it is true, but it would not create a dollar of fiat money or of "cheap money."

The money power ridicules any such system as I here propose, and we are idiots enough to be influenced by their ridicule. They have made us believe that any such system would ruin the country for all time to come. All property would vanish, and we would be left in a cold, desolate world without food or shelter.

The money power says that all we need is to have "confidence" in their present system of credits. By that system they are collecting interest eight times on every dollar in existence, and meantime are keeping us in such a continual strain that we are constantly threatened with panics. Their system is the "wildcat" system, and ours is the sound, businesslike system. But they have the newspapers with which to preach to our brethren the beauties of their system, and we must depend upon the schoolhouse or street-corner meetings. But we are going to win inside of the next four years. It is in the air. The American people have suffered in financial and industrial bondage long enough.

The money power may succeed in getting a makeshift rural-credit law passed within the next few months, hoping thereby to close the question. But when the people get a majority in the House and in the Senate any such makeshift law will soon be replaced with a genuine direct-aid rural-credit law. I should regret to see the farmers of America enslave themselves to the money power for 30 years under any pretended rural-credit law, if such a one should be passed, and I do not believe that the American farmers will be foolish enough to do so. The pending bills provide for mortgages of that length of time, and we had better think well before we lend our assistance to such a law, and the farmers had better think twice before they tie up themselves and their heirs and assigns to Wall Street under any such mortgages. A better day and better terms are coming before very long.

They say the "commission" that went to Europe in 1913 found land-mortgage banks existing there similar to the ones now proposed here. That is true, but it is also true that the peasants of Europe are owned body and soul by the money-lending classes, just as our land-tilling population will be in this country if they enter into any 30-year loans for "credit" from the money power at high rates of interest under any makeshift rural-credit law.

The Late Representative Bremner.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. BROWNING,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 24, 1915,

On House resolution 711.

Mr. BROWNING. Mr. Speaker, on "fair Scotland's strand," away up on the North Sea, we go back only to the year 1873, when "BOB" BREMNER was born; he came of sturdy and steady fisher folk. His short life period is replete with the kind of struggles which only the truly brave and heroic character can make successfully.

When ROBERT BREMNER was a lad his father emigrated to Canada, and the young son's work began as a schoolboy in a village school; after some years in the high and normal schools he was found teaching for a short time; then, reaching out for the practical, he mastered the carpentering trade and later engaged as an electrical worker. Ripe with theoretical and practical experience, it is not surprising that in his newspaper work he very soon found himself in the forerank of editors, and his friends paid him a high tribute when they sought to utilize his varied and splendid talents by electing him to represent them in Congress.

It was not my good fortune to know Mr. BREMNER before he entered this House, but my first impression of him was one never to be forgotten. I beheld the countenance of a man suffering all the tortures that physical pain can inflict, and I saw over and above the expression of physical distress that rare smile revealing a nobility of character, intelligence, patience, and even sympathy which told me that I had met an able, strong, and loyal brother worthy of the friendship and love of his colleagues and countrymen. His wonderful patience and sublime fortitude in the very face of death can be dwelt upon with only admiration and envy by the legion of his friends.

It is not given us to understand why he, who was so full of energy and courage, should be called away. We can only realize

the loss of his companionship which was dear to us, the loss to the community to which he was so useful, and the loss to those whose heartbreaking grief we hesitate to intrude upon.

You shall shortly know that lengthened breath
Is not the sweetest gift God sends His friend,
And that sometimes the sable pall of death
Conceals the fairest boon His love can send.
If we could push ajar the gates of life
And stand within, and all God's workings see,
We could interpret all this doubt and strife
And for each mystery could find a key.

The President's Indianapolis Speech.

EXTENSION OF REMARKS

OF

HON. SIMEON D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 23, 1915.

Mr. FESS. Mr. Speaker, as a principle I do not believe in the practice of general criticism of the Executive, either on the floor of Congress or outside. I have felt that the head of the Nation should command such regard as would be proof against offensive criticism. I am convinced that too great a freedom is exercised against our public servants, and therefore hesitate to assume the rôle of the critic. I would not at this time make these observations upon this, in many ways, very remarkable speech were I not persuaded that the conviction has been steadily growing upon the country for months that the President was not respecting his position as the President of all the people, but rather the head of a party. His public utterances have been invariably severely partisan. Last July, at Philadelphia, when he honored the city and the occasion with his presence and by an address clothed in faultless English, of which he is a past master, he seized upon the occasion to make a severely partisan speech, notwithstanding one-half of the invited guests representing Congress on that occasion did not belong to his party.

The President's partisan attitude as displayed in his Indianapolis speech, in which he reminds the public he speaks as a historian rather than as a politician, relieves all Republicans from further embarrassment from at least calling attention to some of the remarkable statements of this recent utterance.

The speech has cleared up some things for the public. The Baltimore platform is to have no binding effect on the one-term plank. It removes all doubt of his candidacy in 1916. This intention was specifically couched in his challenge:

> There may come a time when the American people will have to judge whether I know what I am talking about or not. But at least for two years more I am free to think that I do, with a great comfort in immunity in the time being.

Aside from this specific announcement the general tenor of his words and setting of the day can point to no other purpose. His reference to the independent voter is suggestive. This element of the electorate is important. The President hesitated to inflate him, but was compelled to recognize him "as my boss."

His bidding the independent come in out of the cold to bask in the warmth of Democratic favor, probably Executive patronage, has the pull of a magnet. His call to the patriot in his appeal, "I do not love any party any longer than it continues to serve the continued and immediate pressing needs of America. I have been bred in the Democratic Party, but I love America a great deal more than I love the Democratic Party," would ring truer had it not been on such partisan plane.

This appeal to the independent voter—the irregular in party affiliation—his touring the city with Mr. Taggart, the erstwhile national Democratic chairman and the regular of the regulars, these two items taken together ought to be well understood from an Indiana standpoint.

Whether the one-term plank will play any part in the choice of standard bearer is a matter of future development and not present Executive intention. Patronage is a powerful lever, but there have been times when machinery became top-heavy and crashed under its own weight. Surely if the President desires he will head the party in 1916. Why not? Is he not the Democratic Party? However, the solidarity of which the President speaks is but a wish which is somewhat clouded by the symptoms of a feud so apparent, both in what he said and what is observed in Congress, especially the Senate. His felicitating the country that he does not need to lie awake at night wondering what the two Indiana Senators were going to do must be a rather painful reminder to others not from Indiana that his nights are broken by some Senators who choose to do their own thinking, or at least seem to act independently. His assurance that the Democratic Party "will not allow any enemy to break its ranks," and his declaration that "this country is not going to use any party that can not do continuous and consistent teamwork," are most significant when supplemented by the warning that—

> If any group of men should dare to break the solidarity of the Democratic team for any purpose or from any motive, theirs will be a most unenviable notoriety and responsibility which will bring deep bitterness to them.

Can any doubt be entertained of the author's meaning when he says, "If a man will not play in the team, then he does not belong to the team."

Men have been taken off the team and sent to the benches when some order has been disobeyed or when some one fumbled the ball, and so have men been read out of the party when they refused to follow the head. These enemies refer to party recalcitrants, not to members of the opposition party, for the men who refuse to do teamwork are in the party which placed the team in the field, over which the captain has control.

The imminence of a fued is apparent. The President's language is militant. His phraseology is redolent with command. His tones are of the drum and trumpet. In the first few paragraphs of the address appear such phrases as "our sinews," "moral powder," "compelling influences," "in fighting earnest," "ready to fight," and his reference to the Jackson method. His familiarity with this country's history and his admiration for Gen. Jackson's type enable him to pursue a course toward the Senate with such moral inspiration as may be supplied by this patron saint.

The general enforced the law, but only as he understood it, not as the courts interpreted it. He ordered his Cabinet to do, and when such men as McLean or Duane questioned his constitutional authority, he removed them and appointed his "kitchen cabinet." He even exerted his authority over his official family.

When Mrs. Calhoun and other ladies of the official family hesitated at first, and at last declined to receive a wife of a fellow Cabinet member, the general simply commanded that they must receive her. His wish when spoken became law. When Congress sent him bills which he did not like near the close of the session, he both refused to sign and return, but simply pocketed them, to allow them to die by adjournment, within 10 days of adjournment, and hence his famous "pocket veto." When the Senate declined to confirm appointments upon which he insisted, he simply permitted the matter to lapse until adjournment, when he made recess appointments. The most famous recess appointment in our history was the case of his appointing his great favorite, Martin Van Buren, as minister to England. Van Buren went to assume his duties. When the Senate came into session a vote on confirmation resulted in a tie, leaving the casting vote to the Vice President. It seemed the irony of fate when Calhoun, the Vice President, cast the casting vote of rejection, and compelled the future President to return home.

While the country knows that President Wilson is a great admirer of the qualities of Gen. Jackson, it also knows he has many of his qualities of will power, and in consequence is prepared to view with much interest the imminent feud, if such difference can be so styled, between him and the Senate, unless the latter surrenders its function, as the House has done, which is hardly credible. The President's keen partisanship, as displayed in this speech and observed in his administration, has no parallel save Jackson. This is a matter with him of political theory as well as governmental practice. It appears in his political writings and is confirmed by his acts. He aims to be the real head of his party, and as such feels the responsibility for its policy, and is the most ardent party man since the thirties.

When some of us objected to the Federal Reserve Board as provided in the reserve act upon the ground that it would become a partisan board, protestations of administration leaders were loud and virulent against any man who would suggest such a possibility. Notwithstanding the President was unable to find in our great country but one man out of the seven who was not a voter in his party; and had the Senate been subservient on behalf of Jones, the board would have had no one who was not a Democrat. That smacks of the Jackson spoils policy. If there can be a greater danger than partisan control of the banking powers, I know it not. In the address he informs the country that, speaking as a historian, the Republican Party had not a new idea for 30 years. This may explain his failure to avoid partisan bias. Evidently the President congratulates himself that his ideas of the "new freedom," what-

ever that means; "psychological business conditions," whatever that means; "emancipation of credit," whatever that means; "constitution of peace," whatever that means; and "watchful waiting," the meaning of which everybody knows, are his justification of his reference to the Republican Party as moribund. This reminds one of another author of whom the world has heard, "A book is a book, whether there is anything in it or not." The admirers of the President will keenly regret this outburst, which reflects no credit upon its author.

The misfortune is augmented by his emphasis that he does not "speak as a politician, but as a historian." Neither egotism nor arrogance is a trait of mind that the average citizen of this Republic would look for in the President of the Nation. While the country will readily concede to the head of a great party the right to be partial to his party in his administration of affairs, it will not excuse the dogmatist who presumes to represent the only progress in this great Nation.

Within the 30 years to which he referred the country under Republican leadership buried the free-silver 16-to-1 dogma and established upon a sound basis the gold standard. It undertook and completed the Panama Canal, the most gigantic work of engineering ever attempted. It did this by drawing upon the current funds, necessitating an issue of but one-half the bonds authorized for the work.

It created a new Cuba and a new Philippine civilization, and has taken steps to develop the commerce of the Orient by acquiring the Hawaiian Islands. It inaugurated the policy of reclaiming arid lands by irrigation and safeguarding the vast resources for the benefit of the people.

It has conserved the public health by pure-food legislation and an enlargement of the Public Health Service. It has fostered an aggressive development of the Nation's productive ability by the creation of the Departments of Commerce and Labor, and by enlarging the powers of the Interstate Commerce Commission to deal with regulation of rates and safety appliances. It has enlarged the various research departments, such as the Department of Agriculture, the Bureau of Mines, and the Bureau of Standards, all of which are proving the wisdom of the promoters. It authorized the Monetary Commission, whose recommendations served as a basis of the Federal reserve act. It created the Bureau of Corporations, which developed into the Interstate Trade Commission, in accordance with the recommendation of a Republican President and a Republican platform. It developed the postal savings bank and the parcel post. It built up an effective Navy and provided an Army of efficient defense, but still cultivating the fruits of peace. It has during the last 30 years fostered such productive ability in the arts of industry that no country has experienced in the history of the world. During the last 30 years the Nation's wealth has almost doubled, in which all had a share.

It turned over to Woodrow Wilson the country in its acme of prosperity. It left him a Nation with all its labor employed at good wages, all its capital invested at reasonable profit, a revenue system that kept our industries going, and raised sufficient revenue to run the Government, without resorting to direct taxes upon the people. It left a balance in the Treasury of $104,000,000, which is reduced to but a little over $40,000,000, of which nearly $30,000,000 is made up of subsidiary coin, and an alarming deficit of much over $100,000,000 promised by the end of the year.

These ideas may not be new to our President, but at least they are to be preferred to his "New Freedom" as the country knows it to-day. Old though they may be, yet they are not to be despised when viewed in the light of the new ideas of the present régime.

Among the new ideas the President has voiced, that of his address relating to his justification of heckling business is the most illuminating. He assures the country that "there is nothing the matter with business except a state of mind," and then offers this consolation: "I never was in business, and therefore I have none of the prejudices of business." Control of business must be under the leadership of one who was never in business, to avoid prejudice. This is one of the new ideas of Democracy, as now led, which the Republican Party can not boast of.

"I know what a team means when I see it, and I know what the captain of a team must have if he is going to win. It is no idle figure with me." This expresses another new idea of Democracy, as now led, which the Republican Party may not recognize. The captain makes up the line. He places the players; he takes this man off and places that man on; he orders the play; he gives the signals. If Oscar is to make a skin tackle, the captain informs him by signal; if Claude fumbles, some one, perhaps Finis, will take his place. If Champ plays center, it is because the captain places him there. If he flukes in passing the ball, he will be penalized. The men who do not keep the captain awake at night, because they play guard or end just as the order is given, without fumbling, hold their places to the end of the game. No one knows this better than the captain. It is no idle figure with him. But this conception of the relation of the Executive and the Congress may be a new idea to the President, wise or otherwise. It is but an application of his theory as frequently expressed. The Republican minority, which refuses to be disciplined by this captain of an opposing team, are either misguided, blind, or ignorant.

The most preposterous utterance of this address, which sounds very unlike the words of a nation's Chief Executive, is the following, spoken in reference to members of a great party which gave to this Nation the greatest era of national welfare known to history. The three men who deigned to raise a voice in the Senate against the President's ship-purchasing bill were ROOT, LODGE, and BURTON. All of these had spoken a few days prior to January 8. I am anxious to know to which class they belong—misguided, blind, or ignorant.

> Who commissioned them, a minority, a lessening minority? For they will be in a greater minority in the next Senate than in this. You know it is the peculiarity of that great body that it has rules of procedure which makes it possible for a minority to defy the Nation, and these gentlemen are now seeking to defy the Nation and prevent the release of American products to the suffering world which needs them more than it ever needed them before. Their credentials as friends of business and friends of America will be badly discredited if they succeed.
>
> If I were speaking from a selfish, partisan point of view, I could wish nothing better than that they could show their true colors as partisans and succeed. But I am not quite so malevolent as that. Some of them are misguided; some of them are blind; most of them are ignorant. I would rather pray for them than abuse them.

Another new idea of legislation or method of lawmaking not appreciated by Republicans is found in the following passage:

> The Democrats have heard the Republicans talking about the scientific way in which to handle the tariff, though the Republicans have never given any exhibition of a knowledge of how to handle it scientifically. If it is scientific to put additional profits into the hands of those who are already getting the greater part of the profits, then they have been exceedingly scientific. It has been the science of selfishness; it has been the science of privilege.
>
> FOR SCIENTIFIC HANDLING OF TARIFF.
>
> That kind of science I do not care to know anything about, except enough to stop it. But if by scientific treatment of the tariff they mean adjustment to the actual trade conditions of America and the world—then I am with them; and I want to call their attention—for though they voted for it they apparently have not noticed it—to the fact that the bill which creates the new trade commission does that very thing. We were at pains to see that it was put in there.

The President here asserts that the tariff commission is provided in the Trade Commission bill.

It is well understood the Democratic Party and leaders were against such a commission, especially did CLARK, of Missouri, UNDERWOOD, and FITZGERALD oppose it in the Sixty-third Congress. Did the President in his seeing "that it was put in there" surreptitiously inject a joker into the law to deceive the party leaders into adopting what they were openly opposed to? Or did he anticipate what a future Republican Congress would do, create a tariff commission? In either case is this method of legislation one of the new ideas of which the Republican Party knows nothing, and is the country to expect such methods from the head of the Nation?

The truth about it is the tariff commission is not provided for in the trade bill. The only provision in reference to the foreign trade is the following:

> (h) To investigate from time to time trade conditions in and with foreign countries where associations, combinations, or practices of manufacturers, merchants, or traders, or other conditions may affect the foreign trade of the United States, and to report to Congress thereon with such recommendations as it deems advisable.

The chief work of a tariff commission is not to investigate trade conditions where associations, combinations, or practices may affect the foreign trade of the United States. That is the work assigned to the much-vaunted Bureau of Foreign and Domestic Commerce. Whether trusts in Europe are advantageous or not is important to know, but that is not enough.

The tariff commission goes beyond mere trade relations. Its chief purpose is to gather data upon which legislation is to be based covering the subjects of revenue and American industry in their relation to foreign industry, cost of production, and so forth.

The President is not happy in his insistence that there is nothing the matter with business. The country would deny that he was the author of such statements attributed to him, but here are his words:

> There is nothing the matter with American business except a state of mind. I understand that your chamber of commerce here in Indianapolis is working now upon the motto, "If you are going to buy it, buy it now." That is a perfectly safe maxim to act on. It is just as safe to buy it now as it ever will be, and if you start the buying, there will be no end to it, and you will be a seller as well as a buyer. I am just as sure of that as I can be, because I have taken counsel with the men who know. I never was in business, and therefore I have none of the prejudices of business. I have looked on and tried to see what the interests of the country were in business; and I have taken counsel with men who did know, and their counsel is uniform, and all that is needed

in America now is to believe in the future; and I can assure you as one of those who speak for the Democratic Party that it is perfectly safe to believe in the future.

Such dogma can appeal only to one who has not felt the legal obligation of a contract which the law requires the obligor to satisfy. It will not pay the rent, the interest, the insurance that come due to-morrow. It will not employ the 4,000,000 men out of employment, nor shorten the bread line, nor lessen the number of soup houses. It will not relieve the distress so prevalent in every city of the land. Soft and honeyed words are poor substitutes for hunger and cold.

After months of congratulation, first on the state of the country, assured of unheard-of prosperity on its way, the President repeats on January 8 what he said to the representative employers of labor in my own State when they called upon him: "Nothing the matter with business, merely psychologic state." Soon after giving this consolation the editors of his native State were assured that a revival of business was on the way. Then, again, the country was assured that business was looking up. Advanced publicity agents insisted that a wonderful era unheard of in the Nation's life is near; but now we have it that business is not bad, the country only thinks it is; men are not out of employment, they only think they are; children are not hungry, public soup houses are not real, the longest bread lines in our history are purely imaginary. If this be the explanation, then why his proposed Democratic bureau of employment for the unemployed?

Sometimes when I look abroad, my friends, and see the great mass of struggling humanity on that continent, it goes very much to my heart to see how many men are at a disadvantage and are without guides and helpers. Don't you think it would be a pretty good idea for the Democratic Party to undertake a systematic method of helping the workingmen of America? There is a very simple way in which they can help the workingmen. If you were simply to establish a great Federal employment bureau it would do a vast deal; by the Federal agencies which spread over this country men could be directed to those parts of the country, to those undertakings, to those tasks, where they could find profitable employment. The labor of this country needs to be guided from opportunity to opportunity. We proved it the other day.

There is one bureau of employment that this country should foster—American industry. If we would open our mills to American workingmen instead of our markets to European-labor-made goods the problem of unemployment would be solved. Those who have studied the President's past utterances are somewhat surprised. Only a mind of keenly socialistic convictions could justify a policy of displacing American labor, by preferring a foreign product, thus closing up American industrial establishments, on the ground that a Federal bureau of employment can and should care for the unemployed. Wise policy would concern itself with helping to keep men employed rather than finding employment for them after depriving them of it. A removal of the cause is better than experimenting with effects. Prevention in this, as in all other cases, is better than cure. The President makes a very suggestive comment on the business situation that will not be overlooked by the public:

I want to ask the business men here present if this is not the first January in their recollection that did not bring a money stringency for the time being because of the necessity of paying out great sums of money by way of dividends and other settlements which come at the first of the year? I have asked the bankers if that happened this year, and they say, "No; it did not happen; it could not happen under the Federal reserve act."

There is universal agreement that banks are not embarrassed by the necessity of supplying money to pay dividends. While he is in error in his maxims of money rates, he is right in his statement. The industries which have not been compelled to pass their dividends are few. The widespread distress in industrial centers has no parallel. It is difficult to understand the source of choler so prevalent in this administration against all men who have had success in the business world. The time was when our country held up to the youth of the land the men and women of achievement. These have little standing in this administration. To-day we see this class penalized.. If any success is won, the winner must at once have the searchlight turned upon him. Success in business indicates some advantage somewhere. Lord Macaulay years ago declared that in America would come the time when the man who walked would deny the right of his neighbor to ride. While we have not reached that stage yet, many symptoms of its approach are visible.

This may be the manner in which the President has cleared the decks for the service of its business.

The Democratic Party does know how to serve business in this country, and its future program is a program of service. We have cleared the decks. We have laid the lines now upon which business that was to do the country harm shall be stopped and an economic control which was intolerable shall be broken up. We have emancipated America, but America must do something with her freedom.

The Underwood bill is one of the steps of freedom of which he speaks. What are its symptoms? Prices going higher, domestic enterprise paralyzed, foreign trade crippled, deficiency in the Treasury of over $60,000,000 in spite of the war tax. The only remedy is an issue of bonds, another war tax, or revision of the tariff. In the face of these stubborn facts, we hear of the Democratic Party serving business.

The Clayton bill is another step, the measure which instead of encouraging enterprise compels honest business men to be more concerned about keeping out of the penitentiary than to conduct a business on a profitable basis, without which no business can be conducted.

Of all utterances, those pertaining to Mexico are most disappointing. Reference to the Mexican policy was purely political. Some of the Republicans of this Congress took the position from the very outset that in a foreign complication all party lines should be eliminated. Some of us urged upon this floor that criticism should cease because steps of war had been taken and a united front should be presented against the enemy.

Most of us had questioned the steps as wholly unwarranted which had led to that situation. Republican Members suppressed their criticisms when it would have been political capital to do otherwise. That did not mean they condoned the mistakes of this administration. Few Americans could justify the head of our Nation giving orders to a neighboring country as to who should be or not be its head. The President said to Congress, when he appeared in person, "Huerta must go." He had already said in case of an election in Mexico, "Huerta must not be a candidate." He acted upon information not given to the public. To make sure that Huerta must go, he allowed his enemies to purchase munitions of war, and gave them such moral courage as would come from a virtual alliance with the forces of Villa. He asked Congress to support him in his policy, without giving reasons, and before Congress gave its consent he landed at Vera Cruz, which was an act of war. It is pertinent to ask, Why this? But we get no response. Whether it was done to prevent the landing of munitions for Huerta or to compel a salute to our flag, it matters little, for both were unsuccessful. The munitions were landed at another port, and the flag was not and will not be saluted, notwithstanding the loss of a score of American citizens and at least 200 Mexican citizens. Members of Congress, realizing that the war power was a function of Congress rather than of the Executive, were asking what of the future. After Huerta, what? If our President would drive Huerta out, is he ready to assume the responsibility of what will follow? Surely, if he destroys the only Government there, he must accept that responsibility. There are Mexicans in Mexico whose rights humanity demands must be considered. There are citizens of European countries there whose wrongs must and will be redressed. If the Monroe doctrine prevents Europe from doing so, are we ready to assume that duty? There are American citizens there by invitation. Have they any rights to be respected? Has the flag of the Nation any meaning at all? What is the answer? The President makes it clear in the following words:

I hold it as a fundamental principle, and so do you, that every people has the right to determine its own form of government; and until this recent revolution in Mexico, until the end of the Diaz reign, 80 per cent of the people of Mexico never had a "look-in" in determining who should be their governor or what their Government should be. Now, I am for the 80 per cent. It is none of my business, and it is none of your business, how long they take in determining it. It is none of my business, and it is none of yours how they go about the business. The country is theirs. The Government is theirs. The liberty, if they can get it, and God speed them in getting it, is theirs. And so far as my influence goes while I am President nobody shall interfere with them.

NOT TO DENY RIGHT TO SPILL BLOOD.

That is what I mean by a great emotion, the great emotion of sympathy. Do you suppose that the American people are ever going to count a small amount of material benefit and advantage to people doing business in Mexico against the liberties and the permanent happiness of the Mexican people? Have not European nations taken as long as they wanted and spilt as much blood as they pleased in settling their affairs, and shall we deny that to Mexico because she is weak? No.

This orgy of blood spilling continues. Can we say with the approval of our President? It began with the death of Madero, followed by Huerta, followed by Carranza, followed by Carbajal, followed by Gutierrez, followed by Garza, to say nothing of Villa and other lesser lights.

The President has made this a political issue, which relieves any man from further silence. In the campaign of 1914 the issue was made by the Democrats by appealing for the support of the President in his "watchful-waiting" policy. No man should hesitate longer to repudiate the most indefensible operations that have made the Nation's foreign policy inexcusably weak in the eyes of the world. No student of international relations can fail to see what the future will bring unless a change of policy will soon be adopted.

The President's optimism is wholesome. In the election of 1914 he sees a distinct triumph of his policies. He declares had it been a presidential year his party would have been successful by about 80 majority in the Electoral College. Most of the

country are asking how many such triumphant elections any party could stand. In this connection the following statement by the secretary of the national Republican committee may be enlightening. Figures tell their own story:

The result of the elections of November last proves three very important political facts:

First. The Republicans carried upon national issues States that would give a clear majority in the Electoral College and elect a Republican President.

Second. The Democratic majority in the next House is only the result of the Progressive vote in certain districts of the country, and the Democrats will be really a minority party in the House of Representatives.

Third. Two-thirds of the Progressive vote of 1912 has not only ceased to support third-party candidates but has returned to the support of Republican principles and candidates.

This is the story that is told by the official figures of the last election just compiled by the Republican national committee. They are the official figures of 38 different States, representing all sections of the country.

The Republicans carried 23 States which in the Electoral College cast 288 votes for President, a clear majority of 22 over the 266 necessary for a choice. There are three States which may be temporarily classed as doubtful, as on national issues they divided their allegiance. These are Oregon, South Dakota, and Nevada in which Democratic Senators were chosen but Republican congressional delegations were elected.

At this election 230 Democratic Members of Congress were successful. In 39 of the congressional districts of the country, however, the Progressive vote was larger than the Democratic plurality, so that had it not been for the Progressive vote the Democratic membership in the next House would be only 191, with 218 necessary for a majority. The Progressive vote also elected four Democratic Senators—those in California, Colorado, Indiana, and Oregon.

The question of what has become of the Progressive vote of 1912 is well answered in these official returns. In the 38 States whose returns have been compiled there is a Republican gain of 2,489,588 over the Republican presidential vote of 1912. There is a Progressive loss of 2,507,811, as compared with the presidential vote of that party two years ago. In other words, the Progressive loss is within less than 1 per cent of being the same as the Republican gain.

In these 23 States which put themselves in the Republican column the Republican plurality over the Democratic vote was over a million, whereas in 1912 the Wilson vote in the same States was larger than the Taft vote by over 1,000,000. Of the total vote cast by the three parties in these States in 1914 the Republicans cast 49.6 per cent; the Democrats, 38.9 per cent; and the Progressives, 11.5 per cent. In 1912 the presidential vote cast was, Republicans, 28.4 per cent; Democrats, 39.7 per cent; Progressives, 31.9 per cent.

The States carried by the Republicans at the election are shown in the following table, together with the electoral vote of each State and the comparative election figures of 1914 and of 1912. In this table the senatorial vote is indicated, also the total congressional vote of the several districts of each of the States:

States.	Electoral vote.	Vote.	1914			1912		
			Republican.	Democrat.	Progressive.	Taft.	Wilson.	Roosevelt.
Connecticut	7	Senatorial	89,983	76,081	6,853	68,324	74,561	34,129
Delaware	3	Congressional	22,922	20,681	1,653	15,998	22,631	8,886
Idaho	4	Senatorial	47,486	41,266	10,321	32,810	33,921	25,530
Illinois	29	do	390,661	373,403	203,027	253,613	405,048	386,478
Iowa	13	do	205,832	167,251	15,058	119,811	185,376	161,783
Kansas	10	do	180,823	176,929	116,755	78,844	143,670	120,123
Massachusetts	18	Congressional	222,831	179,197	30,120	155,948	173,408	142,228
Michigan	15	do	218,445	149,662	47,700	152,244	150,751	214,584
Minnesota	12	do	181,482	87,305	2,473	64,334	106,426	125,856
New Hampshire	4	Senatorial	42,123	36,382	1,938	32,927	34,724	17,794
New Jersey	14	Congressional	198,290	167,521	14,753	88,835	178,289	145,410
New Mexico	3	do	23,812	19,805	1,695	17,733	20,437	8,347
New York	45	Senatorial	639,112	571,419	61,977	455,428	655,475	390,021
North Dakota	5	do	48,732	29,640	2,707	23,090	29,555	25,726
Ohio	24	do	526,115	423,742	67,509	277,066	423,152	229,327
Pennsylvania	38	do	519,830	266,436	269,175	273,305	395,619	447,426
Rhode Island	5	Congressional	39,001	35,190	1,321	27,703	30,142	16,878
Utah	4	Senatorial	56,261	53,128	.....	42,100	36,579	24,174
Vermont	4	Congressional	36,980	13,685	9,545	23,305	15,350	22,070
Washington	7	Senatorial	130,479	91,733	83,282	71,752	87,674	111,977
West Virginia	8	Congressional	111,387	102,223	8,605	56,754	113,197	79,112
Wisconsin	13	do	159,369	115,501	.....	130,878	164,409	58,661
Wyoming	3	do	21,363	17,246	.....	14,560	15,310	9,232
Total	288		4,113,319	3,215,426	956,467	2,477,372	3,495,704	2,805,748

In this summary no attention is paid to the election of governors, because of the local character of governorship contests and the fact that the real tests on national issues come in the election of United States Senators and Members of Congress. How essentially local is the governorship issue is shown by the fact that in the States in the above table which elected Democratic governors Republican lieutenant governors were chosen at the same time. Wisconsin is put in the table of Republican States, even though a Democratic Senator was chosen, for the reason that local conditions were an element in this senatorial election, and that the Democratic senatorial candidate was successful by a plurality of less than 1,000, while the Republicans carried 8 congressional districts out of 11 and carried the State on congressional vote by a plurality of 44,000.

Of the total Progressive vote cast by these 23 States, it is interesting to note that half of it was cast by two States, Illinois and Pennsylvania, and nearly two-thirds of the total by the three States of Illinois, Pennsylvania, and Kansas.

The three doubtful States, according to the last election, were Nevada, Oregon, and South Dakota. In Nevada the Democrats won the Senatorship by 40 votes and the Republicans won a Congressman at large by a plurality of 877. In Oregon the Democrats and his own personal popularity reelected Senator CHAMBERLAIN by a margin of 23,000, while the Republicans carried all three congressional districts and had a plurality of the congressional vote of 35,000, besides electing a governor by 27,000. South Dakota elected a Democratic Senator by 3,800 and at the same time elected two Republicans out of three Congressmen; the Republicans carried the governorship by 15,000 and had a like plurality of the congressional vote.

Taking the total of the senatorial and congressional votes in each of these three States, and dividing by two to get the average party vote in each State on national issues, the result would be: Oregon, Republicans, 95,200; Democrats, 89,500; South Dakota, Republicans, 48,500; Democrats, 42,900; Nevada, Republicans, 8,471; Democrats, 8,054. This would at least entitle the Republicans to claim half of the electoral votes of these three States, which amount to 13, and would thereby raise the Republican electoral vote won in the election to 295.

Figures have been compiled from 12 States in which Republicans were not successful at the election, and these are representative States in different sections of the country. In the total votes cast in these 12 States the Democrats won by a plurality of less than 200,000. In 1912 the Democratic plurality in these same States was over 1,000,000. A very small percentage of Republican gain would have put 3 of these States into the Republican column, as an increase of a little over 5,000 Republican votes would have carried Nebraska, Colorado, and Maine, with their 20 votes in the Electoral College.

The following is the detailed vote of these States for both 1914 and 1912:

States.	Vote.	1914			1912		
		Republican.	Democrat.	Progressive.	Taft.	Wilson.	Roosevelt.
Alabama	Senatorial	12,320	63,389	4,263	9,731	82,439	22,689
Arizona	do	9,183	16,617	2,608	3,021	10,324	6,949
California	do	254,159	279,896	255,232	3,914	283,436	283,610
Colorado	do	98,728	102,037	27,072	58,386	114,223	72,306
Indiana	do	226,766	272,249	108,581	151,267	281,890	162,007
Kentucky	do	144,758	176,605	14,108	115,512	219,584	102,766
Maine	Congressional	60,318	60,683	17,958	26,545	51,113	48,493
Maryland	Senatorial	94,864	110,204	3,697	54,956	112,674	57,786
Missouri	do	257,056	311,578	27,614	207,821	330,746	124,371
Montana	Congressional	26,151	37,012	6,694	18,512	27,941	22,456
Nebraska	do	110,839	112,309	3,141	54,216	109,008	72,689
North Carolina	Senatorial	87,095	121,241	.....	29,139	144,507	69,130
Total		1,472,237	1,663,820	470,968	733,020	1,767,885	1,045,252

Taking all of the 48 States together, the Republicans at the November election cast 47 per cent of the total Republican, Democratic, and Progressive vote. The Democrats cast 41 per cent of this, and the Progressives 12 per cent. In 1912, in the same States, the Republicans cast 26 per cent of this total, the Democrats 43 per cent, and the Progressives 31 per cent.

The House of Representatives chosen at the November election will contain: Republicans, 195; Democrats, 230; Progressives, 6. In addition to these, there are from California a Progressive-Republican, a Prohibitionist, and an independent, and from New York a Socialist. The House of Representatives elected in 1912 contained: Republicans, 122; Democrats, 292; Progressives, 15; Progressive-Republicans, 5; and independent, 1.

The following is a comparative table of the Members of the House of Representatives elected in 1914 and 1912:

States.	1914				1912			
	Republican.	Democrat.	Progressive.	Others.	Republican.	Democrat.	Progressive.	Others.
Alabama		10				10		
Arizona		1				1		
Arkansas		7				7		
California	3	3	2	3	4	3	1	3
Colorado	1	3				4		
Connecticut	5					5		
Delaware	1					1		
Florida		4				4		
Georgia		12				12		
Idaho	2				2			
Illinois	16	10	1		4	20	2	1
Indiana	2	11				13		
Iowa	10	1			8	3

It was the Progressive vote that saved the control of the House of Representatives to the Democrats. They elected 12 more than a majority of the House, whereas in 39 congressional districts Democrats were chosen because of the candidacy of a Progressive.

There follows a table showing the congressional districts in which Democratic candidates were successful because of Progressive candidates, and also giving the majority of Republican and Progressive vote over that cast for the Democrat in each district:

Districts.	Republican.	Democrat.	Progressive.	Majority of Republican and Progressive over Democrat.
Ninth California	25,176	28,097	27,560	24,639
First Colorado	21,569	26,169	8,729	4,129
Sixth Illinois	17,382	23,103	6,161	400
Seventh Illinois	20,143	22,377	6,724	4,490
Fourteenth Illinois	16,132	17,221	4,272	3,183
At large, Illinois	373,682	375,465	113,510	111,727
First Indiana	17,681	20,488	3,519	712
Second Indiana	19,145	21,451	5,087	2,781
Fifth Indiana	17,552	21,785	5,254	1,021
Sixth Indiana	14,880	18,371	9,443	5,952
Eighth Indiana	13,160	21,841	10,785	2,104
Ninth Indiana	21,035	21,992	6,198	5,241
Tenth Indiana	16,999	20,666	8,106	4,439
Twelfth Indiana	15,052	18,612	3,976	416

Third West Virginia	21,457	21,890	1,969	1,536

The President's address reveals the characteristic of the schoolman in many ways. Petulance and fretfulness under criticism. His shot at the editors is in evidence when "Woodrow just sits back and chuckles." The preacher, teacher, settlement worker, and all altruists are usually immune from bitter criticism because of the character of their work. They are named to be praised, and very infrequently to be blamed. When the professor leaves that field for one where he invites criticism he becomes restless, if not irritable. The college president expects obedience. His life demands it. The college head administers the year round, and meets only occasionally with his trustees, who usually expect him to make recommendations to be ratified. The head is looked to for such service and is held responsible for it. Partisan politics is a field quite unlike his. His work invites criticism from some; praise from others. The

professor's life does not discipline him to harsh criticism from those who differ. The command "Do this" when given, although it be done in the interest of party, may not be obeyed because of adverse opinions. To resist is too often looked upon as personal, hence the extreme fretfulness. This speech reveals the danger of a strictly dignified personality assuming the commonplace. It shows the danger of an aristocratic mind talking down to the populace. It invariably undershoots. The keenest critic in America of a public man's words is the mass. Interesting scenes are due the next two years. The gauntlet is thrown down. Will it be taken up? The immediate interest is in an imminent family row that but a few paces removed is soon to appear. In 1916 the country will relieve the family of further dissension by applying the same remedy of 20 years ago to cure a similar national disorder.

Philippine Islands.

EXTENSION OF REMARKS

OF

HON. BIRD S. McGUIRE,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 27, 1915.

Mr. McGUIRE of Oklahoma. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following letter, which I received from Mr. C. C. McCollum, of Pawnee, Okla., and other documents accompanying the letter, not of very great length—in fact, very brief—but a comprehensive view of the situation in the Philippines as bearing upon the capability of the Filipino people:

DECEMBER 28, 1914.

Hon. BIRD S. McGUIRE,
House of Representatives, Washington, D. C.

DEAR SIR: As per your personal request of last week, I have prepared certain comments and data on the subject of the Philippine Islands, which I am herewith handing you. The pieces are consecutively numbered, and attached to some of them are some comments made by myself.

I wish you would bear in mind in reading this material that politically I am a Democrat and am generally a strong supporter of the present administration; but when it comes to the question of dealing with Mexico or China or the Philippines we should not be a Democrat or Republican or a Socialist, but Americans only, and I venture the assertion that at least 95 per cent of the persons who have had any length of service in the Philippines will concur with me in most of my remarks. I have found that these people, regardless of age or political affiliations, are almost invariably of one mind and opinion regarding the Philippines; but our duty there, our best good efforts in discharging that duty, and our present mistaken idea of what our duty is, and it is such an elementary and potent fact to all of us that the Filipinos are wholly incompetent to govern themselves, that we feel ridiculous in discussing or arguing the question, but when our fellow countrymen so forget our high national duty toward the Filipino people and toward the social word as to favor a withdrawal, wholly or partly, from the Philippines, just because we want to shirk our duty or because this infant people ask for things which they should not have, when we are threatened with such an alarming state of affairs it becomes our duty to do what we can to keep the United States Government from permitting one of the greatest tragedies of political history, for that is exactly what it would be to turn loose of the Philippines. We owe a duty to the Filipinos to help them look out for the best social and economic progress of which they are capable. As a strong and intelligent nation we owe it to the rest of the world to assist civilization and progress to this extent by taking charge of this one backward group and aiding them to do their part in the business world. When we consider that England has done it so honorably and so well and has been so bounteously rewarded for doing so, it should make us ashamed, who are descendants of the same people and who have unlimited resources with which to operate, it should make us ashamed to be so selfish and cruel as to be unwilling to do this little part of colonial tutoring.

Last spring I sent to Mr. C. B. MILLER, Representative from the eighth district of Minnesota, two numbers of the Philippine Monthly, same being for December, 1911, and January, 1912, containing two articles written by myself on the subject of colonization, which I think you would find profitable to read in connection with this matter. Not having another copy available, I suggest that you call on Mr. MILLER and get these articles, in which I believe I have shown the falsity of the theory that it is a disgrace for a people to be a colony or dependents of another stronger and more highly advanced nation. In that I point out the fact that the United States was once a colony of England; that England was once a colony of Rome; that Italy was once a colony of Greece, and so on; in fact, every present important nation, with the possible exception of Russia, has at one time in its political history been a dependent student under the care of another nation. It is the rule, not the exception.

It must be obvious to you that I am very much interested in this subject, else I would not have taken so much time and trouble to prepare these things; but if anything I have said or done can be of any service to you or any of the other Members of Congress who will try to see the right on this subject I shall feel amply repaid, and if I can do anything at any time I shall feel very glad to do so and you can feel free to call upon me at any time.

Express my personal regards to Hon. C. B. MILLER, as I believe you two gentlemen are agreeing on this Philippine question. I am,

Very truly, yours,

CLAUDE C. McCOLLUM.

P. S.—Since writing the above letter and preparing the remarks to go along with it, I have seen several newspaper reports concerning an attempted uprising in Manila and vicinity on Christmas Eve. The press reports are quite conflicting, and it is natural for the Government to say that the only dependable report is the report of the Governor General, but I fear that that is not the case. It should be borne in mind that the Governor General has been in the islands but a short time and he might not understand these things as well as those who have spent more time there, and it should also be borne in mind that should Mr. Harrison report a bad condition it might be taken as a concrete example of the impropriety of his administration. It therefore behooves Congress to get first-hand information on this matter as well as all matters in connection with the Philippine Islands. Although I have seen only the press reports, I might say that I am sure that the officers are correct who say that no such a movement by the Filipinos could reach serious proportions. The islands are well policed and are covered by a network of secret service, and it is impossible for a movement of this kind to gain any headway before being discovered, but that is stating one fact only. The other fact is that if the Filipinos could get away with it and felt sure they could, they would start a revolution to-morrow. Their frequent abortive efforts in this line are not so much revolutions against the American Government as they are revolutions against government. A large majority of the Filipinos can easily be induced to undertake to overthrow any efficient government, because the efficient government stops plundering, robbing, embezzlement, and the other tricks by which so many Filipinos lived before the Americans established a stable government. The situation in the Philippines is not very different from the situation in Mexico. It is war of the "outs" against the "ins," and if the Filipinos had their independence given them next week or next year or 10 years from now we would have a repetition of the Mexican situation accompanied by immediate international complications, which in my judgment would in a very short time result in the islands going under the dominion of Japan or England, more probably Japan, as the Japanese need territory and have already made quite an invasion of the Philippines peaceably and could turn the islands to their great immediate advantage, and as England and Japan are closely allied, England would probably permit Japan to take up the job which we would have ignominiously abandoned before we had done half our duty.

The lack of time prevents my discussing this matter further. I hope that the foregoing remarks may be of some satisfaction and service to you.

CLAUDE C. McCOLLUM.

JANUARY 5, 1915.

Attached hereto is a clipping from the Manila Times for April 5, 1914, which comments on the existence of robber bands operating in the island of Cebu. I might say that I spent most of three years in the island of Cebu and several months on the west coast of this island, and that I do not doubt the statement made in the clipping. The island of Cebu is located in about the middle of the archipelago, is about 130 miles long, and averages about 18 or 20 miles wide, and is very densely populated, there being about 1,000,000 on the island at this time. It is inhabited by the Visayans, which is the most numerous tribe in the Philippines and is considered the most peaceable and among the most intelligent. It is significant that in such an island, so densely populated, so centrally located, and having as its provincial capital a city of importance second only to Manila, that this robbing should still go on, and in spite of the honest and energetic American administration for more than 12 years. While I was in Cebu—1909–1912—these robbers were operating more or less all the time in spite of the fact that each municipality has a large force and despite the fact that there are several constabulary posts situated in the island, the constabulary being a kind of military organization whose duty it is to hunt down and suppress the more violent lawbreakers. While in Cebu I heard several times of these robber bands operating and collecting tribute or blood money; that is, they would come to a Filipino's house and tell him that they were organizing a kind of rebel band against the Government, and that they had to have supplies to operate with, and that they would take his cattle or other property if he did not buy a cedula from them; that if he did buy this cedula his property would be protected. Many of them bought the cedulas, thinking that the cheapest way out, and were afraid to report the matter to the authorities for fear they would be murdered or plundered for so doing, as several were murdered for telling too much on the robbers; but when the Filipino had bought the cedula he was not secure, for within a short time another alleged rebel leader would approach him on the same proposition to extort more money. A very famous robber of this kind operated in Cebu from the American occupation up until 1912, and was then captured by being induced to visit the office of the provincial governor, Dioniso Jakosalem. These plunders are arrayed more or less under the guise of insurrections or revolutions and are encouraged in their work by any weakening of American authority, and the continual harangue about independence makes them believe that the Americans are soon to withdraw, and they feel sure that they will never be punished after they do withdraw.

I might remark in this connection that the speaker of the Filipino Assembly, Hon. Segio Osmena, resides in Cebu and is a mixed blood, being part Chinese; and it is the opinion that it is the Chinese mixture which makes him such a prominent leader in Filipino affairs. But Mr. Osmena has some Cebu friends who are not so praiseworthy. In 1911 and 1912 the presidente or mayor of the city of Cebu, Mr. Teves, and the treasurer of the municipality, Mr. Roda, both friends and supporters of of Mr. Osmena, were caught in the very reprehensible conduct of defrauding the municipality out of horses by taking the good horses which belonged to the municipality, shipping them off to some remote place and selling them, and putting in their places cheap, worthless horses. They were tried in the court of the first instance at Cebu before Judge Hurd, and both sentenced to terms in the Bilibid prison. On trial they were defended by Filamon Sotto, a member of the Filipino Legislature, whose brother has been a fugitive from justice for years, residing in Hongkong and issuing independence propaganda, and has only recently been caught and put in prison in Manila. This seems significant to me because of the fact that until these two gentlemen were caught they passed off as very reputable, worthy, and intelligent Filipino officials, and were well connected politically, and were not deserted by their political friends, even after they were found out. In fact, the average Filipino does not regard a public office as a public trust and an opportunity to serve his fellows, but regards it as a private graft and an opportunity to filch his fellows. They have an idea that the principal good thing about a government is the soft jobs that it furnishes and the opportunity to exercise arbitrary power and extort valuables from the citizens. I might say that this is pretty well trained out of the

young Filipino, who has good thorough high-school training under American teachers; but unless he is protected and supported after he gets out of school it will not take long for the old dogs to swing him into their way of doing; and it should be remarked also that the number of Filipinos getting training in school is small. When I was in the islands the bureau of education did not hope to reach more than 15 per cent of the population at all, and the Province of Cebu, with almost 1,000,000 population, supported but one high school, and in that high school there were less than 100 secondary students, and it graduated its first class in 1912, with about 12 to the class.

CEBU CLIPPINGS.

[From the Manila Times.]

Reports received at Cebu indicate that there is a reign of terror beginning in the west coast of the Province, due to the activities of numerous robber bands in the district. Stories have grown in number in the past week, and it has been learned from reliable sources that armed robber bands are now actively engaged in stealing and killing cattle, holding up and robbing the villagers, and burning houses and destroying other property.

Says the Cebu Chronicle: "It is indeed a lamentable picture that is presented to the world. Filipino politicians snarling at each other like dogs quarrelling over a bone, Americans quitting the islands by hundreds in disgust, business houses suspending all efforts at progress and asking only the chance to sell out at a price not entirely ruinous, Japs sitting back and waiting their chance, copra fronting a dropping market, sugar prices on the down run, and hemp facing dangerous competition."

Gov. Manuel Roa, accompanied by Engineer C. Russell, has left for Matutinaw to open the new concrete bridge across the river.

Fio Villanueva, postmaster at Zamboan, has been arrested pending the result of an investigation into the alleged robbery of the Zamboan post office. It is alleged that an attempt was made to set fire to the post-office building.

—

FILIPINOS ARE LIKE CHILDREN, HE SAYS.

"No portion of the Filipino people which I have met seems to be ready for independence. The mass of the people are like children. Their leaders are intelligent men—men who compare favorably with Europeans and Americans—but the ordinary individual, Filipino or Moro, is a long way from fitness for the independence for which they seem to think the United States is preparing them."

In these words Ebbe Kornerup, noted Danish artist, author, and newspaper man, sums up his conclusions reached after a stay of two months in different parts of the Philippines. Mr. Kornerup, with Dr. Mortensen, the Copenhagen authority on marine biology, arrived from Zamboanga on the steamer *Romulus* Friday morning.

The pair have spent six weeks in Moroland. From Zamboanga Mr. Kornerup went out into the forests, where he lived with Moros, and he spent a short time at Jolo as the guest of Gov. Whitney. There he met the famous Sultan of Sulu.

To a reporter, who asked him for his impressions, Mr. Kornerup said: "Your Sultan of Sulu is not much of a Sultan. I have met men of far superior intelligence and greater seriousness in Egypt and in the Sahara among the Arabs.

"But I do like the Moros. I believe them to have the strongest minds and characters and the best brains of any tribe in the islands. But the Moro is a sort of anarchist and must prove a very difficult problem for his rulers.

"The Filipinos I have met around Cebu and Manila are more fitted to be good citizens, but they are slow in thought. Both peoples are too much like children to be ready for absolute self-government. I refer here to the masses, not to the leaders."

—

Attached to this is a clipping from the Manila Times regarding the sending of a priest to Bilibid Prison. I was personally acquainted with this priest, who passed as a very substantial priest and a person of influence and importance of the community, as in fact all priests are. The prevalent religion in the Philippines is Catholic, and most of the priests are Filipinos and treated with tolerance by the government and with much veneration by the people in general. Although an exponent of a Christian religion, it is a regrettable fact that the example and influence of these priests is not very elevating. Nearly all of them drink more or less, and some to a very aggravated excess. Many of them, though not married, have children and several mistresses, and they are not generally friendly to the American administration and to the extension of learning and intelligence generally, because of the fact that the more intelligent the people become the more difficult it is for them to enjoy the numerous privileges and prerogatives which they now enjoy. It is not a very uncommon thing for a priest to be sent to Bilibid Prison for complicity in some crime or an attempted revolution or insurrection. This priest seems to have been found guilty of suborning and inducing witnesses to swear falsely against one against whom he had a personal grudge, and it furnishes an opportunity to make a few remarks on trials in the Philippines. Most of the judicial work in the Philippines is attended to by judges of the courts of first instance, who sit as tryers of both fact and law.

The jury system has never been used, and it would be absolutely impossible to use it and get any judicial results. There is no difficulty in getting a witness to swear to most anything. They can be bribed for small sums, or if they are dependent in any way upon another Filipino, as most of them are, their superior may bring pressure to bear on them to testify as he wants them to testify, and that is what occurs. The superior may be a landlord or he may be a loaner of money, and therefore, ipso facto, a usurer, charging from 1 to 5 per cent per month for the use of money, or he may be a municipal official or a master of household servants, and it requires the keenest insight of independent and conscientious judges to get anything like justice out of the courts over there. The judges are appointed by the Governor General, with the advice and consent of the Philippine Commission, and hold office during good behavior; and, with a strong and courageous Governor General keeping a hand on the appointments, the standing of the judges has been very high. Most of them in the past have been Americans. A few intelligent Filipinos have been made judges and have discharged the duties satisfactorily, but they have done so knowing that they would be backed up by the Governor General in discharging their duties carefully and fairly, and unless they did do so they would be demoted or fired. When the appointment comes to be made by a Governor General who is not familiar with the Filipino personnel and must take most of his advice from hearsay sources, and must get his appointments approved by a commission dominated by Filipinos, and undertakes to replace the American judges with Filipino judges, I very much fear for the standing of the courts of first instance in the Philippines; and if justice can not be had, of course, there will be little chance for progress of any kind. In Spanish days bribery of the judges was a most common thing, and I learned of one example there in Cebu where a judge of the first instance had a system of taking bribes from both sides and the one that paid the highest got the decision of the court, and he was a very wealthy man. It is true that the older Filipinos are thoroughly saturated with the Spanish standard and think that a Spaniard is far superior in every way to an American. They have a way of smiling at the American's honesty and integrity as being childish and weak, and if these Filipinos are put in power the Spanish standard of morals, vice, bribery, and general corruption will very soon prevail, to the total exclusion of any good seed that the Americans have sowed in the short time they have been there.

PRIEST TO BILIBID.

Bilibid will be the future home of Rev. Sancho Abadia, formerly parish priest of Moalboal, Cebu, and Felix Garcia, a Spanish landowner of the same municipality, who were convicted last week of subornation of perjury and sentenced by Judge Adolph Wislizenus to two years and six months and three years and six months, respectively.

The court scathingly rebuked the priest, who, according to the decision, conspired to convict two innocent men of murder to satisfy a personal grudge he held against them for denouncing him as a leper to the health authorities.

From the decision it appears that the accused procured the presentation of a complaint against Andres and Brigido Gaco for murdering Agaton Canece, suborning and inducing a number of persons to accuse falsely and knowingly Andres and Brigido Gaco.

In its finding the court further says that it appears extraordinary and incomprehensible that the sacred office of priest was an important factor in overcoming any scruples which the suborned persons might have had in giving their services as perjured witnesses. Nevertheless the fact that the order to put in jeopardy by perjured declarations the life and liberty of innocent men emanated from the lips of a minister of God did not fill them with horror, but, on the contrary, the principal motive was to them obedience.

—

Attached is an editorial comment taken from the Manila Times of April 18, 1914. Mr. Phipps was insular auditor under the previous administration, and was one of the few personæ gratæ who were retained by the Harrison administration; and it is a lamentable fact that practically all of those men who were retained very soon quit the service in disgust. Mr. Phipps's words speak for themselves and are very significent and instructive, showing that the new Governor General is going headlong into discharging Americans and appointing Filipinos, regardless of the good of the service. He seems to have a mistaken idea that it is his function to confer favors on individual Filipinos rather than to work for the general good of the whole Filipino people. That this is a mistaken policy must be admitted by any thinking person. The public official must serve all the people and must depend for his popularity, if he is bent on having popularity, on lasting beneficial results for the whole social community, and not on a few individuals at the expense of all the rest. Mr. Harrison has not discovered, perhaps, that he lives in a land of Judases, that these fawning Filipinos who caress and embrace him do so only for the purpose of getting special favors for themselves. They are very skillful and diplomatic in this work and are able to get a good many things from a person who is not familiar with their style of diplomacy and trickery. An American Army officer many years ago sizes up the situation by saying, "A Filipino tells the truth when it is consistent with diplomacy to do so; an American is diplomatic when it is consistent with truth to be so." These Filipinos make a noise over Mr. Harrison, because by doing so they can get pie for themselves and friends. When he ceases to be of service to them for that purpose, they will have no use for him whatever; and not having made a record for the general or common good, where will Mr. Harrison's merit marks come from? Last April I received a letter from a gentleman in the Philippines, a graduate of one of our eastern universities, a man of long service in the islands, in which he made these remarks: "Some people think that the Government has about reached the end of the Filipinization; for the present the Filipino is all right, when he is held in check, but the more he is assisted the more he wants, and there has to be an end to all things. The Filipinos thought that Gov. Gen. Harrison came over here to give them their independence, and now they want him to do it and get out. Something was referred to him recently and one of the natives said that it was quite unnecessary, that the Filipino Assembly should have made its own conditions and let the Governor General mind his own business. Every now and then there is a break like that. Undoubtedly Harrison will go away a sadder and wiser man; and we will all be sadder, too. I suppose it is very wrong for us to care so much what becomes of the Filipinos, but it is an accepted fact that he will not advance unless he is forced to do so, as he was under the previous régime."

PHIPPS TELLS THE FOLKS AT HOME.

Once again W. H. Phipps, former insular auditor, is to the fore—not as a financial expert, or an adviser on legislation this time, but as a letter writer. He has told the New York Journal the story of the first few months of Gov. Gen. Harrison's administration as he conceives it, and it goes without saying that W. H. Phipps plays an important part in the events he describes. For instance, we learn that he "was preparing to leave the islands when Gov. Gen. Harrison arrived," which will be news to everyone in Manila. Then, at the suggestion of "some very substantial men," among whom he names "the Hon. C. W. O'Brien and Judge L. M. Southworth," he was persuaded to remain—at ₱15,000 a year. His duties were those of "financial adviser," and he tells how he advised with the Governor General "almost every day" and with the speaker "every day." Then, out of these advisings, things began to happen:

"I drew a bill for the abolition of slavery. It was passed by the assembly, but so badly amended as to be worthless.

"I wrote a letter to the governor, the speaker, and to members of the commission, each letter the same, excepting the address. I have copies of each letter. I sought and had interviews with each person to whom I sent such letter and said to him that if the bill as it passed the assembly became a law the effect would be worse than if they passed no law, as on its face it showed an intention to deceive the American people. The only thing to do, I told them, was to pass a bill which would reenact the United States statutes. I gave them the needed sections, as I had the original draft which I prepared.

"I kept at them and finally forced my bill through.

"QUEZON was much displeased with my slavery report, and he and I were not on very friendly terms. I attribute to him the attitude taken by the assembly.

"Nevertheless I attended a banquet where Harrison said he owed his appointment to QUEZON. As he spoke he put his hand on QUEZON'S shoulder. There were hundreds who say he put his arm around him.

"He did this same sort of thing in his inaugural address and on many other occasions. Many Filipinos and practically all the Americans did not like this."

He goes on to tell of how the heads began to fall into the basket, and speaks particularly of the appointment of Frank Carpenter as governor of the Moro Province. He says:

"Harrison proposed letting Executive Secretary Frank W. Carpenter, one of the ablest men in the service, out, and putting in Attorney Villamor, a Filipino. The latter, while a man of some ability, is not at all fitted for the place.

"I went to Mr. Bonsal and told him to tell Harrison for me that this was a very unwise move; that if he had fully decided to let Carpenter out he must put in a man in whom he had full confidence, and that I thought only an American ought to fill the place.

"My protest did no good. Carpenter was appointed governor of the department of Mindanao. I personally know he did not want the place, but was forced to take it.

"When Harrison had made his appointment of Villamor he called me to the palace and said, 'Well, what do you think of my executive secretary?'

"I said, 'Governor, I expressed myself before when I told you if this thing were done you would find yourself in the middle of the deep blue sea.'"

Then we come to the appropriations bill, that monumental piece of assembly folly. "Notwithstanding the fact that I was appointed as advisor to the assembly, I was not consulted as to its provisions," he says, and denies that he had "part or parcel in it." He tells of the reduction of the amount allowed the bureau of posts for printing postage stamps—one of the most glaring of the instances of foolishness in the assembly bill—and says he could cite scores of items almost as bad. However:

"Both Harrison and the speaker were in daily consultation with the appropriations committee, and this was the result.

"As soon as I got hold of the bill and saw what they had done I resigned and refused to stay longer, leaving the islands December 21, 2 months and 15 days after my appointment.

"When I left the islands business was stagnated and revenues were dropping off badly. It took a hardy American to speak well of the change. I was in China in September, the full month, and passed from Peking clear across the country. The new policy of letting Americans and their interests in foreign countries go to the bowwows was every where derided and deplored.

"I talked with many an American who was sick at heart over the attitude of the administration toward Americans who have business and investments in foreign countries.

"Many anxiously asked me if it could be possible that we would give up the Philippines. I told them I feared it was true, and they declared nothing could happen to hurt our prestige so much as that, for foreigners will not believe any notion but fear of Japan actuated our country, and Japan will see to it that such an impression is widespread."

In fine, it is a letter full of interest to residents of the Philippines for the sidelights it throws on legislation of recent times and on the personality of W. H. Phipps.

—

The attached clipping from the Manila Times of October 11, 1914, shows how the Governor General has failed to get along with his new director of lands, Gen. Tinio. When Mr. Harrison became Governor General an American was in charge of the bureau of lands, and the bureau of lands was doing much to improve economic conditions by getting title to lands determined. In the Philippines different people claimed land, but nobody owned land. It is practically impossible to get real estate security on loans because the mortgage on real estate would be no good, the title being an uncertain proposition. The Governor General made the very great mistake of putting an incompetent ex-insurrecto general in this important position, from which he has recently been forced to resign.

TINIO NOW KICKS.

Complaining that his orders have been set aside during his absence by the assistant director, that his efforts to secure well-merited salary increases for certain Filipinos were thwarted by none other than that great exponent of ultra-Filipinization, the secretary of the interior, and that the estimates for the bureau for the coming fiscal year prepared by him had later been altered without his approval, ex-Director Tinio, of the bureau of lands, has incorporated his grievances in a lengthy memorandum, which he is about to submit to Speaker Osmeña.

La Vanguardia publishes in full the correspondence that passed between Señor Tinio and the secretary of the interior on the subjects mentioned. To a letter of Señor Tinio recommending a salary increase for Filipino surveyors the secretary of the interior replied, calling attention to the reduction of all salaries recently effected, and asking that no increases be recommended which are not in strict conformity with the civil-service rules.

Unconvinced by the secretary's economy pleas, Señor Tinio replied, pointing out the great difference between the compensations paid to American and Filipino surveyors in his bureau and insisting that the raise be granted to the latter. The Filipino surveyors, Señor Tinio said, are gradually acquiring greater efficiency, and as a matter of justice should be given a raise. By gradually increasing the salaries of these Filipinos, it would become unnecessary to continue the policy of importing high-priced American surveyors.

Secretary Denison then expressed his willingness to submit the question of all salary increases to a board vested with authority to act on all recommendations for raises submitted by the division chiefs. To this proposition Director Tinio was unwilling to agree, on the ground that the board would usurp the prerogatives of the director and that the division chiefs were not familiar with the interior administration of the office nor vitally interested in the proper administration of the same.

The next letter of Señor Tinio to the secretary of the interior has to do with the matter of changes effected by the assistant director in the estimates of expenditures for the coming fiscal year. On the very day Gen. Tinio left on his vacation, it appears the assistant director and other employees of the bureau got busy effecting changes to the budget in conformity with their own views of the needs of the office, which amended budget was then forwarded to the secretary of the interior. Upon his return to Manila Gen. Tinio was requested by the secretary of the interior to change the budget submitted in conformity with the results of a conference had between the secretary and the assistant director. Señor Tinio at once went to see the secretary of the interior, who asked him to submit his comment on the changes proposed by the assistant director. To this the director replied, charging Asst. Director Jones with violating the provisions of the reorganization law, which confers no authority upon an assistant director to change the action of the chief during the latter's absence. Mr. Jones, Señor Tinio said, in addition to changing the budget, had taken it upon himself to effect changes in an administrative circular issued by the director before he went on leave.

"Taking into consideration all these facts," Señor Tinio winds up his last communication to the secretary of the interior, "it is not difficult to understand who is the person that has fomented and is still fomenting disloyalty in this bureau. It is not my desire to attack anyone, but only to state the facts as they have occurred."

—

A YEAR OF HARRISON.

What is to be said of conditions in the Philippines to-day, the anniversary of the arrival in Manila of Gov. Gen. Harrison, and the end of the first year of what has been styled the "new era"?

The question is not easy to answer, but some of its difficulties are removed if we personify the abstraction, if we consider the "new era"; that is to say, in and through the Governor General, its herald and its exponent. Admittedly, this may do Mr. Harrison an injustice. It is possible that he is the mouthpiece and the servant of the President of the United States to a degree unrealized here; that his dependence upon and subservience to Washington are greater than any previous Governor General has been willing, or has been asked, to allow. If this is so, it would be unfair to Mr. Harrison to visit blame upon him for acts or omissions traceable to presidential order, and equally unfair to the President to praise Mr. Harrison for accomplishments in which his part might be likened by analogy to the relation between the phonographic disk and the voice whose tones it reproduces. This, however, would not necessarily affect the justice of the praise or the blame, but only the destination to which they should rightly be addressed.

There are two things to be considered in any review of the first year of Mr. Harrison's administration—the degree of his opportunity, and the use he has made of it. Minor achievement might be highly laudable if it were snatched out of small opportunity; and, per contra, large accomplishment might be so sadly out of relation to the chances offered as to the matter for severe criticism.

All things considered, Mr. Harrison had such an opportunity as has been given to no Governor General before him. He was charged with a message which made him at once the hero of the hour; he began his work on the crest of a wave of enthusiasm which insured legislative approval of his policies, and he found a trained and efficient civil service awaiting his orders. He had all that his predecessor had, and one vastly important thing that he lacked—the sympathy of the legislature. It must be remembered that—much passionate protestation to the contrary notwithstanding—the long deadlock over the appropriation bill which characterized the last years of the Forbes régime was in the last analysis prompted by desire to hamper an administration which was known to be unfavorable to ideas of immediate independence. No such obstruction was to be feared by Mr. Harrison. He was a young Congressman in whom the taint of Tammany was offset by his known adherence to the tenets of the "anti-imperialist" school, and whose priceless distinction it was to have been chosen by MANUEL QUEZON. He was received with open arms, his actions were applauded, his words were accepted as the inspired utterance of one who would lead the people out of bondage. A hundred times it was said that under his direction the Filipino people—that is to say, the Filipino legislators—would at last be able to show their capacity, which, being interpreted, meant that they were prepared to comply with the august suggestions of their new chief, to the end that Washington might be satisfied of their good behavior. In short, Mr. Harrison was to initiate a "new era," for which the people had been sedulously prepared by their leaders.

This being so—and our statement of the situation in which the Governor General found himself last October will hardly bear denial—it remains to ask what Mr. Harrison has made of his opportunity. Are the people happier, more prosperous, more free for his coming? Has the country in this year measurably advanced toward the oft-named ideal of economic independence? Has the year seen the beginning of constructive work of any description which Mr. Harrison can claim to have originated? Since government, rightly regarded, is service, is the government to-day giving better service than before? Is there any spot in all the islands where, as the result of Mr. Harrison's work, two grains of rice grow where one grew before? Has he accomplished anything for our health, our education, our peace and order? In short, what is there to show for his 12 months as Governor General?

The apologist would doubtless here interpose the statement that, on his arrival, Mr. Harrison found the finances of the country in a serious state. There are two sides to that question, of course; but, for the sake of argument, let us admit that this was the case. What remedy did Mr. Harrison apply? He stopped public works, he cut salaries, and he abolished positions. All these are good things in their way and in their season, but it should be remembered that they are all negative things, and unless they are accompanied by something that is positive, that is constructive, they can not fail to do harm. In effect, all that Mr. Harrison did was destructive, and a child might have done as well. So complete a lack of understanding was displayed, indeed, that to-day we find the civil service destroyed, and as, for instance, in the case of the coast-guard vessels, the sum rightly chargeable to depreciation rapidly gaining upon the estimated saving by nonemployment. We find important positions held by incompetents, while the country suffers; we find politics triumphant while public need is unregarded; we find depression where there had been buoyant confidence; we find a government and a country to all appearances utterly unprepared to take advantage of the splendid opportunity which is offered at this crisis in the world's affairs. To say that all this is the result, first, of the financial situation of the Philippines at the time of Mr. Harrison's arrival, and, second, of causes which are common to the rest of the world, is to beg the present question. It was Mr. Harrison's duty and his privilege to have used his power and his tremendous influence with the people to better ends than mere stoppage of public works and cutting of salaries—the effect of which is but to deepen depression. The need of the time was for a man of constructive ability, a man of resource, not a politician of purely negative attainments.

The Times believes that only in the way it has indicated can a fair estimate be made of this year of Harrison. It believes that if all that the Governor General's most loyal and enthusiastic supporters can advance in his favor is weighed in the balance with the opportunity which was his from October 6, 1913, his achievement will kick the

beam. It believes that, in relation to what he might have done, what he has done is pitifully small. It has searched in vain for any indication which would give color to the belief that Mr. Harrison has in him the ability to meet a positive need with any other than negative expedients. It believes that, in the early days of his administration, he utterly failed to understand the situation, and that to-day a weak obstinacy is all too likely to prevent his applying such experience as the past 12 months have brought him. It believes that he is to-day estranged from all the country save only that small section whose political future he believes to depend on the fate of the preamble to the Jones bill. In fine, it believes that he has been tried and found wanting.

It may be said that a year is too short a time in which to form a right judgment of a man and his possibilities. If this is indeed so, and if in the time to come Mr. Harrison should display qualities which he has very successfully hidden hitherto, this paper will be profoundly thankful, and will not hesitate to pay him tribute. But to-day it confesses to the belief that Mr. Harrison is a failure. It can not forget the richness of his opportunity and the miserable poverty of his accomplishment.

—

IN DEFENSE OF HARRISON.

It is pleasant to find El Ideal coming sturdily to the defense of Gov. Gen. Harrison, and if the editorial in which it replies to this paper's summing up of the past year fails to carry conviction, at least it lacks nothing in the matter of good will. There is an admission—"for sake of discussion"—that the year just closed "was largely devoted to undoing many of the blunders committed by the last administration," but El Ideal points out that "it is a truism * * * that every constructive work must be preceded by destruction." So sadly had the Republicans upset things "that not one year, but two years, was needed to effect the necessary house cleaning before the great plans of the new régime could get a proper start." Moreover, we are informed that Mr. Harrison met "the dogged opposition of his countrymen in every step he took in rectifying the serious mistakes of the Republican Party," and thus fought against "terrible odds."

This notwithstanding El Ideal urges that constructive work has not been lacking. It instances the "brilliant campaign against two powerful enemies of agriculture—rinderpest and locust—conducted under Gov. Harrison's wise guidance," as to which it must be admitted that the "dogged opposition" of the Amercan press to the spread of these pests stirred Mr. Harrison to effort once or twice. Next we are asked to admire "the splendid work being done in the Department of Mindanao and Sulu and in the mountain Province in the way of education, sanitation, self-government, and public order." Did this work, such as it is, originate with Mr. Harrison? Did it not antedate his arrival? And, finally, "Will the Times ignore the perfect peace and contentment which reigns in every nook and corner of the archipelago?" The Times will not ignore it, but will deny it. The fact is that there is less peace and contentment in the Philippines to-day than at any time during the past five years. If proof of the prevalence of discontent and the decline in public morals is needed, the columns of El Ideal and the editorials in that paper, in which present conditions are deplored, are sufficient testimony.

However, in matters affecting the administration of Mr. Harrison it is not to be expected that El Ideal, the organ of the Nacionalista Party, should see eye to eye with the Times. It may serve a better purpose if we turn to another Filipino newspaper, La Democracia, to see how the claim that "the Filipino people" to-day know that Mr. Harrison "has admirably acquitted himself" appears to a Filipino writer. La Democracia has at least as good a right to express an opinion and to have it considered authoritative as El Ideal. On the subject of the proposed demonstration next Sunday afternoon to celebrate the anniversary of Mr. Harrison's coming La Democracia says:

"Probably the organizers of this 'new-era' demonstration have deemed it prudent to keep their names from public print and to hide themselves under the thinly screened misnomer of 'some prominent Filipinos,' because they are well aware that such a demonstration, which is not justified by actual facts, would be taken by the people in general as something that could only be conceived by spineless sycophants."

Later we are informed that Gov. Gen. Harrison is "the defraudation of our great and flattering hopes to see the blunders of the former 'bottom-side-up' administration rectified." His "solemn and sententious declarations" are referred to; he is said to have "seemed to be resolved to reform and simplify the administration"; his "penchant for the decentralization of the government" is mentioned. And then this:

"But later on he displayed his irresolute infirmity of purpose and apprehensive vacillation, egged on and gagged by the vociferating criticism hurled against him and his administration policy by the Imperialists. His heralded policy of Filipinization has been paralyzed. He has hung in suspense his plan of decentralizing the government. And, as if contact with our people has convinced him of our many defects, he has unqualifiedly approved all the amendments introduced to the Jones bill, which are very restrictive. All of which shows that Francis Burton Harrison is one of those that have little confidence in our capacity for assuming the responsibilities of an independent government."

Then that nigger in the woodpile, the Mauro Prieto bank bill, is discerned, after which we are informed that one year of the "new era" having elapsed, "agricultural, industrial, and commercial conditions, instead of improving, seem to have fallen below normal."

Out of all this, one thing emerges clearly. If in the pressure of his many duties Gov. Gen. Harrison has found time to keep alive his sense of humor, he will gently but firmly indicate to those who would demonstrate before him on Sunday, in the name of the Filipino people, that the time is not propitious.

—

Attached to this are two clippings from the Manila Times on the new collector of internal revenue. The insular government depends very largely on internal revenue, and the new Governor General put in charge of that important bureau J. J. Rafferty, who was distinctly persona non grata with the previous administration. Mr. Rafferty had been collector of customs at the port of Cebu, which is a very important port, but because of his blundering had been demoted and put in charge of a Moro port at a considerably reduced salary. He refused to take the suggestion to resign and, hanging on, was picked up by the new administration and made collector of internal revenue, with the result indicated by these clippings. Mr. Rafferty is of that alleged amiable type of public official who seeks by flattery and personal favors to employ himself and retain his position; and, of course, as collector of internal revenue has plenty of chances to deal out personal favors at the expense of the public treasury, and unless removed from that bureau will grow more and more lenient in the collection of duties and internal revenues, and receipts will continue to fall off. It is not surprising that Mr. Rafferty should grab a high position, but it will be very surprising if the administration does not run on financial rocks with such a man steering an important fiscal bureau.

BUREAU OF INTERNAL REVENUE SHOWS HUGE DECREASE—NET LOSS OF ₱685,873 IS DISCLOSED BY OFFICIAL FIGURES OF BUREAU COLLECTIONS FOR THIS YEAR.

Unless prompt action is taken by the Governor General in the reform of the bureau of internal revenue, the Philippine Islands are facing the possibility of bankruptcy. This is the result of an investigation which has been conducted for some time past by the Manila Times, the facts disclosed by which have now been supported by official figures obtained from the office of the insular auditor.

In the five months of the present year ending on May 31, the collections made by the bureau of internal revenue are shown to be ₱685,873.84 less than they were in the equivalent five months of 1913. Of this enormous decrease ₱432,075.75 is represented by the two months of April and May, and from these figures the speed at which the bureau is slipping downhill under Collector J. J. Rafferty and Assistant Collector Venancio Concepcion may be judged.

Comparative statement of internal-revenue collections during the period from Jan. 1 to May 31 of the calendar years 1913 and 1914, respectively.

Item.	1913	1914	Increase.	Decrease.
DOMESTIC.				
Distilled spirits	₱1,122,546.42	₱1,006,259.00		₱116,287.42
Fermented liquors	64,250.00	68,250.00	₱4,000.00	
Manufactured tobacco	103,975.88	81,477.06		22,498.82
Cigars	99,754.10	89,808.26		9,945.84
Cigarettes	1,942,380.84	1,842,936.72		99,444.12
Matches	109,100.00	84,480.00		24,620.00
Wines	30,545.59	34,944.43	4,398.84	
Total domestic	3,472,552.83	3,208,155.47	8,398.84	272,796.20
IMPORTED.				
Distilled spirits	117,522.61	122,438.70	4,886.09	
Fermented liquors	7,381.66	8,362.98	981.32	
Manufactured tobacco	51,612.66	53,869.97	2,257.31	
Cigars	5.86	31.55	25.69	
Cigarettes	1,247.38	3,410.69	2,163.31	
Matches	44,881.09	60,519.31	15,638.22	
Wines	44,233.38	47,997.14	3,763.76	
Total imported	266,914.64	296,630.34	29,715.70	
LICENSES.				
Dealers in alcohol and tobacco products	300,145.66	303,696.19	3,550.53	
Merchants, manufacturers, and common carriers	1,015,277.31	947,258.45		68,018.86
Occupations, trades, and professions	289,786.73	320,284.43	30,497.70	
Banks and bankers	142,524.34	130,867.99		11,656.35
Insurance companies	10,641.98	12,043.98	1,402.00	
Documentary stamp taxes	122,097.24	117,778.19		4,319.05
Cedulas	2,804,966.00	2,672,064.00		132,902.00
Forest products	181,376.83	187,042.81	5,665.98	
Miscellaneous	130.91	14.20		116.71
Total licenses	4,866,947.00	4,691,050.24	41,116.21	217,012.97
Total internal revenue	8,606,414.47	8,195,836.05	79,230.75	489,809.17
United States internal revenue collected in the Philippines	262,563.32	135,460.48		127,102.84
Opium	36,709.58	19,997.46		16,712.12
Weights and measures	60,274.03	57,182.98		3,091.05
Franchise taxes	73,534.29	78,646.18	5,111.89	
Justice of peace fines and fees	159,256.80	132,875.85		26,380.95
Income tax		260.28	260.28	
San Lazaro estate rents	24,486.07	6,188.50		18,297.57
San Lazaro court costs	7.24	163.40	156.16	
Sisiman matadero	33,652.94	25,743.25		7,909.69
Mining fees		2,267.00	2,267.00	
City of Manila taxes, charges, etc	1,145,212.66	1,061,616.13		83,596.53
Total	1,795,696.93	1,520,401.51	7,795.33	283,090.75
Summary total	10,402,111.40	9,716,237.56	87,026.08	772,899.92

Net decrease, ₱685,873.84.

Since the beginning of the year the issue by the bureau of 10-day statements of collections made has been abandoned. The plea was that the compilation of the necessary figures took too much time, notwithstanding that this compilation must be made for bureau purposes, if the collector is to keep in touch with the affairs under his jurisdiction. The application of the Manila Merchants' Association was met by the reply that the bureau could not undertake to continue the sending out of information, and as a matter of fact the only information as to the condition of the bureau which the public has had came from the quarterly figures issued officially.

These showed a heavy decrease, but in April and May facts came to the knowledge of the Times which showed that things were going from bad to worse. This paper undertook an independent investigation, and finally reached certain conclusions:

"It believes that conditions in the bureau of internal revenue are so bad that if not promptly and effectively remedied grave results will develop for the whole Philippine government.

"It believes that the moneys which the Government should derive through the collection of internal revenue are decreasing at a rate which, if maintained for a year, would produce a ruinous deficit.

"It believes that, while a certain proportion of the decrease is traceable to general business depression, by far the greater proportion is the result of disorganization in the bureau, the utter incapacity of its management, and the indifference, or worse, of those on whom rests the duty to collect the taxes."

The conclusions which follow from the facts which the Times has been able to gather and set out in this issue are irresistible; an alarming percentage of the taxes which should be collected upon the manufacture of tobacco products and distilled spirits is not being collected, while the way the collection of the cedula taxes is being handled would be positively humorous if it were not serious. It would appear that certain of the internal-revenue agents whose duty it is to collect these taxes are either grossly negligent or venal, and that the central organization of the bureau whose duty it is to supervise this work has ceased to supervise. Unless radical and prompt action is taken the financial integrity of the Philippines is threatened, the good name of the government will be smirched, and a lot of honest merchants and manufacturers will face appalling losses.

When the independent investigation conducted by the Times had disclosed certain conditions, an appeal was made to the insular auditor—and the Philippine Islands are fortunate in having a man in that position of the strength and courage of Mr. French. He recognizes that the financial position of this government and the condition of its revenues are matters which the public have a right to know. Not only are the collections of our revenues a trade barometer necessary for the information of the merchants, but the future prosperity of the islands is so closely wrapped up in the proper collection of the revenues that the fullest publicity and discussion of the manner of collection should come as a matter of course.

We publish on this page a comparative statement issued by the insular auditor showing the collections of the bureau of internal revenue for the period from January 1 to May 31 of the calendar years 1913 and 1914, respectively. This statement shows a net decrease in the collection of internal revenue of 1914 of ₱685,873.84, as against the same period for the year 1913. This statement is bad enough in itself, but when compared with a similar comparative statement issued some time ago for the first three months of 1913 and 1914 it becomes truly appalling. The three months' statement showed a decrease for 1914 as against 1913 of ₱253,798.09. The present statement shows a decrease for five months of ₱685,873.84, or, in other words, the decrease for the first three months of the year was ₱253,789.09 and for the next two months was ₱432,075.75. Thus the monthly decrease during the last two months has been two and one-half times as great as it was during the first three months of the year. If this rate were maintained to the end of the year, the country would be bankrupt.

In order to make a fair statement of the conditions of the bureau, the causes for the decrease, and the probable effect of the decrease on the general condition of the government, the Times has also investigated the general financial condition of the insular government. It finds that in spite of the fact that the internal-revenue receipts have decreased so alarmingly the revenues collected through the bureau of customs have increased during the same period 7.24 per cent, as against 1913, exclusive of the duties which in 1913 were collected on exports. The loss from the duties on exports was a known factor, which was taken into consideration in making the estimates of the government expenses for the current year, and this loss was discounted.

It also finds that, while the total revenues of the insular government for the first four months of the current year have decreased ₱777,-199.55, as compared with a similar period in 1913, the expenditures of the government for the first five months of this year have decreased ₱2,269,017.13, as against the equivalent period of last year. In other words, and aside from the conditions in the bureau of internal revenue, there is much that is reassuring in the general financial condition of the government. Actual economies are being carried out—made necessary by the anticipated reduction in our revenues—and the actual revenues being collected by the bureau of customs are better than the estimate. If the conditions at present existing in the bureau of internal revenue are promptly and effectively met and remedied, there is no reason why the government should not come through the present year in fairly satisfactory shape. If, however, conditions in the bureau of internal revenue are allowed to continue as they are at present, the government will face a deficit of at least a million and a half pesos, and probably considerably more.

The comparative statement for the five months shows a decrease in the collection of the internal-revenue tax on distilled spirits of ₱116,287.42. After a very careful analysis of the figures and investigation of the general conditions in the distilling trade and of general conditions of business in the Philippine Islands, the Times is convinced that this decrease is not due to any decrease in the manufacture of distilled spirits. On the contrary, it has evidence going to show that there has been an increase in the amount of distilled spirits produced, and it is thus clear that no tax is being paid on a very large part of the whole production.

The honorable distillers who are paying their taxes are meeting a competition which is ruinous. No figures were needed to show these men that something was wrong. Their business proved it conclusively. Distilled spirits are being sold at prices which are only made possible by the fact that the internal-revenue taxes have not been paid. The knowledge of this condition was one of the things which started this paper's investigation, and the figures bear out these facts.

While it is unquestionably true that there is a very serious depression in the Philippine Islands at present, as we have pointed out on numerous occasions, in an undeveloped country like the Philippine Islands this depression shows itself in the discontinuance of constructive work and the failure of new capital to come in. Crops have been good, and the prices secured for these crops have been high. The purchasing power of the Filipino has not decreased, therefore, and everything indicates that the total amount of trade in the way of purchase of the products of the islands and the supplying of the requirements of the inhabitants is at least up to normal.

What is true of distilled spirits is equally true in the manufacture of cigarettes. Here we find a decrease in five months of ₱99,444.12 in the revenue. Every fact which we have been able to discover aside from this figure would indicate that the total production of cigarettes in the Philippine Islands is on the increase rather than on the decrease.

With the exception of 1910–11, every year of the past decade has shown a steady increase in the number of cigarettes manufactured in the Philippines. Said one prominent manufacturer to the Times: "An increase in the number of cigarettes manufactured and consumed is natural, and we expect it. The only reason that we know at this time which would operate to reduce the consumption of tobacco in this form would be an increase in price, and this most emphatically has not taken place. Rather, there has been a steady decrease in the price of the cigarette."

Further inquiries were made as to this decrease in the price, and the manufacturer stated that in the last five years it had probably amounted to some 20 per cent; that is to say, that for a given number of cigarettes—say 10,000,000—the factory would receive 20 per cent less to-day than five years ago. This may not be apparent to the retail consumer, but it is apparent to the dealer, who is able to make small concessions to his purchaser for this reason, such as the giving of a box of matches with a packet of cigarettes, and the like.

Here we may refer to an item in the auditor's figures which throws a lurid sidelight on the situation in regard to distilled spirits and cigarettes. Among the few increases shown by the five-month statement is that represented by money paid for licenses issued to dealers in alcohol and tobacco products. While the taxes paid on these products have decreased ₱246,000, the number of licenses to deal in them has increased so as to show a money gain to the Government of ₱3,500. The inference is obvious—dealing in alcohol and tobacco products is getting to be one of the most profitable businesses in the islands.

When we come to investigate the matter of cedula collections, the results, as we said before, would be funny if they were not so serious. The comparative statement for the first three months of this year showed that the collection of cedulas in 1914 was ₱72,924 greater than in 1913. Two months later the increase has been wiped out, and there is a decrease of ₱132,902—in other words, a decrease for two months of ₱205,826.

The full significance of these figures can not be understood until a comparison is made of the collections of the cedula tax by Provinces. If the cedula taxes are being collected honestly and conscientiously by the bureau of internal revenue, then there has during the past five months of the year of our Lord 1914 been a shifting of the population of the Provinces in the Philippines which is going to change our map. We find, for instance, that in the Province of Occidental Negros, ₱110,152 has been collected in cedula taxes in the first five months of 1914, as against ₱59,440 in 1913, or an increase of 100 per cent. In a neighboring Province we find that the figures have decreased from ₱50,000, in 1913, to ₱23,000, in 1914, or a decrease of over 50 per cent. Surely the Filipinos are becoming a nomadic people and no longer can complaint be made that they refuse to leave home.

In one of the most populous Provinces near Manila we find the collection of cedula taxes has decreased just 50 per cent, while in the Province of Albay it has increased over 80 per cent. By taking the figures as an index, the little Province of Zambales has doubled in population. Year by year the collection of the cedula taxes in the Philippine Islands should increase with a normal increase in population. There has not been any shifting in the population, but what there has been is a shifting in the bureau of internal revenue, and the rotten conditions in that bureau have not struck all Provinces alike.

When it comes to the taxes paid on imported spirits and tobacco manufactures we find a uniform increase. These taxes are paid as the result of the returns from the bureau of customs, and it is certainly a significant fact and one shedding a wealth of light on general conditions in the islands, that there has been a uniform increase here. The conclusion is inevitable that if the internal-revenue collections had been as honestly, impartially, and effectively collected as those on imported goods we should have found in the internal revenue the same general increase that we find in the imported article.

Approaching the question from another point of view, that of the bureau of internal revenue itself, what is the condition in the bureau? What changes have been made in the bureau which would account for the falling off in the revenues? So far as the total expenses for its maintenance are concerned, for the first four months of 1913 they were ₱202,114.06, and for the first four months of 1914 they were ₱180,-293.54, or a decrease of ₱21,720.52. If this saving in expense has caused a loss in efficiency which has resulted in reducing our taxes ₱685,873.84, every peso of economy has cost the government in revenue something over ₱30. This, however, is not the cause. The cause is the substitution of inefficient and incompetent officials for efficient and competent ones; the substitution of the spoils system for the merit system in making appointments; the withdrawal of effective supervision by Americans.

RECOGNITION FOR RAFFERTY.

It is permitted—or, at any rate, it is not forbidden—to a newspaper to make a suggestion. In the case of Collector of Internal Revenue Rafferty, then, the Times hopes to see the achievement of which it was able to tell yesterday fittingly recognized by the Governor General. In the course of nine months Rafferty has managed to lighten the burden of taxation on the people of the Philippines to the extent of nearly ₱385,000. The fact that a cold and heartless legislature decreed the collection of certain imposts is nothing to Rafferty. His heart is wrung, his compassion is moved, and he takes it upon himself to correct the cruelty of the lawmakers by the simple process of omitting to collect. In the nine months of 1913 ending with September 30, at a time when the islands were suffering from the effects of a severe drought, the men of the department which Rafferty now conducts gouged (isn't that the word?) from an unwilling populace hundreds of thousands of pesos more than the soft heart of the collector would allow him to pry loose (isn't that the phrase?) in the equivalent nine months of 1914.

Nothing seems more clear to the Times than that there should be a bond of sympathy between a Governor General who hates to govern and a collector who hates to collect. Why not a letter of warm appreciation from Harrison to Rafferty, therefore?—the sort of letter which Rafferty would be glad to publish. It may be that the chief executive has already made up his mind to do something of the sort; but if not, this paper makes him a present of the idea. Such a communication would give a splendid opportunity for a slap at the previous administration, which disguised under the name of "efficiency" its base and unworthy greed. It might contain an eloquent passage descriptive of the divorce between the new era and the old taxes, and of sympathy with a Democratic bureau chief whose hatred of Republicanism was such that he revolted from the idea of enforcing obedience to laws which are a heritage from those wicked days. In short, it might be a document to which JONES, QUEZON, and the rest of them would point with pride.

And, when the letter was finished and dispatched, Mr. Harrison might return with zest to the consideration of the need of new taxes, as set forth in his inaugural message of October 16. The need is greater by at least ₱385,000 than it would have been if the position of collector of internal revenue had been filled by a capable man. Moreover, since it is sufficiently proved that Rafferty is only able to collect a certain percentage of domestic taxes, it follows that any additions to the list of these impositions must be more numerous and more heavy to offset his incapacity.

The suggestion of a letter from Harrison to Rafferty is made with diffidence and with some doubt that it will be entirely pleasing. If the Governor General should adopt it, however, it will at least prove that he is occasionally open to suggestion.

—

THE EMANCIPATORS.

It will be no news to most of us on the spot that the Democratic majority on the Insular Affairs Committee of the House of Representatives had little information on the Philippines, and didn't want any. The extracts from a letter written by Congressman MILLER, which appear elsewhere, disclose a condition which has been known in Manila for many a month—a condition which will be better understood if the statement recently made by former Vice Governor Gilbert is remembered. Said Mr. Gilbert: "I was surprised to discover that the school of thought which Mr. JONES represents is in no sense actuated by a desire to help the Filipinos, but that they openly say that their purpose is to rid the United States of the Philippine Islands and their inhabitants, whom they regard as a menace to our peace and unworthy of serious American attention."

Some months ago Congressman JONES, in an interview with a Washington representative of the Times, frankly avowed that his desire, above and beyond all else, was to "get rid" of the Philippines. He even went so far as to admit that, if it were proved that this could only be done with grave danger to the people of the islands, he would still advocate American withdrawal.

These facts being known, is it any wonder that the Americans of the Philippines look with cynical amusement at the declarations in which JONES and his associates are hailed as emancipators, as true and noble-hearted friends of an aspiring people?

—

HON. HEN. HURRIES HOME.

The Senate, it appears, is not to fall into the error of the House of Representatives. Information on the Philippines is desired by the upper House, and is to be supplied by Henderson Martin.

The question naturally arises as to the amount and the nature of the information which the vice governor will be able to supply. To be frank, the Times does not believe that his views will have an appreciable effect on the deliberations of the upper House, but it is, nevertheless, difficut to refrain from speculation as to the attitude which he will assume in Washington. There is little in his record which would assist in forming an opinion. With the exception of his prompt and patriotic offer of services at the time of the Mexican trouble, it is difficult to recall that the vice governor has at any time "gone on record," as the cant phrase has it. Like the Member of Congress in the classic cartoon, he "sets and thinks," or, when this occupation loses interest, "jest sets."

The habit of sitting and thinking, of course, may produce mental results in any direction. There may be surprises in store for the Senate and for the people of the Philippines—and, again, there may not. Henderson Martin may prove to be almost anything from a rank retentionist to a rabid anti-imperialist. Nobody knows, not even Henderson Martin. It is a fascinating puzzle for an idle day, but on other days matters of real importance are likely to overshadow it.

By the way, Sam Ferguson is also going along.

—

A HAIR OF THE DOG.

There are certain assumptions in regard to the political situation of the Philippine Islands which can be made with reasonable certainty at this time. First and foremost, it is clear that, however much the radical section of the Democratic Party may desire to get rid of the islands, its members have signally failed to produce any workable scheme under which this would be possible. Second, there is a feeling in the Democratic Party that the passing at this time of a bill—such as the Jones bill—would serve the double purpose of pointing a pleasant comparison with the former Republican régime, and of allaying the unrest in this country which is caused by the wearisome cry of the Filipino politicians for absolute independence. It is the last of these considerations which will best repay examination just now.

There is but one issue on which political elections are decided in the Philippines, and that is the question of independence. The point has not yet been reached, and it is apparently still far in the future, when those desiring the suffrages of the electors will appeal to them on social or economic grounds. The power of the would-be elected over the electors is inextricably bound up with this question of independence of the United States. To assume, therefore, that these politicians would be quieted by anything short of independence is to assume that they would deliberately put away from them their only means of impressing the voter.

This is neither likely nor—from the Filipino point of view—would it be conceivable. There is classical warrant for the throwing of a sop to Cerberus, but in this instance it is a Cerberus who will not be appeased, who will growl for more. To dream that the passing of the Jones bill, even if there should remain to it the much-discussed preamble, would avail for an instant to still the cry for independence, to give the Philippines rest from the interminable and pernicious political agitation of years past, is to display either amazing ignorance of the situation or a childlike simplicity which has in all else been utterly foreign to the Democratic Party.

In the last resort, the mistake of the Democrats is that they have adopted the homeopathic method of treating the Philippine question. The "like cures like" principle is very well in its place, but its place is certainly not the domain of politics. You can not cure politics by more politics, which is precisely what the Democrats are attempting to do with the passage of the Jones bill. That measure deserves the most respectful treatment, of course, but the temptation to say that it resembles a "hair of the dog" is irresistible. It is as though the islands were suffering from an overindulgence in some stimulant, and the Democratic Party prescribed as a pick-me-up a further quantity of the same stimulant, in the fond hope that moderation would be observed. Vain hope!

—

COMMENT ON THE NEW BILL.

Three New York newspapers took the new Philippine bill as the text of an editorial immediately the drafting of that measure was announced, and it is interesting to see wherein their opinions vary. First comes the New York Tribune, which wonders that, with Mexico on his hands, President Wilson could have decided to "stir up another hornets' nest" in the Philippines. It says:

"As if it hadn't already troubles enough on its hands the administration is going to encourage legislation for upsetting the political status in the Philippines. Representative JONES, of Virginia, the great Philippine emancipator, has again obtained President Wilson's ear and promises to introduce in a day or two a measure which will grant the Philippines a territorial form of administration, give them practical control of their local affairs, and pledge the United States to turn them loose as a nation as soon as they prove their capacity for self-government. Moreover, the United States will undertake to secure from the chief powers of the world a guaranty of the independence and neutralization of the archipelago. But considering the mess which the administration has made so far of foreign relations an internationally guaranteed Filipino Republic is a far more distant dream than a pacified Mexico, basking in contentment and plenty and cheerfully discharging under the supervision of the United States its domestic and international obligations.

"It shows some self-restraint on the administration's part that it has not put the Jones Philippine-for-the-Filipinos bill on the legislative program for this session. Congress, fortunately, has been occupied with more serious matters, and enthusiasm for the Baltimore platform's promise of 'an immediate declaration of the Nation's purpose to recognize the independence of the Philippine Islands so soon as a stable government can be established' has reached a high pitch in few other bosoms than those of Mr. JONES and his mentor, Mr. MANUEL L. QUEZON.

"We think that the President will have all that he can do in the next couple of years in straightening out the Mexican situation. It would be folly for him to stir up another hornets' nest by turning control of the Philippines over to the Filipinos. It will be many years—another generation at least—before the Filipino people begin to master the art of self-government. To force them prematurely into an experiment which must be disastrous to them would be cruel and thoughtless. Their worst enemies in public life are mistaken enthusiasts like Mr. JONES. They will have no cause to remember Mr. Wilson gratefully if he should help Mr. JONES to thrust a burden on them which they are not fitted to carry."

The New York Times, on the other hand, finds the new bill "much nearer sanity in some regards" than "the wild scheme of two years ago." It has a good word for the feature which "gives up entirely the fixing of a date for independence, and makes the grant of that depend on the success of the islanders in running the government to the extent that it will be turned over to them." Commenting on what was known of the terms of the measure, however, it still believes that "the Government would largely be turned over to a relatively small class hitherto composed of, or led by, the native politicians," and holds that "at best the new plan would be a remote approach to that self-government of which its authors are professedly enamored."

Finally there is the New York American, whose attitude can best be judged from the following paragraph:

"It is fortunate that the administration has receded somewhat from the position into which the Bryanite element at Baltimore forced it. While it is unthinkable that Congress could have enacted any legislation which would have committed us to the abandonment of the Philippines at any definte time, it is reassuring to find that the President himself has abandoned so dangerous and unpatriotic a policy."

—

MR. DENISON'S SPEECH.

The speech delivered to the members of the City Club Tuesday by Winfred Denison, secretary of the interior, was clearly the result of careful and unhurried preparation. It may be taken as the reasoned statement of Mr. Denison's attitude to the problems which are his immediate official concern, and generally to all the questions which come within the scope of the American executive in the islands. Obviously, it would be unfair to submit it in all its details to criticism which did not arise from closer examination than the rush of newspaper work permits on the day of publication. This hardly applies, however, to the principle which guides and informs the speech as a whole, the less since Mr. Denison gives us nothing new. His argument is that old hybrid whose sire is sentimentality and whose dam is indecision. The questions which he puts are 16 years old in these islands, and the presence here of the United States is the answer to them.

"Why," asks Mr. Denison, "should we insist upon hustling the East against its will and at its own expense if the East itself wishes to lie placid?" His answer is that it is the American duty here to spend Filipino money "for things that they want whenever there is a difference between what they want and what we think they ought to want." Therefore in the discharge of his duties he proposes "to consult their wishes to the utmost extent, and to spend none of their money in any way which they are not willing to vote that it should be spent." He finds himself forced to make certain exceptions, of course—"where the subject affects the international obligations which we have assumed, the primary essentials of order, and of sanitation to prevent injury to the other nations of the world." He admits that for these things the United States is morally responsible to the rest of the world, but he draws a distinction between them and "matters in regard to which our responsibility is exclusively to the Filipino people and not to the outside world."

Not to put too fine a point upon it, the Times considers this loose thinking and perilously near to nonsense. "In matters involving the responsibility of the United States to the rest of the world," says Mr. Denison, "we must provide the best that is in us, but in matters which concern only the Filipino people we must provide what they want, whether we hold it to be the best or not." In effect, this amounts to a denial of the principle under which Americans have worked here during the past 16 years—save only where they have been policemen or sanitary inspectors—and Mr. Denison has a perfect right to make the denial. It is interesting as indicating an attitude of mind, and no more. But if this denial of principle is to find expression in the offical acts of the secretary of the interior, then it is another and a dangerous matter. It means that Mr. Denison is to be led to a decision in questions arising in his department by what some inner and mysterious voice tells him is wanted at the moment by a backward and ignorant people, and not by an intelligent and educated appreciation of what is best. How this inner and mysterious voice is to get its inspiration is not clear. And on what authority Mr. Denison bases his assumption that police and sanitary duties constitute the whole of American obligation to the world in respect of the Philippines is still less clear—in fact, does not appear at all.

In this speech Mr. Denison puts from him the need of "accurate knowledge of details of fact," and squares his implied ignorance with his right to talk on the subject at all by referring to "general principles of conduct" and "fundamental political conceptions" which "no one will deny me the right to entertain." He is welcome to them, of course, but he should be reminded that their sanction must be found

in those "details of fact" which he does not yet possess. Let us suppose that for the past few years his principle in regard to domestic expenditure of funds had been applied. It would have meant that appropriations called for by the assembly would have been passed by the commission without question as being what the people want. And—if Mr. Denison will pardon a detail of fact—it would have meant that this country would long ago have been bankrupt. If he will take the trouble to inform himself of the total amount of money for whose expenditure the elected of the people expressed willingness during the last session of the legislature alone, he will be rudely awakened.

The fact is, however, that Mr. Denison is likely to have many rude awakenings unless the filmy and insubstantial theories he is swayed by are sufficient protection. And in proportion to the completeness of his awakening he will become of real value to this country. The Philippines have not yet reached the point where the realm of the practical can be invaded without danger by the academic—and more particularly by the academic as it is diluted and weakened by contact with a personality obviously lacking robustness. Mr. Denison as a private individual may generalize as much as he likes without doing appreciable harm, but as a public man it is his duty to keep his generalizations to himself until by a long and unwearied process of testing he feels reasonably sure of their approximate truth. And where the experience of other men, facing the same problem, making the tests which he has yet to make, has led them away from his generalization, he should be chary of exposing it for the exasperation of a community already overburdened with talk.

—

THE DENISON SPEECH.

Careful reading of the speech in which the secretary of the interior, Winfred Denison, developed his theories of colonial government—theories acquired in an armchair and freshened by harmless adventures in a country where peace and order are legacies his predecessor has left him—leaves the reader undecided whether impertinence or ignorance is its chief characteristic. It is impertinent in the sense of irrelevancy, and in the later and derived sense of presumption; it is ignorant in its utter lack of comprehension of the forces which control the modern world, and in its parade of a form of democracy-cum-Denison which would be contemptuously denied by leaders of political thought in any country. Indeed, Mr. Denison can not by any stretch of the imagination be described as a Democrat—he is a reactionary, though happily a futile one.

It would be possible, of course, to analyze his speech and to answer him out of his own mouth, but this would serve no purpose other than to discover him as the possessor of the type of mind best described as yeasty. Admittedly in the majority of instances it is unfair to select a particular sentence from a man's utterance and to offer it as representative of the whole. Yet in the present case we believe that it is not doing Mr. Denison an injustice to say that all his instances, all his sounding periods, led up to the declaration that it is wrong to "hustle the East against its will and at its own expense if the East itself wishes to lie placid." Everything he said, every stupidity of which he was guilty, can be referred back to that precious piece of nonsense as the guiding principle of the address.

Let us assume that the phrase, "to hustle the East against its will and at its own expense," correctly describes the work which has been done here by the United States, and further that the desire of the people of the Philippines has been to lie placid, murmuring "Manana." Has Mr. Denison reflected—but of course he has not—that in order that the people might be saved from absorption by other and stronger races the country has been fenced off from China; that the attempt of the United States has been to hustle the Filipino into a realization of the promise and the menace of the future in order that, when artificial restrictions had been removed, he might not be hustled out of national existence by a better man? Has it occurred to Mr. Denison—but of course it has not—that whereas there is something to be said for immigration restrictions affecting Occidental and Oriental there is vastly less to be said where Oriental and Oriental are concerned, and that the day of free Chinese entry to the Philippines can not be indefinitely postponed? Has he a remote idea—but of course he has not—of what will happen on that day if in the meanwhile the Philippines are to lie placid murmuring "Manana"? Does his bewildered brain form any concept—but of course it does not—of the need of the world for the potential products of the fertile acres of the Philippines, or of the inexorable law which decrees the destruction of those who lie placid murmuring "Manana"? And, finally, does he realize—we hope he does—that he has made of himself a laughingstock, a thing of derision?

When all is said and done, however, there is a way in which the speech can be explained, and even excused. It can be explained as an expression of that dramatic instinct which resides in all of us, as an answer to the call which bids every man, at some time or another, to strive for a place in the limelight. It can be excused if a brief examination is made of the situation in which Mr. Denison finds himself.

The fact is that the position of secretary of the interior—alas!—is not what it was. The incumbent of that exalted post no longer takes his life in his hands when advancing to meet the assembled men of a tribe; he seizes a razor, hangs a mirror upon a convenient tree, and prinks himself for the encounter. No longer does he look on the bright face of danger as it is mirrored in bolo or spearhead; his enemy is the anopheles, and the face of danger is a bilious and a safron visage. Let it be admitted that these are things to try the very soul. They may be magnificent, but they are certainly not war. That a man should have within him possibilities of the heroism which is unbearable in obscurity, that fate and a Senate tardily compliant should have placed him in the one position of all others where this quality might be expected to find scope, and that he should discover that there is more danger in Broadway than in Benguet, that another has been before him, that the perils have been faced and overcome, is too much.

Obviously, there remains a choice of two things. The first involves a generous recognition of the work that has been done, a graceful acceptance of the fact that the new man must expect to be overshadowed until he has accomplished something, and a determination to pay unfaltering loyalty to the men who have borne the heat and burden of the day. This, however, is possible only to the few, at the cost of much self-denial and a foregoing of the pleasures of a place in the limelight. The second, and the easier thing, is to do what Mr. Denison did yesterday morning.

"To understand everything," says the French proverb, "is to pardon everything." Remember that the present secretary of the interior would be a bigger man than he has been found to be if he did not know the vague and restless feeling that the achievement in which he had no share is a much overrated thing. Remember how many there have been to aggravate this feeling. Do not forget that Mr. Denison is versed in democracy as they practice it at Harvard and has some acquaintance with political platitude. And, lastly, remember that a man must strike a new pose if he is to win to the limelight. Then read the speech again, and it will be found to have a fresh and vital interest, even if it does lose most of its effect.

—

AN ANSWER TO DENISON.

Since the secretary of the interior achieved notoriety by the delivery of a speech at the City Club last Tuesday there has been much comment and criticism in the columns of American periodicals here. It must be remembered, however, that in each case the writer was addressing a public familiar with the facts of the Philippine situation, that he could, and did, assume general and detailed knowledge as the possession of his readers. There is a wider public, however, unfortunately not armed with this knowledge, and it has been suggested to the Times from several quarters that a good purpose would be served by the preparation of an answer to Mr. Denison which should take account of this wider public. The present article, therefore, is such an answer. It does not pretend to be a complete setting forth of the facts, and the permissible generalizations from these facts which could be marshaled to refute Mr. Denison for space and time would not permit of anything so ambitious. But it does pretend to be a fair and reliable statement of certain matters, the knowledge of which was within the power of the secretary of the interior to obtain, and obvious ignorance of which entirely destroys the value of his utterances.

First of all, it has to be said that Mr. Denison permitted himself to make several generalizations, admitting meanwhile that he was not in possession of facts. Since a generalization is unthinkable without the antecedent gathering of facts, it follows either that his generalization is foolishness or impertinence, or that he is presuming to fit United States facts to a Philippine generalization. In either case his position is not to be envied by one who desires the good opinion of thinking men. In his peroration he admitted that those who support the former régime in these islands have in America a monopoly in knowledge of the facts. Now it is a most significant thing that, while the adherents of the former régime are conceded to have this monopoly in knowledge of the facts, those who have a knowledge of the facts are unanimously adherents of the former régime. Mr. Denison's speech may be taken as conceding and demonstrating this, but it will be noticed that he undertakes no explanation of the phenomenon. In the absence of this explanation it is right to expect that the conclusion the American people will form—and the conclusion to which they are respectfully invited—is that a knowledge of the facts leads irresistibly to a support of the former régime. Moreover, it will be noted that the conclusions which Mr. Denison utters so firmly are wholly unaccompanied by any facts on which the American people should, or will, be willing to make any other decision than that we have indicated. Does he expect them to conclude, because a letter took two or three weeks to come to Manila from the Mountain Province, that the Filipino people prefer it so? Does he ask them to conclude, because certain wild men were ready to make a choice among gaudy cloths specially selected to suit their savage tastes, that the native peoples are fitted to govern themselves without firm and constant American direction? Does he believe that because the leaders of the Ifugaos in his awesome presence expressed a preference for schoolteachers over feasts the American people will agree that the administration had better be put under native control and direction, lest primary education suffer while molossuses are photographed? Will the American people conclude, because the secretary asked leading questions of the elders of the wild tribes and got the right answers, according to his standards, that his successor should be compelled to accept all future answers as right, regardless of standards?

And, on the question of Mr. Denison's facts, is he not guilty of a deliberate withholding of the truth in two important instances? A story has reached the Times, from sources which make its truth unquestionable, of the reply made to the secretary of the interior by an elder of the tribes when asked for a statement of the attitude of these tribes on a proposal to substitute doctors for feasts. "I suppose," said the old man frankly, "that those who are well would like the feasts and those who are sick would like the doctors." Why has Mr. Denison concealed this? Moreover, at a great gathering, at which Gov. Gen. Harrison and Secretary Riggs shared with Mr. Denison the center of the stage, is it not a fact that when the elders expressed their willingness to forego the feasts and to use the carabao as work animals there was so ominous a demonstration from the ninety and nine per cent in the background that Messrs. Harrison and Riggs—to Mr. Denison's annoyance—purchased two animals for slaughter and subsequent consumption? Why have we heard nothing from Mr. Denison about this?

It is a fact that the Filipino people a very short while ago did not know that a letter could be habitually and economically brought to Manila from the Mountain Province in less than two or three weeks. It is a fact that they scarcely recognized any advantage in quicker transmission. It is a fact that they were totally ignorant of the ways and means of accomplishing such a mail service. But it is equally a fact that the Filipino people to-day would be dissatisfied and discontent with a mail service typified by two weeks' delay between Baguio and Manila. To maintain the contrary is to be far more unfair and unjust than to point out the unpreparedness of the native himself to maintain such a service. A seeker after facts should consult the post-office statistics. He will find that the Filipino people in all parts of the islands have increased their patronage of the service to a remarkable extent, and always in the exact ratio that its efficiency became established and became popularly known. He will find the sale of postage stamps was at a low level for many years prior to 1898, but that each year since then it has cost the Government an additional 25 to 50 per cent to print these stamps for the use of the Filipino people. It is a fallacy—a grave and fundamental fallacy—to state that the postal service or any other of the great governmental agencies will fall into abandon and inefficiency because the Filipino people are not alive to their advantages and prefer to do things in their own way. The fall would come not because the Filipinos have no use for these advantages but because they are not yet ready to take up the work unaided and undirected and to carry it from the point which it has reached to a permanent conclusion.

It is a fact that the Filipinos fought the introduction of vaccination against smallpox, and that had their wishes been consulted the disease would have had the preference over the prevention. It is also a fact that, if native wishes are to be consulted and are to prevail, the scourge will return to its erstwhile ascendency. This would not be due to a lack of appreciation of the benefits and efficacy of vaccination or to ignorance of how to apply the virus, but because the Filipino people have not yet gained knowledge of the true purposes and functions of government and, left to their own devices, have not the hardihood to

adopt and enforce an unpopular measure. However, it will be remembered that Mr. Denison himself admits that in matters of public health a duty impels the enforcement of what is best over the wishes of the people. It is a fact that the Filipino dreads and abhors rinderpest, and earnestly prays for its extermination, that his very necessary draft animals may be spared. It is equally a fact that he will conceal its occurrence among his herd in order to avoid the quarantine of his animals. Here, then, the secretary of the interior would be faced with the nice problem, how to accomplish the native wish to exterminate the disease, which involves a general quarantine applicable to an infected community, without enforcing it against any member of the community.

It is a fact that, despite the enormous consumption of matches in the Philippines—where men, women, and children are habitual smokers—there was never a match manufactured in the islands before American occupation. It is a fact that upon the successful establishment of a modern match factory the native merchants desired to purchase it, and sought a law to compel its founder to sell. It is a fact that, while this factory at its utmost capacity is incapable of supplying more than a fraction of the demand, there has never been erected a second factory. It is a fact that native legislators, selected for their eminence among their people, when consulted as to a fitting site for the inauguration of a life-saving service, proposed an inland creek too shallow to drown a kitten. It is a fact that the same body, while discussing a maximum speed limit for trolley cars, solemnly proposed the establishment of a minimum speed limit. It is a fact that the successors to that body debated compelling the street cars to display illuminated signs at the rear, in order that those who missed a car might have the consolation of knowing the destination of the car they missed. It is a fact that native elections are characterized by more extensive and various frauds than the Australian ballot system has produced in any other country. It is a fact that in the last election a native governor, vainly endeavoring to defend his fraudulent reelection, repudiated certain specifications of fraud on the ground that he had been able to devise far shrewder and more effective methods than those imputed to him. It is a fact that the long record of successfully contested elections demonstrates conclusively that the secretary of the interior will find no little difficulty in ascertaining the true wishes of the community.

It is a fact that in this archipelago the natives turn to the left, build the roofs of their houses first, and in innumerable instances reverse American customs. But it is also a fact, and a supremely important fact, that there has never been any attempt to supersede in the slightest manner or degree the customs and practices of the native population by American customs and practices unless something positively harmful and injurious could be ended thereby. It is a fact, notwithstanding implications to the contrary, that there has never been an undertaking, great or small in which the American administration has said, "Do thus and so, because we are your masters." The injunction has always been, "Do thus and so, because for this or that reason it is unmistakably for your best interest." It is a fact that at no time under the American régime in these islands has anyone ever countenanced or even uttered the sentiment that the revenues of the Philippines were to be spent for America or Americans, whether because of the purchase of these islands by the United States or for any other reason. "The Philippines for the Filipinos" has been the slogan through all the years, and so completely and thoroughly is this the fact that it is impossible to conjure up a single general doctrine or concrete proposal that has been seriously advocated on other grounds than Filipino welfare. It is a fact that the United States have been and must continue to be, for a time at least, the judges and the administrators of Filipino welfare. It would be miraculous if this were not so. It is a fact that our duty in affairs of international import and of public health absolutely require this. It is a fact that the judgment, capacity, and enlightenment of the Filipino people are no better and no greater in countless other matters than they are in matters of international import and public health. And it is a fact that if we limit our administration to matters of international import and public health, and follow the dictates, or apparent dictates, of the Filipinos in all else, we may discharge our duties to the outer world, but we shall surely be derelict in our duty to our own wards.

What is written above is not a compendium of the material and relative facts in any discussion of Mr. Denison's speech. It is rather a random collection of facts, each of which may be taken to point a moral slightly different from the others, but all of which tend, as all truth concerning the Philippines must necessarily tend, to demonstrate the exact parity between the duties and responsibilities of the local American administration and those of the guardians of minor children. Under this concept of present American duty here Mr. Denison admits "greater material benefits, with more efficiency and less cost," could be produced, "but," says he, "we do not ask for it at home, and why should we ask for it here?" He talks of giving the Filipinos an exhibition, as it were, under glass of how well a group of selected and unhampered Americans could run things, and asks how the art of self-government is really and deeply to be advanced in this way. His simile is not quite what it should be. One does not learn arithmetic without practice, it is true; but it is also true that one does not put a person ignorant of arithmetic in charge of a bank. If Mr. Denison wished to imply that the Filipinos have never been given practice in government, he shamefully misrepresented the facts. Since 1902 every municipality in the islands has "elected" its own officers and conducted its own affairs, and since 1907 the Provinces have practically done the same thing. And some seven years ago it was found that most of the municipal revenues were being expended in salaries for the officials. Roads and streets were impassable, public buildings were falling to ruin, the jungle was entering the town, and instead of progress there was retrogression. In some cases over 90 per cent of the revenue was absorbed by the greedy "representatives." The people did not object. No complaint was heard. What happened? Unmindful of the fundamental principles of democracy-cum-Denison, a naughty government passed an act limiting salaries to 50 per cent of the revenues. What would Mr. Denison do in such a case? Would he remain a doctrinaire?

He had not a good word to say for ethnology, but it might at least have taught him one thing—that the treatment necessary to stimulate any race must depend upon the character of that race. In the main the Anglo-Saxon may be given what he wants because he generally wants what is good for him. But what would be nourishing food for an Anglo-Saxon might easily be political poison for a Malay. The Malay, that is to say, is a political child, and if the correctness of the statement be doubted a perusal of the acts introduced in the Philippine Assembly during any session Mr. Denison chooses to select ought to convince him, unless he is utterly blind. William Howard Taft found this, and the present secretary of the interior should study the case of that gentleman. The former President of the United States was at one time Governor General here, and he made a speech at Iloilo which had the same effect as the recent utterance of Mr. Denison. Mr. Denison should ask himself why it was that Mr. Taft was compelled subsequently to assume greater and greater control over the expenditure of Filipino money, although his desire for the good of the people in no way diminished. The answer is that Mr. Taft learned by experience what old-timers have learned in the same hard school, that the so-called representatives of the Filipino people in no way really represent that people; that there is no such thing as democracy in a true sense existent or immediately possible; that there is no true public opinion; that the so-called parties are nothing but herds of political brigands held together by promises of booty by self-appointed leaders, and that the "independence" preached to the masses is simply a condition in which there will be no taxes and little work. The real patriots in the Philippines—and there are a good many—never take office, seldom associate with Americans, do not fawn on "white" or "brown" hopes. They are obliged by terror of political bandits to remain inconspicuous; they deplore the absence of American control and believe in plenty of it, knowing it to be good.

Now for a word as to the spirit in which Mr. Denison undertook to exploit his ignorance. The instances which he took to point the moral of his speech were in two cases selected from requests for permission to make certain expenditures by the director of the bureau of science, an official subordinate to Mr. Denison. Citing them in that way amounted to a public attack on this bureau chief, whose zeal to carry out the work of his bureau should certainly not be made the subject of public denunciation. They showed clearly Mr. Denison's lack of executive ability and his indifference to the need of encouragement of those under him. From this it was easy for him to pass to a calm assumption that these expenditures would have been authorized at a time of stringency by the previous administration; to ignore—what as a lawyer he should have known—that he can not use money appropriated for the bureau of science to expend for the bureau of health; and to enter on a criticism of the previous régime by the questionable method of innuendo. Indeed, it was not only a criticism of the previous régime, but it amounted to an offense against his fellow Americans as a body which he is probably too unfamiliar with local conditions to realize, while as for their just and natural resentment he is perhaps too pachydermatous to feel it. Of the nature of that feeling, the following extract from one of many letters which have reached the Times is clear enough:

"We who have lived over here for many years, who have given up the best part of our lives, and who have come to love the country we live in, either are conscienceless exploiters or respectable citizens. Our opinions are worth nothing or everything in a discussion of this sort. We have it due us, if we are respectable and patriotic Americans, that American officials here shall not sacrifice us to their lust for political advancement. Remember, we have no vote and no voice in the government. Our influence is merely moral. We realize we can not help anyone to achieve political aspirations. We have had examples galore of Americans coming over here and securing political preferment by doling out green goods to the natives. Baiting Americans has proved the easiest and quickest way for an otherwise unworthy American to get into high office. So really we are not taken by surprise. Its the old, old story. * * * A certain Gen. Wright was removed from office because he was offensive enough to like his fellow Americans over here, and they were stupid enough to like him. About every time a boat comes in it brings some visionary, or worse, who immediately kids the public with the 'be nice and reason' idea—'rule by kindness,' etc. The idea is splendid, but whenever you expound it you give the native to understand that he has not heretofore been ruled in that way. You tell him that your countrymen have acted wrongly toward him, and when you do that you stir up race hatred. Of course, Mr. Denison would deny having done this, for he couldn't well do anything else. The old-timers say that, while you may achieve personal advancement by this practice, you are hurting your fellow countrymen, and the Filipino himself. You are causing the estrangement of races.

"These are things about which there can be no argument. Either they are facts or fancies. Whether the old-timers know better than a newly arrived politico is not hard to determine. No politics enter into this, so far as we are concerned. Most of us haven't voted for 18 years.

"We don't care whether the rulers are Republicans, Democrats, Mugwumps, or Denisons. We are for the Philippines and the Filipinos. Understand that—we are for the Filipinos! The native politicians who control the native press will tell you we are not. You simply have the choice of believing your fellow countrymen or the native. Our reputation for truth telling will compare very favorably with theirs. When you cause them to lose respect for us (and you) you are hurting us, and hurting them infinitely more. You don't know it yet, Mr. Denison, but they are laughing at you. They feel they have you in their pocket—and we guess they are right."

Should not this letter carry a message to Mr. Denison—and to Gov. Gen. Harrison, for the matter of that? If the old-timers in the Philippines feel, as the writer of this letter feels, that they have been treated as conspirators against the welfare of the Filipinos, as selfish exploiters of their patrimony, can it be wondered at, when the story of the Harrison administration is remembered and the Denison speech is fresh in the mind? Surely when a man has put the best years of his life into learning, unlearning, and relearning, working always with the best that is in him, honestly striving for the good of the whole country, it is a bitter thing that he should be slapped in the face by an ignorant countryman and told by implication that he is an interloper. Does it sweeten the dose that it is administered by the hand of a countryman, by an American who seeks in this way a cheap political notoriety? Men of all other races have fairly and frankly spoken out their admiration of what has here been done. They had no ax to grind, the sincerity of their praise need not be questioned. But it is an American who now is open in his disdain of the efforts of the past administration to enhance the material welfare of the islands. It was "out of sympathy with the people," declares Mr. Denison, whose experience of the people is almost nothing.

Perhaps he has been studying the records of his own department for justification of the phrase. In that case he must know that every advance in sanitation has been made by force; good naturedly applied wherever possible, but force, nevertheless. Inquiry of other departments would inform him how industrial and agricultural education had been fairly rammed down the throat of the unwilling Filipino, and how the best method of spreading the knowledge and encouraging the study of English—the making of it the official language—was bitterly opposed by the very men who are now in power. Admittedly, the people were not in sympathy with any of these things, but even Mr. Denison will hardly deny that the cause of democracy was served by insistence upon them.

Proverbially it is an ill bird that fouls its own nest. Had Mr. Denison been wise instead of cocksure he would have waited for experience before making his decision and his speech. He would have remained—if, indeed, he ever was—the "white hope," and he would at last have learned that in the true sense "white hope" and "Filipino hope" are synonymous; that the welfare of the Filipino masses still depends and will for a long time to come depend upon the guidance and control of the white man.

—

MR. HARRISON AND MR. RIGGS.

There is a border line between the public and the private relations of public men which, as a general rule, need not be crossed by the newspaper. Ninety-nine times out of a hundred it is the part of wisdom and of courtesy to remain on this side of the line—to observe, as it were, a scrupulous neutrality in all that does not admittedly and notoriously concern their public life.

The hundredth time—the exception which proves the rule—is occasionally reached, and the Times would ask to be acquitted of too great an intrusiveness, to be given credit for sincerity of purpose, when it says that the case of Secretary of Commerce and Police Riggs is such a case. This paper is not even mildly interested in the opinion which the Governor General or Mr. Riggs may hold, the one of the other, but the position is radically altered when a reported cleavage between the two men arises from a fundamental difference in their attitude to the Philippine question. This touches us all, Americans and Filipinos, and it becomes legitimate matter for comment, always provided that such comment is confined to essentials and avoids any approach to an impertinent concern with matters of minor personal import.

At the outset be it said that the Times has no more knowledge of Mr. Riggs than of Mr. Harrison; that is to say, that it has been concerned and is concerned solely with their public life—their official acts. But for some time it has held the opinion that the conception of duty which moves the Governor General is radically different from that which guides the secretary of commerce and police, that, moving in opposite directions, it was inevitable that at some time the two men should come into collision. Reduced to its simplest elements, the difference is this: That whereas Mr. Harrison serves a political party Mr. Riggs serves the people of the Philippines and of the United States. Let it be said at once that this bare statement of the case, like any other generalization, tells at once more and less than the truth. It is quite possible that in serving a political party Mr. Harrison may at the same time serve the best interests of this people and of those who stand to them in loco parentis, and it is equally possible that Mr. Riggs may at times fall short of doing either the one or the other. Generally speaking, however, it would be natural and it would be right to expect that the spirit which we believe to actuate Mr. Riggs would be more fruitful of good than that which we believe to govern Mr. Harrison.

If a student of the question were to be asked to state in a sentence the rule which should be followed by those charged with Philippine Government at this time, we believe that he could find no better answer than this: Unremitting recognition of American sovereignty, with all that it implies—with all that it implies; that is to say, of kindness, of consideration for the rights of the individual, of justice tempered with mercy, but also of efficiency, of desire for progress, of uprightness, and of vigor. We believe that, to be successful in the broadest sense and fully to do its duty by the Filipino people as they stand to-day, the administration of the islands should be an American administration in a very special sense of the term. It should be more concerned with the formation of character than with the enunciation of theories, and it should be instant and unsparing in its condemnation of weakness, of sloth, and of failure when failure is clearly the fault of the individual. We believe that the American Government of the Philippines could have no higher duty than that of acting, so to speak, as an organized and powerful public opinion, taking the place of the Filipino public opinion which does not yet exist, and exercising the prerogatives which in democratic countries belong to public opinion with a rigor which is excused—and is even demanded—by the circumstances of the case. We believe that it is the privilege of the American Government of to-day to shape the tradition of public life for a to-morrow which belongs to the Filipino people, and that this is not fitly to be done by a weak acceptance of anything less than the best, even when this acceptance can be defended by a reference to the immortal words of the framers of the Constitution. And we believe that it is by strict and stern insistence on the maintenance of a high standard of public service, and not by a cruel kindliness of compliance in face of ineptitude, that the natural and inherited weaknesses of the Filipino people can be corrected, and the duty and the destiny of the United States in these islands fulfilled.

To say that Mr. Riggs has acted at all times in this spirit would perhaps be more than the occasion or his opportunities so far have warranted. But of Mr. Harrison it is possible to say that, judged by his public acts, he is far, indeed, from any such conception of his duty. His general course of conduct has been explained by some on the assumption that he was told to make ready for American withdrawal, and by others as the expression of weakness parading as amiability. Whether the reason is to be found in his obedience of orders or in himself, however, the fact remains that he has done nothing to raise and little to maintain the standard of public service, and a great deal which, as displaying the fatal ease with which he may be bamboozled, has tended to lower it. Where he should have been strong he has been weak, and where he might with advantage have been complaisant he has been obstinate. His vision of his duty has not overlooked the walls of party, and the desires—real or imaginary—of his political leaders in the United States have been the inspiration for certain public utterances here which were patently insincere.

Mr. Riggs, whatever else may be said, has at all times been honest. So far as the Times is aware, he has not found it either necessary or expedient to describe conditions in the islands as the Democratic leaders would like to have them, nor has he appeared willing to purchase a little immediate popularity at the expense of his convictions. Assuming that this statement does him no more than justice, then nothing was more certain that, as time went on, he should find himself estranged from men of the Harrison-Martin-Denison type, and the object of bitter hostility from their Filipino colleagues on the commission, who take color from them.

The general situation, then, seems to be this: That a man of sufficient ability, of sincerity of purpose, wholly desirous to make the office to which he is appointed a power for good, finds himself hampered at every turn, opposed by his associates, and heartily sick of a situation which to-day must be well-nigh intolerable. It is a bitter commentary on the condition of things to which we have been reduced in little more than a year.

Attached to this is a copy of a report on economic conditions in the municipality of Carcar and Barili, Province of Cebu, which was prepared for the purpose of furnishing data to the Bureau of Education, which was preparing a textbook on the subject of economic conditions of the Philippines. This report should prove an interesting, economic, and social study for those who are undertaking to legislate concerning the Philippines, and to those who are thus engaged and honestly and intelligently trying to do the best thing for the Philippines this report should be self-explanatory and unneedful of explanation or comment.

A REPORT ON ECONOMIC CONDITIONS IN THE MUNICIPALITIES OF CARCAR AND BARILI, PROVINCE OF CEBU.

MANILA, *February 13, 1912.*

Brief: The director of education acknowledges receipt of the report on economic conditions in Carcar-Barili district.

[First indorsement.]

BUREAU OF EDUCATION, DIVISION OF CEBU,
Cebu, Cebu, February 26, 1912.

Respectfully referred to Mr. Claude C. McCollum.

J. C. MUERMAN,
Division Superintendent.

—

[The Government of the Philippine Islands, department of public instruction, office of the director, bureau of education.]

MANILA, *February 13, 1912.*

MY DEAR MR. MCCOLLUM: I wish to acknowledge receipt of this office of your report on economic conditions in the Carcar-Barili district.

Upon glancing over it the report seems complete and well done. It will undoubtedly be of considerable assistance in the preparation of the text on economic conditions in the Philippines.

The information contained in the reports will not be considered in detail until all of them have been received. If at this time any questions arise or any points come up which should be made clear, requests for further information will be made.

Sincerely, yours,

FRANK R. WHITE,
Director of Education.

Mr. CLAUDE C. MCCOLLUM
(Through the division superintendent of schools),
Cebu, Cebu.

FOODS.

The chief food in both Carcar and Barili is corn. This constitutes the basic part, and in most cases the whole, of this food supply for all the barrio and mountain people. It is estimated that in Carcar one-fifteenth (and in Barili 6 families) of the people of the poblacion (the center of population in a municipality or township) use rice instead of corn as a staple food. The barrio and mountain people have rice only upon festal occasions. This would seem to indicate that corn is used because, being produced at home instead of being imported, as is most of the rice, it is cheaper than rice. However, it is observed that many families who could well afford to buy rice use corn. An inquiry regarding this matter elicited the information that the corn is actually preferred, but that rice is used by wealthier people and by poor people on festal occasions, because it is whiter and more presentable, and being a little unusual it is regarded as a kind of luxury. It is a known fact that all people, with pretended relish, sometimes eat things at banquets which do not please their appetites.

This staple diet of the people of Carcar and Barili is prepared by the women as follows:

1. The dry corn is crushed and ground into coarse meal by means of a circular millstone system, which is run by hand. Those not being equipped with this hand mill are permitted to use the neighbor's mill. No charge is made for such use. Small amounts are crushed at one time, the amount crushed seldom being more than will be needed for two days' food supply.

2. By a sifting and blowing process most of the husks of the corn are removed from the coarse meal.

3. The meal is then stirred into a pot of boiling water, where it is cooked about 15 minutes.

4. After cooling the dense mush is handed to the mouth with the fingers, or is put up in small blocks and covered with a woven coconut palm and then cooked. These small units are then portable and may be taken to the field for lunch, or may be offered for sale in the small tiendas (a small store) along the roads and trails.

This staple food is supplemented by:

I. VEGETABLES.

1. Camote (domestic or wild).
2. Ube.
3. Gabe.
4. Baliakag (a fleshy rooted plant with a vining top; grows wild; produces an enormous amount of root for a small amount of top).
5. Paw.
6. Beans.
7. Tomatoes.
8. Eggplant.

II. MEATS (A LUXURY).

1. Fish (imported from Bohol and Leyte).
2. Chickens and eggs.
3. Goat meat.
4. Beef.
5. Carabao meat.
6. Horseflesh (rarely).
7. Mutton (very scarce).

III. FRUITS.

1. Banana (much used; both raw and cooked).
2. Mangoes.
3. Guava.
4. April grapes (cultivated in Carcar by wealthy people)
5. Chicos.
6. Lanzones.
7. Tamarind.
8. Wild plum (dark blue, 1½ inches in diameter).

IV. OTHER CEREALS.

1. Millet (little used) of two kinds—one prepared like corn; the other is made into cakes.

2. Flour (used in small quantity by bakers, who make buns, cakes, etc., and sell them from house to house).

In time of famine, which comes every year in Barili, but less frequently in Carcar, and which is caused by (a) dense population, (b) improvident methods, (c) drought, (d) locusts (grasshoppers), people suffer greatly from hunger. They then resort to almost anything for food. The heart of the buri palm is pounded into a starchy meal, wild roots and herbs are eaten, fish, clams, shrimps of any kind are sought after. I am also informed that the locusts are sometimes used for food. But it seems never to occur to them that the enormous number of dogs which they have—from one to five for each family—consume a great amount of food which might be given to the children. These dogs usually eat at the same time and place, and much the same food as the people eat. Of the very few cats possessed a few are killed. I have known of a dog being killed, regardless of his age, uselessness, or disease. A dog tax strictly enforced would seem to be an expedient and beneficent measure. For example (peso worth 50 cents): ₱1 a year for each male dog and ₱2 a year for each female dog, and any dog not bearing the "tax-paid" tag after a certain date should be shot by the police. I am a strong believer in such a law, for economic and sanitary reasons and for public decency and safety. The tax on females might well be made ₱3.

Of course, the fighting cock, now rapidly decreasing in number, represents a waste in time, and in that the finest cocks are used for fighting purposes rather than for breeding.

MEAL HOURS.

In mountain, 8 a. m. (work before breakfast), 12.30 p. m., and 7.30 p. m.

In pueblo, 7.30 a. m., 12 m., and 8 p. m.

EXPORT CROPS.

The following products are exported from Carcar and Barili:

1. Corn.
2. Copra (dried coconut meat).
3. Abaca (a fiber plant).
4. Tobacco.
5. Palay (very little; unhulled rice).
6. Maguey (since 1906; a fiber plant).
7. Sugar.
8. Live stock (hogs, cattle, goats, chickens).
9. Fruits (not important).

Concerning the relative importance of the different kinds of crops and live stock, attention is invited to Form 28, made out quarterly by presidentes,[1] secretary and treasurer. One copy sent to Bureau of Agriculture, one to provincial governor, one to the delegate in the assembly, and one retained. Embodied in this report are extracts from the Forms 28 of both towns for a period of 12 months. It is believed by the writer of this report that the Form 28 of Carcar is fairly reliable, but there are reasons to believe that Form 28 from Barili is not at all reliable. However, these are the only available figures:

Live stock in Barili.

[Extracts from Form 28.]

	Horses.	Cattle.	Carabao.	Hogs.	Goats.	Sheep.
Mar. 31, 1911	260	141	1,255	10,290	2,325	309
June 30, 1911	272	136	1,259	10,627	2,440	323
Sept. 30, 1911	277	234	2,269	10,620	2,479	324
Dec. 31, 1911	369	224	2,235	10,650	2,830	265
Estimated value of each	₱90	₱50	₱125	₱10	₱3	₱8

As a result of live-stock census work being done by the bureau of agriculture, there were registered in Barili between October 1 and December 31, 1911:

Horses	112
Cattle	1,160
Carabao	1,064

Live stock in Carcar.

	Horses.	Cattle.	Carabao.	Hogs.	Goats.	Sheep.
Dec. 1, 1910	197	183	2,384	8,270	1,771	155
Mar. 31, 1911	532	369	2,662	8,400	1,853	161
June 30, 1911	531	368	2,635	8,700	1,906	167
Sept. 30, 1911	532	350	2,636	9,090	1,857	166
Estimated value of each	₱74	₱50	₱100	₱10	₱2	₱4

Agricultural products—Barili.

HECTARES PLANTED AND HARVESTED FOR FOUR QUARTERS.

		Palay.	Cane.	Tobacco.	Corn.	Hemp.	Coconut.[1]
First quarter, 1911	P.	7,500	1,000	550	21,700	13,750	57,000
	H.	7,500	.....	.....	1,200	1,500	135,000

LOCATION OF CROPS AND AGRICULTURE.

There is very little to be said under this head. The municipalities of Carcar and Barili are located on opposite sides of a narrow, dry, and mountainous island. Of course, rice and sugar cane are produced mostly on the narrow, coastal plains and in the small valleys. Corn and other crops are produced on any available spot, the steepest and highest mountain sides being cleared and cultivated by hand. The dense, ignorant, and immobile population makes agriculture very intensive and conservative. No time or room is available for untried crops and methods. Both municipalities are well supplied with springs and running water, but much irrigation is impossible. The effect of the annual recurrence of wet and dry seasons may be observed on the extracts from Form 28.

Crops are occasionally destroyed by locusts. Almost no storms visit these municipalities.

Very little is done either in improving the native plants or in introducing new ones. Maguey has been taken up some since 1905. A few progressive planters in Carcar have bought some steel plows—are drawn by one carabao—and make experiments with commercial fertilizers. Ashes are used some for fertilizer. All waste plant matter is burned.

About two corn crops are produced annually.

There are several water-power possibilities, all undeveloped except one—a cane mill in Carcar owned by Thomas Osmena.

LAND TENURE.

There are absolutely no large haciendas—plantations or large farms—in these municipalities. There are some large landholders, but their holdings are scattered and are operated by tenants—one entirely independent of the other.

Most of the land is owned in small pieces. This has resulted from divisions of estates and from small sales and purchases. The tenant

system is much used, however. Some owners of only 1 or 2 hectares lease these to tenants and play the idle landlord rôle.

There seems to exist no written agreements between tenants and landlords. Verbal or implied agreements are usually entered into from year to year. It frequently occurs, however, that a tenant spends his life on one piece of land. Most landlords owning 10 hectares or more live in the poblacion and visit their land occasionally to see how things are going. This leaves most of the agriculture in the hands of ignorant, listless, and unambitious tenants, which prevents improved agricultural methods, proper care of land, permanent improvements, etc.

The tenant usually builds a very flimsy house of light materials, about which he quarters himself and family, his chickens, his hogs, his carabaos, and in which he stores his part of the crop.

The division of the crop is made on the following:

The labor and seed earn one-third. The carabao—a kind of water buffalo; a beast of burden—and plow earn one-third. The land earns one-third.

The tenants must harvest and deliver to the landowner's granary, on the land, the part due the landowner. In case the land is such that it can not be cultivated by plow, the laborer gets two-thirds of the crop. If the tenant finds it necessary to borrow 100 ears of corn from the landowner, he pays back 200 ears out of the next crop.

In case the landowner becomes displeased with the tenant, he may eject the tenant at any time. Also, in case the tenant considers himself ill treated, he may move off the land. Very few do this, however, since it would involve deserting work already done, and since also most tenants are bound to the landowners by some debt—does not usually exceed ₱10—tenants can not well escape the payment of these debts except by secretly emigrating to another municipality or island. They may even then be brought back for trial.

Not only is the tenant, or servant, bound to his master by debts which he owes the master, but also, and more effectively, is he bound by debts due the tenant from his master. The tenant is afraid to go away or become refractory in any way for fear that the master will not pay him. This is a very effective means of keeping the fickle or lazy servant on the job, and is used pretty generally, I believe, all over the Philippines.

Though the under man seems thus to be bound either way, yet little injustice or actual harm comes to him from it. The extreme ignorance, the characteristic laziness, the proverbial shiftlessness, and annoying fickleness of the average "tao" (a common laborer or workingman of the lower classes) is such as to make it impossible for him to do for himself and such as to make him useless to anyone else unless some system of compulsion is maintained.

In case the tenant cares for domestic animals belonging to the landowner, the tenant gets one-half of the offspring. If the parent animals belong to the tenant, all offspring belong to him.

It is estimated that slightly over one-third of the land is worked on the share system. It is rare for one tenant to take land from more than one landowner. Sometimes, however, a small landholder is also a tenant.

Ten per cent of land is owned in less than ½ hectare lots.
Ten per cent of land is owned in ½ to 1 hectare lots.
Twenty-five per cent of land is owned in 1 to 5 hectare lots.
Twenty-five per cent of land is owned in 5 to 10 hectare lots.
Thirty per cent of land is owned in 10 up hectare lots.

Below is given a list of 10 of the biggest landowners in each municipality, with an estimate of the amount of land owned by each. Since very little of the land is surveyed or held by title, it is not possible to give exact figures:

Barili.

	Hectares.
1. Bernabela Penalosa (hectare, a measure of land, 2.0471 acres)	500
2. Damasa Ricablanca	300
3. Procopio Paraz	250
4. Miguel Abad	200
5. Juliana Paraz	200
6. Mariano Fajardo	150
7. Ciriaco Paraz	125
8. Cenon Fernandez	100
9. Claro Causin	50
10. Martinianon Alquisola	25

Carcar.

1. Tomas Osmena	800
2. Florencio Noel	500
3. Pedro Cui	250
4. Farnando Yap	240
5. Ana Canarias	210
6. Hermanos Enriquez	195
7. Mateo Mercado	175
8. Narcario Gantangco	140
9. Salvador Gantangco	132
10. Vincente Jaen	113

Advance in land values may be seen from the following table for land in Carcar:

	First class.	Second class.	Third class.
1 hectare, 1832	₱125	₱100	₱75
1 hectare, 1902	(1)	(1)	(1)
1 hectare, 1912	500	400	300

[1] No market value, due to disturbed conditions and to death of animals.

A corresponding increase in prices of corn is shown:

1 cavan, 1892, at harvest	$0.75
1 cavan, 1892, at highest price	2.00
1 cavan, 1912, at harvest	3.50
1 cavan, 1912, at highest price	5.50

Men of wealth consider land the best investment. Most of them are "land poor." It does not seem that large landholders have, for the most part, acquired their land through oppressive or illegitimate methods, but rather through prudence, industry, and inheritance.

I found, however, that in a few cases money has been loaned and the land taken at about two-thirds its value for security, with the stipulation that until the debt was paid—usually a 4-year period was allowed—one-half of the crop should go to the loaner of the money. Obviously those conditions are very hard and inevitably result in the debtor losing his land. About one-third of agricultural work is done for hire. (See Labor.)

To make some short explicit statements concerning the share system as it exists in Carcar and Barili, I should say the following:

1. About one-half the farms are cultivated on the share system. The usual crop is corn.
2. The usual total amount so cultivated by one man is 2 hectares. The smallest amount is one-third of a hectare, and the largest is 5 hectares.
3. Plats as small as one-eighth of a hectare and as large as 5 hectares are leased.
4. Lessees occasionally lease several noncontiguous plats.
5. Small landowners become tenants of adjacent land in order to increase their possibilities.
6. The largest period of lease is 4 years; the shortest is 1 year. The usual period is 2 years, but since the agreements are oral or implied it is difficult to set exact periods.
7. Lessees usually reside for many years on the same piece of land.
8. The control of the landlord over the tenant and the question of debts is discussed elsewhere.
9. The recognized rights of the tenants against their landlords are few. In extreme cases of fraud or maltreatment the tenants appeal either to the justice of the peace or to the bolo (a kind of thick corn knife used for all domestic purposes and for fighting). Both are very rare.
10. The lease and share system is elsewhere dicussed. Cash rents are never contracted.
11. Outside of the production of the crop the landlord and tenant deal with each other as employer and employee. There is no free service either way.
12. The work of the household is divided as follows: The wife cooks the food, weaves and makes the clothing, cares for children, and prepares seed for planting. The wife is usually financial manager of the household. The husband does the field work, markets products, etc. The children care for the domestic animals and aid both parents.
13. The tiller of the small holding makes but a scant living for himself and family. Suppose there are five in the family and that it costs ₱0.30 a day to feed and clothe this family. This would mean a yearly value of ₱91.25. It is thought that this is about correct, since none accumulated anything and since laborers work for 40 to 50 centavos a day and furnish their own food. They live a scant existence, as does the tiller of the small holding, and yet the laborer does not work 365 days a year by any means.
15. The tenant usually regards the landlord as a business benefactor.
16. The landlord regards the tenant as a natural and easy means of getting his land worked. He does not abuse the tenant, as one does not abuse his domestic animals.
17. It does not seem that the landlord ever sells the tenant and his debts to another landlord.
18. Very few tenants make a very serious attempt to better their conditions. A few, however, save enough to buy a carabao, plow, and finally a bit of land.
19. The children of a deceased tenant are not held responsible for the parents' debts to the landlord.

It does not seem easy to offer a solution for the betterment of conditions. Some of the things which might be considered necessary to any improvement, however, are:

1. The tenant and poor class must be informed that there are better things so that they will want better conditions. As it is they are contented with the miserably meager existence they are dragging out.
2. Population is entirely too dense. It should be decreased by emigration and by instructing boys and girls that it is morally wrong to bring children into the world unless they can provide for them.

The dignity of labor must be emphasized, so as to do away with the large number of petty landlords and bosses. The country is poor and could support an industrious population of one-third the present size moderately well. But it can never be made to support as large a population of loafers as now live on it.

I should say, then, increase the wants, increase the knowledge of better conditions elsewhere to cause emigration and emulation; use drastic and continual methods to prevent further increase in population and to decrease the present number.

HOMESTEAD.

There is no land open for homestead in Carcar and Barili.

THE BARRIO SYSTEM.

In Carcar there are 10 barrios; in Barili, 21. These are really not villages. There may be a slight collection of houses in a barrio to distinguish it from the other parts of the municipality, but in most cases the name simply signifies a location. The location may be determined by a spring or the crossing of lines of travel.

There is usually a small chapel for religious purposes. These chapels are built by community labor. This is about the only community labor performed. In some few instances there is some "swapping of work," but a lazy penuriousness prevails in such cases more than the spirit of community work. The barrio people do not even work together to improve the roads or build bridges useful to all. The barrio people have never been attacked by enemies to amount to anything. Groups of ladrones (thieves or robbers) of their own people bothered them some in former times. But the influence of such attacks was not toward grouping, since the people did not attempt to defend themselves, but fled immediately to the poblacion, where the alarm was given. Having poor houses and almost nothing in them, they could lose them all and not be seriously handicapped.

For each barrio—sometimes for a group of two or more—there is one councilman, who usually resides in the poblacion. There are also a teniente (lieutenant) and a subteniente residing in the barrio. It is through the aid of these tenientes that the presidente or councilman publishes notices and executes certain duties relating to the barrio people.

Almost every barrio resident goes to the poblacion once a week. They bring to town certain of their raw products and take back—

1. Dried fish.
2. Petroleum.
3. Shoes and chinelas (stipper of cloth top over the toes only) (for dress occasions).
4. Rice (for festal occasions).
5. Clothing or cloth (two-fifths thus bought; three fifths woven in barrio).
6. Hats (but most people go without).

Their wants and purchases are increasing from year to year.

AGRICULTURAL LABOR.

The enormous population found in Carcar and Barili, and the scarcity of good land, convinces one that the law of diminishing returns should long since have begun to operate. Yet, considering the extremely small outlay that is required to feed and clothe the ordinary laborer, and considering the fact that whatever is exported from the municipalities has been collected bit by bit from numerous individuals, one is led to believe that a very peculiar condition exists here. The wants are so few and the indolence and ignorance so great—no improved tools or methods being used—that the law of diminishing returns has not yet begun to operate in most parts of the municipalities. Lack of wants and inefficiency of labor explains this situation. Consider the facts that these two municipalities, with a total area of less than 500 square kilometers, much of which is, from natural causes, untillable, have a population estimated at 75,000; and, further, consider the small exports; and one begins to realize how little actual labor is done per capita.

It is estimated that one-third of the agricultural labor is done for hire, at the rate of 30 to 40 centavos a day, the laborer furnishing his own tools and food; about one-third is done by tenants and one-third by the owners of small holdings. The laborer usually spends long hours in the field, but does not work rapidly and effectively. The laborer, as a rule, prefers to do agricultural work for a much less wage than to work on the roads or do other public works, not from any idea of the dignity of agricultural labor, but because (1) his work is nearer his house; (2) he can more easily stop for fiestas or other desired rests; (3) having no boss over him, he works slowly and more according to his own inclinations.

Labor is not quite so immobile and reticent as it was five years ago, yet there are almost no signs of changed methods or changed attitudes. Amusements, standards of living, tools, labor efficiency, etc., are practically the same as they were 10 years ago. Baseball, which is played much by the boys, is the single exception.

The laboring population constitutes a large, passive, unfeeling, uncaring, insensate mass, held in strong restraint by ignorance, poverty, custom, and superstitions; conservatism, schools, expositions, and other means of education seem to be the only possible way to wake them up to human ambitions and endeavors, and, with the best of means, it is a herculean task.

The above remarks, it should be observed, apply to the barrio and mountain people engaged in agricultural pursuits. Conditions in the poblacion of Carcar are quite different, and in the poblacion of Barili a little different.

It does not appear that there are many, if any, real bonded debtors. It is not necessary to have a debtor bonded to get him to stay. The dense population, the shiftnessness of all classes—and especially the servant class—and the extreme poverty make it easy for the better classes to have servants. Almost everybody has a servant. These servants do not constitute a separate class; but, while they are servants, they have a servant's fare and considerations. Their condition is not so grievous compared with that of their masters, but it is certainly inferior.

Most servants are given food, clothing, and a small monthly salary of from 50 centavos to ₱10. The latter salary is a higher one, and would be paid only to a good cook or some such servant. I have known of servants receiving 25 centavos a month. This small salary is usually spent for some necessity of clothing which the master has failed to provide. A few servants owe their master, but I think more masters owe their servants, which has the same effect, as above explained. In case of such debts, however, no interest is charged.

Labor is not mobile at all. Above descriptions of conditions should serve to explain why labor is not mobile. It is reported that five persons have gone to Hawaii to work on the sugar plantations.

THE ANIMAL INDUSTRY.

The unimproved native pony is used for transportation of people on the roads and is used some to turn sugar mills. (See Form 28, pp. 5 and 6.)

The carabao is the chief beast of burden, doing all agricultural and heavy transportation work. In Carcar goats are used a great deal to haul sacks of grain and other products. A few cattle are used for work.

Hogs, goats, chickens, and sheep are produced for food. The animal industry has not recovered from the losses caused by rinderpest and other diseases of 1897–1900.

FISHING.

A small amount of fishing is done for local consumption. Fish are imported from other municipalities and Provinces.

LUMBERING AND FOREST PRODUCTS.

The municipalities of Carcar and Barili are denuded of all forests. There is not even rattan (a kind of thorny vine, which is smoothed off and split into small strands and used as string or wire) or enough trees to make posts for the houses. Bamboo is present, but not abundant. Fuel is scarce and high priced.

IMMIGRATION AND EMIGRATION.

The population of Carcar is almost entirely unaffected by immigration or emigration. About 40 families leave Barili annually for East Negros. A similar number come into Barili from adjacent municipalities. Newcomers are neither greeted nor resented. They are received with an apathetic indifference. They try first to establish themselves by hiring their services. Only the poorest move. They have some hope of bettering their condition; they feel sure they can not easily make it worse.

POPULATION AND INDUSTRY.

It is hard to conceive of so simple a people operating a very extensive system of commerce or manufacture. Fish are not overly plentiful. If the raw materials could be made to grow, the people ought to learn to produce many articles of value, such as mats, baskets, cloth, etc. This would have to be a household work rather than factory work. As it is there is almost nothing in this line, either as household work, wage work, or as a handicraft.

TRANSPORTATION.

Transportation is, for the most part, by carabao and sled or cart (a cumbrous affair supported by two wooden wheels—disks). The cost in Carcar of transportating one cavan of corn 7 kilometers, over bad road, is ₱0.40; over good roads, ₱0.25. In Barili the cost is about ₱0.30, no distinction being made between good and bad roads.

MERCHANTS.

Chinamen are the chief merchants. There are about 10 Chinese merchants in the two towns. They buy all products of the community and sell to the people such cheap wares, canned goods, flour, petroleum, dishes, etc., as the public will buy.

There are also an indeterminate number of Filipino merchants who are part merchant, part farmer, and part loafer. Some of these are itinerant barterers, carrying out dishes, dried fish, clothing, nails, bolos, etc., and bringing back chickens, eggs, vegetables, etc. Formerly these barterers cheated their customers quite systematically and successfully. But the rustic has now learned town values too well to be much cheated. He also prefers to carry his products to the town, so that he may have an excuse to go in and loaf around a day or so each week. So dearly do venders love a trip to town that they frequently refuse a better price in the country than they get after carrying their load 4 or 5 kilometers to town.

MARKETS.

Markets exist in only three places: Poblacion of Carcar, poblacion of Barili, and in the barrio of Mantalongon, a midway station between Carcar, Barili, Aloguinsan, and Sibonga. The market day at the barrio is Thursday. In the poblacions Sunday is the big day of business. All kinds of agricultural products and many manufactured articles are bought and sold on market days.

CREDIT AND MONEY.

Since credit and loans usually result in disputes and loss to the creditors, very little crediting is done. The money borrower will offer to pay any rate of interest, but he has little idea of ever paying either interest or principal. Money is the only medium of exchange, and is used in all deals, great and small.

A satisfactory system of credit and bookkeeping is impossible among an ignorant and tricky people. They do not appreciate the value of time or the value of a general confidence in debtors. They do not understand the proper use of business credit.

CONCLUSION.

In conclusion, it should be said that conditions are not the same in both municipalities. Carcar is far more progressive, awake, and modern in its spirit. Barili I believe to be one of the most lethargic towns in the Philippines. No one seems to be ambitious or to care materially about anything. Very few of her sons and daughters seek education or employment outside the town. The law of supply and demand does not seem to operate here at all. Prices on certain articles are fixed by tradition, not by supply and demand. Nor does an extraordinarily high price offered for some article seem to stimulate materially its production and sale.

Though this report may lack or may err in some respects, it is believed by the writer (who frequently visited both towns, having lived in Barili from Aug. 14, 1909, to April 1, 1910) that a fairly correct and ample statement of existing conditions is herewith most respectfully submitted.

CLAUDE C. MCCOLLUM.

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. FRANK PARK.

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. PARK. Mr. Speaker, on last Friday the gentleman from Wisconsin [Mr. FREAR] attacked in scathing manner the rivers and harbors bill, and in course of his general attack all along the line touched upon the $50,000 for Flint River, Ga.

This river traverses over 100 miles of the second district of Georgia.

A short length of the 77 miles above Albany, where the ruling depth is 2½ feet, touches the second district. This part is now navigable for small craft, but no appropriation is asked for it, and no part of the $50,000 is to be expended above Albany. Below Albany it is deeper and broader and can be rendered excellently navigable by expenditure of a sum commensurate with its commercial importance.

If the gentleman had analyzed the sum of the appropriations for the past 35 years he would notice that less than an average of $11,000 per year has been spent for improvement and maintenance, about $20 for each 1,000 feet of the stream, a bare pittance, calculated to starve any project of like dimensions and importance; yet, the gentleman advocates the killing of the great project which these small appropriations have starved, but which is growing in commercial importance in spite of the meager appropriations.

If the gentleman knew that the expenditure during the past 12 years was paid for work directed and superintended by a person with no scientific training or knowledge for this important work, he would realize, as do the people to be benefited, that much of it was for only temporary benefit.

The person referred to has lately been removed and a junior engineer put in his place, under whose supervision much is expected in permanent improvement.

If the $381,000 had been intelligently and scientifically expended over a period of four or five years continuously, there would doubtless be greater results of lasting benefit.

Five important counties of the second district of Georgia are largely affected commercially by the navigability, or lack of it, of this river.

During the last months of the expiring Confederacy of Southern States these five counties supplied provisions and clothing to the army to such an extent as to give them the name "Egypt of the Confederacy."

The important county of Baker is without transportation facilities except by this river and wagon trains.

On both sides of the 100 miles of navigable length of this river the lands are fertile and abundantly productive; and if navigation shall be rendered reasonably steady and safe, a locality of over 2,000 square miles will largely utilize this river to transport what they buy and sell.

The tonnage last year was thirty-three and one-half thousand tons, nearly 7,000 tons over the previous year.

The value of freight carried last year was above $2,000,000, an increase of nearly $600,000 over the previous year.

This is a worthy and a much-needed project among a people who are struggling and pushing onward industrially and commercially.

I trust the Congress will allow the appropriation and help those who manufacture little but produce much for manufacture.

A Delaware River Triumph.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 28, 1915.

On the bill (H. R. 20415) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1916.

Mr. MOORE. Mr. Speaker, in connection with the navigation item in the agricultural bill I wish to draw attention to the Delaware River, which was the subject of a brief discussion yesterday when we were considering the aids to navigation bill. My good friend, the gentleman from Georgia [Mr. ADAMSON], and my distinguished leader, the gentleman from Illinois [Mr. MANN], indulged in a good-humored controversy over the aids to navigation already secured for the Delaware. They had in mind the item of $80,000 for new range lights made necessary by the completion of the 35-foot channel at Schooner Ledge, near by the city of Chester. I am satisfied both gentlemen were convinced of the wisdom of making this appropriation, as was also the gentleman from Wisconsin [Mr. STAFFORD], whose usual accuracy in debate was somewhat shocked by his criticism of the Delaware River and the Atlantic coastal project as part of a system for promoting moonlight excursions in motor boats of a 3-foot draft. If it were not for the tremendous importance of the commerce traversing the Delaware River and awaiting the opportunity to pass through the Atlantic coastal waterways and the risk of life upon the open sea it would be amusing to listen to those who think the rivers and harbors of the East deserve no further attention at the hands of the Government. I know my friends are not to be taken seriously with regard to the River Delaware, because the value of that stream and its preeminence as a common carrier of international consequence has been demonstrated upon this floor too often to need further recital. Only a few days ago I put in the RECORD some remarks upon this subject showing the Delaware to be the greatest of our inland rivers and quoting its revenue-creating ability as aggregating more than $200,000,000 during the last 10 years.

I said then, what I now repeat, that there is no river in the country upon which there is so much shipbuilding at the hands of American workmen. That the river needs additional aids to navigation, even beyond those provided in the aids to navigation bill reported yesterday by the gentleman from Georgia [Mr. ADAMSON], is demonstrated by the testimony of navigators and pilots who safeguard the property that is intrusted to the bosom of its waters. We have built the Nation's greatest battleships upon the Delaware, and we have built them well and economically. Since the beginning of our history we have been building merchantmen upon the Delaware, and we are continuing that line of work, with very great credit to our shipbuilders and mechanics, down to the present day.

AIDS TO NAVIGATION NEEDED.

It is rather a coincidence that about the time the friendly criticism of our item for new lights at Schooner Ledge was being made upon this floor the greatest of modern passenger vessels, so far as American construction is concerned, was being held up in the Delaware River because of a fog, which made it inadvisable to continue the initial passage of this great vessel to the sea. I refer to the steamship *Great Northern*, built in my district by Philadelphia mechanics on the Delaware River for coastwise service on the Pacific coast.

It is not safe to proceed upon a river or in the sea, except with very great caution, when a fog envelops a vessel. Recent accidents at sea and on the rivers have emphasized the necessity for caution under these untoward circumstances. The value of aids to navigation, such as lighthouses and buoys, are therefore easily apparent to anyone who undertakes to appreciate the perils of navigation. No one will dispute the value of these aids when a vessel is making progress in the dark. In darkness or in fog the lights and the buoys and the spars are of inestimable value in helping to shape a safe course for the mariner.

I do not want to be impatient with respect to the aids of this kind on the Delaware. We are doing a great business there and are giving an ample return to the Government for every dollar it spends either in aids to navigation or in its sluggish work upon our channel, but there are points along the river where additional lights would be of great service, and there is one stretch of nearly 14 miles along what is known as the Goose Island Bar, where it requires great skill in navigation by night to avoid the danger of running aground. Naval captains understand this situation as thoroughly as do the experienced pilots of the river, and some of them have recently obliged us to present our navigation proofs in order to retain our rightful hold upon Navy contracts for coal.

I shall not pursue this question further, however, because it is my purpose in extending these remarks to tell the story of the latest Delaware River triumph in shipbuilding, a triumph the celebration of which was halted temporarily on yesterday, not necessarily because of the lack of sufficient aids to navigation on the river, but because of that natural condition resulting from fog, which makes it so highly essential to have sufficient aids to navigation at hand.

TRIUMPH IN SHIPBUILDING.

I append the story of the *Great Northern* as it appears in the Philadelphia Record of this morning:

FOG DELAYS START OF SPLENDID STEAMSHIP—PHILADELPHIA-BUILT "GREAT NORTHERN" LEAVES THIS MORNING FOR THE PACIFIC—MANY NOTABLES ON BOARD—PASSENGERS FROM FAR AND NEAR CROWD VESSEL FOR TRIP VIA PANAMA CANAL.

Heavy fog on the river and a delay in the arrival of baggage belonging to the passengers caused a postponement until this morning of the sailing of the new $3,000,000 Philadelphia-built steamship *Great Northern* from the Washington Avenue Wharf yesterday on her maiden voyage to San Francisco by way of the Panama Canal. All of the 525 passengers, who will claim the distinction of being on the first passenger vessel hailing from this port to pass through the waterway, were on board early yesterday afternoon, but refused to leave when they learned that the time of sailing had been postponed.

Representatives of the Great Northern Pacific Steamship Co. who are accompanying the vessel and the officers held an informal reception on board last night as she lay at anchor in the stream, and apparently none of the passengers was disappointed in not getting started on scheduled time. The passenger list includes many persons, and every part of the United States is represented among those on board. In a number of instances the passengers traveled from various points along the Pacific coast to this city in order to accompany the vessel on its special cruise.

MANY INSPECT FINE SHIP.

During the afternoon hundreds of men and women from this city and New York inspected the *Great Northern*, and all pronounced the ship to be one of the most beautiful and best-appointed vessels that ever sailed. A large delegation from Cramp's shipyard, where the steamship was built, were among the visitors, as were also a score of members of the Maritime Exchange. Every part of the ship was inspected, and camera enthusiasts spent a busy afternoon snapping the interior and exterior of the vessel from every angle.

Capt. A. H. Ahman and the 225 members of the crew acted as guides, and explained every detail of the new steamship to the passengers and visitors.

NOTABLES ON THE TRIP.

Among the notables on board are ex-Gov. Martin H. Glynn and Mrs. Glynn, of New York; Norman E. Mack, national Democratic chairman, Mrs. Mack and daughter, of New York; H. J. Heinz, known internationally in Sunday-school work; Col. G. S. Young, commandant of the military post at Vancouver, Wash., and several other Army officers; Howard A. Banks, private secretary to Secretary of the Navy Daniels, who will install the Navy exhibit at the Panama-Pacific Exposition; Pierce Lyman Howe, director of the Great Northern Pacific Steamship Co., and wife, of San Francisco; Drake C. O'Reilly, Maurice Dooly, Ion Lewis, and G. M. Trowbridge, of Portland, Oreg.; J. L. Dalrymple and Mrs. Dalrymple, A. C. Von Hagen, and A. S. Brooks, of St. Paul, Minn.; Miss L. H. Tiffany, New York City; Commander Pryor, of Washington, the new Governor for the Samoa Islands; F. L. Parker and W. Madison, Astoria, Oreg.; R. W. Searle, Buffalo, N. Y.; J. H. Williams and Mrs. Williams, Tamaqua, Pa.; P. M. Sharpless, West Chester; A. C. Baxter and Mrs. Baxter, Camden, N. J.; Mrs. Hollingshead and Miss Hollingshead, Camden, N. J.; E. H. Moffett, Lewistown, Idaho; J. R. Moore, Stuart, Va.; J. J. McConville, St. Paul, Minn.

Capt. Ahman expects the *Great Northern* to arrive at Colon on the morning of February 2. The steamship will then pass through the canal to Balboa, where six hours will be spent sight-seeing. San Diego will be reached on February 10, where a stop of 17 hours will be made. The steamship is scheduled to arrive at San Pedro on the morning of

February 11, where it will remain 12 hours, and at San Francisco on the morning of February 12. The approximate distance of the cruise is 5,205 miles.

TOURISTS TAKE THEIR AUTOS.

The Panama-California Exposition opened in San Diego on January 1, and there the tourists will spend much of their time until the Panama-Pacific International Exposition opens in San Francisco on February 20. Five automobiles were taken on board by passengers, and it is the plan of the owners and their parties to return to the East in the machines. The big touring cars were lowered into the hold by the stevedores, and, according to the officers of the *Great Northern*, the shipment marked the first time automobiles have been lowered into vessels without being taken apart.

The *Great Northern* and the *Northern Pacific*, the sister ship now being constructed at Cramp's shipyard, are all-steel vessels, and will be the largest ships yet constructed for the Pacific coastwise trade. The *Great Northern* has a length over all of 524 feet, carries six decks, and is the most thoroughly equipped steamer ever built in an American shipyard.

Two days after the *Great Northern* arrives in San Francisco she will sail on a second special cruise for Honolulu. The steamship will arrive in Honolulu on February 21 and remain there three days and then return to San Francisco, where she will be expected on March 2. On March 15 the *Great Northern* will be placed in coastwise service between San Francisco and Portland, Oreg., by way of Astoria, Oreg.

Ship Purchase Bill.

EXTENSION OF REMARKS

OF

HON. KENNETH D. McKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 28, 1915.

Mr. McKELLAR. Mr. Speaker, some time last fall Mr. C. P. J. Mooney, the able editor of one of our leading southern newspapers, published at Memphis, in my district, begun writing a series of articles on the ship purchase bill. These editorials are strong presentations of the question from the point of view of the section that I come from. I do not think the case could be better put than it is stated by Mr. Mooney.

Memphis is one of the largest cotton markets in the world. We handle about one-fifteenth of the entire American crop there. We raise 2,000,000 bales within a radius of 150 miles of our city. We are the largest hardwood lumber market in the world. The amount of hardwood lumber exported from Memphis is simply enormous. At present the lumber business is stagnant, because we have no ships to carry it to foreign markets. Our cotton while bringing a much larger price than it did is still distressingly low, and largely so because we have no ships to carry it to foreign markets. Mr. Mooney discusses the question fully in this series of editorials, and I ask unanimous consent to extend my remarks in the RECORD so as to include this series of four editorials. They are as follows:

[Saturday, Dec. 5, 1914.]

COTTON AND SHIPS.

There is a report from Washington that Germany and Austria are eager to buy American cotton and pay a big price for it if the cotton can be delivered.

The difficulties of delivery are in ships and in marine insurance. That is just where the United States Government might perform a useful service. There is no objection to shipping cotton to Hamburg direct and to Amsterdam for reshipment into Germany. Cotton could also be shipped to Genoa and taken by rail across Italy and Switzerland into Germany.

Cotton not being contraband, the United States Government might at once renew negotiations with the allies and effect an agreement to take over the ships that are now interned in New York. A steamer like the *Vaterland* and some of the great German freighters could in two or three trips convey an enormous amount of compressed cotton to Europe.

Then the Government should send agents of the Department of Commerce to each of the ports in Europe and send other agents of the same department into the German importing cities and let them have immediate charge of the cargoes.

At every turn in this European war the helplessness of the United States is shown in the matter of ocean commerce.

When our 16 battleships went around the world to show the yellow men and the copper-colored men and other sorts of men our big sea power they were received with great respect. But the wise ones laughed when they saw that the transports bearing coal for the warships were flying the flags of other nations.

If while our American battleships were touring the Orient war had suddenly been declared against us, the merchant ships carrying coal would have been compelled to run away and leave us stranded on the high seas.

Before this war opened there were only four American trans-Atlantic passenger ships, and they were almost obsolete. A few other ships have come under American registry.

Ninety-five per cent of the ocean commerce of the United States was carried in foreign bottoms. If the United States carried ordinarily one-half of its sea commerce in its own ships, we could now have a fleet capable of delivering cargoes of cotton to any point in the world, with others left for carrying grain, live stock, and food products.

If we can not do any better, the Government should build a number of so-called auxiliary cruisers, which could carry commercial products in such times as this and could carry coal and war provisions for our battleships and could carry our soldiers in times of war.

—

[Tuesday, Dec. 8, 1914.]

LET THE GOVERNMENT HUNT FOR SHIPS.

It is stated from Washington that Germany and Austria are in the market for cotton.

It is reported by a number of cotton men in Memphis who have had dealings with Germany in times of peace that as much as 1,000,000 bales of cotton could be sold in Germany and in Austria if the cotton could be safely landed there. There is a dearth of ships.

Ocean rates to Gothenburg and to Rotterdam are three or four times the regular rates. The few ships now available are used principally in carrying foodstuffs. The difficulties of transportation are such as to make it exceedingly serious for private enterprises independently to undertake trading in large quantities.

The United States Government desires to continue the balance of trade in favor of this country. When exchange runs against us, when our gold is being drawn out, the Treasury Department quickly becomes active.

The demand for foodstuffs and war material has turned the drift of credits to our favor. But the United States might add to our commerce, solve a difficult situation in this country, build up more credit in Europe, and bring about a desired prosperity by taking a hand itself in the over-sea cotton commerce.

The Government, through the Department of Commerce, might establish a base in continental Europe, to which point cotton could be shipped and distributed wherever there arose a demand for it.

The danger of mines and other hazards would be obviated by making Genoa the base. From Genoa the cotton could be shipped overland into Germany and into Austria.

After having provided these facilities, then the United States should look into the gathering of ships.

At the outbreak of the war there threatened to be a stoppage of ocean navigation. A bill was offered and passed permitting the Government to encourage the registration of ships under the American flag. Another bill was offered permitting the Government itself to provide ships for commerce. This second bill failed.

The Government might offer such encouragement to ships as would make them undertake the business of carrying cotton to Germany and to Austria, and at the present session of Congress the problem should be solved by further legislation.

In some parts of the world cotton is in great demand. We have the cotton in large quantities. The supreme work of the Government of the United States, then, is to give all of its aid toward bringing the buyer and the seller together in such a way as a transfer of commodities could be made.

—

[Wednesday, Dec. 9, 1914.]

MR. WILSON'S MESSAGE.

President Wilson strikes a high note in his address to Congress.

While preparing it the President had always in mind the extraordinary confusion brought about by the colossal war.

Impressed himself with the thought that we are a Nation of peace and a peace-loving people, at the same time the conflict in Europe forces Mr. Wilson to suggest that while we are at peace we should give lively attention to such measures as will keep us from being at the mercy of any bellicose people.

The President utters no high-sounding platitudes about the forces of peace and love as being all powerful, but he does say that our warships should not be permitted to rot at their moorings, and that our land equipment should not be permitted to rust.

Without jingoism, the President intimates that the old proverb of keeping our powder dry while trusting in the Lord is a pretty fair rule of life for nations, as well as for individuals.

The President feels that the program of reform legislation involving business is over. The former twilight zone, under bills recently passed, has been narrowed. Business men and controllers of large corporations, he feels, have now a clear knowledge of what may be lawful or unlawful.

The President has cause to felicitate Congress on the success of the reserve-bank act.

Strongest is the President in an appeal for unlocking for the use of the public the forces of nature which have their being in water power.

The President is urgent for an American merchant marine.

The United States at the outbreak of the present war was almost as helpless on the sea for safe commerce as were the belligerents.

That any ships are coming into our ports now is due to the tremendous superiority of the English Navy. Had the Germans approached the English in sea power, and then had they resolved to take their chances on the high seas, there would be now in the Atlantic neither English nor French nor German ships carrying cargoes.

The only salvation in the foreign-trade field under these conditions would have been a fleet of our own and not one-half of 1 per cent of the over-sea trade of the United States was borne in American bottoms.

The word "subsidy" is peculiarly offensive to Democrats, but we have got to have ships flying the flag of the United States. We should have ships sufficient in number to carry at least half of the tonnage in and out of our ports.

If we can not enlist private enterprises in the construction and operation of these ships, then our Government must itself adopt some method—even if it builds ships—that will result in a United States merchant marine.

—

[Jan. 24, 1915.]

WE MUST HAVE AMERICAN SHIPS.

Mr. Secretary of Commerce Redfield is doing a tremendous service to his fellow citizens of the South when he is advocating a system of ships by which things made and grown in the United States can be transported to all the other ends of the earth.

If the great war struck the exchange market, the stock and the bond market in the East a tremendous blow, it paralyzed for a time the commerce of the South, which is controlled more by international forces than the people had ever before realized.

The cotton that is every year shipped from seaports in the South goes, much of it, to the mills of interior England, to the great mills of eastern France, Alsace, and Lorraine.

In many spinning regions in Europe the roar of the machine gun has taken the place of the clatter of the looms. But there were other mills in Europe as distant from the scene of war, so far as immediate danger is concerned, as our own.

Cotton is not a contraband. After the first flurry of the beginning one of the quickest demands for things other than war material was for cotton.

German ships had been swept from the ocean. German ships were tremendous carriers of American goods. The English and the French ships were busy carrying their own stuff out and bringing war materials in.

The ships of Norway, under whose flag there is a great tonnage of seagoing vessels, were enlisted in carrying merchandise needed for immediate war purposes to French and English ports.

The United States had no trans-Atlantic liners except four vessels, which carry second-cabin passengers.

We were in exactly the same position as if we were to own our railroad beds and Canada owned all the equipment, and Canada suddenly gave orders that all the locomotives in the United States and all the cars be immediately run over the border.

The South is a great producer of lumber. The export business in lumber has steadily grown. It was all transported in foreign ships. These ships either hid in ports or came under the control of England, who controls the seas.

What would the United States do if Canada, owning all of the rolling stock of our American railways, should suddenly commandeer it. Naturally we would proceed either to build locomotives or to buy them already built or to rent some for temporary use from some neighbor, if such a neighbor were at hand.

There was a demand for cotton in Europe and there was a fair demand for lumber, but there were no ships.

The European nations were too busy saving their throats from being slit to give any attention to what the bystanders might desire.

Here and there a ship was picked up that might carry a cargo, but the demand was so much greater than the supply that the freight was almost prohibitive.

The blow clearing the ocean of ships struck not only lumber and cotton, but it struck wood products, the manufacture of which is a great industry in those parts of the South near the Gulf.

Mr. Wilson was quick to realize the gravity of the situation. Mr. Redfield himself, who is a man of business, gave to his chief the results of his investigations and submitted recommendations based upon these investigations and his experiences.

The bill modifying the shipping laws so as to enable ships flying foreign flags to register under the American flag was passed. But this bill was inadequate. A more elaborate shipping bill was proposed.

If the bill now under consideration is passed, this thing will happen: There will be more ships ready to carry American products not only to neutrals but to warring nations.

Therefore the passage of this bill is of immediate importance to us—more important to us than to the people of any other part of the country.

All the ships that are now afloat first carry food and war material. Unfortunately, we southern people export neither food nor war material.

If it became necessary, England would dismantle her five-day boats and fill the hulls with wheat. Lumber and cotton and turpentine and rosin would have to wait their turn.

Some of our southern Senators are fighting the present bill because they say it smacks of a subsidy.

Some of the Republicans are fighting it because it smells of Government ownership.

This is an extraordinary occasion. While we are not in the war we are suffering from a state of war.

The Government in the time of war takes over railroads, rolling stock, and, under certain conditions, even private property.

The writ of habeas corpus is probably the most prized instrument of human justice the English-speaking people have. Yet in a time of war even this writ may be suspended.

If we had been in possession of ships flying our flag in August, September, and October, cotton would not have dropped to 6 cents a pound.

If we had ships now, cotton would be higher than 8 cents a pound.

This war may last another year.

If we do not have more ships this fall, the new crop may not bring over 6 cents a pound.

If we had ships now and had been in possession of ships in August, there would not have been the paralysis in the lumber trade that has all but destroyed some of our strongest southern producers.

The necessity, then, is of supreme importance to the little sawmill man and of supreme importance to the man who toils in the forest, drives the logging wagons, sets the blocks at the mill, and offbears the sawed product.

The necessity of ships is of supreme importance to the small farmer who grows five bales and of equal importance to the small share cropper.

Therefore, when your southern Senators and Congressmen who are opposing Mr. Wilson's bill come back home and say they opposed it in the interest of the plain people, they are deceiving these plain people.

When they preach their devotion to Democracy and their devotion to the people, the people in turn may indict and convict them of preaching much and doing nothing.

The Republican opposition is a mere jockeying of a set of old-time reactionaries and standpatters who feel that they and their crowd were born and destined to rule and that the control on the part of others is an act of usurpation.

A nation that is strong at sea is always strong on land.

From the day that the Phœnicians sent their rafts with the colored sails out from Tyre into the Mediterranean, during the times when Carthage held sea power and when Rome wrested it from her, down through the period of sea control by Venice and Genoa, nations who were strong on sea were the dominating controllers of the commerce and destinies of the Governments of the world.

We must carry our own commerce in our own ships for the same reason that it is absurd to permit the hauling of our goods up and down this country on roads whose rolling stock might be owned by another people.

The United States, while it may keep out of the fights of other people, can not isolate itself from the rest of the world, and therefore if it is to be in the commercial affairs of the world it must have every instrumentality of commerce necessary for the successful prosecution of trade.

This is not only good Democracy, but it is good nationalism.

Existing Worthless Projects are no Better than Worthless New Projects.

Is this $34,000,000 bill a pork barrel? How many projects can stand alone? Of the total amount, 42 per cent is for three rivers. Of the 250 projects, 70 are for three States—Florida, North Carolina, and Texas.

This bill carries 172 new surveys aggregating over $50,000,000.

It increases future waterway obligations to over $400,000,000.

A retrenchment of 1 per cent would ordinarily pay for publishing the CONGRESSIONAL RECORD for an entire session or pay the President's salary during his four years' term. A retrenchment of 10 per cent would save the Government $10,000 per day throughout the year.

Based on the Engineer's Report, a saving of 50 per cent could be effected without injury to any worthy improvement, thereby saving over $17,000,000 that will otherwise be squandered on wasteful or worthless projects—an amount equal to the average annual appropriations given for all agricultural purposes during the past four years.

If to be given to aid the unemployed, let us apportion the $17,000,000 among worthy people and not spend it upon valueless dredging or worthless canalization schemes.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915,

On the bill (H. R. 20189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. FREAR. Mr. Chairman, the American people do not grumble at legitimate Government expenditures. Waste and extravagance they denounce.

Let us take an inventory of stock and ask ourselves what justification can be offered for wasted finances and palpable fraud, the first evidenced by a cursory examination and the second by an honest appraisement of some of our national investments.

A leading economist and man of wide information has said that this Government wastes $300,000,000 annually through inefficient, unbusinesslike methods. Similar indictments have been presented by statesmen great and small. What are the facts?

The increase in national expenditures is not calculated to satisfy inquiring minds in this year of 1915 when a brand new war tax jostles a second-year income tax and a shopworn general tax in reducing the pocketbook surplus of private citizens.

A statement of Federal appropriations shows:

Appropriations 1875 to 1914, inclusive.

1875	$325, 666, 791. 89
1876	328, 128, 199. 32
1877	299, 591, 138. 07
1878	296, 006, 694. 21
1879	332, 407, 776. 68
1880	372, 119, 629. 30
1881	361, 572, 204. 39
1882	365, 965, 479. 83
1883	422, 138, 073. 31
1884	355, 297, 875. 23
1885	318, 829, 489. 13
1886	336, 439, 913. 20
1887	387, 330, 971. 99
1888	359, 011, 523. 52
1889	408, 624, 057. 37
1890	385, 522, 367. 61
1891	509, 368, 345. 86
1892	514, 424, 019. 49
1893	463, 684, 385. 20
1894	479, 932, 667. 08
1895	459, 925, 178. 62
1896	457, 088, 344. 72
1897	469, 494, 010. 41
1898	485, 002, 044. 72
1899	862, 682, 487. 06
1900	690, 667, 188. 54
1901	719, 278, 826. 89
1902	757, 607, 464. 72
1903	796, 633, 864. 79
1904	736, 378, 402. 76
1905	732, 197, 855. 84
1906	765, 553, 620. 06
1907	871, 041, 847. 40
1908	918, 362, 329. 07
1909	986, 251, 657. 60
1910	1, 028, 506, 570. 94
1911	1, 027, 901, 629. 18
1912	1, 026, 682, 881. 72
1913	1, 098, 678, 788. 40
1914	1, 116, 118, 138. 55

The foregoing does not include contract authorizations, which in 1913 and 1914 amounted to $68,505,174 and $40,333,000, respectively.

In view of present criticism stockholders in this great corporation of ours, the National Government, will wonder what we have to show for expenditures during the last 10 years for our Navy, as follows:

Navy appropriations.

1905	$97,505,140.94
1906	100,336,679.94
1907	102,091,670.27
1908	98,958,507.50
1909	122,663,885.47
1910	136,935,199.05
1911	131,350,854.38
1912	126,478,338.24
1913	140,800,643.53
1914	144,868,716.61

In like manner, stockholders are asking what use was made of the following moneys spent for our Army during the same period:

Army appropriations.

1905	$77,070,300.88
1906	70,396,631.64
1907	71,817,165.08
1908	78,634,582.75
1909	95,382,247.61
1910	101,195,883.34
1911	95,440,567.55
1912	93,374,755.97
1913	94,266,145.51
1914	101,019,212.50

With an aggregate 10-year expenditure of about $1,880,000,000 for our Army and Navy during times of peace, or over $100 average for the head of each family, we turn to the principal business occupation—agriculture—in order to learn what Congress has been doing during this same period toward giving instruction and aid to the people who feed the Army and Navy and who also feed the hundred million people now depending upon our own resources.

By separate years the report of Government aid to agriculture shows:

Agricultural appropriations.

1905	$5,902,040
1906	6,882,690
1907	9,930,440
1908	9,447,290
1909	11,672,106
1910	12,995,036
1911	13,487,636
1912	16,900,016
1913	17,986,945
1914	19,865,832

Agriculture received during the decade $1 for every $15 spent for war in times of peace. What have we to show for the war investment?

In order to understand another specific appropriation which has been taken from the regular Appropriation Committee and lodged with a special committee, I offer a further statement of expenditures to which I desire more particularly to address myself.

The following statement, taken from Army engineers' reports also contains food for thought when we realize that a war tax in times of peace is not caused by European troubles but by inexcusable waste and inefficient management of our own affairs:

River and harbor appropriations, 1875–1914.

1875	$5,218,000.00
1876	6,643,517.50
1877	5,015,000.00
1878	None made.
1879	8,201,700.00
1880	7,846,600.00
1881	8,951,500.00
1882	11,441,300.00
1883	18,738,875.00
1884	None made.
1885	13,949,200.00
1886	None made.
1887	14,473,900.00
1888	None made.
1889	22,397,616.90
1890	None made.
1891	25,136,295.00
1892	2,951,200.00
1893	21,968,218.00
1894	14,166,153.00
1895	20,043,180.00
1896	11,462,115.00
1897	16,244,147.00
1898	20,832,412.91
1899	14,627,449.56
1900	25,110,038.94
1901	16,285,605.75
1902	7,046,623.00
1903	32,540,199.50
1904	20,233,150.00
1905	10,872,200.00
1906	28,726,007.21
1907	17,252,052.04
1908	43,500,813.00
1909	18,092,945.00
1910	29,190,264.00
1911	49,380,541.50
1912	40,558,620.50
1913	51,115,889.00
1914	26,990,000.00

The force of the above table will be gained by comparisons. Taking biennial appropriations, in order to meet the former practice, we find—

1883 1884	$18,738,875
1893 1894	36,134,371
1903 1904	52,773,349
1913 1914	78,105,889

A diminishing river traffic and a 400 per cent increase in appropriations in 30 years are facts that deserve serious consideration.

We should remember also that a reduction in the 1914 appropriation was brought about after widespread public protest had been dinned into the ears of Congress, coming as it did from the press throughout the country. The river and harbor bill of 1914, including new projects and sundry civil items, reached the astounding sum of $93,000,000, the greater part of which was waste. Notwithstanding a strenuous fight and secret back fire conducted by the rivers and harbors lobby during last session the barrel was smashed in the Senate and a $20,000,000 fund was placed in the hands of the Army engineers for emergency work in addition to $6,990,000 appropriated by the sundry civil bill.

It is a common claim of waterway enthusiasts that we will soon have all projects cared for and expenditures will then decrease.

No man will be simple enough to be misled by such ridiculous statements when he realizes that although we have spent over $800,000,000 on our waterways, nearly half of which has been used within the past dozen years, we are digging a deeper hole every year.

According to Chairman SPARKMAN's statement, our obligations approximate—

Balance due on present projects	$250,000,000
Amount to be paid on 100 new projects	101,000,000
Forty per cent of 172 new surveys (1915)	69,000,000
Obligations with this bill	420,000,000

Hundreds of other new surveys are waiting approval. An increase of a 5-foot depth in a river or harbor may mean many millions, and these projects will be endless.

The Muscle Shoals project of $18,700,000 urged in this bill invites an astounding waste for similar water-power projects.

The waterway policy of this Government is a piece of monumental stupidity that has become a national laughingstock.

A portion of the money expended no doubt has been well invested, although no unsystematic plan can serve any great public good, but by far the greater part of the $800,000,000 we have dumped into our rivers and into our harbors has been wasted. Contained in those vast figures are private water-power projects, land-reclamation schemes, wasteful contracts that benefited only dredgers and material men, projects notoriously for special interests, all brazenly challenging public criticism or clumsily covered up by those who have unwillingly or unwittingly fostered these humbugs.

ECONOMY IS A DISCARDED POLITICAL ISSUE.

We nominate and elect men to the Presidency pledged to some special theoretical legislation. We are trying to overcome all business and moral evils by law. We promise to lower the high cost of living by a political and sectional reduction of tariff schedules; but we do not, and few people believe we can. It was a convenient political issue in the last national election, and one in which the blind were selected to lead the blind.

We promise in party platforms to practice governmental economy, but such promises are not fulfilled and experimental legislation registers many mileposts of growing waste and dismal failures.

Presidents may not determine the amount of appropriations, because that responsibility rests with Congress, but Presidents possess a veto power, and the American people will look with favor upon the candidate who comes with a pledge to investigate fraud and waste in Government expenditures and a sincere promise to increase business efficiency in the management of governmental affairs.

Such a candidate will present a genuine issue that will appeal to millions of war-tax paying citizens who are bewildered by time-worn excuses, and ask for relief irrespective of party politics. The party platform that gives a specific pledge to investigate recognized abuses in extravagant appropriations and to cut off waste in Government moneys will invite confidence. It is an issue too long honored by neglect.

No business man could survive for a moment under the wasteful methods we pursue in our Federal expenditures, and no Government will long consent to have appropriations given by

courtesy to statesmen, politicians, or favored local and private interests. No people will long close their eyes to an annual "humbug and steal," which masquerades under the elusive title of "waterway improvements."

Men who stood on the floor of the Senate and refused to be turned aside from their purpose; who exposed waterway humbugs and declined to accept a mixture of gold and dross; who refused to surrender convictions to senatorial courtesy; men who filibustered, if thorough discussion can so be called, acting on behalf of the tax-paying public, and thereby defeated grossly wasteful appropriations; such men performed a legislative service that invites and is receiving public confidence, a confidence which has too often been betrayed by party promises through political platforms.

It is difficult to delude the average voter with promises of governmental reform when he knows we wink at humbugs and steals by voting for scores of questionable projects scattered through every river and harbor bill. That is the system fastened upon us through the activities of a $50,000,000 waterway lobby.

Efficiency and business methods will save hundreds of millions of dollars annually to the country, eliminate inexcusable war taxes, and yet not sacrifice a single worthy project or injure any legitimate function of government.

The people are ready to drop political-platform phantoms, which are a shadow rather than substance, and they are willing to place the tariff, trusts, and waterways in the hands of high-class administrative boards, empowered to investigate conditions and to recommend proper legislation.

LEGITIMATE WATERWAYS DESERVE IMPROVEMENT.

Legitimate waterways are important to preserve, but practically every river in the country, excepting the St. Marys, a connecting lake link, has lost in commerce under the present lack of system or of intelligent improvement. Of all the hundreds of rivers, creeks, and rivulets receiving Government appropriations, not one in a dozen has maintained its traffic during the last 10 years.

Hundreds of millions of the people's money—not ours—has been frantically poured into the Mississippi, Ohio, Missouri, Tennessee, Cumberland, Arkansas, Red, and other streams, but dredgers, contractors, land-reclamation schemes, water-power projects, and other private interests have been served to the exclusion of commercial consideration.

Local contributions for harbor improvements, with guaranteed public free water terminals, would give some assurance that improvements were necessary and legitimate. To-day the Government Treasury is a huge grab bag, and while Congress holds the strings, investigation shows a multitude of private interests, from railroad-owned shipping and dredgers and land reclamationists down to electrical interests, all have their hands in the bag. This year the bag, or the barrel, is slightly smaller in size, but never before in the history of the country has a river and harbor bill been presented which contained any objectionable project surpassing the $18,701,000 Muscle Shoals water-power project, found hidden under the Tennessee River appropriation contained in this bill.

A SWARM OF 172 NEW SURVEYS.

Never in recent years have the engineers been directed in times of business depression to report on so many new surveys, reaching 172 in number, and never has any State with a total insignificant actual tonnage ever before placed over 30 projects, many of them questionable, in a single bill.

THREE GREAT RIVERS RECEIVE $14,421,000—A COMPARISON OF INLAND WATERWAY COMMERCE.

After first deducting floatable timber, sand, and construction material on the Mississippi and Missouri Rivers and duplicated commerce on the Ohio River—

	Tons.
Upper Mississippi (including duplications)	233,315
Lower Mississippi, no definite data.	
Missouri River, Kansas City to mouth, 400 miles	35,000
Ohio River, continuous traffic (see Kingman's letter), about	2,000,000

these three rivers will receive 42 per cent of the $34,000,000 bill.

SEVERAL LAKE PORTS.

	Tons.
Ashland, $20,000 item	5,623,309
Milwaukee, $15,000 item	8,647,230
Chicago, $464,000 item	13,275,000
Cleveland, $100,000 item	16,488,000
Buffalo, $187,375 item	18,920,000
Superior-Duluth	46,875,416

The lake shipments will average over 500 miles. For harbors accommodating over 100,000,000 tons of commerce in 1913, less than $1,000,000 is appropriated for all purposes by this bill. A similar proportion holds good for seaports in this economy bill, but through wasteful river appropriations in the past and by this $34,000,000 bill over $100 is spent per ton for river traffic in proportion to every single dollar that goes to ocean or lake tonnage.

Evidence as to the above river projects and the absolute waste thus brought about I desire to present, based primarily on the engineers' reports.

OUR DISAPPEARING RIVER COMMERCE.

The old river traffic can not be rejuvenated with Treasury elixir. It will return, if at all, through changed business conditions, through a control of both minimum and maximum railway freight rates, through Government owned or controlled waterway transportation agencies, and, finally, through a different form of craft to meet changed commercial demands that will serve to divert traffic from the Great Lakes and railways. Until commercial demands are manifest and actual we will continue to waste hundreds of millions of Government money, blindly chasing after our lost river commerce. Engineers may provide waterways, better craft may be devised than the old stern-wheelers, but the law of economies, of modern business methods, can not be set aside by lavish Government appropriations, however large and wasteful they may be.

Never before has the Mississippi River demanded $7,387,000, the Ohio $5,684,000, and the Missouri a paltry $1,350,000—totaling nearly fourteen and one-half millions out of a $34,000,000 bill. Over 42 per cent of the total amount is to be poured into these three rivers, notwithstanding engineers' reports show the Mississippi and Missouri commerce now exists only in name and the Ohio is also on the toboggan slide.

True, this bill has postponed some vicious projects. The $750,000 Oklawaha, and the Kissimmee, and the Trinity, and the Matawan, and a few of North Carolina's creeks have been told they must wait for the 1916 Santa Claus; but Cape Fear River gets $378,000 in this economy bill, and Beaufort Canal for floating timber is given $600,000 in this money saver.

Coosa's water powers are not forgotten in a $131,000 appropriation for a stream without traffic. Port Aransas, Sabine Pass, and the Houston project down in Texas together absorb a million dollars in this economy measure, while the busy Brazos contractors get over a quarter of a million to tide them over a hard winter.

Bad as ever in principle, containing millions of dollars in wasted moneys, committing the Government to an infamous private water-power project at Muscle Shoals, with nearly one-half of the total to be dumped into three rivers, this river and harbor bill is a hypocritical pretense to economize. We are told the President will sign it if it gets through Congress. We were also told the President was ready to sign the $53,000,000 bill that was recently killed in the Senate. Posterity will not search for the pen that signs such bills, but will look for the legisative ax that kills them, whether wielded by Senators on the floor of the Senate or by the Senate committee that rocked the boat with the last $53,000,000 bill.

When the present $34,000,000 bill was presented to the House, on January 14, for amendment I introduced the following amendment:

TO PLACE AN ADDITIONAL CHECK ON WASTE.

At the end of line 9, page 1, insert:

Provided, That before the payment of any moneys for projects hereinafter specifically mentioned a board consisting of the Secretary of Agriculture, Secretary of Labor, and Secretary of Commerce, to be known as the national board of waterways, shall, by written report to the Secretary of the Treasury, approve the public necessity for any expenditure on each individual project, and that such expenditure is to serve a public use in aid of navigation: *Provided further*, That said board may make or cause to be made independent examinations of the character of any and all projects and may call upon the Army engineers or employ the service of such other experts as may be necessary in determining the surrounding conditions, general character, and public use which such project is intended to serve.

With that provision in force an additional safeguard would be thrown about the Treasury doors in place of a farcical engineer's survey. No diagram of reasons need accompany the defeat of the amendment, which occurred by a viva voce vote. Then came the following amendment, which is self-explanatory:

TO REQUIRE PUBLIC WHARVES AND TERMINALS.

Page 2, after line 2, insert the following:

Provided, That no expenditure for any project shall be made until the Secretary of the Treasury shall be advised by the Board of Army Engineers that suitable public wharves and terminals have been provided by local interests sufficient in character to afford ample accommodations for all traffic upon said waterways, and that such public wharves and terminals, subject to general supervision and care of the local authorities, will be kept open at all reasonable hours for the free use of any and all persons desiring to use the same.

Railroad ownership of terminals and absence of public terminals have long since ruined competition at many points. In fact, the Government is blindly donating funds to different projects that are to-day supplementing railway interests and

not in any way serving the public purse or convenience, individually or collectively.

The second amendment went the way of the first.

Having confidence in the honest intentions of our distinguished President, and with a purpose of placing in his hands an opportunity to exercise a little genuine economy by striking out scores of wasteful items aggregating many millions that appear in the bill, I offered the following resolution:

AUTHORITY TO WITHHOLD ANY SEPARATE ITEM.

Page 1, at the end of line 9, insert:

"*Provided*, That if the President shall, upon investigation, ascertain and determine that any project or projects hereinafter provided for are not of material value to the public he may, in his discretion, withhold such specific appropriations until further action by Congress."

Notwithstanding we frequently place restrictions upon the Secretary of War and on engineers, who are directed by law to withhold appropriations if in their judgment conditions warrant, a point of order was made that this amendment is unconstitutional. Apart from the doubtful merit of the objection, we appear to have surrendered many more valuable legislative rights to the Executive than is involved in this proposal, which has to do with negative rather than affirmative action.

Again my well-meant efforts were unappreciated by the defeat of the amendment through the overwhelming repudiation of the proposal by the Democratic side of the House.

I have ever believed one sure way to diminish the number of wasteful projects that bob up in every bill would be by compelling local contribution from the community most directly benefited. For this reason I thereupon offered the following amendment:

TO REQUIRE LOCAL CONTRIBUTIONS.

Page 1, at end of line 9, insert:

"*Provided*, That one-half of each separate appropriation hereinafter specifically named shall be available whenever there shall be contributed by any State, county, city, or locality or localities an amount equal to one-half of such appropriations, which amount so raised shall be placed to the order of the Secretary of War and shall be expended by him pursuant to the report of the United States engineers on such project: *Provided further*, That the remaining half of each appropriation hereinafter provided shall be retained in the Treasury, subject to the order of the Secretary of War, and to be used by him whenever needed in the completion of the project for which such appropriation is made."

Again my good intentions failed to substitute the will of Congress in the matter of contributions for the flexible, wavering, and unreliable judgment of Army engineers.

The Government's grab bag would not prove so attractive with fixed conditions of equal local contributions. We adopt that plan when contributing Government highway aid to the several States. Why should we dump into inconsequential creeks or ravenous land reclamation projects millions of dollars in gold simply because a formidable $50,000,000 waterway lobby or strong political pull demands from us the money?

Of course this amendment fell by the wayside, although our Democratic friends have pretended in office and out that they were the anointed economy party chosen by the people to limit governmental extravagance.

After the defeat of these several amendments I called attention to appropriations proposed in this bill for harbors where no public wharves exist or where terminal facilities are practically all owned or controlled by railways or the shipping trust.

The first item in the bill is "Portland, Me." The president of the rivers and harbors $50,000,000 annual waterway lobby has frequently called the attention of Congress to the exclusive monopoly of terminal privileges in eastern harbors now possessed by railroads, and I desire to confirm his assertion by official statements all of which were more fully set forth in a speech made in the House by myself which appears in the RECORD of June 19 last.

I will cite a few notorious cases where the Government is engaged through this bill in serving as the handmaiden to railway interests. Just how public interests are aided or the high cost of living reduced by waterway competition in such cases is not made clear to a war-tax paying people.

PORTLAND, ME.

Portland, Me	$105,000
Balance on hand October, 1914	207,602
Past appropriations	1,877,727

I have been charged with sectionalism because criticisms were mainly leveled at southern projects contained in the last bill. That is partially true, but not because of any purpose to discriminate between northern and southern projects. An easy explanation is found in the large number of projects in the South usually accompanied by an insignificant annual tonnage after deducting sand and gravel and floatable timber. In reply to this charge, I will say that presumably many northern projects are equally indefensible, and as Portland, Me., asks for $105,000 in this bill, it is well to know that we have already appropriated $1,877,727 for the harbor and $207,602 was on hand last October with which to "restore a 30-foot harbor," to use the engineer's expression. That seems an extravagant sum for emergencies during this period of pretended public retrenchment, while other conditions warn us to make haste slowly with this project which has already swallowed nearly two millions of Uncle Samuel's dollars.

WATER FRONT OWNED BY RAILROADS.

In the report of the Commissioner of Corporations, volume 3, page 47, appears the following statement regarding Portland's $2,000,000 30-foot harbor:

About one-half of the active commercial water front of Portland is owned by railroads. No portion of it is owned by the city. That portion not owned by railroads is in the hands of individuals and private corporations. None of the wharves are either public or open.

Frankly there is not much difference between a fertilizing factory project at Matawan, N. J., or on the North East River, N. C., criticized in the last bill, and a railroad-controlled harbor, nor is there any great difference in purpose between aiding steamer companies owned by or affiliating with railroads and a land reclamation project on the Mississippi River or out on the Sacramento, both of which appear in this bill.

When we realize we have given nearly a couple of million dollars to this harbor and six months ago over two hundred thousand was on hand for emergencies it requires a severe wrench to give another hundred thousand dollars in this economy bill when engineers inform us, pages 51 to 54 of the 1914 report, that no definite statement of freight rates can be made, but "the capacity of the harbor has kept pace with the draft of vessels." If so, why not wait until the railroads really need another hundred thousand for their terminals before forcing money upon them? Such a proposition ought to appeal to a business administration that desires to economize.

The amendment to strike out was defeated.

BOSTON HARBOR, $200,000.

Balance on hand October, 1914	$746,326
Past appropriations	12,187,947

The last bill carried $400,000 additional for a 40-foot depth project in this harbor. On the advice of members of the committee in the Senate, to be found on page 16464 of last session's RECORD, we were told that Boston has as much water as any harbor in the country, New York excepted, and is in no immediate need.

Since sundry Indians dumped a cargo of tea into that harbor years ago the harbor has become an inveterate drinker and has swallowed $12,187,947 paid from the Federal Treasury, according to page 1548 of the report.

Boston has a large commerce and has had for many years, so that an extract from the Commissioner of Corporations report (vol. 3, p. 53) is surprising when it states:

The city owns almost none of the commercial water front.

Over on the next page the same official says:

A large part of Boston's water front and much of its most valuable wharf property are in the hands of the railroad companies.

The Metropolitan Improvements Commission discusses the center of culture in this wise (Commissioner of Corporations report, p. 55, vol. 3):

No one versed in sound construction can visit the dock terminals of Boston without realizing that they are in the main the product of haphazard and patchwork policy, largely unworthy of the port and unsafe for present and prospective passenger and freight business.

STEAMSHIP LINES ARE THROTTLED.

Getting down to brass tacks, the commissioner says in volume 4, page 14, of the transportation lines:

Four of the nine services connecting Boston with other important points are subsidiaries of shipping consolidations and four are controlled by railways.

Again, he says of coastwise business:

Boston has but one single steamship line to any port listed.

After studying over such reports the average taxpayer wonders just what public function of Government is called into service when we make appropriations for 35 and 40 foot harbor projects for the accommodation of two or three foreign-owned vessels. I will not discuss the proposition further than to say it is well to remember in these troublesome days of tax burdens a story told of Lincoln during the Civil War. When a delegation of Boston's choicest citizens waited upon him, demanding adequate protection for that harbor, the great emancipator suggested that if he had as much fear in his heart for his home city as the choicest citizens seemed to have, he would inaugurate a self-help endeavor society at home.

Why not invite to Washington the railroad officials controlling the four railroad steamship lines and the head officials of the Steamship Trust which controls all other lines with one exception? When they demand a new 40-foot channel for their boats, would it not be well to remind them of Lincoln's advice just a half century ago?

I do not overlook local improvements undertaken recently by the State, but I believe railroad-owned ships and trust-owned steamships should pay their fair share of improvements—at least until the Government undertakes to build tracks and terminals for railways that do not own connecting steamship lines. I further believe that some portion of the dredging expense should be borne by the municipality or the two or three very heavy-draft vessels which do not carry 5 per cent of the commerce handled at this port.

Contributions have been made by Massachusetts to work on Boston Harbor, but why not make a condition precedent to such appropriations that dredging projects will be undertaken when a proper portion of the expense is locally contributed?

PROVIDENCE, R. I.

Balance on hand October, 1914	$695,772
Past appropriations	2,766,353

Apparently this is not a very large appropriation, but Providence is rather exclusive, and so gets its gratuities from the sundry civil bill. About $2,766.353 has been appropriated for the 10-mile stretch below Fox Point to deep water, according to the report, and counting $500,000 received from the last sundry civil bill, a balance of $695,772 was available last October for use on this project.

The bill before us expresses some desire to have Providence do something for itself before we put any more money in the 2-mile stretch between Fields Point and Fox Point. The other 8½ miles are still included in a continuous performance of Providence to the Treasury and back again.

On pages 66 and 67, volume 3, Commissioner of Corporations report, occurs this interesting statement:

Practically all the wharves at Providence belong to private parties, including railroad and trading corporations. The city owns a small wharf below the Point Street Bridge, which it leases for a lumber wharf, and it also has a small wharf just above Sassafras Point, which is used by the various city departments. There are no open piers in Providence.

A statement that the New Haven Railroad owns most of the wharfage is probably superfluous, and although the belated effort to get Providence to do something for itself is not to be questioned, it does seem that after spending $2,766,000 on all projects, the real Providence is located on the Potomac rather than on Providence River. The latest and most fashionable project recommended by Army engineers for this popular city has received $595,280, according to page 119 of the Chief Engineer's report, and is now 7 per cent completed.

I am convinced we ought to withhold the balance of the money now on hand until we ascertain just what the Government is getting for that money.

The amendment to strike out was defeated.

NEW HAVEN, CONN.

New Haven	$10,000
Balance on hand October, 1914	101,853
Past appropriations	2,280,017

This carries a familiar name, due to temporary notoriety, which connects another enterprising project with this same name. As we are now dealing with $2,000,000 projects, according to the equitable distribution of funds by political pull and powers that be, it is not surprising to learn that behind this $10,000 is a total of $2,280,017 which has been given by a generous Government to New Haven Harbor and breakwater. Of equal interest, we learn that in last October over $100,000 was available for harbor work out of unexpended appropriations.

After spending over $2,000,000 at New Haven, I quote from the commissioner's report, volume 3, page 13, that "Most of the important New Haven frontage is railroad owned." Most everything around New England, including several legislative bodies, were once said to be owned by the enterprising New Haven system, so that $2,000,000 of Government money responded in like manner to the call of the railway magnet and magnate.

WATERWAY TRANSPORTATION LINES.

Just how far-reaching this influence becomes and just how little public interest is represented in the line of boats operating between New Haven and New York may be gathered from the commissioner's report, volume 4, wherein he says the New England Steamship Co. owns 31 vessels, with $6,000,000 in stock and $9,000,000 in bonds, all owned by the New England Navigation Co.

The New England Navigation Co. is stocked at $53,000,000, and all of that stock is owned by the New Haven Railway (pp. 20 and 21). In other words, the New Haven Railway owns the 31 boats engaged in the Sound traffic, and the Government is engaged in perfecting terminal facilities for these boats in a harbor most of the important frontage of which is owned by the same railroad company.

On page 1664, 1914 report, we are informed that traffic in the main harbor decreased 14 per cent since 1912. That is a serious loss after such large investments by the Government; but food for thought lies in the knowledge that New Haven Railway stock fell much faster, when the balloon collapsed.

HARTFORD, CONN.

Below Hartford	$30,000.00
Balance available July 1, 1914	70,998.99
Past appropriations	873,170.00

I do not desire to dwell at length on the splendid enterprise shown by captains of industry at the head of New England railways, but in mentioning this paltry $873,170 spent below Hartford, it occurs to me that the following may be of interest taken from volume 3, page 69, Commissioner of Corporations report:

Of the Hartford frontage, 18 per cent, or 1,280 feet, is owned by the New Haven Railway, about the same amount is owned by the gas company, the Hartford Electric Light Co., and two private estates. The balance is owned by the city for park purposes.

Again, the report says:

The New Haven Railway owns the greater part of the available frontage on the opposite bank.

If this condition exists to-day and Congress derives no information from the engineers' report, why should we continue to spend money on the project?

Harking back to the policy of local contribution invoked in different European countries, would it not be better for the Government to openly enter into partnership with the New Haven Co. and the gas company, inviting local contributions, rather than throw all the money into the harbor surrounded by such eleemosynary corporations?

The proposal to strike out did not meet with favor.

Above Hartford:	
Balance unexpended	$19,719
Past appropriations	155,000

Once on a time the accommodating engineers recommended for this project $1,015,600, but after $117,805 had been spent the following statement occurs in the 1914 report, page 146:

No permanent benefit has resulted from the work so far done in the river. There is no existing commerce of a commercial character other than the operation of excursion steamers in the reach above Enfield Rapids.

Naturally the supposition will occur that if the "existing commerce of a commercial character" is down to joy-ride trips on the upper reach of the river that commercial commerce, sympathetically with the river's stage, has reached low ebb. Yet the committee recommends turning over the balance in hand toward improving a negligible "commercial commerce" in these days of war-tax economies.

NEWARK BAY, N. J.

Newark Bay	$150,000
Balance on hand October, 1914	253,217
Past appropriations	2,192,350

Appropriations reach $2,192,350 for the bay and river, which shows that Newark, with Providence, Point Judith, New Haven, and Hartford, has reached the $2,000,000 class.

Originally the Passaic River possessed a 7-foot depth at Newark, but a 20-foot project is now being carried on, because, according to the Army engineers—

This improvement is necessary to the great industrial interests, and has reduced freight rates, and its continuance is necessary to the successful carrying on of the business of this locality.

It would be idle to reflect in any way upon the commerce or enterprising projects surrounding Newark, but it may be well to inquire, if "great industrial interests" desire a deepening of the river, why would it not be proper for such interests directly benefited to contribute toward such improvement? In other words, why should the taxpayer in North Carolina or Florida or Texas or Minnesota pay war taxes to help out the great industrial interests of Newark unless Newark helps herself?

In this connection the Commissioner of Corporations says, volume 3, page 102:

The New Jersey Terminal Dock & Improvement Co., incorporated 1905, acquired the Hackensack Meadows Co., which owns 33,090 acres of riparian land.

This land is opposite Newark and owned by a great New York company, which also owns vessels and dredging outfits. What increased value is contributed by this "great industrial interest" toward the harbor project? Is there any connection between this dredging company, its 33,090 acres of riparian land, and Government dredging work? If it does not benefit directly, it does indirectly, and ought to contribute.

Amendment to strike out was, of course, defeated.

HUDSON RIVER, N. Y.

Hudson River	$1,500,000
Balance on hand October, 1914	1,860,136
Total appropriations	9,466,524

The engineers jumped their estimates in four years on this project from $5,186,064 to $7,530,000, or approximately 50 per cent.

The project intends to afford a 12-foot depth on the Hudson River to the end of the State canal at Waterford. In view of the enterprise shown by New York State in providing $150,000,000 for a canal from Buffalo across the State, it would be captious to question the Government's duty to make suitable connections, and I do not assume to criticize this appropriation, although it may be unnecessary to add a million and a half, in addition to nearly two million reported in October. In war-tax times such appropriations are subject to critical inspection by every Member, but I desire to call attention to another matter connected with this same river.

On page 41 of the bill is a proposed survey to dredge the Hudson River from its mouth to Hudson to a depth of 30 feet, and to provide a 30-foot harbor at Hudson about 100 miles from the sea and a second 27-foot survey is contained in the bill from Hudson to the Troy Dam, 153 miles from New York City.

The River and Harbor Committee assures us it expects to eventually reduce appropriations, but offers these two samples of economy, which may absorb from ten to twenty million dollars, depending upon the plans.

These surveys are apart from the present 12-foot project. The debate on this item, contained on pages 1711 and 1712 of the January 15 RECORD, is illuminating.

SYRACUSE AN OCEAN PORT.

It appears that Albany and Troy and sundry other river towns wish to become ocean ports. In order to do so it is proposed the Government shall eventually dredge out the Hudson River 30 feet deep for 150 miles from its mouth in order to accommodate these cities.

What possibilities are unfolded when great ocean liners pass by New York City and Brooklyn, two way stations, in order to dock at Hudson or Albany or Troy, which are to become the real ports. Then we may dredge the $150,000,000, 12-foot State canal, at Government expense, to a 30-foot depth in order to reach Buffalo and Syracuse, which are sure to be jealous of Albany and Troy. The old, abandoned Fox River Canal, in my own State, built by a Government land grant, should then be deepened in order to divert trade from the Lakes right on through to the Mississippi River. By so doing we might sidetrack Chicago and other lower lake ports in order to make St. Paul or St. Louis the final destination of ocean liners. The possibilities of this transcendent scheme will appeal to every true friend of unlimited waterway improvements and unrestricted Government expenditures. But is it a wise policy? If so, we are seeking to divert trade instead of serving commerce.

COMMERCIAL STATISTICS.

In the RECORD for June 19 I endeavored to present conditions which surround many harbors. Railroad terminals and railway-owned shipping are profiting at Government expense when the Federal Treasury dredges harbors up to railway wharves. As well build trackage and depots for the railways. Neither policy can be successfully defended.

Again, on September 29, I endeavored to give to the House some facts relating to the $50,000,000 waterway lobby and its associated waterway lobbies. Original subscription lists from various interests were presented, and also evidences of indefensible methods pursued by the lobby to whip objecting Representatives and Senators into line.

On December 14 last I briefly presented a few facts shown by the engineers' report as to the Muscle Shoals water-power project and kindred water-power companies. In all of these discussions facts have been presented concerning the Mississippi, Ohio, Missouri, and other river projects.

QUESTIONABLE COMMERCIAL STATISTICS.

In this discussion I desire to show the unreliability and misleading character of commerce statistics presented by engineers' reports. Heretofore the committee members have asked questioners on the floor whether or not they appreciate the full value of commerce carried on at some particular harbor or on some river. The frequency of such inquiries and the doubtful character of several commercial propositions have caused me to make a slight investigation into the character of commerce, average value and haul, and apparent necessity for deep water demanded by some of the projects. Proposals for deepening streams in which over 90 per cent of the traffic is logs or lumber that floats are to be found in the bill before us. Why dig deep ditches to float timber with a decreasing commerce to accommodate?

Ports or rivers that float hundreds of thousands of tons of sand show an impressive total tonnage until the commerce is analyzed. In like manner a river's commerce is frequently boosted by duplications or, as Chairman SPARKMAN has said, by quadruplications of the same identical commerce.

By repetition, it shows a respectable tonnage to be served. Ferriage across the Ohio, Mississippi, and other rivers is used to swell questionable statistics.

Much cheap commerce is accommodated at lake ports, but it is genuine commerce; and it will be remembered that approximately one-half of Philadelphia's important commerce consists of coal, iron ore, and sand, having an average value of about $3 per ton.

Waterway commerce at interior points usually consists of cheap, bulky freight, but occasionally a little high-priced commerce will boost the average value and mystify the investigator as to the real value of the project or necessity for the improvement.

In order to aid to a better understanding of the commercial necessities of certain projects a brief analysis of commerce will be made occasionally.

SHREWSBURY, N. J.

Shrewsbury	$10,000
Balance on hand October, 1914	14,917
Past appropriations	449,500

Appropriations for this 10-mile project reach $449,500. Compared with Matawan Creek and Shoal Harbor, projects found in the last bill, the Shrewsbury project appears on the surface to be an important commercial enterprise. The Army engineer places emphasis on its commerce, which reached 1,306,188 tons in 1912. Such a large commerce naturally invites attention, and so we learn that of the total commerce 620,000 tons was "general merchandise," valued at $800,000. Conceding for the moment that this merchandise was of an unprecedentedly cheap character, we are mystified upon learning that 500,000 tons of "miscellaneous" tonnage was valued at $501,050, or at the rate of $1 a ton. The intelligent report fails to give the character of "general merchandise" and "miscellaneous" commerce, which reaches about 75 per cent of the total; and in view of the failure of any report on commerce for 1913 Congress has a right to know about this mysterious commerce and the 10-mile project on which it floats before appropriating anything more in these days of economical administration and war taxes.

MONONGAHELA RIVER, PA.

Monongahela River	$211,200
Balance on hand July, 1914	74,721
Past appropriations	6,181,762

We next jump across Pennsylvania, without the aid of any inland-waterway project, to land in the Monongahela River that has received $6,181,762 to its credit, according to page 2594 of the 1914 report. I do not overlook the fact that this stream has been able to hold its own during the past six years—a remarkable feat—when practically all other streams have been steadily losing commerce in recent years.

The report does not disclose any facts as to the particular interests to be aided, but I have been informed that the Monongahela Coal & Coke Co. is practically a monopoly; that it owns or controls practically all the boats on this river and on the Ohio, and more than any other one agency controls the output of coal and the price.

I do not vouch for the correctness of these statements, but if in part true the query will arise just what interests have been advanced by an expenditure of over $6,000,000 on this river, and who will be the direct beneficiary of $211,200 proposed to be given in this year of war taxes and economy. Is genuine competition in freight rates afforded; and if so, is the price of coal reduced?

MEETING AN OLD FRIEND ON THE RIVER.

Recognizing a familiar sound in the Monongahela Coal Co. name, I have glanced back over original subscription lists, and find this concern gave $500 in one year, as did the Carnegie Steel Co., out of a total of about $5,000, to push a waterway lobby that was in turn pushing the Monongahela River in the river and harbor bill. That the push was vigorous is attested by appropriations made by the Government as set forth in the engineers' report.

Traffic has steadily decreased on this system, although we are spending $80,000,000 in all on the Ohio River aside from $6,000,000 on the Monongahela. The continuous or through traffic on the Ohio, as shown by the different locks and at the mouth of the river, only amounts to about 1,000,000 tons of freight, nine-tenths of which is coal. Will coal shipments increase when 53 locks have been placed in the Ohio? No one familiar with river navigation will seriously contend that tows of a score of barges could be run through all these locks profitably.

It is an engineering triumph but an unbusinesslike proceeding, according to the judgment of practical rivermen.

I believe we ought to know where we are traveling in these reckless expenditures, and will discuss the Ohio River traffic later in the bill.

The amendment to strike out was rejected.

IMPROVING DELAWARE RIVER, $1,500,000.

Balance on hand October, 1914	$2,252,243
Past appropriations	20,220,466

We jump back across Pennsylvania again to take up a project or series of projects that have received $20,220,466. The existing project is for a 35-foot channel up the Delaware to Philadelphia. Pointless jokes have been cracked at Philadelphia's expense for many years, but the Army Engineer's Report for 1913, on page 1750, gives in full a letter from John Meigs, assistant director of wharves, wherein Mr. Meigs seriously tells a waiting world—

> The city of Philadelphia seems now to be on the point of awakening from a sleep of decades.

Presumably the period was longer than Mr. Van Winkle's celebrated trance, so we look for the cause of this awakening and find that after nearly a score of millions had been spent on the Delaware by the Government, the Commissioner of Corporations, in volume 3, pages 105–106, made an inventory of stock, with the following results: Ownership of Philadelphia's water front, railroads, 21,042 feet; private and corporations, 31,166 feet; city, 4,431 feet, or less than 8 per cent of the water front owned by the city. Again, the inquisitive commissioner learned that of the piers in use the Reading Railway owned 30, the Pennsylvania Railway owned 18, and the Baltimore & Ohio and Lehigh Railways held 15 between them. Cramps had 13 more, which made about 76 piers owned by these six interests.

Philadelphia city owned three recreation and freight piers and seven other piers, but all the latter were rented to railways. This shows that Father Penn turns a thrifty penny now and then.

The last Engineer's Report shows the city is still awake, and is building another pier, with two or three more in prospect. Philadelphia has a large commerce. For years it has come from across the seas and along the coast, and upon reaching Philadelphia the captains of vessels not owned or controlled by railways have been compelled to lease or rent wharfage rights while loading and unloading cargoes.

How far this is to be changed by the awakening of Philadelphia only time will show. But why should not Philadelphia contribute toward this 60-mile river improvement which has already cost the Government over $20,000,000? I am speaking of the principle of contribution that ought to be uniform, if ever adopted.

ANNUAL MAINTENANCE CHARGES.

One other Delaware River item is of interest.

We are told on page 307 of the 1913 report that maintenance work in 1913 cost the Government $319,674.78. The report adds, it resulted "in an increase of prevailing depth of one-tenth foot." "This is regarded satisfactory." The complacency with which Army engineers express satisfaction over about 1 inch increase in depth at a cost of $319,674.78 is encouraging to those who are now paying war taxes to meet such expenditures. Through such heroic means, financed by the Government, has Philadelphia been brought down to the sea, a distance of 63 miles.

No motion was made to change this or similar items because of the important commerce handled by Philadelphia, Boston, New York, and other great ports. In none of these cases has any reduction been suggested, because no one will question that under the present system such projects must be considered highly meritorious, and yet elements entering into this and similar large items deserve some consideration.

WILMINGTON, DEL.

Wilmington	$60,000
Available to June 30, 1915	207,572
Past appropriations	1,556,952

Appropriations on this project reach $1,556,952. Again it will be conceded that a considerable commerce goes to and from Wilmington, but, referring to the Commissioner of Corporations again, we find, in volume 3 page 114, the following:

> The city owns eight wharves on the Christiana averaging 50 feet in length, which are leased for three-year periods at an annual rental of $100 each. The lessees use the wharves principally for their private business, but nearly all of them will allow goods to be handled over their wharves for a nominal charge, so long as it does not interfere with their business.

To fully appreciate the irony of this situation after the Government has spent over a million and a half dollars on the project it is worth while rereading the commissioner's statement. He adds that about 15,000 feet of frontage are owned by industries having more or less wharfage facilities.

On March 9, 1901, the city of Wilmington appropriated $60,000 to aid improvements for the Christiana River.

To June 30, 1914, only $20,297 city money had been used, or a little more than 1 per cent of the amount paid by the Government to aid Wilmington. Where is the balance of the amount appropriated by the city? Why was it not used, and why is the Government paying a million and a half dollars to improve a harbor where the wharves are owned by or leased to private parties?

Nothing more clearly demonstrates the complete farce of local contributions to Government expenditures as now practiced by engineers. Without system or power to enforce, the engineers are between a local and a political fire.

JAMES RIVER, VA.

James River	$100,000
Balance on hand	14,357
Past appropriations	3,200,832

Richmond was a hard city to reach some 50 years ago, but Grant was an express train compared with this project. According to the Engineer's Report the project for a 22-foot depth from Hampton Roads to Richmond was started in 1884, and during the past 30 years over $3,000,000 has been spent by the Government on this river, although the present project is only 45 per cent completed. At the same rate of speed we may expect our children to celebrate a 22-foot depth about 40 years hence. According to the Engineer's Report during the last seven years the commerce has remained stationary.

During the discussion of this bill I have been honored by the attention of many able and courteous gentlemen and sometimes by gentlemen not so able and courteous, all because of my inquiries into pet local projects. The James River 22-foot channel for 100 miles from Hampton Roads to Richmond has been severely criticized by Senator BURTON, a great waterway authority, and also by others who ask why $5,374,943.15 is to be spent on this stream when, after an expenditure of over half that amount, the Government in 30 years has given to Richmond an 18-foot channel (p. 449), or more than is to-day found at the head of navigation on the Hudson River or on many other busy waterways. Several of Virginia's ablest Members have belabored the committee because of its neglect of real waterways in the Old Dominion; but the James is cared for with $100,000, and so its local Representative indulges in withering denunciation of those who venture to question his pet project. He credits me with an investigation of all the projects in the bill, whereas I never examined but one Virginia item—the James River. In fact, the RECORD will show his is the only one of fifteen projects in Delaware, Maryland, and Virginia which was criticized.

A $100,000 BIASED JUDGMENT.

The celebrated Cowpasture and Pagan Creeks that have cooperated with $3,200,000 of Government money in making the James River navigable have not been criticized. Neither have other Virginia projects been subjected to inquiry; but, coming to the defense of the committee on the defeated Muscle Shoals private water-power project, the James's Representative gives this bill and the James River $100,000 appropriation his unqualified support. Other Virginia Members do not agree with him and have criticized the committee without gloves. Who is right? To show his confidence in the $5,374,943 James River project the James Representative offered misleading statements as to comparative commerce of States. Some one has been stringing the gentleman, otherwise he would have known that according to the Engineer's Report one Wisconsin port has more actual commerce than the entire amount he credits to Virginia—saw logs and all—and this does not reflect on Virginia's large commerce.

The difficulty with the distinguished Member is that he persists in representing Richmond to the exclusion of Virginia or the Government that pays his salary and whose interests should equally command his attention.

ONLY A FEW PROJECTS HAVE BEEN EXAMINED.

From the nature of things I have been unable to reply to personal criticisms without distracting attention from some of the projects that appear in the bill. Neither have I examined nor objected to nearly all the items in the bill, as has been asserted by the several Members, nor to one-half nor one-quarter of them. A few here and there indicative of conditions surrounding others in the bill have been noted. The James River is no better and no worse than many others, but in the absence of positive information that Richmond requires a 22-foot hundred-mile channel to the sea, at a total cost to the Government of over $6,000,000, why is it not well to inquire what has been done with $3,200,000 given by the Government to that same river? If an 18-foot channel now possessed by Richmond will answer present needs—and the engineer gives no information to the contrary—why dump $100,000 in war taxes into the river this year just to keep dredgers and contractors busy? The engineer's estimate that $3,030,978.50 will be required to get an additional 4-foot depth on the James River, or $30,000 per mile, in addition to a like amount already spent for the 100-mile stretch. This is in addition to a large annual

maintenance charge. Irrespective of other projects in Virginia or elsewhere, what justification exists for an extravagant project that after 30 years is only 45 per cent completed and has received over $32,000 per mile during that period from a generous Government?

NORFOLK-BEAUFORT CANAL.

Waterway Norfolk to Beaufort	$600,000
Amount available July 1, 1914	820,115
Past appropriations	1,400,072

For what purpose is this large amount of money to be spent? What is the ultimate gain from a governmental expenditure of $5,400,000, proposed by Army engineers? A dozen years hence, after we have adopted some safe and sane system of waterway improvement, we will look back at this $5,400,000 project as a piece of monumental folly.

Even now engineers are unable to determine the route they intend to pursue, according to their report on page 461, and yet in their frantic desire to please their patrons they demand $1,000,000 in appropriations for present use.

They are building three bridges at a cost of $82,890, and the Government is to purchase land for hydraulic dumping. According to the report a traffic that reached 203,812 tons in 1903 dropped to 90,337 tons in 1912. However, the last report gives 1913 lockages at 258,441 tons, of which 195,000 tons was timber that has always been floated in rafts or barges. Just what proportion of the balance is for governmental material for the canal it is hard to say, but to anyone familiar with conditions along the canal and in the country reached by the canal the project of putting $600,000 into such a wasteful venture is unpromising. To levy war taxes for such a humbug is to advertise the extravagance of any administration. Not $100,000, presumably, could be raised by all the surrounding localities toward aid for the project. At points along the canal the desolate region is only sparsely inhabited, and for a hundred miles along the coast only life-saving men are found, and not one community of any size will be served by the canal, if we except Norfolk and Beaufort village, at the two extremities of this 186-mile stretch.

FOR NAVAL USE.

Army engineers may have some scheme for running dreadnaughts or submarines through this canal, but at present it only accommodates launches and little boats, according to all reports received, and no commerce present or prospective warrants an expenditure of one-tenth of the amount proposed by this item. This statement may be in direct contradiction of the judgment of Army engineers, who ask for $1,000,000 to use before June 30, 1916, but these officials have recommended all kinds of worthless projects that are now standing jokes, from the Kissimmee, Oklawaha, Brazos, and Trinity Rivers to the $63,000,000 canalization of the Ohio and the unlimited Mississippi land-reclamation scheme. Their last stretch of conscience occurs with the Muscle Shoals water-power project. Theoretically, they can do wonders, but their recommendations from a commercial standpoint, if they were given free rein, would bankrupt Rockefeller within 12 months.

Is this an exaggeration? I intend to point out a few projects during these remarks that will show the kind of judgment exercised by these guardians of the Treasury, whom Congress has selected to protect us from ourselves.

We discussed this project in the last bill, and I will only invite attention to one other point. Three months ago we had $800,000 on hand, and now the engineers are to be given $600,000 more when their reports show that the final location of portions of the canal have not yet been determined. Surveys are still under way. Like the carpenter who began construction with the cupola, these officials are beginning anywhere to come out somewhere, and Uncle Sam pays the bills.

The amendment to strike out was rejected.

NORTH CAROLINA HAS 20 PROJECTS.

Pamlico and Tar Rivers	$35,800
Amount available to June 30, 1915	19,038
Past appropriations reach	322,863

This project is for a channel to Washington, N. C., near the mouth. Thence to Greenville, 22 miles, it is 6 feet deep, and for the next 26 miles, to Tarboro, it drops to 20 inches in depth. To state the facts presents the argument.

In 1913 the Engineer's Report says the river was navigable above Greenville from three to six months during freshets (p. 1967). Even the Kissimmee claimed four months of water for navigation, but this North Carolina stream is of little service above the 26-mile stretch.

Nineteen hundred and thirteen, however, was an unusually busy season for the waterway, because during an eventful three to six months a snagging boat removed 5 snags, 510 stumps, 6 logs, 16 saw logs, 1 scow, and 1 old house. When it comes to removing boats and houses from a river to aid navigation it must be admitted that in North Carolina the ground of demarcation between town lots and navigable waters is not as clearly fixed as it should be. In view of $35,800 asked this year and $322,863 already expended by the Government, it is well to note that during the past 12 years commerce has decreased 70 per cent (p. 1968), and of the commerce reported downstream 90 per cent was floatable timber that could be rafted or sent by flatboats.

Apparently some real commerce at Washington, N. C., is used to give character to the rest of the river. In any event, it requires no stretch of imagination to determine where the best natural automobile track is to be found between Greenville and Tarboro during six to nine months in the year.

Motion to strike out rejected.

NEW RIVER AND WATERWAYS TO BEAUFORT, $37,300.

Balance on hand	$7,056
Amount expended	221,000

On this important waterway the Government has expended $221,000, which will reach over a quarter of a million when the 1915 war-tax contribution contained in this bill is added. Part of the money expended was used to cut 4-foot canals through Wrights Island and Cedar Bush Marsh. By this means sailors unfamiliar with their surroundings are now able to distinguish the island from the marsh and, in turn, the marsh from the canal. A generous investment by the Government of $221,000 has produced by 1913 nearly 30 distinct items of commerce found on page 1996 of the report which reach a "grand total" of 42,687 tons, according to the Engineer's Report. One item of floatable timber amounts to 39,865 tons, leaving 2,822 tons to be distributed among the remaining 29 items. It is a matter of speculation just what would become of the engineer's "grand total" if the portable sawmill that appears to be in that vicinity should move to some other waterway.

Motion to strike out was rejected.

HOLDING ON TO A 1-INCH CHANNEL.

North East, Black, and Cape Fear Rivers	$13,000
Balance on hand	6,000
Past appropriations	76,500

I quote literally from page 505 of the 1914 report in order to show the character of the North East River project, which is included in the above item:

Amount expended on present project up to June 30, 1913, was $33,738.86, of which $10,687.96 was for improvement and $32,050.90 for maintenance.

As a result of the expenditures to date, the channel has been cleared wherever needed. Six feet of water can be carried to Bannermans Bridge and 3 feet to Crooms Bridge during all stages of the water.

From Crooms Bridge to Kornegays Bridge, the head of navigation, the river is so shallow that navigation is practicable only when the water is up. This is liable to occur at any time, but during the summer low stages usually prevail.

The minimum low-water depth to Bannermans Bridge is 6 feet; to Crooms Bridge, 3 feet; to Hallsville, 0.5 foot; to Kornegays Bridge (the head of navigation), 0.1 foot.

From the report we are solemnly told that after spending $32,050.90 on this North Carolina "project" the Government has obtained a depth of 6 inches at Hallsville, and 15 miles farther up the river, at the end of the "project" and head of navigation, we have secured (in the channel) a depth of 1 inch—all for $32,050.90. The report says so.

Referring to the bill defeated in the Senate, we learn that it carried $38,375 for this raging stream that floats a little boat called the *Duplin* twice a week on its bosom. That project is shown by House Document No. 1356, Sixty-second Congress, to be for three fertilizing companies, and it fell by the wayside with the rest of the $53,000,000 bill.

It appears that to Bannermans Bridge, for a distance of 48 miles, there is some slight traffic. From Bannermans to Hallsville, 40 miles, the turbulent river falls to about 6 inches in depth, and from the 6-inch stage on to Kornegays Bridge, "the head of navigation," a distance of 15 miles, this famous waterway falls from 6 inches in depth to 1 inch. After deducting floatable timber and fertilizer for the three factories to be served, the commerce is nominal.

FIGHTING HARD TO KEEP THE CHANNEL.

Two thousand five hundred dollars, in addition to the $37,200 already spent, was given by the Army engineers in October, 1914, apparently to maintain a stage of water of 6 inches at Hallsville and, like Horatio, to defend 1 inch at the bridge. As the 1912 report contains this same identical information, it appears certain that by careful attention to duty the North East River, around the head of navigation, has not backslid from its permanent record of 1-inch depth, although the stream shows a loss in commerce during that year of about 30 per cent, and of the balance nine-tenths is timber and fertilizer.

In times of financial depression that bring us a heritage of war taxes it would be wise to strike out a few of North Caro-

lina's 20 different waterway projects contained in this bill. With a full belief that another good automobile track is being spoiled by Government dredges at Kornegays Bridge and that 1 inch in depth has no great commercial value, let us take the dredge away and give the highway commissioners a chance.

Motion to strike out was rejected.

A $6,000,000 NORTH CAROLINA PROJECT.

Cape Fear River (above)	$173,000
Balance on hand October, 1914	139,561
Spent on the entire river (p. 514)	5,805,790

On page 510 the report confesses that since the adoption of the present project closer investigation renders it necessary to increase the estimate of expense from $615,000 to $1,031,000—an increase of 75 per cent in the estimate for the same identical project in four years. The project calls for an 8-foot depth, Wilmington to Fayetteville, and after spending $346,160.68 on this particular project we are informed "the improvement has had no effect on freight rates so far" (p. 511). How can it affect freight rates when there is practically little river commerce?

In 1912 the engineers reported 213,181 tons.

In 1913 they report only 154,797 tons.

A loss in one year of 58,384 tons, or 27 per cent.

Of course, the 69 items in the Engineer's Report are somewhat impressive on paper, but over 80 per cent is covered by floatable timber, usually barged, and by fertilizer factories, that show a net 4-mile haul for 49,553 tons. Even the balance of the "traffic" is largely absorbed by governmental crews, according to advice of those familiar with this part of the river. Yet, with $139,561 on hand, we are asked to add $173,000, or $312,561 for this part of the river in a year of war-tax economies, all for a traffic that has fallen off 27 per cent in the last year and is not affected by any dredging proposition. Of equal interest and waste is the next project on this same river.

Cape Fear River at and below Wilmington	$205,000
Balance on hand October, 1914	187,610

Bearing in mind a past expenditure of $5,805,790 on the whole river we find $187,610 was available for this part of the river in October, 1914. Added to $139,561 on the upper reach it aggregates $327,171 on hand from past appropriations, with $378,000 more asked for in this bill for Cape Fear River.

While a considerable commerce is handled by Wilmington, it fell off 28 per cent during last year, and no data is submitted by the engineers to show any pressing necessity for a 26-foot channel on this 30-mile stretch. If commerce lost 28 per cent after the project reached 65 per cent of completion, it is due to fall to 50 per cent when Wilmington gets its 26-foot channel finished. Possibly the man who pays a war tax to keep the river and harbor bill afloat may fail to get the logic of the situation, but the facts are found in the Engineer's Reports from which I have been quoting.

No further argument is required to show that on most of these "projects" commerce is rapidly decreasing, largely because timber has been cut off and railways are dividing traffic. Glittering generalities fade away before the cold figures revealed in these Engineer's Reports. Allowing for duplications which are shown to occur in reporting commerce, what actual traffic is to be served by this large appropriation?

Motion to strike out was rejected.

WINYAH BAY, S. C.

Winyah Bay	$50,000
Balance on hand October, 1914	82,715
Past appropriations	2,980,664

This modest project has already received $2,980,664 from the Federal Treasury, but Uncle Sam has been so easy that $50,000 more is asked in this year of hard times to be supplemented by $15,000 turned over by the engineers from the October, 1914, river bill.

After spending nearly $3,000,000, two-thirds of which went for jetties, the engineers say, on page 527:

> The precise percentage of reduction of rates does not appear to be susceptible of determination.

A man who pays a war tax can determine his end of the proposition without trouble; but the question occurs, if the engineers, with their superior information and convenient judgment, can not tell about freight rates, who can?

Providing freight rates were reduced, where does the consumer come in? Does he get cheaper coal or a reduction on food or clothing? Who gets the freight reduction when rates are reduced?

Winyah Bay has a tragedy, told in three lines, as follows:

	Tons.
Commerce of 1912	309,673
Commerce of 1913	211,055
Loss in 1 year	98,618

Coupled with a loss of over 30 per cent in the traffic, we learn that of the 1913 tonnage 177,837 tons, or about 85 per cent, is timber that floats or can be barged with an existing 5-foot draft as well as with the 18-foot channel now being urged upon Congress by Army engineers.

I do not care to present any argument, further than to give the official statistics, which speak for themselves—motion to strike out rejected.

WACCAMAW RIVER, S. C.

Waccamaw River	$55,000
Available July 1, 1914	46,156
Past appropriations	253,162

If these projects receive especial notice, it is because a brief examination of their character seems to invite criticism. Take the Waccamaw River, which has received $253,162 from the Government. After 34 years it has secured 60 per cent of a proposed depth, and by digging cut-offs at Government expense the engineers triumphantly declare they have brought Conway down from 49 miles to 45 miles nearer to the mouth of the river—a gain of 4 miles for Conway. Conway appears to be a hamlet of about 1,400 people, and they have been saved the additional distance of 4 miles, due to the generosity of an engineering department superintending a canal built by Congress. The average haul on this stream is given at 35 miles.

	Tons.
Total commerce in 1913	85,287
Logs, timber, etc., that floats	64,164
Balance	21,123

Of this 21,123 tons balance, 45 per cent is fertilizer that does not necessarily require any deep-draft vessels for its conveyance. "No change in rates was noted during the year," say the engineers. With these facts confronting us, what excuse can be offered for bearing down upon a war-taxed people to accommodate Conway village or any other village further than has been done?

Fifty-five thousand five hundred dollars would buy a dozen high-priced automobiles or a half hundred Fords. Under favorable conditions these Fords could convey the 21,123 tons of truck, including the 9,000 tons of fertilizer, over a 35-mile haul in one day; or, differently expressed, one Ford could do the work during the summer, when creeks run dry, using the bed of the stream for a boulevard. Why not buy a Ford instead of further cut-offs for Conway—and why not save money?

Flint River, Ga	$50,000
Balance on hand	18,037
Past appropriations	381,500

Flint River has had a particularly rocky road from 1874, just 40 years ago, when the project was begun. Since those halcyon days of reconstruction of streams and people $381,500 has been sent by the Government down to that river to meet the demands of Flint and steel. Authorities differ in the correct spelling of the last word.

After that expenditure it is well to note the satisfied tone with which engineers announce that from the mouth to Albany vessels drawing less than 3 feet can crawl through, but from Albany to Montezuma only 2½ feet depth is afforded. This stream, we are further advised, is much obstructed, although repeatedly cleared of snags. Snagging seems to be a most profitable occupation on that stream, judging from a $381,000 investment, which only produces 33,594 tons of commerce in 1913, and a portion of that is timber, with an average haul of all commerce of 35 miles. Presumably this "commerce" begins and ends near the mouth of the stream, judging from its short haul.

Bearing in mind that this is about the same net traffic shown on the Waccamaw, with the same haul, and about the same appropriation, how would it do to save $105,000 on these two projects and keep a Ford machine in commission during the entire year, serving both streams? We criticize Democratic extravagance when an extra automobile is asked for by the Secretary of State. In fact, his temerity is greeted with economy speeches filled with patriotism and politics. Why not save the price of a score of good cars and buy a Ford to help out these two projects, neither of which appears to be in need of anything but commerce?

Motion to strike out rejected.

THE COOSA RIVER (GA.) PROJECT.

Coosa River between Rome and Dam 4	$75,000	
Locks and Dams 4 and 5	56,000	
		131,000
Amount available (p. 675)		170,058
Amount appropriated (p. 2175)		1,982,583

To my mind, this is one of the most indefensible projects in the whole bill. When the true story of the Coosa is written it will be shown to be a gross fraud upon our Government, per-

petrated under the name of navigation; that it has ruined lives and property through the agency of this Government, and already leaves a heritage of over 500 damage suits to greet poor residents along the river, who have stood in the way of a powerful water-power trust.

Apparently this river has been used to serve the purpose of a water-power company, and our Government is the worst offender of all against vested rights of hundreds of Georgia's citizens.

After spending about $2,000,000 on the river, its commerce, aside from that used in Government work, is too small to measure and reported to be even less than it was the year before. After spending $2,000,000 during the past 38 years we also learn this project is about 27 per cent completed. There is no humor in a letter I append concerning this project. Thus far, I have avoided the insertion of personal letters, hundreds of which are at hand, but have based criticisms on official engineers' reports. This letter is so specific in its description of conditions that I offer it without further comment than to say it confirms the belief that the Coosa River is one of the most vicious projects contained in the bill. If you would know how bad it is, study the reports and investigate the truth of letters, of which the following is a sample:

MONTGOMERY, ALA., *January 1, 1915.*

Mr. FREAR, *Congressman,*
Washington, D. C.

DEAR SIR: I noticed in a Birmingham paper, several days ago, where you had opposed the appropriation of the Muscle Shoals project of the Alabama Power Co., and that you intended to fight this to the end. I appreciated reading this very much. * * *

The Alabama Power Co. built a dam on the Coosa River up in Chilton County of this State, and they were going to give everybody cheap electricity and they claimed it would do great things for the surrounding country. Well, it did great things all right. They made hundreds of people leave their homes and caused great numbers to die with chills and malarial fever. They have ruined the country for 2 or 3 miles on each side of this river and up the river for 20 miles. They have covered something like 12,000 acres of land that the State and county will never get any taxes out of, and this was some of the best land in the State. The Alabama Power Co. is now furnishing Birmingham with electricity from this dam on Coosa River and the rates are the same in Birmingham as they have always been. This Alabama Power Co. and branch companies are trying their best to get a monopoly on the water power of this State and every other State that they can, and the people of this State do not want this. The Alabama Power Co. has numbers of attorneys and men employed all over this State, and they are the ones that write the beautiful pieces in the papers about the great things this development of Muscle Shoals will do for Alabama.

I can get a petition signed by thousands of men in Alabama condemning this project, and these are some of the best business men of the State. There have been filed in the courts of Chilton County some 200 cases for damages on account of sickness caused from this dam on the Coosa River, and there are something more than 200 filed in Shelby County, and about 200 in Coosa County, and some in Talladega County; these are the four counties which border on this pond of polluted water. Practically every man in these four counties of this State will sign petitions condemning the power companies' monopoly on the death devices they have caused.

If you will write to the law firms of Stallings, NeSmith, Hunt & Judge, of Birmingham, Ala.; Riddle & Burt, of Talladega, Ala.; Riddle & Ellis, of Columbiana, Ala.; Acuff & Pitts, of Columbiana, Ala., they will tell you all about how the Alabama Power Co. has done the poor people in the counties of Chilton, Coosa, Shelby, and Tallageda. These attorneys have over 500 damage suits against the power company.

The Central of Georgia Power Co., which is another branch, or, rather, is connected with the head of the Alabama Co., built a dam at Jackson, Ga., and they ran people away from their homes and killed numbers of them with malaria and chills; and if you will write to Col. C. L. Redman, of Jackson, Ga., he will tell you he has over 100 damage suits against the Georgia company, account of the destruction of homes and sickness.

The people of Alabama do not want any more dams built in this State where they have to be built by the Alabama Power Co. or their branches.

If you will write to Mr. J. P. Vanderveer, jr., of Clanton, Ala., which is the county seat of Chilton County, he will give you all the information you need about what the Alabama Power Co. has done to the people along the Coosa River, and he has a large acquaintance all over the State and can probably be of some service to you.

I have secured a copy of a newspaper published in Clanton, and I am sending you a copy under separate cover, telling something about the power company in Alabama.

Trusting that you may be successful in downing the Muscle Shoals project, I am,

Yours, truly, J. B. BENROM.

FLORIDA'S 30 MODEST PROJECTS.

St. Lucia, Fla	$100,000.00
Balance on hand July 1, 1914	99,927.08

It is well to correct an erroneous impression, that the river and harbor bill contains all the pet schemes of men who enjoy a pull with the committee. This is shown to be error, because while prominent statesmen from Florida at both ends of the Capitol have great influence in shaping its provisions, only 30 projects contained in this bill are apportioned to Florida. With commendable self-denial Florida places the Kissimmee and three-quarters of a million Oklawaha projects back on the waiting list during a vigorous effort to economize. While it is true that Florida gets from two to three times as many projects as its nearest competitors among the States, with the exception of North Carolina's 20 projects and Texas's 20 projects, it is not true that all of Florida's projects are in this bill. Some large ones are wating for the next bill.

St. Lucia is to get $100,000 and later $800,000 more.

On July 1, 1914, the appropriated balance on hand reached $99,927.08. It is practically a new project, and although the Engineer's Report, page 699, says there is "no water-borne commerce at this locality," at the present time, it is possible that 32 people living in St. Lucia, according to the 1910 census, now want to see business boom. For many centuries St. Lucia has slumbered, and the engineer reports (p. 598), "Inside inlet is a harbor of limited depth, suitable only for light-draft yachts." When Uncle Sam's $900,000 has been placed in good hands the harbor ought to be deeper, although no commerce is in existence or in prospective, according to the report.

Why not save this $100,000 by striking it out of the bill? Why not turn the balance on hand back into the Treasury and perform one meritorious act in connection with this bill?

A COMMITTEEMAN REVOLTS.

If any further testimony is desired as to the character of this project, I invite attention to the remarkable fact that the gentleman from Massachusetts [Mr. TREADWAY], an able member of the Rivers and Harbors Committee, presented the motion to strike out this item on **January 15.**

Referring to House Document No. 1312, Sixtieth Congress, he disclosed that the engineers reported against this indefensible project, but Gen. Bixby felt that Florida was not getting its full share of projects—over 30 in this bill—and so threw a life preserver to St. Lucia.

Only 16 votes could be rallied against this project, while 55 Members voted to keep it in.

Incidentally most of the committee members remained in constant attendance, and, aided by delegations from States having projects under consideration, it became practically an impossibility to knock projects, however worthless, out of the bill.

St. Lucia stays in the bill, which is nothing to the credit of the bill and no more meritorious, in my judgment, than the $47,000 Kissimmee or the $733,000 Oklawaha, Fla., projects knocked out of the preceding bill by the Senate committee.

ANOTHER OF THE 30 PROJECTS.

Miami-Biscayne Bay	$50,000
Balance on hand July 1, 1914	100,000
Past appropriations	661,000

This Florida project is fully as worthy as the Coosa or Kissimmee Rivers. Already we have spent $560,760 in developing its commerce, only to find from page 601 that—

No practical channel has been secured, as the channels dredged have filled up within a few months after completion.

On July 1, 1914, a balance of $100,000 was on hand to help needy dredgers out. The bay asks Uncle Sam to loosen his purse strings again.

Here is some additional information from the report:

Commerce in 1913 reached 123,850 tons.

Sand and rock amounted to 73,620 tons, indicating that the Government is a great booster for commerce when it begins operations, because the engineer's eagle eye counts everything, including construction material.

We learn, as an additional reason why more money is not needed, that only one steamer is in the trade—part of the year. Also, that the Van Steamship Co.'s line was abandoned last year. Also, that only 20 per cent of traffic is handled by water. Also, that a suit is pending against the Florida East Coast Railway Co. to compel compliance with a dredging contract.

With abandoned steamer lines and a small doubtful commerce to be served, it would be magnanimous for Florida to drop another of its 30 projects, just to help out the northern war-tax payer.

Again, Mr. TREADWAY, a member of the Rivers and Harbors Committee, moved to strike out from this bill, and presented an able argument against the indefensible project. His final remark was significant, when he said:

We are simply throwing $50,000 into the district of the genial gentleman from Florida, who has so ably defended the St. Lucia Inlet.

As the gentleman from Florida [Mr. CLARK] had just finished a lively flow of oratory against opposition to St. Lucia Inlet, wherein he placed in the Ananias class all opponents to his project, it becomes a matter of congratulation to know that he was in a genial frame of mind when organizing his class.

Biscayne Bay was shown to be a wasteful project, according to the statement of the gentleman from Massachusetts. He is personally familiar with the surroundings, and they corroborate the judgment formed by any unprejudiced person who studies the engineer's reports.

The motion to strike out was defeated.

ST. ANDREWS BAY, $36,000.

Balance on hand Oct. 2, 1914	$36,000
Past appropriations	239,560

Quietly nestling away down on the Florida coast far removed from commercial life and political strife is St. Andrews Bay.

Through Government contributions reaching $239,560, a 22-foot channel has been dug at East Pass.

This project is completed, yet on October 2, 1914, a balance of $36,000 was on hand to care for contractors and dredgers, who needed work during cold winter months in Florida. We are asked to give $30,000 more for this charitable purpose. Possibly no safer testimonial was ever offered by Army engineers than when, after viewing the completed work, the report says (p. 655):

> The completion of the project will serve to test the commercial value of the harbor.

No statement is made that it was needed, but we will now see what we shall see, after spending $239,560.

What was the commerce for 1913? One hundred and sixteen thousand six hundred and twenty-two tons.

What part was floatable timber? One hundred and two thousand five hundred and fifty-seven tons. What was the net commerce? Fourteen thousand and sixty-five tons.

What was the haul? Eleven miles.

And $239,560 was spent to develop such commerce that has an average haul of 11 miles. What is the name of the sawmill that furnishes the commerce? Florida is modesty personified when it comes to asking for something. Thirty-two projects have their hands out reaching for alms like so many disciples of Lazarus, and every other project must kotow to the superior claims of Florida or get an apple-core appropriation. Isn't it a remarkable spectacle? And yet the motion to strike out was defeated.

HILLSBORO BAY, FLA.

Hillsboro Bay	$120,000
Balance on hand July 1, 1914	660,868
Past appropriations	2,089,944

This is no petty Florida project. It is in the easy millionaire class, with a proud record of $2,089,944 squeezed out of the Federal Treasury. It is also a 9-mile arm of Tampa Bay and a type of engineering development that will be found with nearly every project. First a survey, then a modest appropriation, and afterwards a steady gnawing hunger for greater depth of water and Government gold. This project was begun in 1880 with an 8-foot depth; in 1899 it grew to a 12-foot depth; in 1905 it had metropolitan tastes, and was given 20 feet by the accommodating engineers; still hungry, it demanded and received 24 feet in 1910; and with the present popular political pull it ought to be extended to 30 feet by 1915. That is what puts Hillsboro on the map and in the millionaire class—nerve and Army engineers.

We are further informed that Yber City must construct 1,400 feet of public wharf acceptable to the Secretary of War. That is quite a concession to ask from Yber City after the Government has spent a few millions in the waters around about. When we realize that nearly a half million was on hand July 1, 1914, and $120,000 more is in sight through this bill, in these piping times of peace and war taxes, it is disquieting to read from page 622:

> The commerce for the year 1913 showed an apparent decrease of 33.4 per cent from 1912.

How is that for a $2,000,000 investment—one of 30 that Florida proudly presents in this economy bill?

During the discussion of this project, on motion to strike out, the distinguished chairman of the Rivers and Harbors Committee, who is familiar with the harbor, stated that the commerce reached over 2,000,000 tons, although the report shows 1,319,283 (p. 2122).

DID ANY COMMERCE GET AWAY?

Bearing in mind the fact that the chairman of the committee has stated that frequent duplications and quadruplications exist in commerce reports on our rivers, we may also find occasion to investigate reports of harbor traffic unless properly vouched for. Engineers get their statistics from local individuals or boards of trade; but where no reports are required to be kept by law we may well believe the commerce is not underestimated by local interests.

The same sources of information were afforded in 1912 and 1913, so that any attempted investigation of 1913 alone would not disclose the true relation with the preceding year.

With $660,000 on hand last July, and with commerce proceeding in adverse proportion to the increasing depth, I can not believe we should raise more war taxes to take care of this Florida project. I say this with regret, because I feel that the chairman has some pride in this project; and I have found it an unpleasant task to criticize propositions in which different Members are so deeply interested. It all tends to disclose the peculiar fact that this bill is one of personal projects, in which Members look to the item of local interest through colored glasses, to the exclusion of other projects in the bill.

Amendment to strike out was rejected.

A REAL RIVER AT LAST.

St. Johns River	$350,000
Balance on hand October, 1914	406,570
Past appropriations	6,306,562

A 30-foot channel has been dredged up this river, and $6,306,562 is the tidy sum that helps maintain the chiefest river in the land of perpetual youth and 30 Government projects. Possibly the commerce, 40 per cent of which is lumber and ties, floatable timber, warrants over a third of a million this year, but where there is so much that is dross it is difficult to repress noisy suspicions.

Take, for instance, in the same connection Palatka to Lake Harney, $10,000.

Here are the mortality statistics offered by the 1914 report:

Balance on hand October, 1914, $5,000.

Total appropriations, $185,440.

A 5-foot channel, 90 per cent complete.

A total traffic of 174,000 tons.

Logs and lumber compose 75 per cent of the total.

It also includes the tonnage of the Oklawaha.

Commerce decreased during last year 17.9 per cent.

A FAMILIAR FLORIDA FRIEND.

Oklawaha Creek	$10,000
Balance on hand July 1, 1914	10,046
Total appropriations	78,710

In the $53,000,000 bill killed last session was a husky Oklawaha project of $733,000 masquerading at $175,000 cash appropriation. It almost escaped attention, but was finally located with a spot light, so that the Senate committee struck out the item and also another popular Florida project, the Kissimmee, before the bill was reported. Since that episode three reputable citizens, one a prominent ex-governor and another a Member of the present Congress, have all declared to me personally that criticisms leveled at the wasteful project were fully justified.

The 1914 Engineer's Report says the existing project is to secure a 6-foot channel from the mouth to Silver Springs Run, 53 miles, and thence to Leesburg, 94 miles, a depth of 4 feet. To show the necessity for a lawn mower on the Oklawaha we learn, page 595, "navigation in upper river is much obstructed by hyacinths and eel grass." No true picture of navigation on the Oklawaha is had until we learn that in three months of 1914 Capt. Maguire and a dredge removed 1,298 snags, 991 overhanging bows, 478 logs, and 144 stumps. The wise sailor on this creek never fails to provide himself with a pair of shears for clipping branches in order to vary exercise when he gets fatigued from running the lawn mower that keeps down the eel grass. And in the stream where this $733,000 project was logrolled through the House last year we find a "commerce" of 14,622 tons, of which 6,210 tons were logs that rolled down the creek, leaving a balance of 8,412 tons for a 50-mile stream. This is another waterway investment to challenge attention if not our confidence.

Motion to strike out was rejected.

Crystal River	$3,000
Balance on hand July 1, 1914	4,000
Past appropriations	34,000

It is almost impossible to shoot into these projects without striking something, although shot bounce off without doing much execution. I have only had opportunity to examine a few of the Florida projects, but with few exceptions they are questionable monuments to the courtesy of accommodating Army engineers who approved them.

Crystal River, Fla., is a small 9-mile creek running to or from the village. Incidentally the 9 miles have cost the Government $34,000, or about $4,000 a mile for this creek. Nothing was spent in 1913, and a balance of $4,000 is now on hand, yet $3,000 more is demanded.

Here is the statement of a disgusted engineer, found on page 2127 of the 1914 report:

> Commerce, 1913, 1,240 tons.
> No regular steamers.
> Only 2 per cent of Crystal's trade is carried by water.
> Effect on foreign rates, none.

Small private launches alone use the stream. One week's work with that Ford machine would carry the total commerce over Crystal River's 9-mile route. In addition, it could furnish a joy ride for all the inhabitants of Crystal River who send 98 per cent of their freight by some other route. After spending $34,000 without affecting freight rates for the village,

why not appropriate $100 and hire a Ford for a week? Let us help the committee to save money on this project.

Motion to strike out rejected.

Anclote River, Fla	$5,000

Amount expended on this "narrow, crooked, 20-mile stream" (p. 626) has been $56,500. The 4-foot channel begun in 1899 has been completed, and we pause with pride to note a total for 1913:

	Tons.
Commerce	22,730
Logs and lumber	21,100
Net amount	1,630

Logs and lumber have floated since the Creator determined the specific gravity of wood, and such statistics justify an investigation. To make us easy, the engineer truthfully says "commerce" decreased 33 per cent during the last year. No regular steamers are in the trade, and the only boat line was abandoned last year, due to railroad rates.

Anclote wants $5,000 for a 1,600-ton annual commerce. What Anclote wants Florida demands.

Why not switch that Ford machine over to this 2½-mile project that rises in the marshes and runs to nowhere with any appreciable commerce save Government currency?

Let it not be supposed that I have selected many of these smaller projects. Those presented have been offered because they throw some light on general methods pursued or because my attention has been called to them because of their extreme wastefulness or worthlessness.

CHOCTAWHATCHEE RIVER, FLA.

Choctawhatchee River	$30,000
Balance on hand	20,079
Total appropriations	255,300

The project has been completed (p. 657).

There are several strange features connected with the engineer's report regarding the average haul of freight, and I will give the items on a completed project for which, in addition to the balance on hand, $30,000 is demanded in this bill.

	Tons.
1913 commerce	73,877
Logs and lumber	46,841
Net traffic	27,036

As an evidence of necromancy it is proper to quote from the Engineer's Report (p. 657):

There is no commerce on the river above the mouth of Holmes River, with the possible exception of a small movement of logs.

Also we are informed that—

From the mouth of the Holmes River to the mouth of the Choctawhatchee River is about 40 miles (p. 657).

With a total navigable distance of 40 miles on this river, we are next informed an average haul of the 73,877 tons of freight, including logs rafted—14,572 tons of which are turpentine and resin—is about 110 miles, indicating logs, resin, fertilizer, and all other items came down or went up on logs. How can commerce go 110 miles on a 40-mile stream? Such is the story told on page 2156, so that we are compelled to believe freight statistics are subject to investigation before acceptance at face value.

It has been said these creeks and rivulets are "arteries of commerce" that justify liberal treatment; and we are told we are not acquainted with this intricate waterway question. It is too deep for anyone other than Army engineers—deeper than the projects to which it relates.

A BUSY SNAGGING PROJECT.

Alabama River	$125,000
Balance on hand Oct. 2, 1914	63,609
Appropriations	1,214,000

This project that has been so generously treated by the Government had a commerce of 153,295 tons last year, but over 73,000 tons was rafted logs and floatable timber. Nine thousand tons of lumber was barged, and it would be interesting to know just what actual commerce is handled on the river—the haul, and what results have come from an expenditure of $1,214,000.

A snag boat's work for last year indicates a commerce in "timber" on the river that may have gone to swell the total. It says:

Trees removed	130
Saw logs	28
Stumps	91
Snags	145
Piles	138
Logs from banks	27
Trees cut	577
Trees trimmed	60
Total	1,196

And this refuse was taken out of the stream last year after we had already spent nearly $1,214,000 to make it navigable. One of the most significant parts of the report is that wherein it states a barge line established in 1910 was finally abandoned. All the money so generously donated could not maintain the boat line longer. We need not search for reasons, but with over $60,000 on hand in October, why spend $125,000 more now?

TEN MILLIONS FOR 16,000 TONS.

Tombigbee	$64,500
On hand October, 1914	1,169,584
Past appropriations	9,901,295

This is an imposing project that carries sundry locks and dams, including a 63-foot lock at No. 17, which can be utilized for water-power purposes without any stretch of imagination. Of course Army engineers constructed this dam and all the dams for purposes of navigation, so it is rather surprising to learn that after an investment of nearly $10,000,000 in this historic stream a total commerce was floated in 1913 of only 64,523 tons, of which 48,492 tons was floatable timber, and the high-grade freight amounted only to 16,031 tons, and included 2,579 tons of stone. Nobody seems to know when the project will be completed, and, judging from the steady flow of Government gold into the Tombigbee, nobody seems to care; but to show that trade does not follow the flag on this stream I quote from the Engineer's Report (p. 690):

A traffic was inaugurated by a fleet of six self-propelled steel barges, each of about 1,000 tons capacity, transporting coal from a point in the Black Warrior River near Gilmore to New Orleans. Due to the unfinished state of the project, upon the approach of low water operations had to be abandoned.

In other words, an impulsive effort to help waterway traffic was finished when the water was furnished. This would be a promising field, whether wet or dry, for a system of artesian wells similar to those recommended for the $10,000,000 Trinity project.

Motion to strike out rejected.

Mobile Bay and Mississippi Sound	$20,000
Balance on hand July 1, 1914	24,042
Past appropriations	37,277

This is a small project, but we are informed by the report that after spending $37,277 the project is 98 per cent completed, with $24,042 on hand with which to finish the remaining 2 per cent. Although the $20,000 was to be used for the Grant Pass survey, which has been abandoned, and notwithstanding liberal engineers only asked for $10,000, the committee that finds plenty of money for certain projects doubled the engineers' request.

Why was the $20,000 given for Grant Pass turned over to a project that does not include Grant Pass and is 98 per cent completed?

MISSISSIPPI WATERWAY COMMERCE.

Pascagoula Harbor	$125,000
Balance on hand July 1, 1914	30,123
Past appropriations	1,312,133

For an investment of a million and a quarter it is interesting to read this report. First, the commerce of 1,020,938 tons shrivels to a shadow after deducting 998,966 tons of floatable logs and timber. That leaves 21,972 tons of supposedly real traffic, but the logs and timber were turned into 15,750 tons of charcoal, which leaves a net traffic of 6,222 tons, after deducting timber and its products. That commerce will float in a barge with 2 feet of water, as well as in a 22-foot to 25-foot depth provided for this harbor. The project is only 22 miles long. In other words, 6,222 tons floated 22 miles on a 22-foot channel that cost over a million dollars, and it is asking for more. The query naturally arises, Who runs the sawmill?

To show Army engineers were shamefaced, the report says this improvement was conditioned on a $100,000 contribution by local interests and also an 800-foot wharf.

On page 703 we learn "no work has yet been done under this project, as local interests have not complied with requirements." To prove that hope springs eternal, we turn to page 2209 of the same report, where we are greeted with "it is believed the wharves will be built and payment of $100,000 will not have to be made by local interests." Now you pay it; now you do not. Why does the engineer perform this $100,000 sleight-of-hand trick? Does he ever increase the amount demanded or does he always decide against his employer and paymaster? Who gives him the right to decide?

AGAIN THE SAME COMMERCE.

Pascagoula and Leaf Rivers	$18,000
Balance available October, 1914	8,781
Past appropriations	106,250

Just 3,921 stumps, snags, and other obstructions were taken from this 46-mile waterway in 1913. It was a busy time on the Pascagoula during 1913, and we learn that incidentally 603,600 tons of logs and timber were floated down the stream just as they might have floated a century or more ago. Of the 23,356 tons remaining 15,556 tons were charcoal, leaving an irresistible inference that the traffic on Pascagoula Harbor was the same

traffic that had previously been reported on Pascagoula River, and that in determining the cost per ton-mile, which engineers delight to mention, it is necessary to get the cost of maintenance and interest earnings on both investments. In other words, the cost to the Government of floating that charcoal and 20 tons of other freight per day is only ascertained after counting the $1,312,133 sunk in the harbor and $106,250 additional sunk in the river, and it counts the products of the same sawmill in twice to make an apparent showing.

Leaf River—part of the above project.

No volume of maritime statistics will be complete without mentioning the "commerce" of Leaf River. According to trustworthy engineers, we are told that Leaf River totaled 335,010 tons of commerce in 1913, of which 335,000 tons were logs and hewn timber that floated to the mill, and 10 tons were merchandise to sustain the crew engaged in pulling 7,165 stumps, snags, and so forth, out of 10 miles of Leaf River during that same year.

Page 707 of the report reads like a novel. What a wealth of material has been dug from the depths of Leaf River before and since the advent of that sawmill. Nor should it be forgotten that this same tonnage appears to be part of the commerce mentioned in Pascagoula Harbor's report.

A note from the engineer, same page, says, "Tugboats, small sailing craft, and so forth, navigate this river from the mouth of Dog Run up to Dead Lake, a distance of 32 miles." Only a snagboat and saw logs jostle the rivulet above that point. And on this stream floated 10 tons of actual merchandise in 1913, with which to replenish the commissariat for a snagging crew. In order to secure a better understanding of this commerce to be served I submit a table furnished by a commercial club.

COMMERCIAL STATISTICS.

The following statement concerning the commerce of the Pascagoula River and its tributaries, the Leaf and the Chickasahay, for the calendar year ending December 31, 1913, was furnished by the Pascagoula Commercial Club, of Pascagoula, Miss.:

Articles.	Amount.		Valuation.
	Customary units.	Short tons.	
Pascagoula River:			
Round logs	275,000 pieces	275,000	$1,375,000
Piling	175,000 pieces	262,500	1,312,500
Crossties	475,000 pieces	47,500	237,500
Sawn and hewn timber	15,000 pieces	15,000	112,500
Hardwood	2,400 pieces	3,600	24,000
Turpentine	1,000 barrels	200	30,000
Rosin	3,000 barrels	600	12,000
Charcoal	420,000 barrels	15,556	126,000
General merchandise	7,000 tons	7,000	700,000
Total		626,956	3,939,500
Leaf River:			
Round logs	325,000 pieces	325,000	1,625,000
Hewn timber	10,000 pieces	10,000	75,000
General merchandise	10 tons	10	1,000
Total		335,010	1,701,000
Chickasahay River:			
Round logs	75,000 pieces	75,000	375,000
Hewn and sawn timber	7,500 pieces	75,000	56,250
Hardwood	1,500 pieces	2,250	15,000
General merchandise	5 tons	5	500
Total		152,255	446,750

It is impracticable to obtain ton-mile rates.

12,600 OBSTRUCTIONS.

Pearl River below Rockport	$24,000.00
Balance on hand July 1, 1914	25,731.62
Past appropriations	300,461.00

Leaf River and Pascagoula Harbor may well pause, so far as achievements in snagging operations go, for in that same notable season of 1913 two other snagging crews snatched from the Pearl just 12,651 obstructions above, below, and all around. So says the veracious report, page 2219.

In order to form a sober and intelligent judgment of this waterway project we are further informed it was adopted in 1880, just 34 years ago, and after spending $300,461 a depth of 2 feet has been obtained in the channel.

In harmony with the general character of this river is its "commerce," which I quote for 1912 and 1913, respectively. It consisted only of three significant items:

1912.	Tons.
Logs and timber	79,613
Sand and gravel	64,500
Crossties	47,000
Total	191,113

1913.	Tons.
Logs and timber	81,950
Sand and gravel	32,481
Crossties	1,150
Total	115,581

Loss in one year, 42 per cent.

The disturbing character of this startling showing is revealed in the fact that after removing 12,651 trees, logs, snags, stumps, and bushes, and after spending over $300,000 on this stream below Rockport, a net loss of 42 per cent in a commerce composed of sand and gravel is the 1913 dividend. Truly a pearl with an extravagant price is a doubtful asset.

MORE COMMERCE.

Big Sunflower	$215,000
Balance on hand October, 1914	8,000
Past appropriations	285,000

With a feeling of concern over the high cost of living, we turn from jewels to flowers only to learn the same desire for Government gold envelops all. Without argument I quote from the report (p. 889):

The proportion of the approved project to June 30, 1914, was 10 per cent completed—

after an investment of $285,000. Such discouraging statements as—

no work done in the open channel, no results yet evident, and no effect on freight rates—

seem superfluous after reading the 1913 "commerce," which contained 74,704 tons of lumber, timber, and gravel out of a total "commerce" of 92,024 tons.

For a net tonnage of 17,320 that has certainly not been underestimated. We may well inquire if $215,000 in good war-tax revenues can not be profitably held in the Federal Treasury until some apparent need for expenditures is developed apart from the demand of Army engineers.

AMONG MILLIONAIRE PROJECTS.

Galveston to Texas City	$50,000
Balance on hand October, 1914	1,314,956
Past appropriations	2,035,006

After following the fortunes of the Texas Angora in another bill, a famous steer appears to also run riot through this bill. Texas gets 20 projects, the same number that has been appropriated by North Carolina. With the 30 projects yielded to Florida, it makes 70 in all for three States, or more than one-quarter of all the projects contained in this economy bill. Nor is it well to forget 25 projects—good, bad, and indifferent—that go to Louisiana and Mississippi.

Texas City wants a 30-foot channel for 8 miles. The amount now available is $1,314,956, but Texas City wants more. After spending $708,388 in this last project, we learn that it lacks 89 per cent of completion. Based on the average estimates and proportionate work, we will spend from $5,000,000 to $7,000,000 more before Texas City gets a completed 30-foot project for its 8-mile waterway.

To show the procedure under which we are blindly acting, I quote from results achieved according to page 801:

The effect of the project on freight rates has been beneficial owing to the establishment of a line of steamers from New York to Texas City, thereby breaking up the rate agreement that had existed between the old lines between New York and Galveston. Prior to establishment of this line in 1908 the rates by the steamship lines from New York and points in seaboard territory to points in Texas were the highest figures that ever were in effect, notwithstanding the fact that the deepening of the Galveston Harbor channel had been continuously going on and at that date the depth was about 30 feet. But with the competing line in operation to Texas City the rates were reduced on an average of 51¼ per cent, and the volume of the business increased over 300 per cent. *However, during the past years the rates have advanced again, the average increase being about 75 per cent over the rates of 1908, and on a parity with Galveston.*

The italics are mine.

Motion to strike out rejected.

40 PER CENT LOSS IN 1 YEAR.

Galveston to Port Bolivar	$40,000
Balance on hand	32,363
Past appropriations	306,080

This Texas project is only 4 miles long, or just half the distance of the last one. In addition to $76,520 per mile already paid, we are asked to give $10,000 per mile more in this year of Democratic economy.

Port Bolivar has 83 population according to the last census, but, like the Angora goat, Port Bolivar knows no such word as fail.

According to the report, this Government money is being used to dredge 30 feet deep up to the slip and wharf of the Gulf & Interstate Railway Co. The railroad can not conveniently handle freight from its cars with a 25-foot depth, and Uncle Sam obligingly gives the Gulf & Interstate Railway Co. a portion of this liberal appropriation to preserve dividends that might otherwise be diverted from the company treasury into the harbor to meet its supposed needs.

In 1912 Port Bolivar boasted of 428,495 tons of freight.

In 1913 Port Bolivar claimed only 256,105 tons.

In one year Port Bolivar lost 172,390 tons, or 40 per cent.

What kind of freight was it that called for first aid for a needy railroad? Practically lumber, that did not require a 30-foot or 3-foot draft. Of the 256,105 tons in 1913, 168,000, or about two-thirds, were logs and lumber. Another item that did not require a deep-sea-draft vessel was 8,630 tons of sand and gravel.

To show that Texas overlooks the needs of the Trinity and recklessly wastes its resources, this same 1913 commerce included a shipment of 1,730 tons of water worth $520. That is a modest valuation, even where water has limited uses in dry Texas. Water below Dallas will cost this Government more per ton than at Bolivar, because artesian wells will be required to sprinkle the Trinity boulevard during summer months, so say the engineers.

Port Bolivar and Texas City will probably get what they want from this House, but both projects appear wasteful in character and hasten the day when Congress will gladly throw over unintelligent waterway improvements and respond to a demand for an economical development of worthy projects.

Motion to strike out rejected.

MILLIONS TO DEFEND THE PASS.

Port Aransas and Aransas Pass	$400,000
Balance on hand Oct. 14, 1914	830,353
Past appropriations	3,253,791

This is one of the cases where incompetency among Army engineers is shouldered onto civilians to cover up a loss of a half million dollars, according to page 834 of the report, which reads as follows:

Work was completed in accordance with the above-mentioned specifications June 11, 1906, at a cost to the Government of $546,703.10, but after the completion of the north jetty the channel became steadily worse, approaching dangerously near the jetty, and finally a secondary channel, 600 feet wide and 6 feet deep, broke through the gap between jetty and shore, with the result that for all practical purposes the channel was on the north side of the jetty instead of the south side, as intended by the plan adopted by the Aransas Pass Harbor Co.

After spending over $3,000,000 on the project we learn, on page 836, that two years ago the Texas State Railway Commission placed Aransas on a parity with Galveston, and that sailings of two or three vessels are made every month.

What do they carry? What was the $3,000,000 spent for, and who owns the oil well?

The engineers report 211,330 tons of commerce for 1913, of which 193,922 tons was fuel oil, leaving a balance of miscellaneous fright amounting to 17,408 tons.

We have spent over three and a quarter millions on this project, and with $830,353 more on hand ready to dump into the sea we are asked to pursue the judgment of a drunken sailor by throwing in $400,000 more of Government money, contributed in these days of war taxes and business depression.

Judging from past history, all the titanic struggles between Teutons and Muscovites for control of the Carpathians are sham battles compared with the victories won by the Texas board of strategy.

Sabine and Aransas will go down to history with the Carpathians.

They are all hard propositions to get through.

MORE MILLIONS SHELLED OUT.

Sabine Pass and Port Arthur Canal	$500,000
Balance on hand October, 1914	555,270
Past appropriations	5,716,550

This half million dollars is for a 16-mile canal of 25-foot depth. Over a half million dollars was on hand about three months ago, but the dredgers and contractors who swarm along Texas shores like blackbirds are loud in their demands for more.

After spending $5,135,037, we learn that 75 per cent of the dredging in the canal is completed, but only 13 per cent of the work on the jetties is finished.

When a board of waterway experts takes hold of the waterway problem it will place such projects under a strong magnifying glass. The reports of engineers and of shipping will be scrutinized. Great oil interests that monopolize this traffic will cease then to have any especial claim on the Government Treasury, and equal contribution will be demanded in return for every dollar expended on such projects. Millions are dumped into similar propositions and glittering figures of commerce offered in justification of prodigious expenditures.

An administration seeking to economize would use the ax early and often on some of these projects that benefit private concerns and not the people of Texas, nor of any other State that helps pay a war tax for such doubtful investments.

$16,686,931 FOR 5 PROJECTS.

Houston Ship Channel	$250,000
Balance on hand October, 1914	415,449
Amount expended to June, 1914	5,375,590

The total expenditures includes some local contributions. From page 805 of the 1914 report we learn that a 25-foot depth has been secured in this 57-mile canal, which is 99 per cent completed. When Houston learns that New York has 40-foot depth to its harbor, and Philadelphia, Boston, Baltimore, and a score of other cities are digging deeper holes in their own harbors, and incidentally in the Federal Treasury, Houston, like the Texas steer, will again become rampant.

Houston has a commerce in sand of 520,000 tons. It deals in the shell game to the extent of 750,000 tons more, of shells and lumber that floats, furnishes a round 200,000 tons. These three articles of "commerce" compose 80 per cent of the tonnage of this 25-foot canal. Incidentally, round numbers in these and other items show the character and unreliability of engineers, estimates. A liberal increase in the 1913 guess is explained by an increase of 422,000 tons of sand, shells, and lumber in one year.

Texas is demanding a quarter of a million in this bill, for Houston's commerce. Texas has grit—so has Houston's commerce—but it should not be overlooked that leaving out Galveston Harbor, we have already reached five doubtful projects that have received $16,686,931 in the past and are asking for $1,240,000 in this economy bill. Such propositions should be critically examined to ascertain their value.

That Houston has other pleasant surprises in store for the Federal Treasury is attested by the following newspaper clipping sent me:

INLAND-WATER ROUTE TO TEXAS FROM MISSISSIPPI DEMANDED IN RESOLUTION.

HOUSTON, TEX., *December 31.*

Prospects of a continuous inland-water route from all points on the Mississippi, Ohio, and Missouri Rivers to southeastern Texas, and consequently continuous inland waterway connection between Houston to the Great Lakes entered into the discussion of the special executive meeting of the Interstate Inland Waterways' League of Texas and Louisiana here to-day.

The meeting went on record as favoring a canal of 9 feet depth and 90 feet minimum bottom width connecting Galveston Bay and Sabine Pass and a similar canal connecting Morgan City with New Orleans.

The resolution calls upon the Senators from Louisiana and Texas to demand that an amendment be made to the rivers and harbors bill so as to provide for the proposed canal extension.

Congress will now sit up and take notice when Houston demands from its Senators and those from Louisiana that they in turn demand a few more waterway projects. It must be placed in this year's bill—so says the convention and waterway boosters.

Convention or waterway lobbies have had their way with Congress for some time. Indeed, the National Rivers and Harbors Congress, otherwise known as the $50,000,000 annual lobby, declares itself to be second only to the "Congress of the United States." So Houston's Senators and Houston's Representatives must get busy, because Houston has demands to make on the Federal Treasury, demands that must be acceded to at this short session. Houston wants deeper canals. What of these canals? Let us get some light on what Houston demands that Congress must do.

MORE CASH THAN COMMERCE.

West Galveston Bay-Brazos River	$15,000
Balance on hand October, 1914	18,372
Past appropriations	326,851

We have just left a 25-foot canal, and now we strike some of the abandoned, worthless canals the Government has kindly taken over to help out former owners and incidentally a few active dredgers and contractors, and these Houston would have us dig deeper.

Here are a few gems of thought hidden away in the 1914 report, all of which relate to this $326,851 project:

No commercial statistics could be obtained for year 1913.
The channel (5-foot) is used by small fishing boats.
The work has had no appreciable effect on freight rates.
The commerce is about the same as the Brazos and Matagorda.

Many inquirers might feel that after this category of disheartening results we would get inspiration from Matagorda, and so we turn over the report to find that commerce on the mythical Matagorda Canal reached 614 tons in 1912 (1913 report, p. 2264), and a bridge tender guessed it was 2,758 tons last year (1914 report, p. 2313).

This project only asks for $15,000, with $18,372 on hand, and 614 tons of freight have been produced by $326,851 of Federal money. Could it be possible that the fine Italian hands of one or more dredgers directed the activities of Houston's waterway con-

vention? Methods of the $50,000,000 waterway lobby, which tells Congress what to do, have been open to that same suspicion, but Congress will do well to heed the demands for a 9-foot channel for this project.

GREAT INLAND WATERWAYS.

Brazos River, Matagorda Bay	$30,000
Balance on hand October, 1914	24,427
Past appropriations	307,008

By referring to the last project it will be observed that the same 614 tons of commerce of 1912 and the bridge tender's guess of 1913 originated in this 32 miles of canal which is to be deepened to 9 feet when Houston's boosters get to Washington. Keeping in mind this is a 5-foot canal proposition, we are unprepared for the shock occasioned by reading "The recent shoaling of the canal has made navigation uncertain and prevents operation of boats on regular schedule." Before the "recent shoaling" occurred it managed to report 614 tons, but now it is reduced to a further discount on the bridge tender's guess. One small skiff might handle this traffic on a pinch, but an investment in a Ford or team of mules would be of equal benefit to a commerce that did not reach 1 ton per day up and down the canal in 1912. That result on a $307,008 investment looks worse than a deserted Texas oil well and returns about equal dividends.

The Senators who represent two great States are directed to get busy or Houston's waterway lobby will demand its rights from the Government.

Bearing in mind that Texas has received $35,000,000 from the Government for the 20 waterways and would-be waterways represented in this bill alone, it does seem as though some armistice might be agreed upon between the Federal Congress and the Houston waterway lobby providing the increased canal depth fails in the bill before us.

380 TONS OF "COMMERCE."

Aransas Pass to Cavallo	$45,000
Balance on hand October, 1914	25,237
Past appropriations	136,852

Here is an appropriation recommended by the Rivers and Harbors Committee, and incidentally by the Army engineers, that deserves attention. We have paid enough to buy all the produce that might be shipped on this streak of moisture for a hundred years to come. With $45,000 we could buy nearly a hundred Fords to carry all the actual traffic of these waterways of Texas, excepting, of course, Galveston, which has received $12,000,000. Here, however, is a canal that produced last year 380 tons, carried on "30 vessels," according to the Engineer's Report, page 2314.

What can be said to do justice to this showing? No explanation can explain, and it is immaterial who deserves credit for a $45,000 recommendation to Congress in 1915 for this "project." It speaks for itself.

Is this one of the canals that the Houston lobby demands shall be deepened to 9 feet? If so, why not increase to 25 feet, the depth of the Houston Canal, that carried 1,250,000 tons of sand and shells last year? By so doing we may start some commerce in dredging machinery and at least offer a showing for the money we have been using.

LOST 80 PER CENT OF COMMERCE IN ONE YEAR.

Mouth of the Brazos	$45,000
Balance on hand June, 1914	132,310
Past appropriations	751,250

It requires patience to discuss some of the "projects" found in this bill. According to the engineers, we have spent over three-fourths of a million dollars at the mouth of the Brazos to take care of an oil well, just as we have been taking care of private fertilizer factories, and private reclamation schemes, and private water-power steals, and various other humbugs conducted in the name of the public good. After spending over $100,000 a mile on this 6½-mile stretch, we learn that of a commerce of 123,750 tons in 1912, 112,750 tons was fuel oil, leaving a net balance of 11,000 tons, which was probably exaggerated.

The oil well went bump, and we find a "commerce" reported in 1913 of 24,575 tons, of which 13,848 tons was oil, or a net loss of 80 per cent in commerce in one year through a bad oil investment. As if to grind it in, we are advised by engineers that Government money is being used to dredge up to some of the railway wharves.

During these days of an economical Democratic administration I advise Members to note that on the projects so far reached in Texas, not counting Galveston, we have already spent $18,481,592, and in this bill we are asking $1,385,000 during these piping hard times.

[From Appendix T—Report of Lieut. Col. Riché, p. 2319 (1914).]

COMMERCIAL STATISTICS (1913).

Season of navigation, year ending December 31, 1913: Navigable the entire year.

Freight traffic.

Articles.	Amount (short tons).	Approximate value.
Ammunition	1,218	$1,461,600
Canned goods	239	20,800
Dry goods	1,518	759,000
Hardware	1,400	168,000
Iron and steel articles	1,200	589,600
Manufactures of iron and steel	1,000	
Machinery	748	
Oilcloth and linoleum	66	13,200
Paints and oils	204	24,480
Paper	334	15,030
Roofing material	221	11,050
Soda, lye, and potash	277	33,240
Twine	300	108,009
Miscellaneous	929	92,900
Books	456	228,000
Drugs	300	300,000
Fireworks	132	92,400
Wire and wire products	185	7,400
Fuel oil	13,848	93,756
Total	24,575	4,004,541

No vessel classification obtained. Two vessels, the *Kennebec* and *Hondurus*, are making regular sailings twice a month from this port.

This is the brief report offered for the preceding year when traffic was 500 per cent greater:

[From Appendix T—Report of Lieut. Col. Riché, p. 2269 (1913).]

COMMERCIAL STATISTICS (1912).

Season of navigation: Navigable the entire year.

Freight traffic.

Articles.	Amount.		Approximate value.
	Customary units.	Short tons.	
Cement	3,335 barrels	600	$6,670
Fuel oil	902,000 barrels	112,750	85,600
General merchandise	10,400 tons	10,400	461,330
Total		123,750	553,600

No vessel classification obtained.

THE $10,000,000 TRINITY.

Trinity River	$15,000
Balance on hand October, 1914	343,600
Past appropriations	2,207,638

This project has been discussed so frequently on the floor by the able gentleman from Texas [Mr. CALLAWAY] that I will not venture to add to his picturesque descriptions found on pages 1823 and 1824 of the RECORD.

Its ultimate cost has been estimated at $10,000,000 or over and the time required for completion over a hundred years. The Trinity finds vigorous defenders, and, of course, every project has two sides that ought to be presented. I am mentioning a few that need to be seriously considered before large amounts named in this bill are appropriated for such purposes. Limited and necessary expenditures for any proper public purpose ought to be made beyond question; but the Trinity and other questionable projects that must depend largely upon artesian wells and summer showers for navigation, that have no commerce, present or prospective, are in the discard class, and it does seem proper to call a halt until we can ascertain just where this headlong policy is going to land us.

The Trinity and the Coosa, and the Muscle Shoals on the Tennessee, and a few other navigation projects have each dragged many millions from the Government Treasury. Have we made bad investments? If anyone has doubts on the subject, they may be easily dispelled by referring to the official reports. I offer no criticism beyond the statement of the gentleman from Texas [Mr. CALLAWAY], borne out by official reports, that this project is indefensible.

A $400,000 WATERWAY FOR 1,000 TONS.

Velasco to Old Washington	$10,000
Balance on hand last report	37,288
Past appropriations	415,000

This project is part of the preceding Brazos River travesty. On page 829 it is stated a navigable channel of 4 feet exists four months during the year in intermittent periods. Again, the Engineer's Report says, page 830:

No commerce of any note has been developed, nor can any be expected until the Brazos River is improved from its mouth to Waco, a distance of 424 miles.

The only record of commercial statistics furnished is found on page 2319, where, we are informed, one boat makes trips every 10 days and last year carried in all about 1,080 tons.

The Brazos and the Trinity and the Coosa Rivers will ever remain lasting and expensive monuments to the cupidity of dredgers and contractors and the gullibility of the American public.

Somebody has said at some time and some place that this $34,000,000 bill is an economy measure. After presenting two scores of small projects that invite careful investigation, with larger ones to follow, will anyone be deceived as to the wastefulness of this bill and worthlessness of scores of projects it contains?

MILLIONS FOR DREDGERS, BUT NO COMMERCE.

Brazos, Old Washington to Waco	$200,000
On hand October, 1914	277,878
Past appropriations	1,150,000

This project is for 170 miles, from Old Washington to Waco. It was started in 1896 (p. 829), and no one knows what proportion of the proposed work has been completed. Not a ton of commerce is reported and none will be reported for many years to come. The protest of the gentleman from Massachusetts [Mr. TREADWAY], a member of the Rivers and Harbors Committee, who moved to strike out the item, is briefly quoted as it appears in the RECORD of January 16:

Mr. TREADWAY. Now, Mr. Chairman, the item of the Brazos River is sufficiently well known, and it is not going to take a great deal of the time of the committee to show just a little what we are paying here for it. It is shown by the report of the Board of Engineers that there has been already expended on the improvement of the Brazos, appropriated to December 1, 1914, $2,316,250; that the amount needed to complete is indefinite; that no commerce has as yet developed. I think that of itself——

Mr. COOPER. No commerce?

Mr. TREADWAY. No commerce has yet developed on the Brazos River. That puts the proposition in a very concrete form as to whether or not we wish to continue spending good money and chase it after bad, letting the good money become just as bad in the end as that already spent is now.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield for just one question?

Mr. TREADWAY. Certainly.

Mr. HUMPHREYS of Mississippi. Will the gentleman state how much commerce passed through the Panama Canal before it was finished?

Mr. TREADWAY. Oh, well, we expect to get commerce through there, and we will never get any on the Brazos River. I yield to the gentleman from Mississippi any comparison with the Panama Canal when he uses it to illustrate a stream that eventually is going to have some commerce on it; but if I can read figures right, if I can read these statements, if I can read the engineer's reports, the commerce that is going to be developed on the Brazos River is of a minimum amount, and the result would be just about as it is now after we have spent two and a quarter million dollars—"No commerce has as yet developed." When an indefinite sum is expended, which the engineers say will be needed to complete it as planned, then I prophesy the report can still come back here and be given in with all truth, "No commerce has as yet developed." And why? I hold in my hand the report of the engineer, which is made with all due consideration of the interest of the Brazos River and the people promoting it, and I quote:

"It is obviously difficult to determine with absolute accuracy the number of months in which the minimum depth for water in navigation will prevail, primarily because the rainfall varies greatly from year to year, and secondarily, on account of the great expense of obtaining all the exact data for each reach of the river."

Then they have on the next page of the report a table showing the depth of water and its stages over a certain average number of days during the years 1903, 1904, and 1905, and we find that for 252 days of that period—the average number of days per year during that period—the average depth was 3 feet; for 184 days, 3½ feet; for 136 days, 4 feet; and for 88 days they actually got 5 feet of water.

Then, again, I see this item:

"Experience with the shoals below Old Washington indicates that by dredging and contraction work a gain in depth over shoals of 2.6 feet can be readily made. The work is being done with that idea, and frequently depths of 3 feet and more result."

Is not that fine? Frequently there will be 3 feet of water!

"It therefore seems that the proper answer to the proposition proposed by the act of Congress, upon which the appropriation of the $75,000 depends"—

Do we not begin these big projects mighty modestly? The original project was $75,000—

"namely, the least number of locks and dams that will furnish navigation for four or six months, is eight, and that these eight will furnish a little over four months' average navigation."

And still my good friend and colleague on the committee wants to compare navigation on the Brazos River with the greatest engineering proposition ever undertaken by the United States, namely, the construction of the Panama Canal.

Motion to strike out defeated by a vote of 8 to 42.

MORE CRAZY CANALIZATION SCHEMES.

Ouachita River	$25,000
Amount available October, 1914	454,693
Past appropriations	3,605,616
Expended to June 30, 1914	3,145,385

When our Government invests over $3,000,000 in a waterway project, we ought to ask for an accounting. We learn that the total commerce reported on this river for 1913 amounted to 64,874 tons. Deducting floatable timber, reaching 44,175 tons, leaves a net "commerce" of 20,699 tons of low-priced freight, including over 2,000 tons of stone and including duplications of the same freight. Two locks, Nos. 6 and 8, were watchfully waiting for commerce all the past year, according to the report, but found none. A maintenance charge of $20,110 for these two locks brought no traffic. In fact, the report says:

These locks were not used during the fiscal year ending June 30, 1914. (P. 2372.)

In the report for 1913 it is stated "no commerce passed through the locks." From this brief statement it shows the Government is paying from $8 to $10 for every ton of stone and other freight shipped on this river. After many years of watchful waiting we can do no greater public service than to wake up to the facts and cease wasting money on such projects. At least, let us have a report on its value before spending more money.

A HALF MILLION FOR 4 TONS PER DAY.

White River	$15,000
Amount on hand October, 1914	14,945
Past appropriations	554,415

Again does the deceptive commerce confront us when we learn that, apart from 245,783 tons of floatable timber and nearly 5,000 tons of sand and shell, only 14,219 tons remain that have an average haul of about 40 miles.

Bearing in mind Chairman SPARKMAN'S statement that river commerce is frequently counted and recounted several times, it is well to ask what return is being afforded for an expenditure of over a half million dollars. Let us not be prodigal in these distressing hard times, when the war tax disease is abroad in the land, but let us economize while inquiring into such questionable projects.

WHY NOT SAVE THIS $40,000?

French Broad and Pidgeon Rivers	$40,000
Amount available October, 1914	10,297
Past appropriation	210,000

After spending $210,000 we learn this is a 2½-foot project that will cost $150,000.

A genuine "commerce" of 50,896 tons of "sand" is hauled 4 miles, and of the remaining 16,000 tons over 10,000 is for floatable timber and marble, leaving less than 6,000 tons. Some of this commerce has value, but why should the Government be called upon to advance $40,000 for such a project in these days of war taxes and promised economy? During all the years that have passed since 1880, when the project was begun and actual commerce encountered, the Government has spent, on the average, about $7,000 per year.

After commerce has decreased in our inland waterways, it does not seem good business policy to spend nearly six times the average annual expenditure, as proposed by this $40,000 appropriation.

11 STATESMEN VERSUS 6 ENGINEERS.

Cumberland River, above Nashville	
Balance, July 1, 1914	$54,014
Past appropriations	3,317,500

Here is a peculiar item, because it provides that amounts appropriated for dams and locks and not needed may be expended for open-channel work.

Just what amount of money is contained in this item does not appear, the House does not know, and nobody seems to care, providing individual projects are passed undisturbed.

Considerable commerce is reported, but without allowing anything for duplications, it is illuminating to learn that sand hauled 10 miles and floatable logs and timber made up 84 per cent of the traffic.

This is the river on which nine Congressmen and two United States Senators joined forces, bore down upon the Army engineers, and after three rejections had been had and a renewal secured, in reply to a demand for equal contributions for a $4,500,000 appropriation, these statesmen convinced the engineers that contribution should not be exacted.

It will be up again many times. But what does this item cover and what is to be done with the money? The Cumberland River has had over $5,000,000 and expects many millions more.

Cumberland River below Nashville	$445,000
Amount available October, 1914	835,439
Past appropriations	2,103,000

This project, we are informed, includes seven locks.

We learn from the report that—

Cumberland River below Nashville is navigable for all boats six months in the year. Boats drawing 3 feet can be run from six to eight months, and a 16-inch depth is good the year around.

Of the 165,123 tons, 131,891 tons was composed of railway ties and timber that can certainly be floated the year round; 11,250 tons was sand hauled 6 miles, and the balance of 21,982 tons of all kinds of freight resulted from a past expenditure of over $2,000,000.

With $835,439 on hand three months ago, we ought to try and save $445,000 on this item to avoid another war-tax levy.

Motion to strike out was rejected.

THE TENNESSEE RIVER COMMERCE.

Tennessee, Alabama, and Kentucky Rivers..... $287,000

A pro forma amendment was offered in order to answer misleading criticisms as to traffic on the Tennessee River, on which the next item of Muscle Shoals is situated. In previous remarks my statements that the engineers' report showed less than 6,000 tons of commerce annually at Muscle Shoals was criticized by the gentleman from Tennessee [Mr. MOON]. I desire to state the exact commerce on the Tennessee River as shown by the engineers' report, which report includes duplications and quadruplications through the loose practice pursued by engineers, according to the chairman of the committee [Mr. SPARKMAN]. The character of discussion is best shown on this item from page 1966 of the RECORD for June 19, as follows:

The CHAIRMAN. The gentleman from Wisconsin is recognized.

Mr. FREAR. Mr. Chairman, I do not desire to encroach on the time of the committee and will not take the full seven minutes if I can answer fully statements that have been made with reference to the Cumberland and Tennessee Rivers in a shorter time.

As I said, Mr. Chairman, I was corrected a moment ago by a Member who is supposed to know conditions on a river in his own State. As I understood him to say, navigation is possible only for a few months on the lower branch of that river. Let me read the engineer's report, in which it is stated the Cumberland River below Nashville is navigable for all boats six months in the year. For boats drawing 8 feet of water it is navigable for four months in the year. It is navigable for small steamboats throughout the year. I suggested that five-sixths of all that commerce consisted of railway ties and sand and timber, carried 6 miles—things that could be hauled at that stage of water. I think I was fair in my statement. I do not want to misstate.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Wisconsin yield to the gentleman from Florida?

Mr. FREAR. I can not be interrupted unless I get more time.

Mr. SPARKMAN. I notice the gentleman has mentioned several times, in criticism of the commerce on that stream, that it was only sand.

Mr. FREAR. Yes; and it was hauled only 6 miles.

Mr. SPARKMAN. Has the gentleman any particular antipathy for sand? I think it is about as good a class of commerce as you can carry.

Mr. MANN. If there were more sand in the House it would be a good thing. [Laughter.]

Mr. FREAR. The chairman has held us to 17 minutes on a $682,000 item. I want to get some of the facts in my possession into the RECORD, even if I can not get them before the House. I say a large portion of the commerce is sand, which is hauled 6 miles, and the river now offers a sufficient stage of water for all practical purposes throughout the year, according to the engineer's report. Now, the gentleman from Tennessee [Mr. HULL]——

Mr. MOON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Wisconsin yield to the gentleman from Tennessee?

Mr. MOON. Just for a question.

Mr. FREAR. I can not yield to the gentleman at this time unless I get more time, Mr. Chairman. I want to be as courteous as possible to the gentleman, but I am tied down as to time, and I want to answer the gentleman as to a former statement.

Mr. MOON. The gentleman was talking to my colleague [Mr. HULL].

Mr. FREAR. Mr. Chairman, the gentleman from Tennessee [Mr. MOON], the other day, followed me on this floor and criticized me severely. He did that, apparently, because I stated what was shown in the records upon Muscle Shoals—that between five and six thousand tons is all the traffic that goes through at this point, according to the engineer's report in 1912 and 1913. He said the traffic was $13,000,000 in value and 1,300,000 tons. Is not that right?

Mr. MOON. No.

Mr. FREAR. So the RECORD shows. I have the RECORD right here.

Mr. MOON. Let the gentleman be composed for a moment and I will show him where the mistake is. It is $23,000,000 instead of $13,000,000.

Mr. FREAR. I am glad the gentleman has made the correction.

Mr. MOON. No; you are not glad.

Mr. FREAR. Yes; I am glad. I want the House to know just what the commerce is on that stream. But here is the engineers' report. It says the total above Chattanooga was 469,685 tons. From Chattanooga to Florence it was 104,133 tons. From Florence to Paducah, Ky., it was 186,000 tons. The total, including duplications, all told, is 1,053,923 tons.

But, Mr. Chairman, of that total, sand and gravel made up 255,000 tons hauled 6 miles, and logs and timber that floats or is barged amounted to 523,000 tons, leaving a balance of 275,923 tons, which is reasonably large. But of that amount, 145,000 tons transported was iron ore, valued at $1.20 per ton, reducing 1,300,000 tons, valued at $23,000,000, to 126,923 tons, with the exception stated, according to the engineers' report. That is the report of the engineers, and when I was questioning the other day the advisability of putting $18,700,000 more into Muscle Shoals, to carry between five and six thousand tons through the canal at that point, criticism was made in reply that I did not know about the river. Here are the facts according to the reports of the engineers as to the rest of the traffic. The expenditure has already amounted to $8,658,000 on that river, as I find it in the engineers' report.

Mr. MOON. How much did the gentleman say?

Mr. FREAR. Eight million six hundred and fifty-eight thousand dollars, including locks and canals.

Mr. MOON. Oh, there has been $10,000,000 recently expended in one place alone.

Mr. FREAR. Then I accept the amendment.

Mr. MOON. That was expended by individuals, however.

Mr. FREAR. This $8,658,000 was Government money. I have no intention, Mr. Chairman, to misrepresent in any case, but I give you the facts as they are shown by the engineers' report. I gave you the facts before as to what the engineers say of the navigability of the Cumberland River—navigable for 12 months in the year as shown above Chattanooga.

AN $18,700,000 PRIVATE WATER-POWER PROJECT.

The Tennessee River between Browns Island and the railroad bridge below the city of Florence, Ala.: For the completion of the detailed surveys, borings, etc., for the purposes of navigation, combined with the development of water power by the United States alone or in cooperation with private interests, $150,000. (Doc. No. 20, 63d Cong., 2d sess.)

This is one of the most vicious proposals, in my judgment, ever presented to Congress under the misnomer of help to navigation. The Government has expended over $3,000,000 on this short Muscle Shoals Canal, and less than 6,000 annual tons of commerce has been produced. It has been estimated that every ton of freight carried through that lock and canal now costs the Government $25 per ton. With this startling evidence of waste and extravagance confronting us, we are asked to adopt a new water-power project at this point and to give to a private water-power company $8,575,000 in cash for approaches and other work ostensibly for navigation. In addition $1,750,000 is to be paid by the Government for flowage easements for this private water-power company.

After making a donation of $10,325,000 to this private interest, the Government agrees to loan to the same company for a period of 100 years $8,375,000, payable in annual installments, drawing 3 per cent interest.

On December 14 last I discussed this particular project for one hour on the floor of the House and pointed out some of the objectionable features it contains. It has been said that no project has ever been driven out of a river and harbor bill when it once receives the indorsement of the committee.

The $18,700,000 Muscle Shoals project carries only $150,000 in this bill as a pretended advance for borings, but it is intended to and does commit the Government to an extravagant $18,700,000 private water-power project which will be the forerunner for many other scandalous private projects if we take this step.

In order to show that honest differences of opinion as to this bill and the project under consideration may occur, I quote from the RECORD of Saturday, January 15:

EVERY PROJECT CAN SUSTAIN CRITICISM.

Mr. UNDERWOOD. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Alabama moves to strike out the last word.

Mr. UNDERWOOD. Mr. Chairman, I regard this bill as one of the cleanest rivers and harbors bills that has ever been reported to the Congress of the United States. [Applause.] I think the men who sat on the Rivers and Harbors Committee are entitled to be congratulated by the membership of this House on the bill they have reported to the House. Unfortunately, on account of the existing condition of the public finances, there are some meritorious propositions that it has been impossible for them to place in the bill, but that is not to the bill's discredit. There is not an item in this bill, in my judgment, that can not sustain any attempt to criticize it, and I think it is the duty of this House to stay here and uphold the hands of the chairman of this committee [applause] and allow him to attend to the business of the Government. * * *

There is no reason why this bill should not become a law. There is no reason why it should not be passed before we reach an adjournment to-night. [Applause.] If you go to your offices and leave this floor, then any legislative obstructionist can demand any unreasonable terms from the chairman of your committee. I believe that everybody who is interested in this bill should have opportunity to be heard, and it is far from my desire to interfere with anybody; but I do believe that no man who wants to obstruct legislation on the floor of this House should be furnished with the opportunity to do so merely because he can demand a quorum and thus waste 45 minutes of the Government's time by calling the roll.

So, in all good nature and in a perfectly friendly spirit, I rise now to appeal to the membership of this House, and especially to the Democratic membership, to stay here and see that this bill is passed, if we have to stay until 3 o'clock to-morrow morning. [Applause.]

Mr. FREAR. Mr. Chairman, may I speak in opposition to the amendment offered by the gentleman from Alabama?

Mr. UNDERWOOD. I had intended to withdraw the pro forma amendment, but will withhold it if the gentleman desires to speak in opposition.

MANY PROJECTS INDEFENSIBLE.

Mr. FREAR. Mr. Chairman, I do not know whether the remarks of the distinguished gentleman from Alabama [Mr. UNDERWOOD] were intended in any degree for my benefit. I tender to him great respect as a gentleman of integrity and high standing. But when he says to the membership of this House that one of the cleanest river and harbor bills ever presented to Congress is before them, let me say to him unfortunately he has not been present at all the sessions of the committee. I doubt whether he would say so if he had been. But if so, it is because all other bills have not been good. I have shown on this floor from 20 to 30 projects that I can not see how he can defend, and there are others of like character in the bill.

Mr. GORDON. Mr. Chairman——

Mr. FREAR. I can not be interrupted now, although I should be glad to yield if I had the time. When the gentleman from Alabama says there is not one item in the bill that can not sustain criticism, I say that is a statement I never heard before on the floor of this House as to a single appropriation bill. I would suggest to him that there are items even in Alabama, on the Tennessee River, that will be criticized on this floor, and I believe justly criticized, and we ought to be heard. I for one have not taken a single minute beyond what was necessary to make statement of conditions surrounding different projects criticized. I have not argued propositions. I have only presented facts here. The courtesy of the House which has been extended to me heretofore is appreciated. I have endeavored simply to present those facts, so that you would know what is in the bill. We ought to know the facts.

The gentleman from Alabama [Mr. UNDERWOOD] says we ought to finish the bill to-night. Let us finish it if we have to stay 24 hours.

A few days ago we were given 11 hours at one sitting, and we sat here uncomplainingly. We are willing to stay here, but let us inquire into every item that appears to deserve criticism. And the gentleman to the contrary notwithstanding, there are items here that I believe the country will criticize, even if he does not. He stands here as the leader of the majority. His well-known ability is appreciated by all of us; but I can not believe that the country sustains his position, in view of business conditions that now exist, and in view of some facts that have been and others which will be presented before this committee. [Applause on the Republican side.]

A BAD PROJECT DEFEATED.

When the $18,700,000 Muscle Shoals project was reached in the bill it was vigorously defended on the floor by the distinguished majority leader [Mr. UNDERWOOD]. Several Members on both sides of the aisle found much to criticize in the item, notably my colleague from Wisconsin [Mr. LENROOT] and Judge TOWNER, of Iowa, and after a discussion of a couple of hours the following appears from the RECORD, page 1978:

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Wisconsin [Mr. LENROOT] striking out the paragraph ($150,000 for Muscle Shoals). The question was taken, and the Chairman announced that the "ayes" seemed to have it.

Mr. SPARKMAN. A division, Mr. Chairman.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] demands a division.

The committee divided; and there were—ayes 86, noes 62.

Mr. SPARKMAN. I ask for tellers, Mr. Chairman.

Tellers were ordered; and the Chairman appointed Mr. SPARKMAN and Mr. LENROOT to act as tellers.

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Wisconsin [Mr. LENROOT] to strike out the paragraph.

The committee again divided; and the tellers reported—ayes 77, noes 62.

So the amendment was agreed to.

The CHAIRMAN. The motion to strike out is sustained and the paragraph is stricken out.

The foregoing extract from the RECORD discloses several interesting facts. First, that for the first time in many years an objectionable paragraph has been stricken from a rivers and harbors bill. Second, that this action occurred notwithstanding the project was valiantly defended on the floor by majority leader UNDERWOOD; and, third, that although the opposition to the paragraph lost 9 votes in as many minutes when facing the possibility of a leaders' displeasure, it was defeated by a substantial majority, and was one of the projects contained in this good and pure bill, which, apparently, could not withstand criticism.

We are advised that the amendment will be reinstated in the Senate, but many things may happen in the Senate before this bill becomes a law.

COMMERCE COSTS GOVERNMENT $300 PER TON.

Big Sandy	$25,000
Balance on hand July 1, 1914	93,387
Already expended	1,626,125

Here is a shining mark among the projects approved by Army engineers and recommended by the committee.

It produced a commerce last year of 172,403 tons, but all except 227 tons consisted of timber—that floats. Like Pears soap, these timber projects are famous, but why spend $1,626,125 to secure 227 tons? Counting interest and depreciation at $65,045, or 4 per cent on the investment, and maintenance at $31,998, the reported amount, it gives a total annual charge against the Government of $97,043, or at the rate of over $300 per ton. The net commerce of 465 tons in 1912 fell off over 50 per cent in one year, and to cap the climax the report adds:

It is believed that the completed works of improvement have had no material effect on freight rates.

How such projects can be defended by engineers as disinterested parties is beyond comprehension.

I quote briefly from the RECORD of January 19 on this project:

Mr. FREAR. Mr. Chairman, I desire to say that this is the last of a number of small items that I care to bring to the attention of the committee. I desire to present the facts shown by the engineers' reports. On this project of 57 miles, Big Sandy River, there has been expended by the Government $1,626,125. The main river is navigable from the mouth to Louisa, 57 miles in length.

The commerce is what I would like to call attention to. In 1913 the commerce amounted to 172,403 tons. Of that amount timber, poles, and ties amounted to 172,126 tons, leaving a net amount, after deducting the timber, poles, and ties, that float or go with a slight depth of water, 227 tons that averaged 38 miles. Interest and depreciation on this item would amount to $65,045, according to the average method of estimating. Maintenance on this item last year amounted to $31,998, or a total of $97,043 at Government expense last year for 227 tons of freight, after deducting the floatable timber, amounting approximately to $300 a ton of cost to the Government that furnishes the waterway.

OTHER EXTRAVAGANT PROJECTS.

In this connection, Mr. Chairman, I wish to refer to some figures that have been given by the senior Senator from Ohio [Mr. BURTON] to the press, in which he stated that on the Arkansas River, deducting timber, the cost to the Government has been $95 a ton for the year 1912. I find that on Red River the cost, deducting timber, was $68 a ton to the Government. On the Black Warrior River the average is about $73, as near as can be estimated, on an appropriation of nearly $10,000,000. On the Muscle Shoals, that we have just passed, the cost to the Government last year was approximately $25 a ton on $3,000,000, which was put through at this point. On the Big Sandy River, which we have just read, the cost to the Government per ton last year has been approximately $300, after deducting floatable timber. And I suggest that while it may be true, as was stated a few moments ago, at the beginning of the session to-day, that not an item in this bill can be subjected to any criticism, in view of the vote just had on the last amendment and in view of the facts presented on the Big Sandy River, it seems to me that criticism can be abundantly leveled at many of these items.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Wisconsin yield to the gentleman from Kansas?

Mr. FREAR. Yes.

Mr. MURDOCK. I want to verify the gentleman's figures. Does he say that the report shows that on the Muscle Shoals proposition the cost has been $25 a ton, and that on this Big Sandy proposition it is $300 a ton?

Mr. FREAR. Yes; after deducting floatable timber.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. HUMPHREYS of Mississippi. In ascertaining that the gentleman takes all the appropriations that have been made for the river since the Government has appropriated for it—in the case of the Arkansas River, for instance, for more than 60 years—and charges that against the river, and then credits it with the commerce that floated in one year?

Mr. FREAR. That is because this is all the commerce that has floated during the year. The interest charges and cost of maintenance are considered for the year, and the traffic for the same year shows the result stated. It is the only practicable way to ascertain the cost to the Government and the one generally adopted for ascertaining the cost of maintaining such waterways.

Mr. HUMPHREYS of Mississippi. But you do not credit it with the commerce that floated upon it during all those 60 years.

Mr. FREAR. No; because each year's commerce should be charged with the interest and maintenance for that year; but it has never decreased down to 227 tons before. According to the report last year it was 400 tons and some odd after deducting the timber. There has been a net loss during the last year of about 50 per cent in the net commerce, deducting the timber. I have endeavored to fairly determine the cost to the Government of carrying on the traffic that floats on this stream.

In view of some of the projects just discussed, which cost the Government from $25 to $300 per ton annually, I submit that the majority leader should amend his statement that this bill is beyond successful or merited criticism.

$5,000,000 FOR A $64,000,000 PROJECT.

Ohio River, continuing improvement, $2,500,000; and authorizing the Secretary of War to enter into contracts amounting to $2,500,000 more.

This is part of a $64,000,000 project, in addition to about $17,000,000 previously spent on the river by our Government. It is a very large appropriation item, and as I have been asked to present a consecutive statement of questionable items in the bill the following, taken from the RECORD of January 19, is inserted without further discussion:

Mr. FREAR. Mr. Chairman, I move to strike out the paragraph with reference to the Ohio River, from line 19, page 26, down to and including line 2, page 27.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

"Strike out the paragraph beginning with line 19, page 26, and ending with line 2, on page 27."

Mr. FREAR. Mr. Chairman, the preceding item, agreed to without opposition, was for improving and maintaining open-channel work, Ohio River, $684,000, to which there can be no possible objection by any Member; but there may be some question as to this item of $5,000,000. I want to call the attention of the committee to the status of the Ohio River, on which over $16,000,000 has already been appropriated for slack water and over $18,000,000 toward a new system of dams; leaving about $45,000,000 more to be appropriated for this system of 53 locks on the Ohio River. I have spoken on this subject once or twice before in the House, and I do not intend to repeat anything along that line at this time. I wish, however, to call the attention of the committee to the remarks of the distinguished gentleman from Pennsylvania [Mr. BARCHFELD] the other day, wherein he said:

"To-day we have a cheaper rate from Pittsburgh to New Orleans by rail than they have from Birmingham, Ala., to New Orleans by rail, only made possible by the great and mighty Ohio."

Believing there might be something to it, although it was a surprising condition of affairs, I called up the Interstate Commerce Commission and ascertained from the traffic department that on soft coal—we were discussing soft coal at the time—the rate from Pittsburgh to New Orleans is $4.45 per ton, which, of course, is prohibitive, whereas the rate from Birmingham to New Orleans is $1.25. We find that less than 1,000,000 tons of coal are shipped down the Ohio River to New Orleans. That is in the last report we have, and all the rest of the coal used at New Orleans came from Birmingham and other adjacent points. We have spent about $10,000,000 on the Black Warrior River and its connecting links which bring coal to New Orleans from Alabama. The question for us to determine is whether or not there is any object in having the Government improve the Ohio River for the purpose of increasing competition from Pittsburgh to New Orleans and Birmingham to New Orleans when the Government is the party in interest at all times and pays the bills. Coal may be brought from Pittsburgh 2,000 miles down the Ohio and Mississippi Rivers through 53 locks which are proposed to be put into operation by the $80,000,000 to be expended, but it is practically prohibitive on that kind of traffic, according to river men. Coal can not be profitably put through 53 locks, according to such authority. I wish to call attention to the expensive obstacle we are building through these 53 locks, which will become an annual maintenance charge to be paid by the Government of over $1,000,000, and in addition I desire to show where the coal from Pennsylvania does go. This last year something over 11,000,000 tons were shipped by rail across the State of Ohio to Ashtabula, or one of the lake ports, and from there up to the Duluth-Superior Harbor, and from there distributed throughout the upper country, first across the State of Ohio by rail to the lake and then on an 800-mile haul up to Duluth and Superior. In that country they depend very largely upon the coal which comes from the Pittsburgh district. The proposition was presented to us the other day by the gentleman from Pennsylvania [Mr. BARCHFELD] that the people of Pittsburgh intend to put through a $60,000,000 canal from Pittsburgh to Lake Erie. I take it we need have no apprehension that private parties will enter into any such proposition. That will be another project

for the Government to prosecute. I have been unable to ascertain from any of the reports in reference to this $60,000,000 canal, but the Government surely will be called upon to make that appropriation if it ever goes into operation——

The CHAIRMAN. The time of the gentleman has expired.

Mr. FREAR. I ask for five minutes more on this $5,000,000 item.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

53 LOCKS FOR 1,000,000 TONS OF COAL.

Mr. FREAR. At the present time we are building 53 locks, according to the report. Thirty-one locks have been commenced; 22 more locks are to be built. If there is traffic upon that river sufficient to warrant the expenditure of $80,000,000 or $100,000,000, of course no man will question but that it is a proper expenditure. The question of traffic does enter strongly into this problem. I have examined, so far as I have been able to do so, all the engineers' reports; and I have consulted with rivermen familiar with the Ohio, and I have received a number of letters, all to the effect that I am right in my position that this is an extravagant, wasteful project. The traffic that goes through the Portland & Louisville Canal and through the open river at that point is a little over a million tons annually, and passing out of the Ohio at Cairo is about 1,000,000 tons. The engineer says that the river commerce reaches over 8,000,000 tons in the total, which amount is presumably arrived at by duplications. All the reports are unsatisfactory, and after all the expenditures we have made on the Ohio—already reaching over $33,000,000—it occurs to me we ought to know what we are up against. If we are to ship only a million tons of coal annually on this river, and this coal will have to go through 53 locks, we had better build a railroad down to New Orleans, if the coal has to go there, and ship the coal at Government expense. It would be far more economical.

Mr. CALLAWAY. What on earth do we want to prepare to ship coal from Pittsburgh to New Orleans for, when it is cheaper for them to ship it from Birmingham? They say they can get it cheaper than in any place on earth there, and now they prefer to ship it down from Pittsburgh.

Mr. FREAR. The gentleman is right. My purpose in bringing this before the House is to show the questionable character of the proposition.

* * * * * * *

I will not take the time of the committee further. I have discussed the Ohio River question before. I am not going to tire you with statistics, as I realize it would be useless. I present this brief statement to the House in order to have a vote on it.

Immediately following my statement of Ohio River commerce, based on the engineer's reports, the chairman of the Rivers and Harbors Committee [Mr. SPARKMAN] introduced a letter from the Chief of Engineers.

Nothing could more fully disclose the true facts regarding Ohio River commerce, which is conceded to rank first among all the rivers in the country, and to be made navigable at a prospective cost to the Government of $80,000,000.

RIDICULOUS REPORTS OF COMMERCE.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] asks unanimous consent to print the letter referred to as a part of his remarks. Is there objection?

There was no objection.

Following is the letter referred to:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, July 27, 1914.

Hon. S. M. SPARKMAN,
Chairman Committee on Rivers and Harbors,
United States House of Representatives.

SIR: 1. Referring to the statement of the commercial statistics of the Ohio River, telephoned to you some time since, I have the honor to inform you that a report just received from the district officer states that the commercial statistics which he reported by telegraph have been found upon careful check to have contained some duplication. A corrected tabular statement of the statistics is herewith.

2. As to the reason for reporting the statistics at only six locks, it may be stated that the particular locks were selected with a view to obtaining as complete statistics as possible, and at the same time to eliminate duplication as much as practicable. Boats with through tows are required to report only at the first lock through which they pass. The item for open river commerce is the local commerce carried on between the various locks and dams.

Very respectfully,

DAN C. KINGMAN,
Chief of Engineers, United States Army.

Ohio River tonnage, calendar year 1913.

[Through lock and open river.]

	Tonnage.	Valuation.	Passengers.
Lock No. 1	1,982,257.5	$3,720,794.36	86,518
Lock No. 8	224,080.5	1,095,666.92	5,005
Lock No. 18	374,945.0	2,336,645.31	9,421
Lock No. 26	796,629.0	2,926,918.65	17,266
Lock No. 37	1,988,434.0	9,953,466.24	104,078
Lock No. 41	1,537,146.5	6,318,567.53	11,767
Open river	1,509,111.5	14,088,452.70	1,086,897
Ferries	1,401,519.5	36,086,390.07	2,949,834
Total	9,814,123.3	77,026,901.78	4,270,786

ENGINEERS' COMMERCIAL STATISTICS.

I call attention to the following peculiar facts in connection with the Chief of Engineer's letter just offered:

The Ohio River traffic for 1913 is given by him at 9,814,123 tons, valued at $77,026,901, but any schoolboy would be chastized for presenting such a misleading document, and its use in attempting to mislead Congress merits condemnation.

First, who ever before understood or believed that ferriage across the Ohio River was included in engineers' statistics in order to get approximately one-half the value of river commerce, or why add 1,401,519 tons of ferry traffic to show actual commerce down the river? Ferries crossing the river boost totals, but their relation to the $64,000,000 canalization project is about as close as the earth is to the moon.

Second, the Chief of Engineers takes the tonnage passing through six locks and adds it together to ascertain the river's commerce. What a travesty. As well add the number of passengers on a street car when it stops at different streets to take on or discharge passengers. It is stated that through statistics are only taken once, but a brief study of the fall in tonnage between Locks 1 and 8 reveals its own story, and the second tumble between Locks 37 and 41 is significant.

Third, the open-river traffic has existed since Indians first canoed on the river hundreds of years ago. Before any channel improvements were attempted, 50 years ago, the open-river traffic was larger by far than in recent years when railways have absorbed practically everything excepting short hauls of bulky freight by a coal monopoly that maintains a control of river boats and traffic and is also credited with a control of coal output and price. Railroad interests should be curbed, but other monopolies are equally bad. Millions of dollars have been spent on Ohio channel work, and yet counting together all the reports from different points, short haul and all, including duplications, open-river traffic aggregates only about 1,400,000 tons, much of which represents short hauls, duplications, and quadruplications, according to Chairman SPARKMAN'S speech.

ACTUAL TRAFFIC SERVED.

The Ohio River is 1,000 miles long, and the 1913 traffic through several locks is shown to average about 1,150,000 tons, while the length of haul by canal or open river is purely speculative. Statistics further show that nine-tenths of the traffic is soft coal of small value. Traffic through the open river and lower canal section combined reached about a million tons several years ago, and that passes out into the Mississippi. Every attempt to get at anything definite discloses the ridiculous methods pursued by Army engineers to deceive Congress as to actual facts. Instead of nearly 10,000,000 tons, aggregating $77,000,000 in value, both totals must be liberally slashed in order to get at true conditions. Traffic fell off 14 per cent last year, as shown by comparative estimates of 12 months' averaged traffic in 1912 and 1913. Assuming that it remains at its present stage during the next 10 years, a dangerous assumption, by that time we will have spent the last of the $80,000,000 which has gone and will go into the Ohio River.

A table offered by me last year was criticized because of its assumed inaccuracies. I have no desire to represent the facts any worse than they are, and in an effort to give a modest estimate of our Ohio River investment we discover the following probable results:

Investment $80,000,000, at 3 per cent interest annually	$2,400,000
Depreciation $80,000,000, at 3 per cent interest annually	2,400,000
Maintenance 53 locks, at $25,000	1,325,000
Annual cost to the Government (about)	6,125,000

I am assured that maintenance charges will be greater. Allowing $2 per ton for shipping soft coal by rail from Pittsburgh to Cairo, a figure equal to the value of the coal, it leaves a balance of approximately $4,000,000 to cover 122,000 tons of miscellaneous freight (p. 2776) and an average cost to the Government of about $33 per ton. Miscellaneous freight is shipped from 10 miles to 1,000 miles, and according to the itemized report it includes 8,000 tons of salt, 12,000 tons of lumber, and 85,332 tons of "miscellaneous," whatever that may be, in addition to a few smaller items.

VALUATIONS OF MISCELLANEOUS FREIGHT.

Shrewsbury, N. J., "miscellaneous freight" was valued at $1 per ton. Ohio River's miscellaneous freight, apart from transportation charges, will cost the Government over $30 per ton, according to conservative estimates offered. Four thousand seven hundred tons of hay, shown by the table, at $30 per ton would make a rapidly rising hay market, but that only represents the cost to the Government for furnishing a waterway for this hay. Does it not look like an unbusinesslike proposal; and what of engineers' reports, which throw ferriage, open river, and lock statistics into one hugh jumble in order to make some kind of showing for these tremendous expenditures on the Ohio? Adding together the lockages is about as clarifying as to attempt to determine the number of automobiles in Washington by sitting on different street corners and counting those in sight throughout the day. But what are you going to do about it? What actual commerce is to be served by this $80,000,000 expenditure?

I have taken some time to briefly call attention to this $5,000,000 item in the bill, but it is one that requires attention.

Motion to strike out rejected.

REAL WATERWAYS AT SMALL COMPARATIVE EXPENSE.

Many genuine waterways exist throughout the country, but no more significant contrast between lake and river commerce could be offered than that which relates to my own State. In reply to several caustic critics, who resent any inquiry into projects contained in the bill based on my own assumed lack of knowledge of waterways, I insert the following brief statement from the RECORD of June 19:

The Clerk read as follows:

"Harbor at Ashland, Wis.: Continuing improvement and for maintenance, $20,000."

Mr. FREAR. Mr. Chairman, I move to strike out the last word. Last year, when we were discussing the river and harbor bill, it was frequently stated that in my own State we had very little water traffic and that I knew little about the subject. I have no defense I feel impelled to offer, but to show the character of some Wisconsin items, I call attention to the one which has just been read. In 1913 the commerce of Ashland carried by water was 5,623,309 tons, carried for a distance of about 600 miles. In addition to that commerce, 18,131,000 feet of lumber was not included. The engineers do not include lumber, logs, or things of that kind which are rafted in. They are not considered with the commerce apparently, nor do the engineers include them in their report. With that Ashland commerce there were 57,000 passengers carried to or from this particular place.

Wisconsin has a large number of harbors, and three of them handle the following commerce of the country: Superior and Duluth, one harbor, 46,875,000 tons; Milwaukee, 8,647,000 tons; Ashland, 5,623,000 tons; a total of 61,245,000 tons for these three harbors, which are only a few of the harbors of the State.

It has been suggested that there was no river of any importance up in that country. I have stated before that the greatest river in the world flows past my district for 100 miles. Also, the St. Croix, a large river, averaging over half a mile in width, and capable of floating, when it is open, the largest boats on the Mississippi River, is opposite my home. Years ago we had more traffic there by far than is on the Ohio River to-day; in fact, more than was carried on the Mississippi at that time. To-day we have practically no traffic at all. There were shipped last year 219,000 tons at a valuation of $1,170,000. That looks big. It is as large as the average Florida project, but one man ran practically all that commerce, which consisted of logs and timber that was rafted. We do not count traffic which floats down in rafts. It is not like other traffic. It floats on the present stage of water. Every project in that State and all other States should be critically examined and the committee, not the Representative locally interested, should be prepared to defend its recommendation.

MISSISSIPPI RIVER.

This is another large project, and on this particular part of the river the item is for $5,000,000. In order to have the projects appear consecutively I quote briefly from the RECORD of June 19:

Mr. FREAR. I move to strike out the figures "$5,000,000," in line 23, page 30, and to substitute "$1,000,000."

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

"Page 30, line 23, strike out the figures "$5,000,000" and substitute therefor "$1,000,000."

Mr. FREAR. Mr. Chairman, I do not assume to be a better judge than the engineers of the necessities of the lower Mississippi River. In view, however, of the fact that we are spending large sums of money at this time, I do believe it is well for us to economize, if possible, in some of these large appropriations. It appears from the engineers' report that October last $4,556,387 was on hand for further use on this project. If any portion of that money is to be used at this time, it appears it might relieve the situation which confronts us at the United States Treasury.

On several occasions I have spoken on the subject of the Mississippi River, and have given the opinions of critics, of engineers, of people who live on the river, and of newspapers at New Orleans and at Vicksburg and at Memphis criticizing the character of the appropriations on the Mississippi River and the improvements now being made. There is a well-grounded opposition, apparently, in the minds of many reputable people against the large appropriations that are being made at the present time for the Mississippi River. The complaint largely is lodged against the system of improvements. For that reason some time ago I introduced a resolution asking that a complete investigation of the present system be had and that the President appoint a high-class board, if necessary, for the purpose of making the investigation. In response to that I received many letters from engineers and others throughout the country urging that my proposal was good, in view of the many criticisms against the work now being conducted by the Mississippi River Commission.

The present system is declared by experts and by people living along the river to be a patchwork system of levees of no permanent value. It is also charged, and charged very forcibly, that the Mississippi River levee proposition is one for the reclamation of lands, as was stated on the floor a day or two ago, and that a great many acres of land are to be reclaimed by this system of levee construction. If so, it is not for the purpose of navigation. I believe it is improper to pay Government funds for such purposes, or at least there ought to be liberal local contributions, and they ought to be published, so that the people of this country whose money we are paying out on the Mississippi will know what is being paid by local communities toward the reclamation of lands.

Mr. GOULDEN. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. GOULDEN. Can the gentleman tell how much money is on hand as of date January 1, and available for this improvement?

Mr. FREAR. I stated that over $4,000,000 was available in October last. That was after the allotment was had.

Mr. Chairman, I do not care to discuss this to any extent, because I realize that I have taken the time of the committee and of the House on this Mississippi River item heretofore, but I do wish to say this: We all know that the traffic on the Mississippi River has rapidly decreased—I think something over 80 per cent—within the last 15 years, and this appropriation is primarily for the building of levees and for land reclamation.

UNDETERMINED MILLIONS FOR LAND RECLAMATION.

We are placing in the hands of this commission a great deal of money—$77,000,000 or $80,000,000, as nearly as I can ascertain from the engineers' report on the lower branch of the Mississippi River. No one knows what this great scheme will cost. It is for us to handle the matter intelligently, remembering that we will have to face the results and be held responsible. We can go along in this reckless way under pressure that comes from one part of the country or the other, but eventually you have got to meet it.

On June 3, on pages 10591 to 10599 of the RECORD, appear my remarks before the House wherein I pointed out secret efforts to influence Congress on rivers and harbors bills from subscriptions of money to the use of threats against business men. At that time I presented the following subscriptions, running for five years, taken from what purported to be a photographic copy of a typewritten statement made by Col. John A. Fox, secretary and manager of the Mississippi Levee Association:

"It has been estimated that a minimum fund of $30,000 per annum is necessary for this organization to do its work in a complete and thorough manner, and already a considerable portion of this sum has been pledged annually for five years (of $150,000 in all). The subscriptions are as follows:

Southern Railway Co	$1,000
Mobile & Ohio R. R	1,000
Frisco R. R	1,000
Missouri Pacific R. R	1,000
Chi., R. I. & Pac. R. R	1,000
St. Louis & So. West. R	1,000
Illinois Central	1,000
Y. & M. V	1,000
Chicago Mill & Lumber Co	1,000
Caldwell & Smith, Memphis	1,000
International Harvester Co	1,000

"Assurance has been given of other substantial amounts."

I am reliably informed that Mr. Fox has been engaged within the past 60 days in collecting money to help the Mississippi River lobby get a larger fund with which to push its activities in favor of Government appropriations. It is stated to me that Mr. Fox has collected $250 from each of 15 or more counties bordering on the river—not from private individuals, but from the municipalities. This money is to be used in promoting larger Government appropriations for the Mississippi River 16,000,000-acre land reclamation project.

Why do we permit such notorious lobbies to influence legislation when we know the secret methods pursued in framing up a back fire to force through the last $53,000,000 pork barrel?

A thorough investigation would be of value to Congress and to the country.

MISSISSIPPI RIVER, $500,000.

Again I quote as to a second project on the same river:

"Mississippi River from the mouth of the Ohio River to and including the mouth of the Missouri River: Continuing improvement and for maintenance, $500,000."

Mr. FREAR. Mr. Chairman, on this part of the river—this 200-mile stretch of the river—I understand from the engineer's report that $17,223,000 has already been expended. That is according to the last report. I do not find the amount that is available.

Mr. Chairman, I move to strike out the paragraph, if I have not already moved that.

The CHAIRMAN. The gentleman from Wisconsin [Mr. FREAR] moves to strike out the paragraph.

Mr. FREAR. I do not find the amount that was available for use, although $250,000 was allotted after the last appropriation.

Mr. SPARKMAN. Mr. Chairman, the amount on hand on November 1 was $376,000, in round numbers.

Mr. FREAR. It would appear to me, then, that there is a large balance available, unless that has already been disturbed.

Mr. SPARKMAN. I have not the figures myself, but I have no doubt that a great deal of that sum has been expended since November 1.

Mr. FREAR. I wish to state in regard to this 200-mile project, that it is one of the most expensive projects we have in the country to-day, according to reports. We have lost 30 per cent of the traffic on the Mississippi River in the last two years, according to the engineer's report.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. CALLAWAY. You say there has been a loss of 30 per cent in the traffic within the last two years?

Mr. FREAR. I understand so; a loss from 435,040 tons to 258,709 tons, as shown by the St. Louis receipts and shipments.

Mr. CALLAWAY. And we had lost about 97 per cent prior to that?

Mr. FREAR. About 80 per cent.

Mr. CALLAWAY. Have you any figures on how much freight was carried on this river?

Mr. FREAR. I have it as 258,709 tons in 1914. (P. 2430.)

Mr. CALLAWAY. Is there any through traffic on the river at all between St. Louis and New Orleans?

Mr. FREAR. There is very little information that comes from the report.

I wish, Mr. Chairman, to read briefly from a statement made by a gentleman who knows a great deal about the waterways of this country and whose judgment we may well accept. He says the following in regard to this particular project. I quote from Senator BURTON of Ohio:

"We have expended more money on this stretch of the Mississippi than the Prussian Government has spent on the whole Rhine. While they carry an average of 45,000,000 tons a year, nearly 200 times the traffic on the Mississippi River on this 200-mile project, the fact is that the Mississippi has to-day a sufficient channel to handle the traffic of the Rhine, 200 times the present amount, and, despite that fact, waterways commerce on that historic river falls each year to a lower level."

Mr. Chairman, in view of that statement that we have spent more on that 200-mile stretch than has been expended on the whole river Rhine and have less than 1 ton conveyed on that stretch as compared

with 200 tons on the river Rhine, I say, Is it not time for us to inquire what we are doing, and how fast we are appropriating money? We have appropriated over $17,000,000 on that 200-mile project.

Mr. CALLAWAY. Do you reckon the committee intends to bring back the traffic to the river?

Mr. FREAR. I would not attempt to predict as to that.

Mr. CALLAWAY. You say the traffic in the last two years has fallen off, and they have expended enormous sums on it in the last two years in dredging and all kinds of work, and instead of the traffic coming up it is going back all the time. Does not that prove that the river transportation in this country is playing out?

Mr. FREAR. It would seem so. That is my judgment.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

MISSISSIPPI RIVER, $1,200,000.

From mouth of the Missouri to Minneapolis, balance on hand October, 1914 ---------- $962,625

Again I quote briefly from the RECORD of June 19:

Mr. FREAR. Mr. Chairman, I move to substitute the figures "$600,000" in place of the figures "$1,200,000," appearing in line 15, page 32.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

"Page 32, line 15, strike out '$1,200,000' and insert '$600,000.'"

Mr. FREAR. Mr. Chairman, this is the only project in which I may fairly be charged to be concerned. I have made a motion to divide the amount appropriated, because I believe in these times we ought to economize, and the amendment is offered to that end unless we have greater need for this appropriation on the project than has been shown. This river flows 100 miles along my district, and its tributaries flow farther than that. There is not a single boat line so far as I know, with the exception of two or three months in the year, that goes through from St. Paul to St. Louis. There is very little traffic upon this river. Taking the engineers' estimate of the width where they have made the completed improvement, instead of a 6-foot channel, as they propose, it would be impossible to get more than 2 feet of water, because the water is not there and in all probability never will be except for short periods.

Commerce is reported in the engineers' report at 2,145,315 tons, and I wish to give the character of that commerce. Brush used in construction work, 82,450 tons; gravel, 398,178 tons; rocks, 708,000 tons; sand, 562,000 tons, aggregating 1,750,000 tons. In addition to that logs, 98,268 tons; lumber, 30,408 tons; wood, 34,000 tons, aggregating 1,912,000 tons. All of this, understand, is not carried by raft, but it does not require a 6-foot channel for that character of traffic, and it leaves a balance of a little over 200,000 tons. Referring again to the engineers' method of giving traffic upon a stream, they report 6,000 automobiles, at $945,950, making practically one-half of the total valuation of that commerce. I was interested to find out where those automobiles ran, and I find they ran 3 miles across the river, ferried across, and that appears as one of the greatest items of commerce upon that river. Now, Mr. Chairman, I was asked why I did not move to strike out the entire amount. There was $962,625 available October last. That is a very small proportion compared with the five million on the lower stretch of the river, but at the same time with that amount of money on hand, by dividing this amount and saving $600,000 to the people of this country, it will benefit my people, who will be saved in taxation, and it will benefit the people of the whole country, even if we strike out only one-half of one item. I am sure they will applaud you for it, because there is practically very little traffic along the river at that point and it leaves $1,562,625 for use on the river during the coming year.

Mr. GOULDEN. Will the gentleman yield?

Mr. FREAR. I will.

Mr. GOULDEN. What portion of the gentleman's district borders this river?

Mr. FREAR. About 100 miles.

Mr. GOULDEN. What important ports has the gentleman upon the river?

Mr. FREAR. There are several places, but there is no important port along the river in Wisconsin except two or three towns, but there is practically very little traffic along the river at that point.

Amendment rejected.

MISSISSIPPI RIVER, $235,000, BETWEEN ST. PAUL AND MINNEAPOLIS.

Again, I quote briefly from the RECORD:

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

"Page 32, strike out lines 16 and 17."

Mr. FREAR. Mr. Chairman, this is a project that has had in appropriations $2,354,600. We are proposing to give $235,000 in addition to the amount available last October, $216,624. I wish to present briefly a statement from a letter which I have received, coming from a former editorial writer on the Pioneer Press, the largest newspaper in the northwestern country for many years:

2219 KNAPP STREET,
St. Paul, Minn., December 9, 1914.

Hon. JAMES A. FREAR,
Washington, D. C.

DEAR SIR: I want to thank you for the copy sent me of the CONGRESSIONAL RECORD.

For many years I have recognized in "pork-barrel" methods the very worst obstruction to the progress of national waterway improvement. When the people see vast sums wasted on "fake" improvements, like that in "Dam No. 2" in the Mississippi at this point, they naturally lose faith in waterway improvement as a whole.

I want to suggest the following as an effective mode of testing the sincerity of those Congressmen who are asking big appropriations for insignificant streams and harbors in their respective States:

Let every appropriation by Congress for such improvement be conditioned on the appropriation, by the State in which it is located, of at least one-half as much as is to be paid from the National Treasury. If they really believe the improvement will be worth as much as is claimed for it, the Congressmen interested can hardly refuse to accept so liberal a condition.

I believe, in fact, that almost all river and harbor improvements should be carried through by cooperation between States and nations. The example of Illinois in appropriating $20,000,000 for the Lakes to the Gulf scheme, and of New York in voting $120,000,000 for the enlarged Erie Canal, should shame into silence those who would place upon the Federal Treasury the entire burden of improvements, the benefits of which are purely local.

Very truly, yours, C. R. BARNS.

I wrote practically all the waterway editorials which appeared in the Pioneer Press for nearly 14 years.

DEVELOPING PASSENGER TRAFFIC.

I do not know the gentleman personally, but upon the receipt of the letter I made some investigation into this project, which is not far from my own home. I call attention to the Engineer's Report, on page 935, giving justification for this expense, which already has amounted to $2,354,000. It is for building a dam between St. Paul and Minneapolis 30 feet high. The engineer says:

"The construction of the lock and dam may develop passenger traffic between St. Paul and Minneapolis, and it is expected to reduce the freight rate on flour and grain shipped from Minneapolis."

That is the project to which the gentleman refers in the letter. I will say in regard to the passenger traffic—this is written by the engineers, so that Members here can determine for themselves the value to be placed upon the report—St. Paul and Minneapolis are only 10 miles apart. Traveling on a street car, it takes about half an hour or a little more. The street cars are great, large cars, two or three times as large as those on the streets here, and they run every five minutes on two different lines; and there are eight trunk lines running between the two cities; yet the engineers say it is for the purpose of developing passenger traffic. And it would ordinarily take half an hour to get to the boat and half an hour to get back from the boat in order to make the trip. It would take nearly half an hour to go through the locks and three-quarters of an hour to travel up the current of the river. Yet the engineers say to us seriously—with 8 trunk lines and 2 street-car lines with, 50,000 people going to and from every day at 10 cents each—that there is a hope of developing a passenger traffic.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. MOORE. I have heard the gentleman make this statement several times about the railroads being accessible. If I understand the waterway movement, it is for the purpose of affording competition with the railroads—not necessarily against them, but competition with them. Do I understand the gentleman, from what he has just said and from what I have heard him say before, to mean that he would prefer to see no waterway competition at all because the railroads can carry the freight?

Mr. FREAR. No; certainly not. I am endeavoring to show to the gentleman and to the committee it is the greatest absurdity to say that any possible passenger traffic can exist for this reason. The street cars carry the passengers from one city to the other for 10 cents. In order to take the boats you would have to pay 5 cents to go down to the boat and 5 cents to get back from it, losing all the time in transferring on the boat.

Mr. MOORE. Let us take freight, bulky matter.

Mr. FREAR. I am speaking of this passenger traffic first. I am going to refer to the other.

Mr. MOORE. Mr. Chairman, the gentleman's statement would seem to indicate that where there are railroads he would prefer there should be no water competition.

Mr. FREAR. No, Mr. Chairman; I have shown the utter absurdity in this case of any possible competition by water in passenger rates with street cars, where it only costs 10 cents to go between the two towns. Naturally, we desire reduced rates wherever possible to secure them and wherever the traffic warrants such expenditures. It is a waste of time of the House to discuss it further, I fear. Of course the gentleman does not mean that seriously.

Mr. MOORE. It would apply to a river like the Hudson, where the railroads parallel the river on either side. Would the gentleman say there should be no improvement of the river to afford water competition?

THEORETICAL COMPETITION.

Mr. FREAR. No; I did not oppose the Hudson River appropriation. I do question the proposed surveys covering the two projects, one a 27-foot depth and the other a 30-foot depth, for the Hudson River, which would involve an expense of possible ten to thirty million dollars, to be ascertained if both projects were put into force. There is only one other thing. I spoke of the absolute absurdity of the engineers' recommendation on this matter.

I have occasionally gone up to Minnehaha on the boat, and, as far as any passenger business is concerned, it is impossible to compete between the cities by waterway traffic. On the question of freight rates on flour and grain, I would not care to express an opinion, because that is in the future. No one can tell; but I will say this, Mr. Chairman, that last year there was brought from New Orleans to the city of St. Paul a boat, traveling the whole length of the Mississippi River. The gentleman who had the boat was entertained by a committee of business men at St. Paul. I recollect quite well the character of his remarks at that time. He brought his boat from New Orleans, and he was feasted, and the banqueters expressed the hope that he would continue in the business. They were very kind to him, but they did not give him business, and he said to them in a speech, "You have done everything except the one thing that is necessary—you have not given me any return cargo." Now, that is the only case to my knowledge of a boat going from New Orleans to St. Paul in recent years, and I doubt if any boats have gone down the entire length of the river. Of course we have hopes of the future, but we have a 30-foot dam and lock, and, as I said, it is a matter of speculation. We are going on with it, and we have to look to the future. I presume we ought to finish it as long as we have gotten so far along with it, but it is an absurdity and absolutely ridiculous from present prospects to speak of passenger traffic, because there is none.

Mr. MURDOCK. Will the gentleman yield?

Mr. FREAR. I will.

Mr. MURDOCK. Did the gentleman state that the Government had spent on this stretch of river some $2,000,000?

Mr. FREAR. Two million two hundred and fifty-four thousand six hundred dollars has been appropriated.

Mr. MURDOCK. What is the tonnage on that stretch now?

Mr. FREAR. There is absolutely nothing. The only traffic is by an excursion steamer to Minnehaha Creek. The Engineer's Report says:

"The statistics of the excursion business done could not be obtained. The rafting of logs below Minneapolis has ceased."

That is found on page 2483 of the Engineer's Report. I have made the motion in order to present the facts set forth by the report on this project.

On the statement that this appropriation is for the completion of the work, the amendment was withdrawn. Possibly the hopes of engineers will be realized, and this is no more doubtful than many others I have discussed in the bill, but I am presenting the judgment of Army engineers as to commercial possibilities.

TWENTY MILLIONS WASTED.

Missouri River: Continuing improvement and for maintenance, with a view to securing a permanent 6-foot channel between Kansas City and the mouth of the river, $1,200,000.

When this project was discussed under the five-minute rule I offered the following statement on the floor:

Mr. FREAR. Mr. Chairman, I move to strike out the last word in order to present the facts briefly. In order to anticipate whatever may be said in opposition regarding the commerce on this river, I desire to refer to page 2513 of the Engineer's Report, wherein it is stated that there were 347,235 tons of commerce in 1913. Of that amount 312,090 tons were sand and gravel hauled 1 mile. That is about nine-tenths of the commerce. Then there was cordwood and building materials and other articles hauled 10 miles, making 323,249 tons out of the 347,235 tons, leaving a net balance of 23,986 tons. This is a $20,000,000 project. We had spent over $7,000,000 before it was undertaken, making $27,000,000. I do not intend to discuss the merits beyond reading a brief statement. This comes from a man who, in my judgment, knows more about this project possibly than anyone on the floor, unless it is those who live in the immediate vicinity. This is what he says:

"The proponents of this monumental folly quote the general commerce carried on this river last year (referring to 1912) of 185,110 tons; and yet of this amount the official statistics show that 155,420 tons consisted of sand and gravel carried an average distance of 1 mile and worth less than 40 cents a ton. The engineers declare it will cost half a million dollars a year to maintain a channel on the Missouri from Kansas City to St. Louis, approximately the cost of maintaining the harbors of Boston, New York, Baltimore, Norfolk, and Charleston combined, with 5,000 tons to every single ton of actual commerce on the river."

I have been quoting from Senator BURTON'S statement given to the press some time ago.

The Missouri River project has been criticized without gloves, and the engineer's reports have shown that from the best available comparisons commerce on the river has decreased 80 per cent during the last 15 years.

To make clear the character of commerce reported on this 400-mile stretch of the Missouri for 1913, I submit the table of freight traffic found in the Engineer's Report on page 2513.

COMMERCIAL STATISTICS.

LOWER MISSOURI RIVER (MOUTH TO KANSAS CITY).

Season of navigation, year 1913: Opened March 15; closed November 30.

Freight traffic.

Articles.	Amount.		Valuation.	Average haul.	Rate per ton-mile.
	Customary units.	Short tons.			
				Miles.	
Grain	253,940 bushels	6,701	$195,303.38	123	$0.0091
Hay		114	2,049.66	105	.0156
Feed and flour		334	9,538.88	8	.0670
Oil	46 barrels	12	345.00	8	.0483
Manufactured iron and steel		1,655	897,790.50	291	.0089
Live stock	4,800 head	945	137,039.20	31	.0403
Salt	148 barrels	22	259.00	9	.0510
Sand and gravel	1,735 cubic yards	2,513	1,646.00	9	.0557
Brick	4,800	16	56.90	9	.0349
Cement	534 barrels	107	1,152.90	26	.0346
Lumber	75,360 feet b. m	183	2,976.60	13	.0333
Other building material		15	1,088.00	10	.0415
Railroad ties	128,908	10,312	62,607.50	14	.0085
Produce		196	22,370.40	125	.0114
Wood	591 cords	847	2,135.60	9	.1002
Miscellaneous		13,579	2,520,734.80	237	.0093
Logs and lumber rafted	43,600 feet b. m	107	473.00	150	(1)
Sand and gravel barged	238,136 cubic yards	309,577	71,555.00	1	(1)
Total		347,235	8,929,212.32		

[1] Owner.

Total ton-miles, 5,173,170.

From the foregoing statement it will be noted that 312,090 tons is of sand, practically all barged 1 mile by the owner, whether a Government contractor or private individual does not appear. Such freight does not require 9 feet depth, nor 6 feet—not even 3 feet—for use of barges. Neither is any special depth required for railroad ties or logs and lumber rafted, which make up 10,419 tons of this peculiar statement of traffic. Subtracting these items from the pretentious table leaves less than 25,000 tons of grain, "miscellaneous," and other items. This comparatively small traffic is to be given a $27,000,000 waterway when completed to the required depth. Estimating interest, depreciation, and annual maintenance at 5 per cent, a conservative figure where no canalization exists, the Government foots the bill for this waterway at $54 per ton, as follows:

$27,000,000 at 5 per cent $1,350,000
25,000 tons, at $54 1,350,000

We provide a track for the craft, whether ship, barge, or skiff, but what kind of business judgment is being exercised by Congress when we embark on such extravagant, wasteful, and indefensible projects that excite the ridicule of rivermen and the condemnation of business men?

CONTRACTORS' $925,000 OUTFIT HELPS COMMERCE.

Missouri River, Kansas City to Fort Benton $150,000

Although $1,049,000 has been expended on this part of the Missouri River, I wish to submit without amendment a statement of commerce, taken from page 2528 of the report.

COMMERCIAL STATISTICS.

UPPER MISSOURI RIVER (KANSAS CITY TO FORT BENTON).

Season of navigation, year 1913: Opened April 1; closed November 15.

Freight traffic.

Articles.	Amount.		Valuation.	Average haul.
	Customary units.	Short tons.		
				Miles.
Grain	786,108 bushels	23,776	$786,000.00	65
Coal		4,166	9,831.76	38
Manufactured iron and steel		499	101,927.00	65
Salt	100 barrels	15	250.00	50
Lumber and shingles		6,029	38,690.00	48
Lumber and piling, rafted		3,960	16,310.00	35
Other building materials		95	1,450.00	54
Miscellaneous		985	85,300.00	80
Sand, barged	88,735 cubic yards	115,685	39,348.00	2
Oil	500 barrels	106	5,000.00	50
Contractor's outfit		9,250	925,000.00	35
Willows used by R. R. Co	2,000 cords	1,200	4,000.00	10
Total		165,766	2,013,106.76	

Total ton-miles, 2,684,759.

Of the total commerce, 115,685 tons of sand was hauled 2 miles, 9,890 tons piling and timber is carried at small depth, 9,250 tons is for a contractor's outfit.

Of the $2,013,106 valuation, the contractor supplies $925,000.

I have cited this report, among others, to show the character of engineers' statistics and importance of taking total commerce with a few grains of salt.

Just what would show up in the tonnage with that 2-mile haul of sand deducted, and just how a presentable total of valuation could be offered if that contractor had not been on the job, is open to conjecture.

NEW SURVEYS, $250,000—172 OF THEM, GOOD, BAD, AND INDIFFERENT.

The choicest plums in the rivers and harbors bill are what were so aptly described by the gentleman from Illinois, Dr. FOWLER, as consolation prizes. In this bill $250,000 is stowed away for 172 consolation prizes, so that when Members are not tied to the bill by one of the 250 "projects" it contains they may be tempted by a "survey."

No trout takes the bait easier than an anxious Member whose constituency looks for him to bring something home, and, if it is nothing more substantial, he brings home a survey for Mud Creek, or Cowpasture Creek, or Mosquito Rivulet, or Fisheating Inlet, some of which are included in the bill under discussion. With the case of the Kissimmee, Scuppernong, or Oklawaha it is entirely different, because these creeks are now waterway projects, having received the official sanction of Army engineers.

All they now require is an opportunity to rush the Treasury; but it is different with Cowpasture Creek and Mud Creek and Mosquito Rivulet and Fisheating Inlet, all of which must first be surveyed and approved by our military forces.

When called upon to give an official O. K. to some of these creeks and "cricks" and rivulets, the conscientious Army engineer wonders who discovered the proposed waterway after its century of undisturbed solitude. His first advisers come from a committee of local citizens, members of the Cowpasture Board of Trade, all filled with enthusiasm over the possibilities of aid for the new waterway, which is to be connected with the necessary reservoir, located on the corner of Pennsylvania Avenue and Fifteenth Street, Washington, D. C.

The committee of local citizens expatiate on the commercial possibilities of their creek. To the north, east, south, and west lie virgin forests of pussy willows and hazel brush. When these are cleaned off in the course of events and all pussy willows and

other "timber" floated down to a movable stave factory, then a great agricultural region will be developed.

Our military defender begins sounding the creek and finds mud, marshes, overhanging boughs, and venerable snags just as they grew centuries ago, when Capt. John Smith first explored the James and the Cowpasture. After a brief examination the engineer, as conscientious and honest as any other man, sends in the facts and his adverse report.

LOCAL INDIGNATION MEETINGS.

When the report becomes public indignant communities living on Cowpasture Creek and Mud Creek and Mosquito Rivulet and Fisheating Inlet are, individually and collectively, insulted and enraged. They meet and resolve that their project has been unfairly examined. Thereupon Cowpasture's Congressman is notified without undue courtesy to get busy and to call for a resurvey, so that the local creek may have another civil-service examination and be placed on the eligible grab-bag list.

Again the Board of Trade of Cowpasture Township furnishes glittering estimates of commercial possibilities, and to prove the soundness of its theory of navigability a gasoline boat is built and run around a snag, up to a bar, thereby proving the creek can be made navigable and will be of commercial value. Streams from the size of the Mississippi and Missouri down to Cowpasture Creek have been subjected to such experiments, as will be discovered by reading the Engineer's Reports, from which I am quoting with slight poetic license.

Again the conscientious engineer gives his former impressions in a second adverse report; but that does not end the campaign. Something has to be done by Cowpasture's Representative. The good people living on the creek are now aroused to the injustice which has been handed out to them by a close-fisted Government. Led by a disinterested agent of the dredgers' secret combine, the people living on the Cowpasture and on the Mud and on the Mosquito and on the Fisheating, severally but firmly, resolve in unmistakable language, while sundry warm epistles are indicted and transmitted to the Member at Washington, who is asked to get something for his constituency, and to get it quick.

BRINGING UP THE RESERVES.

Whether it be in Virginia or North Carolina or Tennessee or Wyoming, the next step is for the Representative to get his delegation together, reenforced by a Senator or two, if possible, and this martial array of distinguished statesmen faces the Board of Army Engineers, demanding their rights as representatives of the good people of Cowpasture and Mud and Mosquito and Fisheating. On the upper Cumberland 11 statesmen, including 9 Congressmen and 2 Senators, turned the tide when things hung in the balance.

Occasionally the Board of Engineers remains obdurate, whereupon it becomes necessary to call in the Chief of Engineers, as in the case of St. Lucia Inlet and other needy waterways. If he is the right kind of a fellow, and sometimes he is found to be such, the Gordian knot is cut and Cowpasture and Mud and Mosquito and Fisheating are thenceforth projects only awaiting the wherewith to make them navigable. I have been giving the history of a number of vicious projects found in the Engineer's Reports, first rejected, then rerejected, and finally given the official O. K.

In the present bill we have in addition to 250 projects about 172 of these consolation prizes. This administration is bent on economy, so the 172 surveys will be passed on to the future, with a quarter of a million for present use. For over a century these 172 surveys were never discovered, but 172 creeks and would-be harbors each have a constituency that yearns for a chance at the grab bag. Forty per cent of the number will be passed favorably, according to usual practice, and 70 new projects, carrying approximately $70,000,000, are among the surveys modestly hidden away in the back of the 1915 bill.

Two surveys for the Hudson River will probably total from ten to twenty million dollars, and from that amount they dwindle down to $100,000 for mud rivulets or consolation projects for Cowpasture Creek and a hundred other creeks. It is all a part of the system. Just why intelligent men in days of war taxes and business depression will permit themselves to be worked by the time-worn trick is hard to say, but these 172 surveys lie smuggled away in the $34,000,000 bill we are asked to pass. All that is called for at this time is $250,000, but our grandchildren will be paying war taxes and income taxes in times of peace 50 years hence to cover some of these 1915 surveys.

This bill ought to be defeated if for no other reason than because of the unprecedented number of surveys it contains. The only way to stop the grab is by stopping it, and if we can persuade Mud Creek and Cowpasture Rivulet and Mosquito Marsh and Fisheating Inlet that this is not the appointed time for their prizes to be drawn it will be a step in the right direction.

The river and harbor bill is a barefaced fraud in another particular when it puts forward a $150,000 appropriation as an entering wedge for the $18,700,000 Muscle Shoals water-power proposal, or its dribbling $100,000 appropriation for a $5,000,000 James River project, or $131,000 for a $10,000,000 Coosa River scheme, or for scores of other proposals that masquerade in the bill under modest appropriations. Dribbling payments put off obligations, whether governmental or private, and they are ordinarily as reprehensible in one case as in the other.

A LIVELY LOBBY AT WORK.

Mr. Speaker, when the $53,000,000 river and harbor bill was before Congress last session we were deluged with letters demanding the passage of that vicious bill.

The Rivers and Harbors Congress has been shown to be a lobby backed by dredgers, contractors, railways, land-reclamation interests, and water-power promoters, but also includes many good men who are innocently used as a cloak to advance the lobby's purposes.

Last year that lobby, from its headquarters in this city and through its traveling agents, instigated a back fire of letters and telegrams to Members and Senators—letters secretly formulated or directed by the paid officers of the $50,000,000 lobby.

To meet the back fire instigated by the lobby I introduced several resolutions asking for an investigation of the lobby's methods. Criticism followed because of publicity sought for these resolutions, whereas that very publicity accorded by the press in fixing a spot light on the lobby caused it to slink into obscurity. Subsequently I presented to the House secret agreements, secret subscriptions, and secret methods employed by the lobby to force the Federal Congress to support that infamous "pork barrel" and other objectionable bills; but although the testimony submitted was original evidence and fairly conclusive to unprejudiced minds, not one word of condemnation or surprise came from those who defended that bill or who defend this bill.

The $50,000,000 annual lobby does not court the limelight, but its secret methods are already in evidence. A thorough investigation of the National Rivers and Harbors Congress lobby would put that second congress out of the back-fire business, because it would create a vigorous protest among many of its reputable members who would not approve its methods if fully understood.

LOBBIES ARE AGAIN ACTIVE.

In order to show the secret scheming of officials of this same National Rivers and Harbors Congress lobby, as applied to this bill, I quote from the remarks of the distinguished minority leader, whose action in exposing such methods will be heartily approved by every right-minded Member of either House.

On January 16 the RECORD shows:

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] asks unanimous consent to extend his remarks by inserting a letter in the RECORD. Is there objection?

There was no objection.

Mr. MANN. It is from the secretary of the Illinois delegation to the 1914 National Rivers and Harbors Congress, Mr. John J. Commons, addressed to the members of the Illinois delegation to the Rivers and Harbors Congress, asking the people to write in reference to this resolution:

"*Resolved*, That each member of the Illinois delegation write each Senator and Representative from Illinois urging him to use his best endeavor to have the Committee of Commerce of the United States Senate restore to the rivers and harbors bill of this session the amounts recommended for Illinois projects by the House of Representatives at the last session of Congress."

The big business men think we have not provided enough, and the secretary of this delegation, for fear that the big business men might not have acumen enough to write a letter to a Member of Congress, says:

"I am inclosing a suggestion for a letter to our Senators and Representatives."

Here is the letter. I have received a number just like it. It is intended to be addressed to us:

"Knowing that you are interested in everything beneficial to the State of Illinois, and I being especially interested in waterway development, I take this means of urging the necessity of strenuous action on your part toward getting appropriations passed in the Senate and Congress as originally recommended by United States Army engineers. I was appointed a delegate to the Rivers and Harbors Congress and have given this matter much thought, and consider it extremely unfortunate that Illinois claims were ignored to the extent of cutting off parts of appropriation that were so badly needed.

"The people in our district are in sympathy with the original recommendations, and I personally would be greatly indebted if you would use your influence toward increasing instead of decreasing appropriations for waterways in Illinois."

The letter accompanying this form letter reads as follows:

"JANUARY 9, 1915.

"DEAR SIR: As secretary of the Illinois delegation to the 1914 National Rivers and Harbors Congress, I am instructed by the delegation to notify you that the following resolution was adopted:

"'*Resolved*, That each member of the Illinois delegation write each Senator and Representative from Illinois, urging him to use his best

endeavor to have the Committee of Commerce of the United States Senate restore to the rivers and harbors bill of this session the amounts recommended for Illinois projects by the House of Representatives at the last session of Congress.'

"It is imperative that you, and others who have influence with our legislators, urge them to make every effort to restore to the rivers and harbors bill the amounts recommended by the Army engineers. Chicago harbors need every dollar recommended by the engineers, and any amount less than the original recommendations should not be thought of.

"Each of the 132 delegates appointed by Gov. Dunne are being requested to write each Senator, as well as each Representative from their district, and I trust you will find time to give this matter your attention. I know you are busy, but busy men are the ones who do things, and your influence and the influence of the other delegates may force our lawmakers to give this matter the attention it deserves.

"I am inclosing a suggestion for a letter to our Senators and Representatives, but expect, of course, that you will use your own language. A letter along this line has the indorsement of Mr. M. F. Rittenhouse, chairman of the Illinois delegation; Mr. T. Edward Wilder, Illinois vice president of the Rivers and Harbors Congress; Mr. E. J. Kelly, of the sanitary district; and others.

"Please advise if we may expect your influence in our effort to restore the appropriation above mentioned, and oblige,

"Yours, very truly,

"JOHN J. COMMONS,
"Secretary Illinois Delegation to the 1914
"National Rivers and Harbors Congress."

That is the way the great business men act upon these propositions. [Applause.] They have a letter sent out, personal in character, to be sent to the Senator or Members of Congress, telling how much they know about the subject, when the man who sent it assumed that they did not know enough to write a letter about it. That is the way big business men handle these things. Thank Heaven, that is not the way Army engineers handle such propositions. They figure them out on their merits and not on personal solicitation.

RESPONSIBILITY OF ARMY ENGINEERS.

Mr. Chairman, no one familiar with the character of Illinois Representatives will question the small amount of weight given by them to such communications, and its exposure is a matter for general congratulation; yet many "of the 132 delegates appointed by Gov. Dunne" doubtless fell to the proposition and made spectacles of themselves.

Some criticisms of Army engineers have been offered by the gentleman from Texas [Mr. CALLAWAY] and by myself, and to these the latter part of the foregoing remarks probably apply.

It is useless to reiterate that Army engineers are as honest and conscientious as other employees similarly situated. For the sake of argument, I will concede they may hold to higher standards than the average employee, although that proposition would not go unchallenged. I will further concede that the fault does not lie primarily with Army engineers, but with ourselves, as the engineers' reports repeatedly show. For every case of political pull that is disclosed by the reports, a dozen cases probably exist in which it is secretly exercised. My own belief is that conditions will not be materially improved until the system is changed and a board, removed from political pull, first passes upon all waterway projects. Congress should take final action as now, but aided by the approval or rejection by a high-class independent board we would be better able to withstand pork-barrel measures. I quote briefly from the RECORD on this point immediately following the distinguished minority leader's remarks:

The Clerk read as follows:

"Pascagoula and Leaf Rivers, Miss.: For maintenance, $18,000."

Mr. FREAR. Mr. Chairman, I move to strike out the last word, for the purpose of calling attention to a statement made by the Army engineers in reference to commerce at this point, characteristic of other items throughout the bill. The question is whether or not their judgment is to be accepted in reference to such items.

On Leaf River I notice that the commerce is 335,010 tons, according to the report of the engineers, of which timber and logs amount to 335,000 tons and the merchandise to 10 tons. I assume that that is a mill, because that would probably be the case in a project of this character. Ten tons of miscellaneous commerce is significant.

But returning to the question of the Army engineers, the gentleman from Illinois [Mr. MANN] states, and very properly, that it would be unwise to leave these questions to men who have a personal interest. Why, certainly. If the gentleman will let me take the letterhead from which he read a moment ago—the gentleman states that the letter has gone to the Clerk's desk, but I had a copy of it in my hand this morning—it is from the Portland cement headquarters, and the writer of the letter sends out in the name of the Rivers and Harbors Congress to these various people who are members of that congress, asking them to write to the gentleman from Illinois and other Members who are interested in the Illinois projects, telling them what to do. No; you would not put men of that character in charge of an enterprise of this kind, to pass upon these projects. Portland cement people and dredgers and contractors should be left out. The suggestion is that men of standing throughout the country, like members of the Interstate Commerce Commission, men of that kind ought to be qualified—high-class men who would not be subject to political pull. No one says that Goethals is not qualified. No one says that Hodges and Gilliard are not of the same type. I have met them all.

Mr. MANN. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. MANN. I have received these letters from men drawing as high as $50,000 a year salary.

Mr. FREAR. I presume so. Salary means nothing at all.

Mr. MANN. Abler men than anybody here.

Mr. FREAR. Assuming that they are abler than the gentleman from Illinois, who is one of the ablest to be found, any man who is interested or likely to be interested in a project ought not to be appointed to such a place. Men who draw more than $50,000 a year have been hammering the Interstate Commerce Commission for months. But men of that type, appointed by the President, selected for the purpose of determining some system of waterway improvements and passing upon these projects, would be highly capable and ought to be removed from political influences. Think of the condition read here the other day when I showed a report where the Army engineers had rejected a project three times, and then 11 Members of Congress, 2 of them Senators, went before the board and demanded that they change their opinions, and they changed them. They had rejected the project three times. I can not believe, Mr. Chairman, that all the good is in the Army engineers, nor do I believe they should be intrusted with this important work. When I see these constant changes in projects, these constant amendments of opinions, these constant increases in amounts to be appropriated, and when I see the character of the propositions presented with the engineers' approval I can not believe the engineers are infallible. In fact, I believe we will get no material relief from present conditions until we take all projects out of the hands of Army engineers.

RAILROAD INFLUENCED PRESS.

The gentleman from Texas [Mr. HARDY] asserts that opposition of the public press to this bill and the $33,000,000 pork barrel killed at the last session is and was instigated by railway influences. No Member should make such charges unless governed by the same judgment that determined Brother Jasper who believed the earth stands still and the sun do move.

From the Engineer's Reports it will be found that many Texas waterway projects have had railway rates fixed at such points by the Texas Railway Commission. That same power rests with the commission at noncompetitive points, and also with the Interstate Railway Commission within its jurisdiction. A charge of railway influences against this bill, coming from Texas, discredits one of the ablest State commissions in the country.

The cry of railroad "wolf," once actual and potent, deceives no one to-day. An unquenchable thirst for Government gold for inconsequential creeks or useless waterways can not be defended by questioning motives of those who seek to prevent looting of the Federal Treasury through pork-barrel bills.

Colliers, Pearsons, La Follettes, Saturday Evening Post, Worlds Work, Outlook, Chicago Tribune, Herald, Christian Science Monitor, Advertiser, and many other leading magazines and papers in Chicago, New York, Boston, Philadelphia, Washington, and other cities, one and all have struck the wasteful pork barrel. They did more, they aroused public sentiment so that the lobby fled for the timber and fearless Senators put a quietus to the last bill.

To question the motives of any one of the publications named or to ascribe its good work to railroad influences is to discredit the ablest writers in the country and our own common sense.

These publications have pointed out the malign influence of pork barrels on legislative action and legislative morals. They have shown beyond argument that the river and harbor pork barrel is a wide-open door to governmental waste. No dust can becloud the issue.

IS THIS $34,000,000 BILL A "PORK BARREL"?

We have been entertained during the discussion of this bill by denunciation of those who call this and similar bills "pork barrels." A pork barrel is a bill that contains Treasury loot by irresistibly combining good and bad measures in its provisions. Its passage is made possible by enlisting the support of enough Members in their own local projects, good, bad, and indifferent, to carry the bill. This $34,000,000 bill contains in round numbers 250 projects scattered from Maine to Florida and Texas and on to California, Oregon, and Washington. It contains 172 new surveys covering nearly every part of the country, judiciously scattered around to bring aid to the bill.

To all this potent influence must be added new projects promised to be commenced in later bills and surveys to be undertaken by future allotment.

The bill contains projects like the Trinity, Coosa River, Brazos, St. Lucia Inlet, Muscle Shoals water power, and many other indefensible proposals, that would not receive 10 votes in the House if standing on their own merits.

I do not believe the Missouri $20,000,000 proposal or the Ohio River $63,000,000 canalization scheme would poll a corporal's guard if taken out of a pork-barrel bill. It is probable that the 16,000,000-acre Mississippi land reclamation project, masquerading under the title of flood protection, would fall by the wayside if left to its own resources, unaided by the 250 other projects and 172 surveys contained in the same bill.

FEW PROJECTS COULD STAND ALONE.

Good projects, and many of them, will be found in this $34,000,000 bill; but if left to ordinary legislative practices and introduced as independent bills, or if placed under the jurisdiction of a conservative appropriation committee, or if required to pass inspection before a high-class nonpartisan waterway board, the total amount would be cut more than half, and many worthy waterway projects now neglected would find recognition. Forty-two per cent of the total amount contained in this bill goes to

the Mississippi, Missouri, and Ohio, and presumably 25 per cent more to streams and rivulets that float little actual commerce apart from contractors' materials.

I have not attempted to make any thorough investigation of many doubtful looking projects, but have been content to offer a few brief facts revealed by the Government engineers' reports. If these facts arouse individual investigation of Members, we may hope to see the end of wasteful pork barrels, but it will not come about until the present system is changed.

The committee and those whose projects are at stake have every reason to stick together. Nobody doubts the resistless power of the combination, and for years we have been confronted with the proposition that never has a project been stricken from the bill and never has a roll call been had against such bills. That fact speaks for itself.

We can not expect the public to place confidence in our motives when we close our eyes to this legislative humbug. I appreciate the courtesy of the House and the committee, which has enabled opponents of the measure to show its general character. Members of this House are as honorable as any body of men who have ever sat here. To say otherwise is to insult the intelligence of this membership and of the general public. The fault does not rest with us primarily.

LOCAL CONSTITUENCIES ARE PRIMARILY RESPONSIBLE.

The pressure of local interests for some local project, the push of waterway lobbies that have secret interests controlling such lobbies, the demand to bring something home in the shape of an appropriation, big or little—these are no mean influences to withstand. All of us have felt them, and all of us will feel them until we throw off this yoke placed on our shoulders by other Congresses, a yoke that has grown doubly heavy during the past 10 years. In this bill we are facing future obligations, coupled with adopted projects, reaching nearly a half billion dollars. Through the system of dribbling appropriations we are digging the pit deeper every year. We are leaving to future generations the duty of passing judgment on many wasteful projects and of discontinuing many worthless ventures we have adopted. To defend the practice is to question our own honest judgment and admit our own incapacity to get rid of it.

Many Members have privately assured me they agree absolutely with these conclusions, and to keep up the fight for a better system. It is needless to say no Member cares to oppose the desires of other Members nor to invite personal criticism by so doing. Neither can any Member honestly arrogate to himself any higher standards than are possessed by every other Member. Let me add, we all realize no handful of men can hope to change the present system unless it appeals to a majority of those who occupy seats, both in this House and at the other end of the Capitol.

With the fact staring us in the face that waterway lobbies have helped dig the pit into which we have fallen, and that public sentiment is aroused over the scandalous waste in waterway improvements, let us unite in throwing off the yoke and adopt a system of comprehensive legislative procedure which will reduce waste and yet aid legitimate waterway development.

Let us devise a system that will do away with the present indefensible legislative practice of bargain and trade, of bluff and beg, all of which is comprehended in pork-barrel legislation.

Why not substitute the sane businesslike policy which we pursue with ordinary measures, requiring every project to stand on its own merits? By so doing we will remove improper influences of lobbies and other interests and not compromise individual judgment by voting for vicious bills which over 10 years ago were fitly characterized by TILLMAN as humbugs and steals. If they were humbugs then, they are doubly so now. If steals then, what defense can be offered for them now?

RECORDING A FIRM PROTEST.

At the conclusion of debate on the bill Mr. CALLAWAY offered the following amendment:

Page 55, line 5, after the word "war," insert: *"Provided*, That no part of the moneys herein appropriated by this bill shall be expended except to maintain existing projects in their existing condition."

This proposal would have reduced the bill to $4,760,540, claimed to be the amount required for actual maintenance.

The vote taken in committee was defeated by a vote of 57 ayes to 120 noes.

A substitute of $5,000,000, to be expended by the Board of Engineers, was thereafter offered by myself. It was the identical substitute offered in lieu of the $20,000,000 Senate substitute at the last session. On this amendment the vote stood ayes 68, noes 109.

On the passage of the bill by aye-and-nay vote January 19, the RECORD, page 2016, shows 164 ayes, 81 nays, and 64 pairs.

The Recent Improvement of the Missouri River.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 1, 1915.

Mr. BORLAND. Mr. Speaker, in view of the criticisms that have been so freely made on the floor of this House recently to the effect that the rivers and harbors bill is solely a pork-barrel measure, designed to expend the Government's money without adequate result and purely for political purposes, I desire to call attention to the following statement. It is prepared by an experienced river man and shows the work of the Government engineers in the improvement of the Missouri River under recent appropriations. It shows that on that river, at least, the Government work is proceeding with success and is a business enterprise of the most important type:

KANSAS CITY MISSOURI RIVER NAVIGATION CO.,
Kansas City, Mo., January 28, 1915.

Hon. WILLIAM P. BORLAND, M. C.,
Washington, D. C.

DEAR SIR: Capt. William L. Heckmann, who has been in our employ for the past 3 years and has seen some 35 years of service on the Missouri River, has been kind enough to "write up" the river from a standpoint of an operating pilot and master, with particular reference to the effect of improvement work carried on by the United States engineers. A copy of his statement is hereto attached, and I feel sure you will find some very interesting information in it. This is not alone the opinion of Capt. Heckmann, but I find it very generally concurred in by other men similarly engaged. One of the Government's pilots told me yesterday, without knowing what Capt. Heckmann had said, that, in his opinion, the river is more than 25 per cent better for operation between Kansas City and St. Louis than it was five years ago.

There is now a project on foot to establish a line of boats between Jefferson City and St. Louis, including the larger intermediate towns such as Hermann, Washington, and New Haven. These people have in mind and are discussing the matter of providing river terminals at the different river towns, there naturally being some disagreement as to the kind of terminals to be provided and a difference of opinion as to the amount to be expended by each point for terminals. This new line may not be established immediately, but the agitation is rather strong and indicates eventual success. The point is an acute interest has been awakened in all of these river towns by the regular passing up and down of our boats and barges, and the more active business men and shippers appear very desirous of securing the benefits in reduced freight rates from water service.

We are endeavoring to force the building of municipal terminals at river cities by taking the position that no city is entitled to water rates which does not provide proper terminals, and I think you will agree that not only is this the correct position to take, but that it will also prove to increase the local interest and effort to provide terminals.

There is quite a healthy sentiment developing along the Mississippi in this matter of municipal water terminals. As in many other things, Kansas City is a pioneer in the municipal water terminal idea. We have been invited, and will attend, a municipal water terminal meeting at St. Louis February 18 and 19, where delegates from many river cities will meet to discuss the subject, the idea being to hold a conference of interested business men rather than the usual big convention of delegates to listen to the speeches of a few men. As you know, Davenport, Iowa, is building an excellent terminal, and the work is well toward completion. Minneapolis has voted bonds and begun its work. St. Louis, while generally slow in matters of this kind, appears to be awakened now, and there is some hope of getting action there on a municipal water terminal.

Very truly, yours,

A. W. MACKIE,
Assistant to the President.

MISSOURI RIVER.

[By Capt. William L. Heckmann, Hermann, Mo.]

In going down the Missouri River from Kansas City, Mo., we find the Harlem revetted levee on the left, and the right bank is protected by dikes and revetment to Randolph Bridge, a distance of 3 miles; then we follow 6 miles of revetted shore in Randolph Bend and cross over to the right-hand shore revetted by Santa Fe Railroad and Standard Oil Co.; then we pass end of Government dike, which holds river out of Old Sissons Bend and makes it follow bluff shore into 3 miles of revetted Wayne City Bend; then follow Liberty Bend, revetted for 3 miles, and cross into Blue Mills Bend, protected by revetment; then down bluff shore and right-hand revetted shore until we cross into Irish Jimmies Bend, protected by dikes and revetment; then long circling crossing past Missouri City, to run 3 miles of revetted shore in Missouri City Bend; then over into Little Blue Bend, where about 3 miles of revetment have just been completed; then we run Jackass Bend, protected with dikes and revetment by Santa Fe Railroad; then we pass under Sibley Bridge and run 2 miles of bluff shore to cross over into Lady Lee Bend, protected by a system of Government and private dikes for 4 miles; then we run Napoleon Bend where Government is now building about 3½ miles of revetment to reach Camden; then 2 miles of natural confined river until we enter Camden Bend, where Government has made a good start on about 6 miles of revetment. When this is completed (say, in 1915) we will have this stretch of 63 miles of improved river, which to-day is 25 per cent better than it was five years ago, and most of this work has been done in the last three years.

Leaving Wellington, we run 1 mile of natural improved river and then make Wolf Island, crossing over one of the two gravel bars be-

tween Kansas City and St. Louis. This is a bad piece of river, and will be until confined. We then run right-hand shore for 6 miles to Lexington, protected by Missouri Pacific Railroad. Opposite Lexington we have a system of Government dikes that keep river confined. Then we find 23 miles of river to Waverly without improvement, except one new dike which holds river down Waverly Bluffs.

In this stretch of 23 miles we find Baltimore Bar, one of the shoal places in the Missouri River ever since low water bothered boats on this river, and here work is badly needed. Below Waverly we pass 3 miles of protected bank, two dikes at head of Cranberry Island, and go over into Bakers Bend, where they are now starting 3 miles of new revetment. Now we pass through Hills, Gilhams, Prunty, Tete Sean, and Thomas Bends to Miami, 24 miles of unimproved river out of one long bend into another where annually hundreds, yes, nearer thousands, of acres of land fell in the river.

Below Miami we find a system of three new dikes to straighten out a dangerous rock bend 2 miles; then we again have 20 miles of unimproved river except for 2 miles of protected shore below De Witt, which protects Wabash Railroad. This stretch is always shallow and bad.

From Cambridge to Glasgow we find 8 miles of partly improved river, mostly done to save Chicago & Alton Railroad and Glasgow Bridge.

Below Glasgow we have 8 miles of natural good river; then 3 miles of new revetment in Saline City Bend; then 1 mile in Nigger Bend, and then 44 miles of unimproved river to Providence, in which there are many shoal places badly in need of attention. In the last three years Providence Bend, 3 miles, and Sandy Hook Bend, 2½ miles, have been revetted and improved; also Eureka Bend, 4 miles, is protected by dikes and revetment; then we find a very shoal and bad crossing at Hanley Island, and about 4 miles of revetment and dikes in Murreys Bend, which brings us to Jefferson City.

Over the 80 miles of improved river from Jefferson City we will pass by lightly by saying this stretch is already 25 per cent better than it was 24 years ago, and, by giving new work—put in mostly between Gasconade and Washington—another season to wash out and settle down to place, you can add another 25 per cent.

This means, where we had 3 feet in standard low water 24 years ago we will now have 5 feet, and when all caving banks are protected above here we will soon have a 6-foot channel in low water; then everybody will be surprised at the tonnage of the Missouri River.

From Washington down we have 5 miles of river protected by bluffs and Missouri Pacific Railroad; then we have 32 miles of unimproved river, in which stretch we have several very shallow crossings and some very bad river. This brings us to head of Howards Bend, held by dikes and bank heads; then we have 3 miles of natural protected river to St. Charles. In front of St. Charles we have the shoals and piece of river between St. Louis and Kansas City. Here a system of dikes would make a big improvement to navigation.

Below St. Charles we have 5 miles of revetment made by the Missouri, Kansas & Texas Railway Co. and the Government; then 3 miles of natural improved river; then a new concrete pile dike to hold water out of car of Commerce Chute and make channel follow old Government revetment in Pelican Bend, also to straighten river through Bellefontaine Bridge. From this bridge out to mouth of Missouri River we have 7 miles of scattered bad cutting and swaggy river, badly in need of control. Then we float out into the waters of the upper Mississippi and Illinois Rivers to have easy sailing to the Mound City.

REMARKS.

[By William L. Heckmann, Hermann, Mo.]

By following my statement of work done on the Missouri River between Kansas City and St. Louis, a distance of 390 miles, we find 212 of improved river by the end of 1915 and 178 miles of unimproved river.

So our task is already over half completed, which is not a bad showing, considering that we have only been working on same some 30 years and most of this work has been done in the last 3 years, while on some of the foreign rivers more easily tamed and much smaller than the Missouri they have spent hundreds of years before they were under complete control.

On the whole, we find that this stretch of river is 25 per cent better for navigation than it was some 24 years ago, when our last big steamers, *State of Kansas* and *A. L. Mason*, ran on this stream.

These steamers were not a failure because the railroads cut rates, not because there was not freight enough, neither because they were antique—one and the only cause was shallow water.

Now, let the Government confine the river at St. Charles, and this same stretch of river will be 25 per cent deeper, and every inch means more tonnage and more boats.

We find that out of the total of over $15,000,000 spent on the Missouri River less than one-third of this has been spent in the last three years systematically, and has done more actual good than the first two-thirds accomplished in piecemeal work scattered over our whole river to benefit certain places and offering no permanent channel.

Besides, in the last four years the Government has built three new steel-hull towboats, two new wooden boats, and one building; also some two dozen all-steel barges and all other equipment new, such as mat boats, piledriver, and quarter boats, and they are now prepared to spend $1,000,000 per year safely and systematically. Also, in the last three years private capital has been invested in new plant to where they are able to spend $1,000,000 annually.

If any skeptic thinks there is any pork barrel in work done on the Missouri River in the last three years, let him examine the fine showing on work done on this river, and he will change his mind.

When our first steamers entered the Big Muddy they found that nature had protected our river banks with heavy timber, which confined the river, and they had ample water to open up our great West. Then we cleared off all our bottom land, and the river commenced to shift from bluff to bluff, which caused it to widen to where it had no depth. What nature did to half our western country we destroyed, and now progress calls on us to again confine our river to cause it to wash deeper, and no cry of pork barrel from our eastern Senators will make us halt one minute in our solemn duty to God and man. It is an easy matter to compare commerce carried on an improved river against a stream like the Missouri River, and, against Senator BURTON'S confirmed knocks, let me say that while the board of engineers that went down the Missouri River some seven or eight years ago and found it impracticable to improve, a later board, who studied conditions more closely, found that Missouri River improvement was practicable. Does anyone think that the people that live along a river that drains one of the most fertile valleys in the world and is one of the cheapest and most easily improved are going to sit still and be dictated to by one whose selfish interests are all in the East, that does not want our western river improved at all?

Does anyone deny that nine-tenths of the sand and silt pumped out of the channel of the Mississippi River, where millions have been spent, does not come out of the Missouri River, and does anyone deny the fact that Missouri River sand is one of the causes of higher levees in the South? Every dollar spent on the Missouri River means twice that much good for the Mississippi River, and the Missouri River is easily confined and banks are easy to hold, as it is a shallow stream. This alone should make our cause the strongest of western river improvements.

In one of Senator BURTON'S articles, so extensively copied, he shows a picture of Bates Bend, without any comment on same. He does not go on to say that this 3 miles of concrete revetment is a monument that will stand for the next 50 years and that it is one of the best and also one of the cheapest pieces of revetment ever put in one of our western rivers. Neither does he say that this same work, with the help of some picturesque bluffs of Warren County and 3 miles of bank revetment in Pinkney Bend, make one of the best stretches of 20 miles of finely improved river in any land. Besides, it offers protection to thousands of acres of land second to none in the world.

In conclusion, come to look at the Missouri River, you can not tell all about it without crossing the Ohio River; and my knowledge of these facts was pounded into me by my father, 40 years a Missouri River pilot, master, and owner, and my own life shows 35 years of close study of this stream from the decks of over 50 steamboats, which should allow me to publish these few facts that none can deny.

Resolution of Board of Aldermen of Holyoke, Mass., in Favor of Connecticut River Navigation.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915.

Mr. TREADWAY. Mr. Speaker, it is with pleasure that I present to the House and ask to have referred to the Committee on Rivers and Harbors the resolution of the board of aldermen of the city of Holyoke, Mass., and the accompanying petition and resolution of a committee of that board.

The statement of the officers of the city of Holyoke is a very concise and correct expression of the views of the people of that section whom I have the honor to represent. For many years this project has been before Congress, while during the last two sessions there has been progress toward accomplishment. We now have a favorable report from the engineers upon the expediency of navigation combined with power development. It was expected that legislation would be secured before the close of the present session of Congress whereby such a combination could be legally made, but as the end of this session approaches the chances of such legislation becoming law are rapidly decreasing. I refer to the final passage and enactment into law of the Adamson amendment to the so-called dam act.

The people of Holyoke, however, are alive to the situation, and I am glad to say are not discouraged. They show an interest in the cause of Connecticut River navigation commensurate with its merit. I do not hesitate to say that no navigation project in the country is of more worthy consideration than that in behalf of the Connecticut River. The bill I introduced early in the Sixty-third Congress appropriating $1,015,600, or a similar one, will be promptly reintroduced at the beginning of the Sixty-fourth Congress.

I present the resolutions passed by the Holyoke board of aldermen and a committee thereof.

HOLYOKE, MASS., *January 26, 1915.*

Hon. ALLEN T. TREADWAY,
House of Representatives, Washington, D. C.

DEAR SIR: At a meeting of the board of aldermen of the city of Holyoke, held on January 19, 1915, a resolution was adopted as follows:

Resolved, That the committee on river navigation be, and they are hereby, instructed to cooperate with Representative ALLEN T. TREADWAY, of Massachusetts, to obtain an appropriation from the National Government for the purpose of opening up the Connecticut River for navigation from Hartford to Holyoke.

Acting on the above resolution, the committee on river navigation of the board of aldermen held a meeting on Tuesday evening, January 26, 1915, and drew up the following petition, and request that you present it to the House of Representatives and have it referred to the Committee on Rivers and Harbors.

It is impossible to mistake the sentiment of the cities and towns of the Connecticut Valley. The citizens of the Connecticut Valley are demanding, not only in their own interest but in behalf of the commercial prosperity of the whole State, the opening of the Connecticut River to navigation from its upper reaches to the sea.

As river conditions between Hartford and Holyoke are what Massachusetts is particularly interested in at this time, the following will cover the subject with great detail:

The section of river between Hartford and Holyoke is 34 miles long, and in the several reports of the Chief of Engineers, United States Army, is divided into three distinct sections. From Hartford to the foot of the Enfield Rapids, 10½ miles, the river has a gentle slope with

a sandy, shifting bottom. From the foot to the head of Enfield Rapids, 5½ miles, the total fall at low water is 32 feet and the bed of the river is largely rock. From Enfield Falls to Holyoke, 18 miles, the river is of moderate width, gentle slope, fair depth, and stable bottom.

In its original condition the lower section had a navigable depth of 2 feet or less at low water. The second section could be navigated only with great difficulty, and only by boats of shallow draft. The third section was navigable by boats drawing 4 to 5 feet of water.

Therefore be it resolved—

First. That transportation by water should be established immediately as far up the river as Holyoke.

Second. That the prosperity of Massachusetts depends upon the encouragement of manufacturing in the interior and the development of commerce at the seaboard.

Third. That low cost of transportation for raw material and fuel to the manufacturing centers and for the finished product to the markets is essential to success in competition.

Fourth. That conditions here are favorable for the payment of high wages and production at low cost, and the tendency of these conditions would be elevating among the class of citizens who supply the skilled labor.

Fifth. That the opening of water carriage to railway centers insures low freights.

Sixth. That the beneficial influence of the direct advantages would extend broadly in many directions, while the indirect influences would be too diversified and numerous to set forth and yet would pervade the whole Commonwealth.

Seventh. That no reason exists which would justify Congress in denying to the inhabitants of the Connecticut Valley the benefits to be derived from improving the river for navigation as desired, in accordance with the policy of internal river improvements now settled for more than 70 years and generously applied in other portions of the country.

Very respectfully,

Alderman FREDERICK CHILDS, *Chairman*,
Alderman DANIEL M. LONG,
Alderman JOHN P. BLEASIUS,
Alderman ALBERT ARCHAMBAUTF,
Alderman HENRY F. THORP,
Committee on River Navigation,
Board of Aldermen, City of Holyoke.

The Shipping Bill.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 1, 1915,

On the bill (H. R. 16637) to provide divisions of mental hygiene and rural sanitation in the United States Public Health Service.

Mr. MOORE. Mr. Speaker, there is decided opposition along the wharves and in the business circles of Philadelphia to the President's shipping bill and the various amendments that have been offered to it in the nature of substitutes. If the bill comes to the House—and I sincerely trust the Senate will spare us the necessity of considering a measure so fraught with danger—I shall be obliged to oppose it. Gentlemen have indicated in this discusion that the shipping bill is in the interest of peace and progress. To many of my constituents it looks like an invitation to involve this country in the most serious of entanglements. The bill threatens to destroy American shipbuilding, with the consequent ill effects upon American business and labor. Moreover, it is charged, by reason of the many international complications that must arise upon its passage, with the very essence of war. Oppose our navigation laws or correct them as we may, there is no warrant at the present time, when our Treasury is in straits, to still further endanger the peace of the country or to lessen the earning power of our people. I submit in connection with these remarks protests that have been handed to me by the Philadelphia Maritime Exchange and the Philadelphia Bourse:

PROTEST AGAINST THE PASSAGE OF BILL H. R. 18666, PROVIDING FOR GOVERNMENT OWNERSHIP AND OPERATION OF MERCHANT VESSELS IN THE FOREIGN TRADE OF THE UNITED STATES.

THE PHILADELPHIA MARITIME EXCHANGE,
Philadelphia, December 31, 1914.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

This memorial of the Philadelphia Maritime Exchange respectfully represents—

First. That a bill, H. R. 18666, providing for Government ownership and operation of merchant vessels in the foreign trade of the United States, is pending in the Congress of the United States.

Second. That by the provisions of the bill a shipping board, composed of the Secretary of the Treasury, the Postmaster General, and the Secretary of Commerce, may subscribe to the capital stock of any corporation now or hereafter organized under the laws of the United States, or of any State thereof, or of the District of Columbia, for the purpose of purchasing, constructing, maintaining, and operating merchant vessels in the trade between the Atlantic, Gulf, or Pacific ports of the United States and the ports of Central and South America and elsewhere, to meet the requirements of the commerce of the United States.

Third. That question is raised as to whether this proposed legislative action by the Government of the United States is justifiable and technically right, while the real question at issue is whether in the present emergency it is either necessary or advisable.

Fourth. That the advocates of the measure advance the theory that shipping facilities for the transportation of our exports abroad under existing conditions are inadequate, but appear not to accept the testimony of experienced and practical men that the present situation is due mainly not to any extensive lack of vessels, but to the present unstable foreign exchange operations, scarcity of foreign labor for handling commerce, and particularly to the high cost of marine insurance, and that with relief in these directions greater activity will follow and the present and future requirements of commerce amply be met by private enterprise.

Fifth. That from an investment standpoint it could not be expected to appeal to the public. Although the men selected for the posts of Secretary of the Treasury, Postmaster General, and Secretary of Commerce are of the highest mental and moral attainments, it is not probable that they would be chosen especially because they were experienced in the ownership and operation of merchant vessels, to be successful in which requires long years of training and an intimate knowledge of every detail of the business.

Sixth. That under our system of government the personnel of these offices, with rare exception, changes every four years. It is not likely, therefore, that with such a flexible and uncertain management the public could even be tempted to invest its capital in an enterprise in the control of which it can for all time hold only a minority representation.

Seventh. That if this conclusion be well founded the proposed legislation would place the Government in direct and complete competition with a large number of our citizens who, with investments of many millions of dollars, are engaged in a business essentially private in character and readily controllable both by competition and governmental regulation.

No private enterprise, however capably and economically administered, where the management is accountable to its stockholders, can compete with the Government in the same industry, where there is no such accountability.

Eighth. That under the terms of legislation recently enacted by Congress, providing for the transfer of foreign-built vessels to American registry, with necessary revision of our navigation laws to enable us to compete on equal terms with foreign shipping, instant impetus and a steady, wholesome growth should be given to our merchant marine, which, however, could not survive against Government competition.

The effect of this legislation should be fully demonstrated before any other is undertaken.

Ninth. That in dealing with this important subject the neutrality obligations of the United States should be seriously considered and any ground for criticism or even suspicion of our good faith avoided.

Tenth. That the Philadelphia Maritime Exchange, strongly advocating the upbuilding of the merchant marine of the United States, regards the provisions of the bill H. R. 18666 as dangerous in the extreme, and is of the opinion that the ownership and operation by the Government of merchant vessels is a backward rather than a forward step, and will not only discourage but destroy all private initiative in the direction so earnestly desired.

Eleventh. For these reasons the Philadelphia Maritime Exchange urgently protests against the proposed measure being enacted into law.

THE PHILADELPHIA MARITIME EXCHANGE,
By J. S. W. HOLTON, *President.*

Attest:

E. R. SHARWOOD, *Secretary.*

PROTEST AGAINST THE PASSAGE OF A BILL H. R. 18666—S. 6856 (63D CONG., 2D SESS.), PROVIDING FOR GOVERNMENT OWNERSHIP AND OPERATION OF MERCHANT VESSELS IN THE FOREIGN TRADE OF THE UNITED STATES.

Memorial of the Philadelphia Bourse, an organization composed of over 2,500 business men, firms, and corporations, having as one of its objects the improvement of the commercial interests of the city, State, and Nation, acting through its board of directors by its committee on commercial affairs at a meeting held January 22, 1915.

To the honorable the Senate and House of Representatives in Congress assembled:

This memorial of the Philadelphia Bourse respectfully represents:

Whereas section 4132 of the Revised Statutes of the United States as amended by the act officially designated the "Panama Canal act," provides for the admission to registry as vessels of the United States foreign-built "seagoing vessels, whether steam or sail, which have been certified by the Steamboat-Inspection Service * * * not more than 5 years old at the time of application for registry * * * for trade with foreign countries * * * the Philippine Islands, etc.," with certain restrictions as to the citizenship of the owners or managers of such vessels; and

Whereas by House bill 18202, Sixty-third Congress, approved August 18, 1914, the restriction contained in the Panama Canal act reading "not more than five years old at the time they apply for registry" was repealed, and the President of the United States granted authority to suspend the provisions of law requiring inspection and measurement by officers of the United States of foreign-built vessels admitted to American registry; and

Whereas under the terms of the legislation above quoted American citizens desiring to engage in the operation of vessels in the foreign trade are free to purchase ships in the cheapest markets of the world, and obtain American registry for such ships; and

Whereas the failure of American citizens to take advantage of the opportunities afforded by the legislation hereinbefore referred to is conclusive proof that ships registered under the American flag can not be profitably operated in the foreign trade; and

Whereas before a merchant marine can be created under the American flag to compete with foreign ships engaged in the over-seas trade a complete revision of the navigation laws of the United States must be made, so that the cost of operating ships under the American flag may be reduced to the level of the cost of operating foreign ships competing for the same business; and

Whereas no such revision is proposed by the bill H. R. 18666—S. 6856—which provides for Government ownership and operation of merchant vessels in the foreign trade of the United States, in consequence of which the Government will operate under the same disadvantages that apply to privately owned vessels, magnified by the greater demands which will be made by seamen in Government employ; and

Whereas Government owned and operated ships operated primarily "to regulate the rates for carrying the mails, and for passenger and freight service" (see majority report of the Committee on the Merchant Marine and Fisheries No. 1149, accompanying H. R. 18666) will unquestionably be operated at a loss; and

Whereas such loss will be the most insidious form of subsidy or subvention appearing under the guise of a deficit incurred in operating such ships, with no limitations upon the amounts of such deficits; and

Whereas, according to the report of the majority of the committee hereinbefore mentioned, "the country is opposed to subsidies, and with good reason," and such granting of subsidies is opposed by all Democratic doctrines (see Rept. 2755, pt. 2, of the Senate, 58th Cong., 3d sess., accompanying S. 6291, submitted by Mr. Mallory, of Florida, for himself and Messrs. Spight, of Mississippi, and McDermott, of New Jersey, which stated, inter alia):

"These sections provide for direct subsidies and are so obnoxious to Democratic principles and to the economic sense of the country that we are compelled to enter our earnest protest against their enactment into law. Its chief difference from former direct subsidy bills—reference is made to a bill 'to promote the national defense, to create a force of naval volunteers, to establish American ocean mail lines to foreign markets, to promote commerce, and to provide revenue from tonnage,' introduced by Senator GALLINGER—is that it is not as honest as these bills were. It displaces the word 'subsidy' with the word 'subvention' * * * without any limitation of the subsidy * * * without any sort of limitation of the total to be paid out of the Treasury now or hereafter * * *.

"We mean no reflection of duplicity against our colleagues on the commission—Merchant Marine Commission—but the situation seems to be such that they can not get away from the idea of direct governmental aid * * *. Section 2 ingeniously introduces the subject by the sugar-coated expression 'In the interest of the national defense and for the performance of public services.' Will the Congress of the United States and the American people permit themselves to be deceived by this transparent disguise? Public sentiment and the sober judgment of the people's representatives have united to condemn every previous effort to enact such legislation, and surely this effort must meet the fate of its predecessors despite the canting phrase 'In the interest of the national defense and for the performance of public services' and the substitution of the euphonious title 'subvention' for 'subsidy.' * * *

"It will be observed also that unlike other previous bills which have been offered from time to time, there is absolutely no limit to the amount which may be expended under this bill."

Whereas, to still further quote the language of the committee, "Whatever objections to previous subsidy bills have been valid are of equal weight to-day against this section," there is every reason why the bill H. R. 18666—S. 6856—should be defeated and no valid reason for its enactment.

Therefore the Philadelphia Bourse earnestly opposes the passage of the bill H. R. 18666—S. 6856—believing it to be futile for the purposes sought to be accomplished, vicious in principle, and indefensible as a piece of economic legislation.

We hold that a temporary condition should not be met by paternalistic legislation subversive of all precedent and the traditions of our people; embarking our Government in business as a common carrier on the high seas in competition with the ships of the world, and not for gain, but to regulate rates, with the complications which would result with foreign nations from such "unfair competition"; denounced and prohibited by section 5 of the act creating a Federal Trade Commission; and further

We respectfully urge that the Congress should "strike the shackles from business" on the ocean by revising all those sections of the navigation laws which by their restrictions on American ships and shipowners enhance the cost of operation of vessels under the American flag.

PHILADELPHIA BOURSE,
By GEORGE E. BARTOL, *President.*

Attest:

EMIL P. ALBRECHT, *Secretary.*

The men who have forwarded these protests are experienced in maritime matters, and careful consideration ought to be given to what they say. I also submit a letter from the Midvale Steel Co., which throws additional light on this subject, and also a copy of a letter forwarded to the President of the United States by Mr. Frank Samuels:

THE MIDVALE STEEL CO.,
Philadelphia, August 15, 1914.

Hon. J. HAMPTON MOORE,
The Raleigh, Washington, D. C.

SIR: The expedient proposed in Congress for relieving the necessities of getting American-made goods overseas is one which should receive the most careful consideration with reference to its ultimate effect rather than the immediate effect.

2. The proposals now appearing strongest in Congress seem to us who are close to the shipbuilding industry in this country to be wholly mischievous, so far as the ultimate effect is concerned, and we firmly believe that something equally effective, without the attendant ultimate evils of the present propositions, can be worked out if a little care and thought be used.

3. Undoubtedly shipbuilding in this country will be injured beyond repair if the present proposals are made law, and with the shipbuilding industry there goes all the attendant contributory manufactures completing the equipment of ships for service, practically all of which is manufactured in this country to-day and has been for many years.

4. The provision in the recent Panama Canal shipping acts, that equipment intended for shipbuilding can be purchased abroad and imported free, has already made a marked impress upon the amount of this equipment formerly manufactured in this country, and to develop this mischief to the ultimate degree proposed by the present measures on the floor of Congress would throw many thousands of men contributing to the finished ship entirely out of work; and this, with the condition of the labor market already in an aggravated state, is the least of contentions which should cause Congress to pause before doing such irreparable damage to the development, naturally and normally, of the shipbuilding and maritime industries of this country.

5. With all our force, we urge you to avoid this blunder.

Yours, very truly,

W. P. BARBA, *Manager.*

PHILADELPHIA, PA., *January 27, 1915.*

Hon. THOMAS WOODROW WILSON,
President of the United States,
The White House, Washington, D. C.

SIR: The papers of this country at present are stating that the so-called Alexander bill is being pressed for passage by yourself. I take the liberty of addressing you as to this bill from an independent shipper's standpoint. For many years past, as an importer of iron shipped in bulk from Mediterranean, Russian, and South American ports to this country, I have been a direct charterer of tonnage in cargo lots. I have also been importing to this country from English and continental ports bulk commodities, such as ferromanganese, ferrosilicon, spiegel, etc., which are shipped in parcel lots.

This firm has no connection of any kind whatever and owns no stock in any ship or shipping company, and is absolutely independent in its views. I am unalterably opposed to the Government entering into a business operating ships in competition with independent shipowners and a business that should be done and carried on by private individuals in this country, who are perfectly capable of conducting this business if proper laws are made so that vessel ownership is possible.

Outside of all questions of the propriety of the Government entering this business and irrespective of complications which are sure to arise with foreign vessel owners, I consider the enterprise a most hazardous one and likely to cost this Government not only many million dollars, but complications and disputes with all foreign countries, owners of merchant marine.

If the merchants engaged in shipping in this country do not find it possible or profitable to own vessels, it is not for this Government to assume such ownership with the hope of creating by artificial means a merchant marine.

The Government in undertaking this with its eyes open is preparing itself for every international complication governing shipping and maritime law, and at the same time risking in a bad business venture a large amount of money.

I trust sincerely that this viewpoint may be considered from one who has some knowledge of vessels and shipping and the chartering and transportation of goods over seas.

Respectfully submitted.

Yours, very truly,

FRANK SAMUEL.

I also append hereto a thoughtful article from Mr. William D. Winsor, of Philadelphia, whose long experience as a shipowner and director is entitled to great weight:

TO GET AN AMERICAN MERCHANT MARINE, THE MAIN THING IS TO GIVE THE AMERICAN SHIPOWNER A CHANCE TO COMPETE WITH HIS FOREIGN RIVAL.

[Written for the Public Ledger by William D. Winsor.]

In these times of the abnormal situation created by the present war, here is the old question coming up again—the need of a merchant marine.

The causes of the disappearance of American vessels in the offshore traffic between this country and foreign nations, the tonnage being now carried almost entirely in foreign bottoms, are as follows:

First. As the result of a high protective tariff, the price of all materials entering into the construction of a vessel were raised, and to this was added, at the instigation of the labor unions, the shortening of the hours of labor, so that the cost of building a steamship in this country is at least 25 per cent more than the same vessel could be built for abroad.

Second. By the enactment of our absurd navigation laws, again at the instigation of the labor unions, by which, among other things, a large percentage of the crew must be Americans, thereby increasing the wages, also a standard of living by no means necessary for their vocation, thus causing the running expenses of the vessel to be at least 30 per cent more than that of a foreign vessel.

Third. Onerous and unnecessary regulations in regard to equipment, bearing heavily upon the shipowner.

Fourth. The increased cost requires additional insurance on the capital invested.

Fifth. The vessels of many foreign nations are heavily subsidized, the nations in question thereby reaping the benefit of the many millions of freight money paid by this country.

The consequence of these burdens has been to drive American-built ships from the ocean trade.

There is only one way to place our own ships again upon the seas; i. e., the disadvantages under which they labor must be equalized so that they can compete on an equal basis.

To my mind, as an old shipowner and in the steamship business for many years, nothing can be more impracticable and clumsy than to attempt to do this by the project now before the country, as contained in the report above alluded to, for Government ownership and running of steamships to be acquired in the present emergency by the purchase of foreign vessels and admitting them to American registry.

What does a shipping board composed of the Secretary of the Treasury, the Postmaster General, and the Secretary of Commerce know about the running of steamships or the commercial matters connected therewith in the freight trade, which requires the keenest knowledge of business matters and can only be found among the merchants and steamship owners who have followed this vocation for many years?

All undertakings of a like nature conducted by the Government, while well done in many instances, are necessarily uneconomical, if not to say worse, and could be done much better by individuals having their own interest at stake.

It is proposed in this extraordinary project that the Government shall own 51 per cent of the capital stock and have control of the management. What a field for politicians it would afford for the appointment of officers and crew. Would any sane man invest in the remaining 49 per cent under such domination?

If this program were carried out, what would be the position of vessel owners now struggling for existence in competition with the Government, which does not even charge interest or depreciation against its investment and carries its own insurance at the cost of the people?

If in the present emergency it is necessary to acquire foreign vessels and admit them to our registry, open this door to private capital and limit the period to, say, six months in which to purchase and admit to American registry such foreign vessels and then close the door.

First. Suspend for 10 years the navigation laws as applied to vessels in the foreign trade, thus placing such vessels on a par in this respect with those owned by foreign nations.

Would any intelligent capitalist make the investment required under a suspension of these laws, subject to the will and power of the Presi-

dent to terminate them at any time? Capital must look far enough ahead to protect itself when the present situation has passed away and things have resumed their normal condition.

Second. A moderate subsidy must be paid to overcome the advantage of the subsidy now paid by foreign nations.

In no other way can American ships be placed on an even keel. What is the difference between meeting the deficit which will inevitably occur in a Government-owned and managed line by taxation or by a subsidy, which, in my estimation, would be very much less in amount?

Let the Government attend to its own affairs and not go into the mercantile business in competition with its own people.

If this were done and private capital again in use upon the ocean, it would stimulate shipbuilding in this country and give employment to our builders.

The Fight Between the Monitor and the Merrimac.

EXTENSION OF REMARKS

OF

HON. BENJAMIN G. HUMPHREYS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 1, 1915.

Mr. HUMPHREYS of Mississippi. Mr. Speaker, a few days ago, when the House was considering a proposition to erect a monument to Capt. John Ericsson, the statement was made that the *Monitor*, which he built, "fought a successful battle against the *Merrimac* at Hampton Roads."

It was also stated that the *Monitor* "completely revolutionized modern warfare."

The battle between the *Monitor* and the *Merrimac* was the first battle ever fought by ironclads, and it no doubt revolutionized modern warfare. In order that the record may be kept straight and that credit may be given where credit is deserved, I asked permission to print in the RECORD the following article, written by Capt. J. S. McNeily, of the Vicksburg Herald. There are very few deeper students of our war-time history than Capt. McNeily and few, indeed, who are given to more accurate relation of its facts. I commend this article to the careful perusal of all who would know the real history of that most stirring and epoch-making event.

The article referred to follows:

UNWRITING WAR HISTORY.

The following is quoted from page 479 of the CONGRESSIONAL RECORD of the present session, in a debate upon a monument to John Ericsson, the inventor of the *Monitor:*

Mr. FITZGERALD. I wish to say that the services which John Ericsson rendered to the United States as the inventor of the *Monitor* were so valuable that I believe a statue to him, to stir the patriotic impulses of the people of this country and to meet a great sentiment on behalf of many of our fellow citizens who were born in the same country or who are the descendants of people who came from the same country as Ericsson, would be very appropriate. The country can well afford to spend $50,000 to erect a monument to the memory of Ericsson much better than it can afford to waste money on many things on which money is wasted.

Mr. MOORE. If the gentleman from New York thinks that $50,000 is a fair amount for a statue to Ericsson, the inventor of the *Monitor*, which fought a successful battle against the *Merrimac* at Hampton Roads——

Mr. FITZGERALD. It completely revolutionized modern warfare.

John Ericsson was an inventor all right; he did his work well and is not grudged his monument. But his "*Monitor* fought a successful battle," not with the *Merrimac*. While as to the assertion that he "revolutionized modern warfare," that had been effected the day before he reached the scene by the *Merrimac*, which on March 8, 1862, sunk, burned, or put to flight five frigates and numerous other craft in Hampton Roads. A further fact that calls for recognition is that France and Great Britain each had built an armored ship before the American war began. In his story of building the *Monitor* Capt. Ericsson says, "Indeed the utility of the armor plating adopted by France and England proved to be better understood at Richmond than at Washington."

Quoting from the record, the *Merrimac*, a United States frigate, had been sunk and burned to the water's edge when the Federals evacuated Norfolk. She was raised by the Confederates, patched up, made serviceable as far as possible, and armor clad with iron plate. Though rechristened the *Virginia*, the old name has survived. The armoring of the old *Merrimac* was well under way before the contract for the *Monitor* was let under the plan of John Ericsson, with every facility of machinery and material.

Under the command of Flag Officer Franklin Buchanan, the Confederate ironclad steamed out from Norfolk on the morning of March 8 and engaged two frigates, the *Congress* and the *Cumberland*, sinking one and burning the other. While thus engaged the *Virginia* sustained a heavy fire from shore batteries and from three other frigates—the *Minnesota*, *St. Lawrence*, and *Roanoke*—that came up from Fortress Monroe. The former was saved from the *Virginia* by shoal water, the other two by taking refuge under the guns of Fortress Monroe.

On the next morning the *Virginia* went forth to destroy the ships that escaped the day before. While engaging the *Minnesota* and the land batteries the *Virginia* was encountered by the *Monitor*, just arrived from New York. The battle of the Confederate ship, with the *Monitor* and the *Minnesota*, lasted four hours. The account of this second day's combat is quoted from the report of Lieut. Catesby Jones, who had succeeded to the command of the *Virginia*, Commander Buchanan having been wounded the first day:

We continued to fire at the *Minnesota*, and blew up a steamer alongside of her. We also engaged the *Monitor*, and sometimes at very close quarters. We once succeeded in running into her, and twice silenced her fire. The pilots declaring that we could get no nearer the *Minnesota*, and believing her to be entirely disabled, and the *Monitor* having run into shoal water, which prevented our doing her any further injury, we ceased firing at 12 o'clock and proceeded to Norfolk. Our loss is 2 killed and 19 wounded. The stem is twisted and the ship leaks. We have lost the prow, starboard anchor, and all the boats. The armor is somewhat damaged; the steam pipe and smokestacks both riddled; the muzzles of two of the guns shot away. It was not easy to keep a flag flying. The flagstaffs were repeatedly shot away. The colors were hoisted to the smokestack and several times cut down from it.

All of the *Merrimac's* casualties occurred the first day. The report of Capt. Van Brunt of the *Minnesota*—who was forced to await the attack of the *Merrimac* because his ship was aground—of the conclusion of the combat is quoted from:

Very fortunately the *Merrimac* drew too much water to come within a mile of the *Minnesota*. * * * I had concentrated upon her an incessant fire * * * and was informed by my marine officer that at least 50 shots had struck her without leaving any apparent effect. By the time she had fired her third shell the little *Monitor* had come down upon her, placing herself between us and compelling her to change her position, in doing which she grounded, and again I poured into her all the guns which could be brought to bear upon her. As soon as she got off, she stood down the bay, the *Monitor* chasing her with all steam, when suddenly the *Merrimac* turned around and ran full speed into her antagonist. For a moment I was anxious, but instantly I saw a shot plunged into the iron roof of the *Merrimac*, which surely must have damaged her. For some time after the rebels concentrated their whole battery upon the *Monitor*, which soon after stood down to Fortress Monroe, and we thought she had exhausted her supply of ammunition or sustained some injury. Soon after the *Merrimac* headed for my ship and I then felt to the fullest extent my position. I was hard and immovably aground and they could take position and rake me. I had expended most of my solid shot, my ship was badly crippled, my officers and men were worn out with fatigue. I ordered every preparation to be made to destroy the ship after all hope was gone to save her. On ascending the poop deck I observed the enemy's vessels had changed their course and were heading for Craney Island.

This report surely does not claim "a successful battle" for the *Monitor*. When the *Merrimac* "stood down the bay, chased by the *Monitor*," she was seeking water deep enough to turn round in. In the report of the commander of a French ship who witnessed the combat, and which is published in volume 7, Official Records Union and Confederate Navies, is the following:

In a narrow channel of little depth the *Monitor*, whose draft is not half that of the *Merrimac*, had an enormous advantage. She could run at full speed, approach, or retire without fear of running aground. The Confederate ship could not move or perform any evolutions except with the greatest precaution.

The record is further quoted from:

The two ironclads fought part of the time touching each other, from 8 a. m. to noon, when the *Merrimac* retired. The damage to the *Merrimac* could not be ascertained. She retreated under steam without assistance. She is an ugly customer and it is too good luck to believe we are rid of her.—G. V. Fox, Assistant Secretary United States Navy.

Through dread of the *Merrimac* the advance of McClellan's army via the peninsula was delayed. "I refused to consent to the peninsula line," testified Gen. Keyes, corps commander, to a congressional committee, "until the *Merrimac* could be neutralized." To McClellan's representations—that the "performances of the *Merrimac* place a new aspect on everything, paralyzes the movements of the Army, whatever route is adopted"—Secretary of the Navy Welles replied: "It is directed by the President that the *Monitor* be not too much exposed." Assistant Secretary Fox stated the case to Gen. McClellan as follows:

The *Monitor* is more than a match for the *Merrimac*, but she might be disabled in the next encounter. I can't advise so great dependence on her. * * * The *Monitor* may, and I think will, destroy the *Merrimac* in the next encounter; but this is hope, not certainty.

But there was no "next encounter." For the two months following the *Merrimac* lay unmolested at Norfolk, a menace and a terror to the northern seaboard. Assistant Secretary of the United States Navy Fox said of the *Monitor*, sheltered under the guns of Fortress Monroe:

The *Monitor* is unhurt and ready at any moment to repel another attack.

But that there was no thought of an attack on the *Merrimac* the following letter from Secretary of War Stanton, addressed

to the governors of the States of New York, Massachusetts, and Maine, two days after the battle, shows:

The opinion of naval commanders is that the *Merrimac* will not venture to sea, but they advise that immediate preparations be made against the danger to our ports by large timber rafts protected by batteries.

This advice was acted on for New York City, Boston, and Portland, while Secretary Wells of the Navy, as late as March 25, ordered nets and hawsers to be stretched across the Potomac to foul the *Merrimac's* propeller.

The following is from the report of Flag Officer Tatnall—"blood is thicker than water" Tatnall—who had succeeded to command of the *Merrimac:*

APRIL 12.

At 6 a. m. I left the anchorage off Norfolk, and dropped down to Hampton Roads, within long range of the enemy's batteries, which fired several shots at me without effect. The *Monitor* was lying close under the batteries. The flagship *Minnesota*, with a large number of men-of-war, was lying below. Several, including the *Monitor*, got up steam, and I thought it their intention to engage me, but they suffered me to hold my position until late in the afternoon without doing so. May 8. The enemy attacked Sewells Point battery, and I immediately went with the *Virginia* to defend it. We found six of the enemy's vessels, including the ironclad steamers *Monitor* and *Naugatuck*, shelling the battery. We passed the battery and stood directly for the enemy, for the purpose of engaging him, and I thought an action certain, particularly as the *Minnesota* and *Vanderbilt*, which were anchored below Fortress Monroe, got under way and stood up to that point, apparently with the intention of joining their squadron in the roads. Before, however, we got within gunshot the enemy ceased firing and retired with all speed under the protection of the guns of the fortress, followed by the *Virginia* until the shells from the Rip Raps passed over her. The *Virginia* was then placed at her moorings near Sewells Point.

Thus ended the chapter of the *Virginia*—three days afterwards, upon the occupation of Norfolk by the enemy's land forces, her draft being too great to reach Richmond, she was destroyed by the Confederates. There is nothing in the volume of the record that traverses what we quote from the official reports. They all testify that the only triumph was that gained by the *Virginia*. Secretary of War Benjamin, in a communication to Gen. Lovel at New Orleans, stated that nothing but her deeper draft saved any of the Union craft from the *Virginia*, a statement borne out by the official narratives of the fight. A monument according to the *Monitor* a "successful battle against the *Merrimac*," or that would give to John Ericsson instead of Franklin Buchanan the credit of "revolutionizing modern warfare," would be a mockery upon the record facts. Reading such an inscription, the lover of truth would be tempted to quote the line:

Tear down the flaunting lie.

The Army.

EXTENSION OF REMARKS

OF

HON. JAMES HAY,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915.

Mr. HAY. Mr. Speaker, the Army of the United States consists, first, of 4,701 officers, 3,481 of these are line officers—that is, officers of the Infantry, Cavalry, Field Artillery, and Coast Artillery—1,220 of them are staff officers—that is, officers composing the different staff corps of the Army, such as the Quartermaster Corps, the Engineer Corps, The Adjutant General's Office, the Inspector General's Office, the Signal Corps, the Medical Corps, the Ordnance Corps, and the Office of the Judge Advocate General.

There are upon the retired list of the Army 1,030 officers with rank as follows:

Lieutenant generals	3
Major generals	20
Brigadier generals	220
Colonels	152
Lieutenant colonels	104
Majors	211
Captains	200
First lieutenants	96
Second lieutenants	24

There are 67 posts for the mobile army—that is, for the Army outside of the Coast Artillery—49 of these posts are in the continental United States, 9 in the Philippine Islands, 5 in Alaska, 2 in Hawaii, and 2 in the Canal Zone.

There are now in the Army, including the Hospital and Quartermaster Corps and the Philippine Scouts, 97,306 enlisted men; 18,092 of these are in the Coast Artillery Corps, 3,398 in the Hospital Corps, 4,098 in the Quartermaster Corps, and 5,398 Philippine Scouts.

Excluding those above enumerated are 65,781 men stationed as follows:

In the Philippines, 9,859; in the Canal Zone, 3,149; in Hawaii, 7,351; in China, 674; and in Alaska, 488. It is proposed to place in Hawaii 15,665 in all, and in the Canal Zone, in all, 8,305; and there will then be in the continental United States 30,790 enlisted men of the mobile army; and the strength of the Army, including Philippine Scouts, will be 89,271.

The pay of the Army alone is, in round numbers, $49,000,000.

Rates of pay to officers, active and retired, act of May 11, 1908.

PAY OF OFFICERS IN ACTIVE SERVICE.

Grade.	Pay of grade.		Monthly pay.[1]			
	Yearly.	Monthly.	After 5 years' service.	After 10 years' service.	After 15 years' service.	After 20 years' service.
			10 per ct.	*20 per ct.*	*30 per ct.*	*40 per ct.*
Lieutenant general	$11,000.00	$916.67	.....	.....	.....	.....
Major general	8,000.00	666.67	.....	.....	.....	.....
Brigadier general	6,000.00	500.00	.....	.....	.....	.....
Colonel	4,000.00	333.33	$366.67	$400.00	[2] $416.67	$416.67
Lieutenant colonel	3,500.00	291.67	320.83	350.00	[2] 375.00	375.00
Major	3,000.00	250.00	275.00	300.00	325.00	[2] 333.33
Captain	2,400.00	200.00	220.00	240.00	260.00	280.00
First lieutenant	2,000.00	166.67	183.33	200.00	216.67	233.33
Second lieutenant	1,700.00	141.67	155.83	170.00	184.17	198.33

PAY OF RETIRED OFFICERS.[3]

Lieutenant general	$8,250.00	$687.50	.....	.....	.....	.....
Major general	6,000.00	500.00	.....	.....	.....	.....
Brigadier general	4,500.00	375.00	.....	.....	.....	.....
Colonel	3,000.00	250.00	$275.00	$300.00	$312.50	$312.50
Lieutenant colonel	2,625.00	218.75	240.62	262.50	281.25	281.25
Major	2,250.00	187.50	206.25	225.00	243.75	250.00
Captain	1,800.00	150.00	165.00	180.00	195.00	210.00
First lieutenant	1,500.00	125.00	137.50	150.00	162.50	175.00
Second lieutenant	1,275.00	106.25	116.87	127.50	138.12	148.75

[1] Officers below the rank of brigadier general receive 10 per cent on the yearly pay of the grade for each term of 5 years' service, not to exceed 40 per cent in all.—R. S. 1262, 1263. (Except colonel, lieutenant colonel, and major.)

[2] The maximum pay of a colonel is $5,000, that of a lieutenant colonel $4,500, and that of a major $4,000. (Act May 11, 1908.)

[3] Retired officers receive 75 per cent of the pay of their grade (salary and increase).—R. S., 1274. No increase of longevity after retirement unless retired for wounds received in battle. (Act Mar. 2, 1903.)

ALLOWANCES OF OFFICERS OF THE ARMY.

The allowances of officers, other than mileage, are quarters, with heat and light therefor, according to their grades, as follows:

	Rooms.		Rooms.
Lieutenant general	10	Majors	5
Major generals	9	Captains	4
Brigadier generals	8	First lieutenants	3
Colonels	7	Second lieutenants	2
Lieutenant colonels	6		

The allowances as specified above were fixed by the act of March 2, 1907 (34 Stat., 1169), and were not changed or affected by the act of May 11, 1908.

COMMUTATION OF QUARTERS.

The act of March 2, 1907 (34 Stat., 1169), provided that officers on duty at places where there were no public quarters could be paid commutation therefor by the Pay Department at a rate not exceeding $12 per month per room. Commutation of quarters is, however, payable only to officers who are on duty without troops at stations where there are no public quarters.

ALLOWANCE FOR HEAT AND LIGHT.

Average monthly allowance of heat and light for officers of the Army.

Grade.	Heat.	Light.
Lieutenant general	$33.72	$10.40
Major general	30.91	9.36
Brigadier general	28.57	8.32
Colonel	26.23	7.28
Lieutenant colonel	23.89	6.24
Major	21.54	5.20
Captain	19.20	4.16
First lieutenant	15.93	3.12
Second lieutenant	13.58	2.08

The allowance for heat and light is authorized by the act of March 2, 1907 (34 Stat., 1167), and is furnished by the Quartermaster's Department in kind and not commuted.

Monthly pay of enlisted men—Philippine Scouts—General Order 236, War Department, Nov. 27, 1909.

[In effect Mar. 1, 1910.]

Grade.	First enlistment, 1, 2, 3 years.	Second enlistment, 4, 5, 6 years.	Third enlistment, 7, 8, 9 years.	Fourth enlistment, 10, 11, 12 years.	Fifth enlistment, 13 14, 15 years.
Battalion sergeant major	$22.00	$22.50	$21.00	$23.50	$24.00
First sergeant	20.00	20.50	21.00	21.50	22.00
Company quartermaster sergeant and sergeant	15.00	15.50	16.00	16.50	17.00
Corporal and artificer	10.00	11.00	12.00	12.50	13.00
Cook	11.00	12.00	13.00	14.00	14.50
Musician and private	7.50	8.00	8.50	9.00	9.50

Grade.	Sixth enlistment, 16, 17, 18 years.	Seventh enlistment, 19, 20, 21 years.	Eighth enlistment, 22, 23, 24 years.	Ninth enlistment, 25, 26, 27 years.	Tenth enlistment, 28, 29, 30 years.
Battalion sergeant major	$24.50	$25.00	$25.50	$26.00	$26.50
First sergeant	22.50	23.00	23.50	24.00	24.50
Company quartermaster sergeant and sergeant	17.50	18.00	18.50	19.00	19.50
Corporal and artificer	13.50	14.00	14.50	15.00	15.50
Cook	15.00	15.50	16.00	16.50	17.00
Musician and private	10.00	10.50	11.00	11.50	12.00

The pay of enlisted men, Philippine Scouts, shall be fixed by the Secretary of War. (Act Feb. 2, 1901.)

Reenlistment must be within three months to entitle to increase. (General Order, 236, 1909.)

Additional pay per month.

Expert rifleman	$1.50
Sharpshooter	1.00
Marksman (General Orders, 28, 1908)	.50
Special sanitary work (General Orders, 8, 1908)	1.20

Rates of monthly pay to enlisted men—Acts of May 11, 1908, and Mar. 23, 1910.

Grade and arm of service.	First enlistment.	Second enlistment.	If reenlisted within three months.				
			Third enlistment.	Fourth enlistment.	Fifth enlistment.	Sixth enlistment.	Seventh enlistment.
BATTERY, TROOP, COMPANY.							
Sergeant, first class—Signal Corps; First sergeant—Artillery, Cavalry, Infantry, Engineers	$45	$49	$53	$57	$61	$65	$69
Sergeant — Engineers, Ordnance, Signal Corps; Quartermaster sergeant—Engineers; Sergeant—Artillery, Cavalry, Infantry; Quartermaster sergeant—Artillery, Cavalry, Infantry	36	40	44	48	52	56	60
Stable sergeant—Field Artillery; Cook—Artillery, Cavalry, Infantry, Engineers, Signal Corps; Horseshoer — Cavalry, Field Artillery	30	33	36	39	42	45	48
Corporal — Engineers, Ordnance, Signal Corps; Mechanic—Coast Artillery; Chief mechanic—Field Artillery	24	27	30	33	36	39	42
Corporal—Artillery, Cavalry, Infantry; Artificer—Infantry; Mechanic—Field Artillery; Farrier, saddler, wagoner—Cavalry	21	24	27	30	33	36	39
Private, first-class—Engineers, Ordnance, Signal Corps	18	21	24	27	30	33	36
Trumpeter—Cavalry; Musician—Artillery, Infantry, Engineers; Private—Artillery, Cavalry, Infantry, Signal Corps; Private, second-class—Engineers, Ordnance	15	18	21	22	23	24	25

Rates of monthly pay to enlisted men, etc.—Continued.

Grade and arm of service.	First enlistment.	Second enlistment.	If reenlisted within three months.				
			Third enlistment.	Fourth enlistment.	Fifth enlistment.	Sixth enlistment.	Seventh enlistment.
BANDS—ARTILLERY, CAVALRY, INFANTRY, ENGINEERS.							
Chief musician	$75	$79	$83	$87	$91	$95	$99
Chief trumpeter—Artillery, Cavalry; Principal musician	40	44	48	52	56	60	64
Sergeant; Drum major; Cook; Corporal	36	40	44	48	52	56	60
Private	30	33	36	39	42	45	48
POST NONCOMMISSIONED STAFF.

Musician, first class	45	49	53	57	61	65	69
Musician, second class	36	40	44	48	52	56	60
Musician, third class	30	33	36	39	42	45	48
FIELD MUSICIANS—MILITARY ACADEMY.							
Sergeant	50	54	58	62	66	70	74
CORPS, REGIMENT, BATTALION.							
Master signal electrician; Master electrician—Coast Artillery	75	79	83	87	91	95	99
Engineer—Coast Artillery	65	69	73	77	81	85	89
First-class electrician sergeant—Coast Artillery; Battalion sergeant major, quartermaster sergeant—Engineers; Regimental sergeant major, quartermaster sergeant, commissary sergeant—Field Artillery, Cavalry, Infantry; Senior sergeant major—Coast Artillery	45	49	53	57	61	65	69
Battalion sergeant major—Field Artillery, Infantry; Squadron sergeant major—Cavalry; Battalion quartermaster sergeant—Field Artillery; Junior sergeant major—Coast Artillery; Master gunner—Coast Artillery	40	44	48	52	56	60	64
Second-class electrician sergeant—Coast Artillery; Color sergeant—Field Artillery, Cavalry, Infantry	36	40	44	48	52	56	60
Firemen—Coast Artillery	30	33	36	39	42	45	48

NOTE.—Men of the Porto Rico Infantry receive the same pay as Regular Army. (Act Apr. 23, 1904.)

There were on June 30, 1914, 3,798 enlisted men on the retired list, whose pay amounts in all to $2,850,000.

The war strength of a regiment of Infantry is 1,836, of a regiment of Cavalry 1,236, and of a regiment of Field Artillery 1,186. There are 30 regiments of Infantry, 15 regiments of Cavalry, and 6 regiments of Field Artillery in the United States Army.

It costs $130,000 more to maintain a Cavalry regiment than it does an Infantry regiment. It costs $135.57 more to maintain an Infantry soldier in the Philippine Islands than in the United States, and $167.18 more to maintain a cavalryman in the Philippine Islands than in the United States.

There are in reserve 195,000,000 rounds of small-arms ammunition—340 per man for 450,615 men. There are on hand 700,000 service rifles of the new model and 300,000 Krags—1,000,000 in all. There are 1,000 machine guns; it is desired to procure in all 1,361 of these guns for an army of 500,000 men, and appropriations are being made annually for this purpose. There are complete 634 Field Artillery guns; 226 of these guns have been provided for and 52 are being appropriated for this year, making in all 912 guns. It is desired to accumulate 1,292 of these guns. It will take six years to supply them at the rate of appropriation provided for in the pending bill.

We have in reserve 38 per cent of field ammunition for guns on hand. The amount provided for in the pending bill will raise that to 60 per cent. We can in four years at the same rate of appropriation provide for all the reserve ammunition needed.

The powder capacity of this country, including private and governmental plants, is 12,940,000 pounds of cannon powder annually and 3,650,000 of small-arms powder. This was the capacity before the European war; it is doubtless much greater now.

Much has been said and written of late as to short and long enlistments and the way to procure a needed reserve which will be serviceable in time of war. I submit the following observations, made by me in 1912 upon these subjects. They can be found in the House report on the Army appropriation bill, Sixty-second Congress, second session.

The committee, after hearing much testimony, which is fully set forth in the printed hearings, from the most experienced recruiting officers of the Army, and from officers who have had long service as troop, battery, and company commanders under both the five-year and the three-year systems of enlistment, reached the conclusion that a return to the five-year system will not materially increase the difficulty of obtaining recruits, but that on the other hand it will materially increase the efficiency of the enlisted personnel of the Army by increasing the number of seasoned and well-trained soldiers in the ranks, by increasing the number of reenlistments and by diminishing the number of desertions; also that it will materially decrease the number of discharges for disability and the number of possible pensioners, and will cause no increase at all in the retired list of enlisted men.

The most experienced of the officers examined by the committee, including the officers before mentioned and The Adjutant General and the Inspector General of the Army, expressed themselves as in favor of a return to the five-year system of enlistment. The remarks made by The Adjutant General, at a hearing before the committee, with regard to the term of enlistment, and especially with regard to the question of the advisability of maintaining a short term of enlistment and discouraging or prohibiting the reenlistment of the majority of privates, also with regard to the feasibility of building up a reserve force that can be called into active service in time of need, cover the ground so thoroughly and are so fully in accord with the views of the committee as well as with the views expressed to the committee independently by all of the officers who were heard by it, and whose opinions with regard to the matter are believed to be entitled to the greatest weight, that it is deemed proper to repeat those remarks here. The Adjutant General, Gen. Ainsworth, said:

I confess that I was somewhat reluctant to appear before the committee for a hearing upon this bill, because I knew that anything I might say and that might be opposed to the views that have been expressed by others with regard to the bill would be considered, in some quarters at least, as a hostile criticism of the persons who expressed those other views. This being the case, I desire to declare at the outset that anything I may say will not be said in any spirit of criticism, hostile or otherwise, and will not be intended to apply to any particular person whomsoever, except in so far as it may be applicable to myself alone.

I am now in my thirty-seventh year of continuous service as a commissioned officer of the Army. For the past 19 years I have been the chief of a bureau in the War Department. For the past 7 years I have been the head of The Adjutant General's Department of the Army, and in that capacity have had immediate charge of the recruiting service and of all Army reports, returns, and correspondence. None of my service has been in the line; all of it has been in the staff. Consequently I have had no experience whatever as a company commander. Neither I nor any other officer, line or staff, no matter how high his rank may be, who has not had experience as a company commander of line troops is qualified to express an opinion that is entitled to much weight as against the opinions of officers who have had such experience, with regard to the merits or demerits of this bill or any other similar measure, so far as it relates especially to the interests of enlisted men.

The holding of public office, civil or military, no matter how high, conveys no assurance of wisdom, good judgment, or even good sense on the part of the officeholder. In the ordinary affairs of life we require a man to qualify as an expert before we accept his opinions as those of an expert; but in dealing with civil or military officials, especially those holding high station, we are too apt to accept their opinions as law and gospel, without stopping to inquire whether they have any real knowledge of the subjects on which they discourse so authoritatively or whether they are mere pretenders to the possession of knowledge and experience that they have never acquired. No man's dictum should be accepted with regard to any feature of so important a matter as that involved in this bill unless he first shows that it is real knowledge and not the mere pretense of knowledge, backed by official position, that he relies upon to give weight to his views. I distinctly disclaim any intention to pose as an expert with regard to any features of this bill, or to set my own opinions against those of others whose opportunities for observation and experience have been greater than mine. However, there are some things about the bill that I know, and these I am ready to tell. And I have some opinions, which I am ready to give for what they are worth, about the various features of the bill and the probable result of its enactment into law.

I favor a return to the five-year period of enlistment and reenlistment because it is evident that it will effect a great saving in expense and because I believe that it will greatly increase the efficiency of the Army. Under the five-year system the Government would get from its soldiers two years of the best kind of service that it now loses by the discharge of men at the end of three years, just as they have undergone a sufficient amount of training to make their services valuable.

I do not think that the recruiting service would be affected unfavorably by a return to the five-year term of enlistment. Under the present system we have difficulty in keeping the Army full when times are good and but few men are out of employment. But our most experienced recruiting officers are all of the opinion that applicants for enlistment will enlist about as readily for five years as they will for three; and as we would not have to enlist nearly as many men under the five-year system, I am confident that we would have no more difficulty in keeping the Army full under that system than we now have under the three-year system.

I think men will be more likely to reenlist under the five-year than under the three-year system. At the end of three years a man has not become fairly weaned from home folks and home affairs, and home folks have not become weaned from him, but are constantly importuning him to come home. And at the end of three years he has not yet become fully adapted to the discipline and restraints of the military life; but at the end of five years all this is different. The home ties have been weakened; the young soldier has gotten over his homesickness; home folks have become reconciled to his absence; the Army has become a home to him; he has begun to realize the advantages that it offers him and its discipline and its restraints now bear lightly upon him.

Desertions should be much less numerous under the five-year than under the three-year system, because most desertions occur in the first year of service, and, to say nothing of reenlistments, there would necessarily be at any given time fewer men in the first year of service under the five-year system than under the three-year system.

I am convinced that it is impracticable, under our system of voluntary enlistments, to accumulate a reasonably large and dependable reserve force of fairly well-trained men by fixing the term of enlistment at, say, 10 years, of which three shall be spent with the colors and the remainder in the reserve. Our most experienced recruiting officers unanimously declare that it will be impossible to keep the ranks of the Army anywhere near full under such a system, because men will be most reluctant to tie themselves up by any kind of an agreement for so long a period as 10 years or for any period in excess of 5 years. It is the opinion of these recruiting officers, who are in constant touch with the class of men from which our recruits are drawn—and in this opinion I concur—that the adoption of the 10-year system would virtually stop recruiting for the Army. But even if we could keep the Army full under the 10-year system, or anything like it, there is nothing whatever on which to base the belief that a reserve thus recruited would be a dependable one in time of emergency. So far as I know, the experiment has never been tried anywhere on earth under the conditions that prevail in this country, where the people are naturally impatient of restraint and are prone to wander at will from place to place; where the distances are vast; where efficient surveillance is impossible, and where well-paid employment is ordinarily obtainable without difficulty. In my judgment, any such reserve as we could create with our small Army as a training school for it would be insignificant in size and in time of emergency would be found to be about as dependable and easy to assemble as a flock of crows.

There is one foreign nation, and only one, that has an army reserve system that might possibly be applicable to this country without resort to compulsory military service. It is useless to look to the nations of continental Europe, where the system of universal and compulsory military service prevails and where the hand and eye of authority are constantly upon everyone from the cradle to the grave. We have nothing in common with any of those nations in a military way, although we pattern after one of them in about everything military, ignoring the nation from which we descended and from which we inherited about everything that has made us a great people.

The British Army, like our own, is maintained by a system of voluntary enlistments. Perhaps it has not quite so many enthusiastic young officers with what they are pleased to call "advanced ideas" as our Army has, but it is a pretty good army, on the whole, and at one time or another has been in the capital of every one of most of the first-class powers of earth, including the United States. Its history and traditions are both long and glorious; its spirit has been as indomitable in defeat as in victory; its organization has usually been sufficient to enable it to win in the end under the most adverse conditions; and although it labors under the disadvantage of not yet having discovered the importance, that has recently been urged upon us, of divesting itself of its older and more experienced officers and men, we may well look to it for information and suggestion, because the conditions under which it is maintained, governed, and employed are substantially the same as those under which our Army is maintained, governed, and employed.

The period of enlistment for all branches of the British Regular Army, with a few unimportant exceptions, is 12 years, of which in most cases 7 or 8 years are spent with the colors and 5 or 4 years in the reserve.

But service with the colors is not restricted to the minimum time specified, because desirable men who have completed that service are permitted, with the approval of proper authority, to extend their service with the colors to the end of their period of enlistment. And upon the expiration of this period such men are also permitted, with the approval of proper authority, to reenlist for a period of 9 years, or for such a period as will make their total service 21 years.

The latest published information that I have been able to find with regard to the reserve system of the British Army was published in 1909, and, in brief, is as follows:

The British Army reserve consists of three sections, A, B, and D.

Section A consists of men who have completed their service with the colors and are in their first two years of reserve service, having agreed to serve outside of the United Kingdom when called upon to do so. They receive pay at the rate of 25 cents a day, and are liable to be called out at any time, without proclamation, for service at home or abroad. On completion of two years' service in this section the men are transferred to section B.

Section B consists of all men, other than those in section A, who are serving out the residue of their enlistments after transfer from the colors to the reserve.

Section D consists of men who enlist or reengage in it for four years after serving out a 12-year enlistment with the colors and in the reserve. Certain classes of artificers, if working at their trades, are permitted to reengage in section D for further periods of four years at a time if under 46 years of age at the time of reengagement.

The men of sections B and D receive pay at the rate of 12½ cents a day, and can only be called out for permanent service by proclamation and in case of national danger or great emergency.

Army reserve men are liable to be called out annually for training for a period not exceeding 12 days or 20 drills. They are not permitted to settle in any foreign country or in any colony in which there is not a British garrison, nor are they permitted to quit the United Kingdom or go to sea without the consent of their commanding officer.

There is a so-called special reserve of the British Army, which consists of former militia units transferred to it when the militia was discontinued and of men who especially enlist in it. Enlistments in this branch are for six years, and reenlistments are for four years.

The chief function of the special reserve is to make good the losses in time of war. They take the place of and recruit for regular troops withdrawn on mobilization. They are subject to 15 days' training annually and the infantry to 6 days additional for rifle practice. They receive army pay and allowances during training or when called out for service. Certain benefits are paid them at enlistment in lieu of pay for reserve service.

It will be observed from the foregoing statement that Great Britain finds it necessary to pay its army reserve at the rate of about $90 a year each for those in the first two years of their reserve service, and at the rate of about $45 a year each for the remaining members of the army reserve (exclusive of the special reserve). This being the case, and taking into consideration the difference between Great Britain and the United States in respect to wages, ease or difficulty of obtaining employment, purchasing power of money, and cost of living, it seems to me clear that we ought to expect to be compelled to pay double those rates in order to obtain anything like an effective and dependable reserve force that shall be under the exclusive control of the General Government and shall be ready for service anywhere and at any time.

It seems to me that membership in the Organized Militia of the various States, either active or in reserve, is a more practical and more reliable source of strength in time of emergency than membership in any such Regular Army reserve as there is any likelihood of our being able to accumulate through service in our small Army and by the aid of any appropriations that Congress is likely to make for this purpose. Officers of the State militia are in much better position than any officers of the Regular Army can be to keep in touch with, and to keep fully informed as to the status and movements of, the members of any reserve force that can be created. Members of State militia organizations, either on the active list or in reserve, are likely to be more permanently located, and thus more easily found when needed, than men of the more or less floating or unattached class from which enlistments in the Regular Army are likely to be made.

It is idle to talk of the creation of an efficient reserve force of any kind without the expenditure of a great deal of money, and it seems to me that if any money at all is to be expended for this purpose, the wisest as well as the most feasible way in which to expend it is in connection with the Organized Militia of the States, either by the expansion of the active militia force or by the creation of a militia reserve that shall offer material inducements for the enlistment therein of honorably discharged members of both the Regular Army and the militia, or by both of these plans combined.

In order to make our small Army productive of any reasonable number of reserves we would have to maintain or shorten our present short term of service with the colors; but I do not know of any officers who have had much experience as company or regimental officers who favor shortening our term of enlistment for any purpose. On the contrary, I believe that many, if not most, of the officers who had experience as company commanders under the former five-year enlistment system, as well as under the present three-year system, would, if called upon for an expression of opinion, favor a return to the five-year system, with the privilege of purchasing discharge, as against maintaining the present three-year system.

That a system of two and three year periods of service with the colors is the rule in the armies of continental Europe, where military service is compulsory and liability to it is universal, is no argument in favor of the adoption or maintenance of any such system in the United States or in Great Britain, where a system of voluntary enlistment prevails.

I do not believe that the short period of service in the armies of continental Europe would be preferred there if the conditions under which those armies are maintained would permit of a longer period; nor do I believe that the officers of those armies claim or pretend that they can make the most efficient and most desirable kind of a soldier in two or three years or that any of those officers would have the hardihood to assert that they turn out "models of finished soldiers" at the end of either of those short periods. It is well enough understood by statesmen, if not by our own Army officers, that the controlling reasons for the existence of the two and three year periods of service with the colors in the armies of continental Europe are, first, in order that they may subject the largest possible number of the whole male population of each country to a term of service in the Army; and, second, to lighten as much as possible the heavy burden of military service which there is good reason to fear that the people may at some time decline to bear any longer.

Beginning with April 30, 1790, the enlistment periods in our Army have been as follows:

	Years.
Apr. 30, 1790, to Mar. 16, 1802	3
Mar. 16, 1802, to Mar. 2, 1833	5
Mar. 2, 1833, to July 5, 1838	3
July 5, 1838, to Jan. 1, 1861	5
Jan. 1, 1861 (the law changing the term of enlistment from five to three years was not actually passed until July 29, 1861, but the law provided that all enlistments that had been made since Jan. 1, 1861, should be considered to have been made for three years), to Jan. 1, 1863	3
Jan. 1, 1863, to Feb. 6, 1864	5
Feb. 6, 1864, to July 28, 1866	3
July 28, 1866, to Mar. 3, 1869:	
For Artillery and Infantry	3
For Cavalry	5
Mar. 3, 1869, to Aug. 1, 1894	5
Aug. 1, 1894, to date	3

The act of June 16, 1890, which, although continuing the enlistment period of five years, provided that at the end of three years' service every soldier whose antecedent service was faithful should be entitled to receive a furlough for three months, and that in time of peace, at the end of such furlough, he should be entitled to receive his discharge upon his own application. As will be seen by reference to House Report No. 1061, Fifty-first Congress, first session, this legislation, together with the purchase of discharge provision which the act also contained, was enacted for the avowed purpose of reducing the enormous desertion rate previously existing. It virtually adopted the three-year enlistment period, as well as the system of discharge by purchase, so that it is impossible to tell what effect either one of those measures would have had alone. At any rate, neither of them had a trial alone as a remedial measure.

By a Senate amendment that was embodied in the Army appropriation act of February 27, 1893, it was provided that thereafter no private should be reenlisted who had served 10 years or more, or who was over 35 years of age, except such as had already served as enlisted men for 20 years or upward. It is within my personal knowledge that this amendment was proposed by and adopted at the instance of Senator Proctor, who had views similar to those that are held in some quarters nowadays as to the undesirability of retaining old soldiers in service, and as to the desirability of turning back into the civil population the largest possible number of men with military training. However, this legislation met with a storm of protest from the Army, and, as will be seen by reference to Senate Report No. 151, Fifty-third Congress, second session, was condemned by the Secretary of War, and by Maj. Gen. Schofield, commanding the Army; Adjt. Gen. Drum, Gens. Howard and Miles, and many other experienced and distinguished officers of the Army. The result of all this was that this legislation of February 27, 1893, was repealed by the act of August 1, 1894, which definitely fixed the term of enlistment at three years, and which not only repealed the exceedingly objectionable provision, enacted during the previous year, that prohibited the reenlistment of any private who had served over 10 years or who was over 35 years of age, except such as had already served for 20 years or more, but it also repealed the equally objectionable provision of the act of June 16, 1890, that enabled enlisted men, at the end of three years' service, to demand furloughs and subsequent discharges.

On reading the Senate report with regard to this last measure, and especially the documents accompanying the report, it will become apparent that the officers who declared themselves in favor of a three-year term of enlistment did so not because they regarded a straight three-year term as better than a straight five-year term, but because they hoped by the adoption of the straight three-year term to escape from the evil effects of the acts of June 16, 1890, and August 1, 1894, which had virtually created a three-year term by permitting soldiers who had enlisted for five years to demand their discharge at the end of three years, and which had made it impossible to retain in service beyond 10 years the very large number of valuable old soldiers whom officers of all grades in the Army were desirous of retaining.

It will be well for those who advocate the prohibition of the reenlistment of privates after 3 years' service to note the storm that was raised in the Army by the enactment in 1893 of a law that prohibited the reenlistment of privates after 10 years' service, and to note also the dispatch with which that law was repealed. The Army at large knows, and always has known, what an invaluable man the seasoned, thoroughly trained, thoroughly disciplined old soldier is, and how important it is to retain him in service as long as he is physically and mentally capable of performing all the duties that a soldier can possibly be called upon to perform. If the Army would not stand for a 10-year limitation of service, what would it have to say to a 3-year limitation?

Those who advocate short terms of enlistment and restrictions upon reenlistments in our Army do so chiefly on one of two grounds, viz, either that it is desirable to turn back into the civil population the largest possible number of men with more or less military training, who in some undefined way shall act as a sort of military leaven upon the whole population or else shall be expected to hasten back into the Army in time of war; or, second, that they shall be incorporated into a reserve force of some kind. Nothing further with regard to the reserve idea need be said here, but something needs to be said with regard to the other things proposed or suggested.

The average annual number of discharges from our Army at expiration of three years' service is about 15,000. The average annual number of discharges by purchase after one year's service is about 1,600. These men properly should not be included in this calculation, because by purchasing their discharges they have signified their distaste for military service. However, they will be considered, in order that the maximum possible figures may be used. Including them makes the total average number of discharges from the Army by expiration of service and by purchase about 16,600.

The total population of the continental United States at the present time is about 94,000,000. This being the case, the ratio of the discharges in question to the total population is 1 to 5,663.

The total male population subject to military duty—18 to 45 years—is about 20,000,000 and the ratio of these discharges to that population is 1 to 1,205.

The annual additions to the male population subject to military duty is about 750,000, and the ratio of the discharges to this annual addition is 1 to 45. In other words, where one man with more or less military training is added annually to the male population subject to military duty, 45 wholly untrained men are added to that population. These figures show how insignificant is the effect that can be produced upon the civil population by discharges from the Army.

There is no ground whatever upon which to form an estimate of the number of former Regular Army soldiers that would reenter the military service in time of war, and consequently one person's statement or estimate with regard to this matter is as good as another's. But in view of the fact that men of the better or more stable class who leave the service are likely to obtain permanent employment with railroads, as policemen, or in other positions under the National, State, or municipal Governments, and in addition to this are very likely to marry and settle down, thus rendering their reentry into service most unlikely; and in view of the fact that the less desirable and less stable men are likely to become wanderers and most unlikely to reenter into an obligation that will

restrict their liberty, there seems to me no good ground for the belief that any very large number of former Regular Army soldiers can be expected to reenter the service in time of war.

The result of shortening our term of enlistment, or of keeping it as now fixed by law, but with the adoption of a prohibition against the reenlistment of privates, would result in filling the Army largely with immature young men of short service to the exclusion in great measure of the mature, seasoned, experienced, and capable private soldier of two or more enlistments that most, if not all, experienced company commanders are so solicitous to obtain and retain, and that has proven so valuable to the Army in a thousand difficult or dangerous situations in the past. This exchange of mature and seasoned soldiers of relatively long service for immature and unseasoned soldiers of short service and little experience could not fail to impair seriously the physical efficiency of the enlisted personnel of the Army. It is a notorious fact, well known to all medical officers and to all experienced line officers, that the young soldier has much less endurance and succumbs to disability much more quickly, either in peace or war, than does the older soldier of long service. The following tables show very clearly, for a period of seven years, and for the year 1909, the latest for which data are available, the great disparity between the older and younger soldiers in the matters of losses from disease and of impairment of effectiveness by reason of disease:

Age of soldiers in relation to losses from disease for a period of 7 years.

Age.	Total losses from disease per 1,000 strength.
19 years and less	27.95
20 to 24 years	17.35
25 to 29 years	15.09
30 to 34 years	14.42
35 to 39 years	14.64
40 to 44 years	24.11
45 to 49 years	26.23

Mr. SLAYDEN. That is, after they reach the period of 40 years the percentage begins to increase again.

Gen. AINSWORTH. Yes; but up to 50 years it does not reach the percentage of loss of the younger men.

Here is a table showing for the last year available the ratio of constant noneffectiveness by reason of disease:

Age of soldiers in relation to noneffectiveness from disease for year 1909.

Age.	Constantly noneffective per 1,000 of mean strength.
19 years and under	45.20
20 to 24 years	41.82
25 to 29 years	33.07
30 to 34 years	27.51
35 to 39 years	25.01
40 to 44 years	25.87
45 to 49 years	25.11
50 years and over	41.94

The superiority of the old and seasoned soldier to the young and unseasoned one in the matters of resistance to disease and effectiveness in time of war are very well shown by Brig. Gen. Woodhull in a recent edition of his work on military hygiene. He says:

"The record of immature recruits is uniformly that of inefficiency and disease. Thus Napoleon after Leipzig (1813) demanded 'grown men; boys serve only to fill hospitals and encumber the roadside.' In the Crimea (1854–55) Lord Raglan responded to the notice that 2,000 recruits awaited his call that 'those last sent were so young and unformed that they fell victims to disease and were swept away like flies, so that he preferred to wait' rather than to have lads shipped to him as soldiers. Lord Hardinge writes of the same campaign that 'although no men were sent under 19 years of age, yet when sent out it was found that instead of being composed of bone and muscle they were almost gristle.' Falsification of age is very common where minors may legally be enlisted. In Egypt, in 1798, the Sixty-eighth British from Bombay was composed chiefly of boys. They lost nearly half their number from fever which broke out on their passage, and they continued so sickly that they were reembarked and sent back. But the Sixty-first, over 900 strong, nearly all old soldiers, who were 16 weeks aboard ship, landed with only 1 man sick. We do not know the condition of the respective transports and the supervision the men received, but the element of age must have been an important, if not a controlling, factor. In the Peninsular War (1805–1814) 300 men seasoned and matured by five years' service were reckoned more effective than 1,000 lads received as recruits. Our own medical officers in Mexico (1847) constantly reported that the inferior physique and especially the youth of the recruits materially swelled the lists of the sick and the dead. In Gen. Roberts's march from Kabul to Kandahar (1880) 'it was the young soldiers who succumbed to its fatigues, while the old soldiers became hardier and stronger every day.' The Franco-German experience (1871) coincided with the earlier records. There are no authentic statistics that show the relative influence of age upon disability in the field during the Civil War, but all officers who served with troops then will agree in the general statement that the very young men were those who, as a rule, first broke down under exposure and hardship, as would naturally be expected. Even in peace the official reports show that the sick rate of those under 25 greatly exceeds the mean for the whole Army."

With regard to the experience of the Union Army in the Civil War, many thoughtless or uninformed persons are accustomed to say that that Army was an army of boys, but that statement is far from correct. Of course there were many boys and very young men in service during that war, but there were also very many more men of mature age and a good many of very advanced age from the military standpoint. Several years ago an examination of the individual military histories of more than a million Union volunteers of the Civil War period showed that the average of the ages of all these men at the dates of their enlistment was a little less than 26 years, and that figure can be taken safely as representing the average age at enlistment of all volunteers of the Union Army. This shows conclusively that that Army was very far from being an army of boys. Of course there will always be boys in any great army, but equally, of course, when the entire military strength of a nation is drawn upon, especially by conscription, men of all ages between the minimum and maximum will be brought into service. It is evident that it can not be said of any great army, even with approximate accuracy, that it is or was an army of boys.

VIEWS OF ARMY OFFICERS.

In order to ascertain the views of those officers of the Army who are best qualified to judge as to the merits of the five-year system of enlistment as compared with the three-year system, the committee addressed letters of inquiry to all field officers of the line of the Army who were not stationed in or near Washington, whose addresses were ascertainable, and whose length of service, as shown by the Army Register, was such that they must have had experience with both the five-year and the three-year systems of enlistment, the former covering the period from March 3, 1869, to August 1, 1894, for all branches of the service, and the latter being in force for all branches from August 1, 1894, to the present date. (Hearings, p. 154.)

Inquiries were not addressed to officers below the grade of major, because their length of service was so short that but very few, if any, of them could have had practical experience with the five-year system that ended in 1894, and consequently their views as to the relative merits of the two systems must be purely theoretical and entitled to no weight as against the views of officers having had practical experience under both systems.

In order to secure frank and unconstrained expressions of opinion, inquiries were addressed only to officers who were stationed at a distance from Washington, and who were consequently beyond the immediate influence of the War Department and of those in it who had committed themselves to any of the different views with regard to the subjects of the inquiry.

These inquiries were sent out because Maj. Gen. Leonard Wood, the Chief of Staff, differing from all other officers previously examined by the committee on the subject of the enlistment period, opposed the five-year system, and at a hearing held by the committee on May 12, 1911, declared, among other things (1) that he was in favor of a short enlistment period of not to exceed three years (hearings, pp. 131–136); (2) that he was opposed to any reenlistments except those of noncommissioned officers and a few of the higher grades of privates, not to exceed 25 per cent of the whole strength (ibid., 129, 131, 140); (3) that an excellent Infantry soldier can be made in one year, and that a very good Cavalry or Field Artillery soldier can be made in 15 months (ibid., 133); (4) that in active military duty soldiers of an organization composed of veterans would not be worth their salt (ibid., 140); (5) that if a soldier has not become a noncommissioned officer in 10 years he is almost worthless (ibid., 140); (6) that reenlistments until eligibility for retirement is gained should be discouraged except in the cases of noncommissioned officers and a few privates (ibid., 129, 136, 143).

The inquiries sent out were as follows:

1. With the understanding that the existing law relative to purchase of discharges shall continue in force, do you regard the five-year period or the three-year period of enlistment as the better for our Army?
2. Had you experience as a company officer with the five-year system of enlistments?
3. Having in mind the question of expense and the difficulty of obtaining an increased number of recruits, do you favor enlistments for less than three years?
4. What is the average time required to make a well-disciplined, well-trained, thoroughly efficient, and dependable soldier in your arm of service?
5. Do you regard it as advisable to discourage the reenlistment of desirable soldiers of any grade?
6. Do you consider it advisable to prohibit the reenlistment of good soldiers who are physically and mentally competent to perform all the duties of their respective grades, but who are not noncommissioned officers, after having had 5, 10, 15, or 20 years of previous service?
7. Do you consider it advisable to encourage good soldiers, who continue to be physically and mentally competent to perform all the duties of their respective grades, to reenlist until they shall become eligible for retirement?

Answers to the foregoing inquiries were received from 277 colonels, lieutenant colonels, and majors of the line of the Army who had had experience with both the five-year and the three-year systems of enlistment. The nature of the answers is shown by the following table:

Table showing the answers of 277 field officers, who had had experience with both the 5-year and the 3-year systems of enlistments, to certain questions relating to enlistments, reenlistments, and service in the Army.

Opinions of officers as to whether 5-year or 3-year period of enlistment is better for Army:	
In favor of 5-year period	182
In favor of 3-year period	91
Indefinite	4
Total	277

Opinions of officers as to enlistments for less than 3 years:	
In favor	13
Opposed	262
Indefinite	2
Total	277
Opinions of officers as to average time required to make a good soldier in their respective arms of service:	
Cavalry officers—	
Believing 1 year required	2
Believing 2 years required	15
Believing 2½ years required	11
Believing 3 years required	26
Believing more than 3 years required	14
Field Artillery officers—	
Believing 2 years required	7
Believing 2½ years required	4
Believing 3 years required	7
Believing more than 3 years required	2
Coast Artillery officers—	
Believing less than 1 year required	2
Believing 1 year required	1
Believing 1½ years required	9
Believing 2 years required	8
Believing 2½ years required	9
Believing 3 years required	19
Believing more than 3 years required	2
Indefinite	1
Infantry officers—	
Believing 1 year required	3
Believing 1½ years required	7
Believing 2 years required	48
Believing 2½ years required	11
Believing 3 years required	51
Believing more than 3 years required	17
Indefinite	1
Total	277
Opinions of officers as to advisability of discouraging reenlistments of desirable soldiers of any grade:	
Would discourage them	7
Would not discourage them	265
Indefinite	5
Total	277
Opinions of officers as to advisability of encouraging reenlistments of good soldiers who are not noncommissioned officers after having served 5, 10, 15, or 20 years of previous service:	
Would not prohibit	262
Would prohibit	13
Indefinite	2
Total	277
Opinions of officers as to advisability of encouraging reenlistments of good soldiers until they shall have become eligible for retirement:	
Would encourage	259
Would not encourage	5
Would encourage reenlistments of noncommissioned officers, but not privates	12
Indefinite	1
Total	277

It will be seen by the foregoing table that an overwhelming majority of the opinions expressed by these 277 officers of long experience was adverse to the views of the Chief of Staff as hereinbefore summarized; that 182 of the 277 officers who answered the inquiries favor the five-year period of enlistment as against 91 who favor the three-year period—a majority of 2 to 1 in favor of the five-year period; that 262 as against 13 are opposed to enlistments for less than three years; that of the Cavalry officers 51 against 17 believe that more than two years are required to make a good Cavalry soldier, and that only two of the entire number of Cavalry officers believe that such a soldier can be made in less than two years; that of the Field Artillery officers 13 against 7 believe that more than two years are required to make a good Field Artillery soldier, and that not one of the entire number believes that such a soldier can be made in less than two years; that of the Coast Artillery officers 38 against 12 believe that two years or more are required to make a good Coast Artillery soldier; that of the Infantry officers 127 as against 10 believe that two years or more are required to make a good Infantry soldier; that 265 against 7 are opposed to discouraging the reenlistment of desirable soldiers of any grade; that 262 against 13 are opposed to prohibiting the reenlistment of good soldiers who have not become noncommissioned officers even after 20 years of service; and that 259 against 17 would encourage the reenlistment of good soldiers of any grade until they shall become eligible for retirement.

This committee has no hesitation in adopting the safe and sane views of the overwhelming majority of this great number of officers of ripe judgment and long experience, both as company and field officers of the line, as against the theoretical and revolutionary views championed by an officer who has had no experience whatever as a company officer, and whose entire experience as a field officer was limited to the few days in 1898 when he commanded a volunteer regiment that had been hastily raised and organized for service during the War with Spain. Surely the opinions of an officer of such limited experience, even though they be echoed by a small following of both superiors and subordinates whom his present high position has enabled him to attract or to influence, are entitled to but little weight in this particular matter as against the independent and expert judgment of a multitude of other officers whose opinions are based upon a long and practical experience, that he has not had, in immediate touch with and in command of enlisted men of the line of the Army.

UNORGANIZED RESERVE—PROHIBITION OF REENLISTMENTS.

In opposing the proposal to lengthen the term of enlistment in our Army from three years to five the Chief of Staff has brought forward a scheme for the creation of a reserve force that shall be available when needed in time of war to fill up the ranks of the Regular Army. This somewhat plausible proposal has received considerable support by those whose judgment has been influenced by the specious arguments and misleading statements that have been put forth by the advocates of the proposal. However, but little investigation is needed in order to show that the scheme is simply chimerical or visionary, as Maj. Gen. Carter preferred to call it during his hearing before this committee.

All of the estimates that have been submitted to the committee in support of the reserve scheme have been based upon the assumption that reenlistments in the Army shall be prohibited, except in the cases of noncommissioned officers and a few privates, and upon loose and extravagant statements as to the number of men who are discharged from our Army every year and who would be available for a reserve force or would be likely to reenter the Regular Army in time of war.

The showing hereinbefore made of the almost unanimous opposition of the most experienced line officers of the Army to any measure that will prohibit or discourage reenlistments of either noncommissioned officers or privates should be sufficient to condemn forever the proposal to curtail or prevent such reenlistments. It is not doubted that the best thought of our Army with regard to this subject should be, and will be, found among line officers of higher rank, whose professional attainments have been augmented and whose judgment has been matured by the experience that is only gained through length of service in all the lower grades and under the varying conditions of the garrison, the camp, and the field.

From the earliest days of the Army these officers have been an honor to their country and its flag. Our people have had good reason to confide in them and to be proud of them and, knowing this, have always been ready to trust them and to honor them. No whisper of detraction against them as a body was ever heard until recently, when opposition to pending legislation led an officer of the Army, not of their class, to speak of them in terms of disparagement that are likely to be regarded as more injurious to him than to them.

It is certain that the officers whose views are set forth in the foregoing table are best qualified to express an expert opinion with regard to the matter in question, and that a very great majority of them are convinced that our Army should be a distinctly professional one, an army composed, not of recruits or of soldiers in the making, but of thoroughly disciplined, highly trained, seasoned, and experienced professional soldiers. Such an army is the British Army, with which our Army has much in common, and concerning which it was said in a recent authoritative publication by a distinguished officer thereof that "the first line is the regular army, or the expeditionary force. The governing idea of this force is that it should be small, professional, highly skilled, and fully trained, prepared to strike quickly at a distance, and mobile to the whole extent of the Empire."

Those who were members of the Military Committees of the House and Senate in 1908 will remember well the urgency and persistence with which the then Chief of Staff, Maj. Gen. Bell, and other officers representing the War Department, importuned members of both those committees to favor an increase in the pay and allowances of enlisted men in order to encourage reenlistments in the Army. It will also be remembered that, solely with this end in view, Congress embodied in the Army appropriation act approved May 11, 1908, legislation that not only provided a large bonus for each private on his first reenlistment, but that also provided a material and continuous increase of pay for all reenlistments up to and including the sixth reenlistment.

And now we are told, in effect, that this legislation, which involved an enormous increase in the annual expenditure for the pay of the Army, was all wrong so far as the private soldier is concerned; that the bonus now paid to him on reenlistment should be cut off; and that, with but few exceptions, he should

not be permitted to reenlist at all. By whom are we to be guided in this matter? The Chief of Staff and his followers of 1908, or the Chief of Staff and his followers of to-day? What assurance have we that if we adopt and act upon the ideas of the present Chief of Staff some other Chief of Staff will not appear in a year or two and tell us that those ideas were all wrong and that our action in accordance with them was a grievous error?

Inasmuch as in this matter of reenlistments the substantially unanimous opinion of the 277 field officers heretofore mentioned is in accord with the views of the Chief of Staff and his followers of 1908 and is distinctly adverse to the views of the present Chief of Staff and his small following, and in view of the storm of protest that was raised in the Army by the legislation of February 27, 1893, that materially restricted the reenlistment of privates, but that, as a result of this storm, was repealed on August 1, 1894, within less than a year and six months after its enactment (hearings, p. 154), this committee is convinced that it should be regarded as settled that in our Army reenlistments in all grades should be encouraged instead of being prohibited or discouraged in any way. The committee is also convinced that no serious consideration should be given to the views of theorists, however enthusiastic they may be, who would attempt to use our small Army for the inappreciable effect that it can produce as a training school on the whole population of the country, or for the creation of a military reserve, in the way in which use is made of the enormous military establishments of the countries of continental Europe, in all of which, the Republic of Switzerland included, compulsory and universal military service prevails.

The futility of any attempt to create a reserve through any use that can be made of our little Army, and the grossly misleading character of the loose and extravagant statements that have been made as to the number of men available for a reserve who will return to civil life from the Army each year, will become apparent when a true statement of the facts in the case is made. So far as known to this committee, the only authoritative or reasonable statement that has been made with regard to this particular subject is one that was published in Senate Document No. 259, Sixty-second Congress, second session, and sets forth, under date of January 13, 1912, the showing of the official records of The Adjutant General's Office relative to the subject in question. In this connection especial attention should be given to the fact, pointed out by the Chief of Staff in a memorandum dated January 13, 1912, and forwarded to this committee on the same date by the Assistant Secretary of War, that those who purchase their discharges and others who reenlist after three months from the date of their respective discharges from the Army should be eliminated from the calculation in estimating the number of discharged soldiers who are likely to return to the colors in time of war. Following is the statement before referred to:

Table showing for the 10 years ending June 30, 1911, the average annual number of original enlistments in the Army, of reenlistments, of discharges from service by reason of expiration of terms of enlistment, and of separations from service for all other causes.

Original enlistment (only enlistments made within 3 months after discharge, so as to give credit for continuous service, are counted as reenlistments. See note below)		19,373
Reenlistments (only enlistments made within 3 months after discharge, so as to give credit for continuous service, are counted as reenlistments. See note below)		10,219
Discharges by reason of expiration of terms of enlistment		18,103
Separations from service for causes other than expiration of terms of enlistment:		
By discharge for disability	1,224	
By court-martial sentence	2,256	
By desertion	5,107	
By purchase (average for 7 years)	1,674	
By order, not including discharge by purchase (includes discharges by purchase for 3 years)	2,950	
By death	512	
By retirement	241	
		13,964

NOTE.—It should be observed in connection with the figures in the foregoing statement showing original enlistments and reenlistments that it has long been the practice of the department, in compiling its annual statistics with regard to these matters, to count as reenlistments only those reentrances into service that occur within three months after discharge, so as to give credit for continuous service to the men so reenlisted. It is well known that many men reenter the service each year after the expiration of three months from the dates of their discharges. Under the practice before stated, these reentrances into service have not been counted in the past as reenlistments, although, of course, they really are reenlistments. It is impossible to ascertain the number of these uncounted reenlistments during the past 10 years in any reasonable time or with any reasonable expenditure of labor. It is certain, however, that if the number were known it would materially increase the average reenlistment figure of 10,219 given in the foregoing table, and would make a corresponding decrease in the original enlistment figure of 19,373 given in the same table. (F. C. Ainsworth, The Adjutant General, War Department, The Adjutant General's Office, Jan. 13, 1912.)

It will be seen by the foregoing statement that during the last 10 years the average annual number of separations from service in the Regular Army for all causes was 32,067, but that of these 13,964 were caused by discharge for disability, by court-martial sentence, by desertion, by purchase, by order, by death, and by retirement, all being causes that indicate that the men so discharged are unavailable for any kind of a reserve, or for further military service, either in time of peace or war.

Deducting these unavailables from the 10-year average of separations from service for all causes, there remain only the discharges by reason of expiration of terms of enlistment, the average of which was 18,103. But this number must be still further reduced by deducting from it 10,219 as the average number of continuous-service reenlistments. This deduction reduces the number of availables for a reserve to the insignificant figure of 7,884, and when this number is still further reduced, as it must be, by the unknown but considerable number representing the men who reenlist after the expiration of the period within which continuous reenlistments can be made, and the men who have desirable employment open to them in civil life, or who have relatives dependent upon them for support, or who desire to marry, or who enlist in the Marine Corps or the Navy, as many honorably discharged soldiers do, or who for any other reasons are unwilling to return to the Army or to subject themselves to military restraint of any kind, it is apparent that the small remaining figure of 7,884, as representing probable or possible reservists, will be reduced nearly or quite to the vanishing point. At any rate, these statistics show the utter baselessness of the extravagant statements that have been made as to the number of reservists that our Army can furnish annually. They also show beyond a doubt that it is impossible for us to create a reserve of sufficient size to be of any value, even if we prohibit the reenlistment of the majority of privates as has been proposed; but the safe and sane opinion of the Army is so overwhelmingly opposed to such a restriction of enlistment that there is little or no probability that such a restriction will ever be imposed, or, if it is imposed, that it will be tolerated any longer than the similar restriction that was imposed by the legislation of February 27, 1893, which was repealed on August 1, 1894, was tolerated.

The Chief of Staff, in referring (statement, p. 21) to a statement said to have been made to the effect that former soldiers will not return to the colors in time of war, says that—

> The best obtainable opinion is that this statement is wholly unfounded and is an unwarranted reflection on the patriotism of men who have served with the colors and returned to civil life.

This declaration would have more weight if it were supported by anything to show that "the best obtainable opinion" emanated from a source having any knowledge about the matter. In support of this assertion the Chief of Staff submitted a few figures with regard to enlistments in our Army during the War with Spain; but on subsequent inquiry by this committee it was found that those figures had no substantial basis and justified no conclusion with regard to the matter. In response to this inquiry, however, the Acting Secretary of War, in transmitting certain memoranda to the committee, submitted several statements by The Adjutant General of the Army relative to enlistments in volunteer organizations raised for service during the Philippine insurrection, and in response to a subsequent request by the committee for any further statements of this kind that had been made the Chief of Staff submitted an earlier statement by The Adjutant General relative to enlistments in another volunteer organization during the Philippine insurrection and in a volunteer regiment raised for service during the War with Spain.

These two statements show that out of 5,134 officers and enlisted men composing three volunteer regiments raised for service during the Philippine insurrection, 1,412 had had previous service in recently disbanded volunteer organizations of the Spanish War period, whereas only 453 had previous service in the Regular Army. The earlier statement, that was withheld when the other statement was furnished to the committee, also brought to light the significant fact that out of 1,237 officers and men composing the First United States Volunteer Cavalry, War with Spain, only 15 had previous service in the Regular Army.

The significance of these figures lies in the fact that the regiments raised for the Philippine insurrection were raised for a short term only, and at a time when many thousands of men who had seen very little active service during the War with Spain were being disbanded with volunteer regiments or were being discharged from the Regular Army, and naturally seized the opportunity to see something more of the service and of the world by joining the short-term volunteer regiments that were

then in process of organization. But the First United States Volunteer Cavalry, which was raised at the beginning of the War with Spain, was raised under more normal conditions, and the showing of the official record as to the small number of its members who had previous service in the Regular Army is a much more reliable indication of what may be looked for in this respect at the beginning of any war.

There is no ground on which it can be safely predicted that patriotism or any other consideration will lead large numbers of former soldiers of the Regular Army, who have been any considerable length of time in civil life, to return to the ranks of that Army in time of war. On the contrary, there is the best of grounds for the belief that these trained men, no matter how great their number may be, if they return to the service at all, will be much more likely to enter recently organized volunteer regiments in which there will be a much better opportunity than the Regular Army affords for them to secure appointments as commissioned officers or as noncommissioned officers of the higher grades. There is no reason to believe that the unorganized "reserve," of which the Chief of Staff speaks so indefinitely in his statement, and which is nothing more than the whole number of men that have been returned to civil life from the Regular Army, with no nearer or other relation to that Army than if they had never been in it, can ever be relied upon as a source of strength for the standing Army in time of war.

COMPARISON OF PLANS OF ENLISTMENT.

In a printed statement dated January 6, 1912, transmitted to this committee by the Secretary of War, the Chief of Staff undertakes (statement, pp. 20–22) to make a comparison between what he calls the "ideal five-year plan" of enlistments and the "reserve plan" of three-year enlistments, for a period of 15 years, in respect of the "military strength of the country" and of certain expenditures on account thereof. He figures that under the five-year plan the "assured enlisted military strength of the country" at the end of 15 years would be 76,912 men, and that the total pay of the enlisted men of the whole Army for the entire period would be $322,203,860; whereas, under his reserve plan of three-year enlistments the "total military strength" would be 316,004 men at the end of 15 years, and the total pay of the enlisted men of the whole Army for the entire period would be $296,589,784, making a difference in 15 years of $25,624,076 in favor of the three-year plan.

Although it would seem that it should be apparent to anyone that the assumptions on which these so-called estimates are based are themselves baseless, and that consequently the conclusions stated amount to nothing more than unsupported assertions that are entitled to no weight, it is believed to be advisable to discuss them somewhat fully in order that those interested may determine for themselves how much or how little weight shall be given to them and to other assumptions or assertions embodied in the same publication or emanating from the same source.

The "ideal five-year plan" described by the Chief of Staff is merely a man of straw set up by him to be demolished for his own purposes. It is not the idea of any thoughtful advocate of the five-year system of enlistments, and any schoolboy should know that the operation of that system in the manner described by the Chief of Staff is so utterly impossible as to render the presentation of it an absurdity as an argument against the five-year system of enlistments.

In attempting to show that as a result of the operation of the "ideal five-year plan" the "assured enlisted military strength" at the end of 15 years would be only 76,912, the Chief of Staff assumes that during a period of 15 years there would be no losses from casualties of any kind, and that every man discharged by expiration of term of service would reenlist, so that all the men who enlisted at the beginning of the period would remain in service until the end of it; but everyone who knows anything about the matter knows that this assumption is wholly unjustified, and that it is a certainty that, under any conditions, the losses from desertion, death, disability, and other causes will be very great, and that many men discharged by expiration of their terms of enlistment will not reenlist.

There is much more solid ground than mere guesswork or unsupported assertion upon which to base a reliable estimate of the losses that will occur in any given period of enlistment and of the number of men who will or will not reenlist at the expiration of their terms of service. That ground is to be found in the showing of the official records of the Army for the past 10 years, as set forth in Senate Document No. 259, Sixty-second Congress, second session, hereinbefore quoted in full. It is shown by that document that, as an average for the last 10 fiscal years, the losses from various causes were such that less than 57 per cent of all enlistments were terminated annually by completion of terms of enlistment, and that the places of more than 43 per cent of the enlisted force were vacated prematurely and were filled by new men. If these were the results obtained under a three-year system of enlistments, it is certain that the losses that would necessarily continue throughout the two additional years of a five-year period of enlistment, added to the losses of the three previous years, would reduce the number of completed enlistments to at least 50 per cent of the whole number of enlistments in force.

The official document before referred to also shows that during the past 10 years, under the existing three-year system of enlistments, the average annual number of continuous-service reenlistments was about one-third of the total number of entrances into service, and, in the absence of more definite data, it may be assumed for the purpose of the present comparison that the same reenlistment ratio would prevail under a five-year system.

It is evident, therefore, that if 76,912 men should enter simultaneously upon a five-year period of enlistment, as assumed by the Chief of Staff, only one-half of them, or 38,456, would serve until the expiration of their term of enlistment, and that the remainder would have their enlistments terminated prematurely for causes that would render them unavailable for further military service. It is also to be expected that only one-third of the 38,456 men discharged by expiration of service would reenlist and that the remainder, or 25,637, would return to and remain in civil life. From this it is to be estimated that at the end of 15 years, or three five-year enlistment periods, there would be in the Army and in civil life a total of 128,186 men with considerable military training. This number is arrived at in the following manner:

Total number remaining in service after discharges on last day of third five-year period	51,275
Discharged by expiration of term during three five-year periods and not reenlisted (3×25,637)	76,911
Total	128,186

Of course this number would be reduced somewhat by reason of deaths and disqualifying disabilities occurring after separation from the Army. The casualties from these causes among men returned to civil life must be greater than similar casualties among an equal number of men in the Army, this because of advancing age, irregularities in mode of life that are repressed in the service, and lack of the food, clothing, sanitary care, and gratuitous medical attendance that are so generously and promptly supplied to the soldier; but if we reduce the foregoing figure, representing the number of men separated from the Army and returned to civil life during a period of 15 years upon the assumption that their death and disability rate will be no greater than that shown for the Army by the official document before referred to, viz, 5 per cent of all separations from the service for all causes for a period of 10 years, we shall certainly make no more than the minimum reduction that should be made in the total figure. Making this reduction leaves 121,777 as the figure that would represent the number of trained men in the Regular Army and in the civil population available for further military service at the expiration of 15 years of operation of the "ideal five-year plan" described by the Chief of Staff.

This strength is 44,865 greater than the strength of 76,912 that was estimated by the Chief of Staff to be the result of 15 years' operation of this same plan.

It is also possible, by utilizing the showing of the official records for the past 10 years to make a reasonably accurate estimate of the results of the operation of the somewhat nebulous "reserve plan" of three-year enlistments outlined by the Chief of Staff on pages 20 and 21 of his printed statement. A real estimate made on this basis will be much more informing than a collection of figures, such as those presented by the Chief of Staff on page 20 of his statement, that have no more substantial foundation than mere conjecture or unsupported assertion. In presenting that collection of figures the Chief of Staff passed over, with but casual mention, all the enormous losses that the Army suffers each year through desertion, death, discharge for disability, or by purchase, and other causes, as if taking those losses into account would not change his figures materially. This is a very convenient method of obtaining a predetermined result, but it will not bear analysis, and it goes far toward discrediting any other conclusions that have been or may be announced by the originator of the method.

The official record of the experience of the past 10 years shows that not more than 56.45 per cent of all enlisted men will complete their terms of enlistment, and that the remainder will leave the service prematurely for causes that render it necessary to exclude them from any calculation of future military strength under any system of voluntary enlistments. Conse-

quently, of the 59,748 men other than noncommissioned officers, assumed by the Chief of Staff to be in service under his "reserve plan" of three-year enlistments, only 33,728 men available for further military service could be expected to return to civil life during each entire three-year period of enlistment. In other words, assuming, as the Chief of Staff does on page 20 of his statement, that the entire Army "would enter simultaneously upon a three-year enlistment," the number of men available for further military service who would return to civil life during each three-year period, up to and including the end of the fifth period and of the fifteenth year, would be 33,728, and no more, making a total of 168,640 such men who would be returned to civil life during the entire 15 years.

To this number must be added the 17,164 noncommissioned officers who would enter the service at the beginning of the 15-year period and who, or the successors of those separated from service for various reasons during that period, would be in service on the last day of the period. This makes a total of 185,804 trained men available for further military service that would be passed into civil life during the entire period of 15 years, or would remain in the Army at the end of that period. Enlisted men, other than noncommissioned officers, who would take the place of those discharged on the last day of the fifteenth year are not included in this calculation, because, the Army being supposed to be at its full authorized enlisted strength on the last day of the period, they could not be enlisted until the next day, or the beginning of the sixteenth year. Moreover, they would necessarily be entirely raw recruits and could not be counted as trained men.

The same deduction of 5 per cent on account of deaths and disqualifying disabilities that was made in the case of those returned to civil life during 15 years of operation of the five-year plan must also be made in the case of those so returned under the three-year plan. This reduction being made, it will be seen that the maximum available military strength of the country at the end of 15 years of operation of the "reserve plan" of three-year enlistments advocated by the Chief of Staff would be 177,372 men. This strength is 138,632 less than the strength of 316,004 that was estimated by the Chief of Staff to be the result of 15 years' operation of this same plan. And the difference in favor of his impossible three-year plan as against the "ideal five-year plan" described by him, instead of being 239,092 at the end of 15 years, as represented by him, is only 55,595. However, this discrepancy is of no importance, except in so far as it suggests the general untrustworthiness of data submitted by the Chief of Staff in support of his various contentions. It is simply impossible to make any intelligent comparison between the preposterous "reserve plan" of three-year enlistments, described on page 20 of the printed statement of the Chief of Staff, and the five-year plan that is proposed by the pending bill.

In the light of the foregoing statement concerning the assertions of the Chief of Staff as to the relative merits of two hypothetical systems of enlistment in the matter of returning trained soldiers to civil life, it is apparent that it would be a waste of time to attempt to analyze the collection of figures submitted by him in support of his allegation (statement, pp. 21, 22) to the effect that in 15 years, under the five-year enlistment plan proposed by the pending bill, the total pay of enlisted men of the Army would be $322,203,860, whereas under his "reserve plan" of three-year enlistments the total cost would be $296,589,784, and at the end of 15 years the balance in favor of the latter plan would be $25,624,076, or an average of $1,708,271 annually. However, some comment with regard to facts underlying the figures appears to be necessary.

In the first place, the Chief of Staff assumes several impossible or altogether improbable things, notably that under the five-year plan all enlisted men will remain in service for 15 years, and that every one of them will draw the highest pay of his grade for second and third enlistments; also that under the three-year plan no privates will be permitted to reenlist. But the first assumption is impossible of realization, because, under any plan of enlistment, a very large number of men will always be in receipt of first-enlistment pay by reason of the fact that they will have been recently enlisted to fill vacancies that constantly occur as the result of desertions, deaths, discharges for disability, and other causes. And the realization of the second assumption is altogether improbable, because, as hereinbefore shown, the opposition of the Army to any prohibition of the reenlistment of good soldiers of any grade is so overwhelming that there is no likelihood that any such sweeping prohibition as that proposed by the Chief of Staff in this respect will ever be imposed, or, if it should be imposed, that it would be permitted to stand longer than a far less drastic prohibition was permitted to stand in 1893 and 1894.

In the second place, the Chief of Staff has very conveniently omitted to make mention of any expense in connection with his proposed system of reserves, but it must be apparent to anyone that in order to make reserves of any value as a dependable source of strength for the Regular Army in time of war they must be kept under the obligation of some form of enlistment, and that in addition to this they must be paid, to say nothing of the other great expenses that must inevitably be incurred for clothing, transportation, and other concomitants of their service. Taking 160,208 as the number of available reserves that could be accumulated in 15 years under the three-year plan described by the Chief of Staff, instead of the impossible 316,004 estimated by him, and assuming that only $2 a month be paid to each of them, the expenditure thus incurred for the fifteenth year would be $3,844,992, and the total expenditures for the entire 15 years that the Chief of Staff has chosen for his remarkable calculations would be $30,220,800.

This statement is based upon the assumption that the entrances of the 168,640 enlisted men, other than noncommissioned officers, into the reserves would be distributed uniformly over the period of 15 years, approximately the same number going into the reserves in each year. Of course, it is altogether impossible that soldiers should pass out of our Army on expiration of their terms of enlistment and pass into any kind of a reserve system, all at the end of the same three-year periods, in the manner described by the Chief of Staff. After a suitable distribution throughout the whole period of the 5 per cent reduction allowed for deaths and disqualifying disabilities, it is found that there would remain in the reserves at the end of the 15 years approximately 160,208 former enlisted men, excluding, of course, the 17,164 noncommissioned officers remaining in the Army; and that of these 160,208 men, 22,405 would have been in the reserves less than two years.

But it is idle to assume that any such pittance as $2 a month would induce any appreciable number of our people, impatient of restraint as they are, to tie themselves up by any sort of a workable agreement for 15 years, or even for 2 years. Our own experience affords no basis for an estimate of what we should have to pay in order to induce men to obligate themselves for a period of years, especially for a period so long as 15 years, to break away from all their manifold relations in civil life, and to reenter the ranks of the Regular Army, whenever called upon by the Government to do so. And the experience of no foreign country except Great Britain is of any value to us in this respect. Like our own country, Great Britain depends upon voluntary enlistments to keep up her regular army, and, in order to maintain a reserve therefor, she finds it necessary to pay her reservists at the rate of about $90 a year for those serving in the first two years of their reserve service and in a class known as section A, and to pay all other regular army reservists at the rate of about $45 a year. (Hearings, p. 151.)

If we were to pay no more than the British rate for a reserve to be created in accordance with the scheme set forth by the Chief of Staff on pages 20 and 21 of his statement, the 160,208 reservists of the fifteenth year, to which number his figures of 316,004 must be reduced for reasons hereinbefore stated, would be costing the Government for pay alone $8,217,585 annually, and the total expenditure for the entire period of 15 years on that account would be $58,174,560. But taking into consideration the difference between Great Britain and the United States in respect to wages, ease or difficulty of obtaining employment, purchasing power of money, and cost of living, to say nothing of the difference in environment, temper, and habits of the two peoples, it is more than likely that we should have to pay for this service double what Great Britain pays for it. On this basis the expenditure for the fifteenth year would be $16,435,170, and for the entire 15-year period $116,349,120.

It is astonishing that the Chief of Staff should have made such a statement as that which he published in the hopeless effort to show that his scheme would be less expensive than the five-year system of enlistments proposed by the pending bill. And it is still more astonishing that the Secretary of War should have forwarded the statement in question to a committee of Congress, with approving comment, as he did in a letter dated January 4, 1912.

ORGANIZED RESERVE.

In the printed statement of the Chief of Staff no attempt is made by him to show how he would keep his proposed reservists under such control that in time of war they could be brought back into the ranks of the Regular Army with any degree of certainty or promptness. It is evident that in order to accomplish this, even measurably, it would be necessary to place the reservists under some kind of a continuing enlist-

ment contract and to subject them to more or less surveillance. But does he or any other person who knows anything of the temper and habits of our people believe that any appreciable number of them could be induced to subject themselves to such a contract and to such surveillance for 15 years or for 10 years or even for 5 years? Does he not know that even with our present 3-year term of enlistment it is difficult to keep the ranks of the Army full at all times and that three of our most experienced Army recruiting officers, who have handled many thousands of applicants for enlistment, together with the Inspector General, who is in charge of the inspection service of the Army, and The Adjutant General, who has long been in charge of the recruiting service, all have testified before this committee to the effect that, while it will be no more difficult to keep the Army full under the 5-year system than it is under the present 3-year system, because for various reasons there will be fewer recruits required, it is certain that it will be impossible to do so if applicants for enlistment shall be required to enter into a contract for service that shall extend considerably beyond the expiration of their service with the colors? (Hearings, pp. 96, 105, 109, 115, 120, 149.)

It has already been shown in this report that if reenlistments of privates are to be continued there will be virtually no discharged men available for a Regular Army reserve and that but an inconsiderable number will be available for that purpose even if the reenlistment of all but a few of the privates is prohibited. But it may be well to consider what kind of an Army and what kind of a reserve we should have if the reenlistment of soldiers other than noncommissioned officers should be prohibited generally, and all enlistments should be required to be made for, say, five years, of which three years should be spent with the colors and two years in the reserve.

Taking as a basis for the calculation the figures given by the Chief of Staff on page 20 of his statement, and assuming, as he does there, that all reenlistments except those of noncommissioned officers shall be prohibited, it is evident that during the course of any three-year period 59,748 men would be separated from the ranks of the Army for various causes, and that their places would have to be filled by an equal number of new and entirely untrained men. If this change were to take place at the end of each three years, as shown by the figures of the Chief of Staff, the Army once in every three years would be composed of 17,164 noncommissioned officers with more or less military training and a mob of 59,748 wholly undisciplined and untrained recruits. That is the condition of demoralization that is portrayed by the ideal figures presented by the Chief of Staff; but, of course, no such extreme demoralization is possible in actual practice, because new men must be constantly brought into the ranks to fill the vacancies that are occurring from day to day because of deaths, desertions, discharges for disability, or by purchase, and for other causes. However, a lesser degree of demoralization and inefficiency would exist continuously as a practical result of the application of the plan under consideration.

Enlistments of all men other than noncommissioned officers being prohibited, and recruits being brought into service to fill vacancies as they occur from time to time, the average length of service of the entire 59,748 men could not at any time exceed one and one-half years, and 29,874 of them would necessarily have had a service of anywhere between 1 day and 18 months, even if it were to be assumed that all enlisted men would serve three full years before separation from active service. But such an assumption would be unwarranted, because the official record of the experience of the last 10 years shows that only 56.45 per cent of all enlisted men complete three-year terms of service. There are no data on which to base an estimate of the length of service of the 43.55 per cent of men who, under this new plan, would not complete three years of service, and whose places would consequently be filled by men with no service at all, but it is certain that the average length of service of these prematurely separated men would be much less than the average of one and one-half years before stated, and it seems entirely reasonable to assume that it could not exceed one year. It will be seen, therefore, that, because of this constant replacement of men with considerable service by men with no service at all, the average length of service of the entire 59,748 men would at any time be about 15½ months, and that 29,874 of them would at any time have had service ranging from 15½ months down to one day.

It is evident that under the operation of the plan in question we should have an Army of which the enlisted force, except the noncommissioned officers, would be composed entirely of men of short service and little experience. But very few of these men could possibly reach that stage of discipline and training that would make them efficient and dependable soldiers, and the great majority of them would be nothing more than half trained or wholly untrained men, unadjusted to their environment, ignorant of their duties and responsibilities, and a source of actual weakness instead of strength in time of emergency. It is inconceivable that any person of sound judgment, no matter what end he might seek to attain, should seriously advocate reducing our little standing Army to such a state.

As to the reserve that could be accumulated under the system of five-year enlistments, the last two years of each enlistment to be spent in the reserve, and all reenlistments to be prohibited except those of noncommissioned officers, it is apparent that unless our Army shall be greatly increased in size it will be impossible under any such system to accumulate a reserve force that will be large enough or dependable enough to be worth what it would cost not only in the way of direct expenditure on account of it but in the great impairment of efficiency to which the Regular Army would inevitably be subjected in order to maintain the reserve.

The only source from which the men for the creation and maintenance of any reserve of this kind can be obtained is the relatively small number of enlisted men who complete three years of service in the Army. As shown by the official record, published in Senate Document No. 259, Sixty-second Congress, first session, for the last 10 years the average annual number of men discharged by expiration of three years of service has been 18,103. But for the purpose of the reserve now under consideration this number must be reduced by the number of discharged noncommisioned officers who reenlisted and who under this reserve plan would be continued in active service. An average of one-third of all the noncommissioned officers must have been discharged annually during the last 10 years, and it is fair to assume that two-thirds of those discharged reenlisted. On this assumption, and taking the present number of noncommissioned officers, 17,164, as the basis for the calculation, we find 3,814 to be the number that should be deducted from the total average number of discharges by expiration of terms of service during the last 10 years. Reducing the number 18,103 by this amount we have 14,289 as the maximum number of men that can be expected to pass each year from service with the colors to service with the reserve.

Inasmuch as the period of reserve service under the plan in question would be two years, it will be seen that the maximum strength that could be obtained by this reserve at any time would be about 28,578 men. But deaths and disqualifying disabilities would continue to occur among the reservists as they have always occurred among men in active service, and, although it is not to be expected that in ordinary circumstances there would be many desertions among them, there is good reason to expect that, in view of the previous high desertion rate of our Army and the marital, business, and other alliances and entanglements in which many reservists would certainly become involved, the failures to respond to a call to the colors in time of emergency would at least equal the desertions that ordinarily occur among the same number of men in active service. It is shown by the official record of the experience of the past 10 years that the average annual number of deaths, discharges for disability, and desertions is about 9 per cent of the total enlisted strength of 76,912, shown by the Chief of Staff in his printed statement. Making a corresponding reduction in the total reserve strength of 28,578 before estimated leaves 26,006 as the maximum number of reservists that would be found available for service with the colors in time of war or other great emergency.

If we were to pay these reservists no more than Great Britain pays her Class A reservists, composed of men serving in the first two years of their reserve service, the annual expenditure on this account alone, to say nothing of clothing and other concomitants of their service, would be $2,340,540, or a total of $35,108,100 for the 15-year period chosen by the Chief of Staff for purposes of comparison.

And the little handful of 26,006 reservists who would be found available for service with the colors in time of war would be composed of men one-half of whom would have less than one year to serve under their five-year enlistment, and one-fourth of whom would have less than six months to serve. So that not more than 13,003 of them, or 19,505 at the most, would be of more than temporary value or would be worth calling out in the event of a great war.

The plan of five-year enlistments, with the last two years of each spent in the reserve was chosen for the purpose of this discussion because all of the officers who appeared before this committee, and who had expert knowledge of the business of the Army recruiting service, were unanimous in expressing a conviction to the effect that any attempt to lengthen the period of enlistment beyond five years, even though much of it should be spent in a reserve, would render it impossible to accomplish the already difficult task of keeping the ranks of the Army full.

However, the basic figures given in connection with the plan hereinbefore described are equally applicable to any other similar plan, and by the use of them anyone who thinks that possibly a dependable reserve of respectable size can be created and maintained under some other similar plan can determine for himself what the result of the adoption of such a plan would probably be.

Surely the creation and maintenance of any such reserve as that hereinbefore outlined, or any such reserve as it is possible to create with our small Army as the source of its supply of men, is not worth its cost in money alone, to say nothing of the grave injury that it would inevitably inflict upon the standing Army. No one who gives the matter careful thought can fail to see what the extent and nature of that injury would be, or can be misled or confused by the unsupported assertions and arguments of a few theorists, who, deriving all their ideas from the enormous armies of continental Europe, where compulsory and universal military service prevails, would have us believe that improvement rather than injury would be brought to our Army by depriving it of most if not all of its seasoned, disciplined, and highly trained private soldiers, and by filling up the ranks with untrained or half-trained men, all of whom would be relegated to civil life by the time that, in the ordinary course, any of them could become fairly efficient soldiers.

It is safe to say that until we have a very much larger standing Army than we now have, or until our people are ready to submit to compulsory military service, it will be impossible for us to utilize our Army, without impairing its efficiency, so as to create and maintain a reserve that will be of any respectable size or of any appreciable value either in time of peace or in the emergency of war.

TERMS OF ENLISTED SERVICE IN THE BRITISH ARMY.

In connection with the subject of enlisted service with the colors in our Army, and of possible service in a reserve, it seems to be advisable to consider here certain remarks made by the Secretary of War at a hearing before this committee on January 13, 1912, relative to the experience of the British Army as compared with our own in the matter of length of enlisted service with the colors, and relative to statements made by another witness with regard to the same matter at a previous hearing before this committee.

Comparing the British service with our own (Hearing, p. 24 et seq.), the Secretary quoted at length an article published in July last, under the caption of "The short-service system," by Col. F. R. C. Carleton, of the British Army, and drew therefrom the conclusion that Col. Carleton favors, and the experience of the British Army justifies, our adoption of such a short-service system as that advocated by the Secretary of War and the Chief of Staff, namely, a service of three years or less with the colors, with reenlistments restricted entirely or almost entirely to noncommissioned officers, and with provision for considerable service in a reserve before final discharge. Assuming that a statement had been made by another witness to the effect that the British Army was organized on a long-term enlistment plan because that was thought to be the best, the Secretary said:

I find by studying his [Col. Carleton's] article on the subject that quite the reverse was true. The British Army to-day represents the system of short-term enlistments, and has adopted it after experience with a long-service system which had broken down. The only reasons which have prevented it from adopting it to at least the extent which I have advocated here are reasons which do not apply to us, namely, the excessive burden of the Indian establishment of the British Army. * * * Before the Crimean War the British term of enlistment was for 12 years, and they had no provision for a reserve.

Again referring to Col. Carleton's article, the Secretary said:

That is an eloquent vindication of the short-term enlistment system by a representative of a nation that admits that they have introduced it as far as they can and that they are only prevented from adopting it entirely because of the burden of their Indian service, which requires 77,000 men. (Ibid., p. 25.)

The Secretary of War was singularly unfortunate in his deductions from Col. Carleton's article. A careful reading of the whole article reveals the fact that there is not a paragraph nor a sentence in it that indicates, or even suggests, that the short service that he was describing bears any resemblance whatever to the short service advocated by the Secretary of War and the Chief of Staff, of three years or less with the colors for all or nearly all soldiers except noncommissioned officers.

With but a very few and unimportant exceptions the term of enlistment in the British Army is 12 years for all branches thereof. "Long service" and "short service" are technical terms, as will be shown hereinafter, the former meaning a continuous service of 12 years with the colors and the latter meaning a service of 12 years partly with the colors and partly in the reserve. Men may, and do, enlist for either of them.

In the second paragraph of his article bearing the title of "The short-service system" (hearing, p. 26), Carleton stated specifically that he proposed in the article "to deal in detail with the line infantry only," the terms of enlistment in which are seven years with the colors and five years in the reserve. In subsequent paragraphs he said:

So far as regards conditions of service, the term of enlistment remained 12 years, the period which had meanwhile taken the place of the 10 years—not 12 as stated by the Secretary of War—of Crimean days, but instead of being passed wholly in the ranks it was divided into six years with the colors and six in the army reserve. In 1881 this distribution was altered to seven and five; from 1902 it was changed to three and nine, and then for a short time to nine and three. In 1906 it again became, and still is, seven and five, a distribution proved by long experience to be best suited to meet our cavalry and infantry requirements, though susceptible of modification with advantage for particular arms and corps. (Ibid., p. 27.)

The short-service ideal is to have large reserves, relatively short terms of color service, and small peace establishments, all calculated with regard only to efficient training in peace and the requirements of mobilization for war. Continental armies, troubled by no consideration of drafts for foreign service, are able to conform to this ideal. But in our army, and even with our relatively large peace establishments, the drafts can not be found if the term of color service is too short, as it was when we had three years' army and nine years' reserve service. When drafts can not be found, a demand arises for longer terms of army service and the strength of the reserve is threatened. The interests of drafts and reserves being thus in a measure antagonistic, we have adopted the seven and five years' term—a compromise which we have found best satisfies both. (Ibid., p. 30.)

All this shows clearly that the "short-service" system that Col. Carleton described and advocated was a system of seven years with the colors and five years in the reserve. If he had any idea of favoring any such system as that advocated by the Secretary of War and the Chief of Staff, he very carefully refrained from saying so or even giving a hint to that effect.

An official publication issued by the British war office in 1911, entitled "The General Annual Report on the British Army" for the year ending in September, 1910, shows plainly the meaning of the technical terms "long service" and "short service," with much other information bearing upon the subject now under consideration. The subjoined data in tabular form, taken from that publication, are consequently pertinent:

TABLE No. 1.—*British Army—Table showing, by branches of the service, the terms of enlistment for service with the colors and in the reserve; also the authorized strength.*

[General Annual Report on the British Army for 1910.]

Branches of service.	Terms of enlistment (years), Oct. 1, 1909 (p. 50).		Authorized number of noncommissioned officers and men, 1910–11 (p. 27).
	With the colors.	In the reserve.	
Long service, all arms	12	.....	(1)
Short service:			
Household cavalry	8	4	1,218
Cavalry of the line	7	5	18,306
Royal horse and field artillery	6	6	28,868
	3	9	
Royal garrison artillery	8	4	17,627
Royal engineers:			
Dismounted	3	9	3,802
Mounted	2	10	
Foot guards	3	9	7,121
Infantry of the line	7	5	137,377
Army service corps:			
Drivers	2	10	6,029
Mechanical transport	7	5	
Others	3	9	
Royal army medical corps	3	9	3,888
Army ordnance corps	3	9	2,224
Total	.....	.....	226,460

[1] The strength is all included under "short service."
[2] Under Sp. A. O. of Mar. 16, 1909, 3 years with the colors and 9 years with the reserve were authorized for a limited number (5,000) of royal field artillery.

TABLE No. 2.—*British Army—Recruits joined, by arms, with terms of enlistment for service with the colors, Oct. 1, 1909, to Sept. 30, 1910.*

[General Annual Report on the British Army for 1910, pp. 50–51.]

Arms of service.	Terms of enlistment for service with the colors.						Total.
	2	3	6	7	8	12	
Long service, all arms	.....	.....	.....	.....	.....	1,550	1,550
Short service:

Army ordnance corps	.....	136	.....	.....	.....	.....	136
Total	1,230	3,670	1,839	16,481	1,664	1,550	26,434

TABLE No. 3.—*British Army—Service men transferred from the colors to the army reserve during the year ended Sept. 30, 1910.*

[General Annual Report on the British Army for the year 1910, p. 100.]

Service of men transferred.	Number of men transferred.	Service of men transferred.	Number of men transferred.
On enlistment	14	After 7 years	820
Under 2 years	3	After 8 years	10,312
After 2 years	965	After 9 years	136
After 3 years	931	After 10 years	64
After 4 years	35	After 11 years	30
After 5 years	95		
After 6 years	399	Total	13,804

The foregoing Table No. 1 shows that out of a total authorized strength of 226,460 enlisted men 198,396, or 87 per cent of the whole, belonged to organizations in which a service of from 6 to 12 years with the colors is required; that 22,035, or 10 per cent, belonged to organizations in which that service is 3 years or less, and that 6,029, or 3 per cent, belonged to organizations (army service corps) in which service with the colors ranges from 2 to 7 years.

Table No. 2 shows, for the year ending September 30, 1910, that of the 26,434 recruits who joined the Army during that year 21,534, or 81 per cent of the whole number, enlisted for a service with the colors ranging from 6 to 12 years, as against only 4,900, or 19 per cent of the whole number, who enlisted for a service of 3 years or less with the colors.

Table No. 3 shows that of the 13,804 men transferred from the colors to the reserve during the year ending September 30, 1910, only 1,948, or 14 per cent, had served with the colors 5 years or less, whereas 11,856, or 86 per cent, had served more than 5 years with the colors. It will also be seen that 10,542 of these men, or more than 76 per cent of the whole number transferred to the reserve, had served for 8 years or more with the colors.

These tables make it entirely clear that the British Army and its reserve afford no evidence of a disposition on the part of Great Britain to favor the extension or general adoption of any such a short-service system (three years or less with the colors) as that advocated by the Secretary of War.

The Secretary of War was also unfortunate in his reference to the practice of the British Army in the matter of permitting or discouraging reenlistments in that army, or continuance in service therein beyond the "normal time." In this connection the Secretary said:

> I should like also to call the attention of the committee to the very stringent regulations which the British Army imposes on the right of any man to continue service with the colors after the normal time. You remember, part of my suggestion was that we should only allow noncommissioned officers and a few specially selected men to do so. Now, the rule in the British Army is even more stringent than my suggestion was. I believe that only warrant officers have the right to extend their service with the colors. A warrant officer is a senior noncommissioned officer corresponding with our regimental sergeant major. In all other cases it is a matter of discretion with the Government.
>
> I have a reference to that in Banning (p. 94). I just call attention to that to show that that system is a possible one and is already in use in the British Army. (Hearings, p. 37.)

It will be observed that the Secretary referred specifically only to the right of the British soldier to reenlist; but it will also be observed that the idea conveyed to the committee by his remarks was that it is the practice to restrict reenlistments in the manner proposed by the Secretary for adoption in our service. Indeed, the Secretary, after quoting his suggestion that "we should only allow noncommissioned officers and a few specially selected men" to reenlist, specifically said:

> I just call attention to that to show that that system is a possible one and is already in use in the British Army.

If the Secretary or his advisers had taken pains to consult an easily accessible official publication of the British Government, viz, the General Annual Report of the British Army for the Year Ending September 30, 1910, hereinbefore referred to, he would have found that no such system of restricted enlistments as that proposed by him and his advisers is in force in the British Army, and he would thus have been saved from the serious error into which he fell in conveying to this committee the idea that such a system "is already in use in the British Army."

By reference to the table printed on pages 82 and 83 of the official publication just referred to, showing the "Terms of engagement, by ranks, of the noncommissioned officers and men in the regimental strength in the several arms" of the British Army on October 1, 1910, it will be seen that of the 236,496 men accounted for in that table, 20,143 "sergeants, drummers, etc., corporals, privates, and boys" in service at the date covered by the report, or 8½ per cent of the whole strength accounted for, had been permitted to extend their service to complete 12 years with the colors; that 18,542 men of the same grades, or 8 per cent of the whole strength, had been permitted to enter into, and were then serving under, a first enlistment of 12 years with the colors; and that 32,008 of the same grades, or 13½ per cent of the whole, had been permitted to "reengage"—reenlist—to complete 21 years' service with the colors. In other words, out of a total strength of 236,496 men accounted for 70,693 sergeants, drummers, etc., corporals, privates, and boys, or 30 per cent of the whole strength, were serving under enlistments or reenlistments that required them to serve 12 years with the colors, or until the completion of 21 years of color service.

This table also throws much light upon the conditions of service in the foot guards of the British Army, an organization that has been held up to this committee as a striking example of the application, in the British service, of the three-year system with restricted reenlistments advocated by the Secretary of War and the Chief of Staff. The table shows that of a total strength of 6,370 "sergeants, drummers, etc., corporals, privates, and boys" of the foot guards, 548, or 8.6 per cent, were serving on October 1, 1910, under a reengagement to complete 21 years with the colors; that 523, or 8.2 per cent, were serving under a first enlistment that required 12 years' service with the colors; that 306, or 4.8 per cent, were serving under an extension of service to complete 12 years with the colors; that 2,223, or 34.9 per cent, were serving under enlistments that required 7, 8, or 9 years' service with the colors; and that only 2,770, all privates, or 43.5 per cent of the whole strength, were serving under enlistments that required less than 7 years with the colors.

These figures fall far short of supporting the assertion or the suggestion that the British Army has adopted or tolerated any such system as that advocated by the Secretary of War and the Chief of Staff with regard to service with the colors, viz, a service of three years for all except noncommissioned officers and "a few specially selected men." It is interesting to note, also, in this connection, that these figures do not comprise any of the warrant officers, concerning whom the Secretary of War advised this committee that he believed that "only warrant officers have the right to extend their service with the colors." (Hearing, p. 37.) The table printed on page 27 of the Annual Report of the British Army, before cited, shows the number of the officers and warrant officers that are not included in the table on pages 82 and 83 of that report, from which pages the foregoing statement has been compiled.

Undoubtedly Great Britain's controlling reason for abandoning in large measure her original long-service system of enlistments for 12 years, all spent continuously with the colors, for a short-service system of enlistments for 12 years, part to be spent with the colors and the remainder in the reserve, was the desire to create and maintain such a reserve. And it is not unlikely that if it were not for the demands of her Indian service, she might extend somewhat her present so-called short service, which, by the way, with a few exceptions, is a very long service when compared with our present three-year system of enlistments, or even with the proposed five-year system. But it is unbelievable that, however solicitous they might be to increase the reserve, her statesmen would be fatuous enough to reduce her regular army to a semimob, the bulk of which would be composed of half-trained or wholly untrained men just drawn from civil life. Great Britain knows very well, and we ought to know, that the only means of escape from a situation that would demand such extreme measures would be the abandonment of voluntary enlistments and the resort to compulsory military service.

But the demands of Great Britain's Indian empire, and indeed of her entire foreign service, upon her army are hardly any greater relatively than the demands that will be made by our foreign service upon our Army in the near future if plans that have been announced are carried out. It is shown by the General Annual Report of the British Army, before referred to, pages 34 and 35, that on October 1, 1910, 127,788 officers and enlisted men of that army, or nearly 51 per cent of the total strength of 252,686 officers and enlisted men, were serving at home and 124,898, or a little over 49 per cent, were serving abroad, in the East Indies, the colonies, and Egypt.

It is also shown by a table printed on page 8 of the report of The Adjutant General of the United States Army for 1911 that on October 15, 1911, 59,328 officers and enlisted men of the United States Army, or nearly 71 per cent of the total strength of 83,675 officers and enlisted men, were serving in the United States, and that 24,347 officers and enlisted men, or a little over 29 per cent, were serving at or were en route to stations outside the continental limits of the United States on that date.

However, it appears from statements recently made to this committee by the Secretary of War (hearings, pp. 5, 6, 7) that the War Department proposes to arrange for the maintenance of a force of approximately 11,000 men in the Philippines, 9,000 men in Hawaii, and 7,000 in the Canal Zone, a total of 27,000 men. To these should be added the 1,136 officers and men serving in Alaska, 617 in Porto Rico, and 5,615 Philippine Scouts, shown by the report of The Adjutant General before referred to, thus making a total of 34,368 officers and enlisted men, or 41 per cent of the total number in service, that soon will be serving abroad. The Philippine Scouts and the Porto Rico Regiment are included in the foregoing figures for the United States Army for the purpose of comparison with the figures for the British Army, which include certain colonial and Indian troops that are counted as a part of the strength of that army.

If in the near future a plan is to be adopted under which 41 per cent of our troops are to be kept on foreign service, as against 49 per cent for the British Army, a difference of only 8 per cent, it is evident that the Secretary of War was in error when he said (hearing, p. 24) to this committee that—

the only reasons which have prevented [Great Britain] from adopting it [short service] to at least the extent which I have advocated here are reasons which do not apply to us, namely, the excessive burden of the Indian establishment of the British Army.

Indeed, if our expansion and entanglements abroad continue to grow, as they almost inevitably will, the time is not far distant when the relative demand upon our Army for foreign service will be even greater than the demand upon the British Army for such service.

If the plans announced by the Secretary of War in his hearing before the committee (hearings, pp. 5, 6, 7) for maintaining troops in the Philippines, Hawaii, and Panama and the present plan with regard to Alaska are carried out and maintained, we shall have nearly, if not quite, as urgent reasons for requiring *five years'* service with the colors in the bulk of our line organizations as Great Britain has for requiring seven or eight years' service with the colors in the bulk of the line organizations of her army. In his hearing before this committee the Secretary of War expressed (p. 9) his desire or intention to keep men three years instead of two in the Philippines. This would be impossible under any three-year system of enlistments, because considerable time must necessarily be consumed in preparing recruits for service, transporting them to the Philippines, and returning them to the United States for discharge, all of which must be accomplished within three years if an enlistment term of that length is maintained.

The proposal to require an enlisted service of three years in the Philippines is a strong argument for the adoption of the five-year system of enlistments, under which there would be no difficulty in establishing a three-year tour for foreign service, because there would be ample time in which to subject recruits to the necessary observation and preliminary training at home; then to send them to their destinations abroad; and then to bring them home after the expiration of their tours of foreign service.

The record of the hearing of the Secretary of War before this committee shows (pp. 24, 25) that he said:

I think The Adjutant General testified here to that, as I understood his testimony, namely, that the British Army was organized on a long-term enlistment because they felt that that was the best, and that we could best follow the example. I have looked that up, and I have here a very carefully prepared article by The Adjutant General for recruiting of the British Army, who is probably the one to know best about the history of that condition in Great Britain. I find by studying his article on the subject that quite the reverse was true (p. 28). * * * Gen. Ainsworth did not state fully the situation. He referred only to the regiments which have the burden of the Indian service. But there are other services, divided altogether into 13 classes or arms. Seven of those classes have a period of service with the colors of either 2 or 3 years, and thereafter 10 or 9 years, respectively, with the reserve; two of them have a period of 6 years with the colors and 6 years with the reserve; and only five have the figures that Gen. Ainsworth mentioned, of 7 or 8 years with the colors and 5 or 4 years, respectively, with the reserve.

Those statements are hardly fair to The Adjutant General, because they convey the idea that he compared the present and former conditions of service in the British Army and announced to this committee the conclusion that the experience of that army had led Great Britain to increase the period of service with the colors, and that it would be best for us to follow her example in this respect; also that he withheld from the committee information of importance relative to the various periods of service with the colors in the British Army. The record of previous hearings shows (pp. 153 and 151) that what The Adjutant General said to the committee, and all that he said to it with regard to these particular matters, was as follows:

That a system of two and three year periods of service with the colors is the rule in the armies of continental Europe, where military service is compulsory and liability to it is universal, is no argument in favor of the adoption or maintenance of any such system in the United States or in Great Britain, where a system of voluntary enlistment prevails (p. 153).

The period of enlistment for all branches of the British regular army, with a few unimportant exceptions, is 12 years, of which, in most cases, 7 or 8 years are spent with the colors, and 5 or 4 years in the reserve (p. 151).

The Adjutant General made no comparison between present and former conditions of service in the British Army, and expressed no conclusion with regard to the merits or demerits of either the "long-term" or the "short-term" service, past or present, of that army. And in saying that in most cases seven or eight years of the enlistment period in the British Army is spent with the colors and five or four years in the reserve he was entirely correct and withheld no information of importance from the committee. By reference to Table No. 1, ante, it will be seen that, out of a strength of 226,460 distributed therein among various branches of the service, 174,528, or 77 per cent of the whole number, are distributed among organizations in which seven or eight years' service with the colors and five or four years in the reserve is required; that 23,868, or 11 per cent, fall to organizations in which six years' service with the colors and six in the reserve is required, and that only 28,064, or 12 per cent, as against 88 per cent that fall to organizations in which long service of six years or more with the colors is required, are allowed to organizations in which short service of less than six years with the colors is permitted. The total enlisted strength of all short-term organizations, including 7,121 for the foot guards, about which so much has been said to this committee, was too insignificant to require or to justify mention of those organization either individually or by classes.

Flax.

EXTENSION OF REMARKS

OF

HON. J. M. C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1915.

Mr. J. M. C. SMITH. Mr. Speaker, flax is a very important farm product. Recently I requested some information for a constituent concerning the culture and uses of flax, and to-day I am in receipt of a valuable reply from the Bureau of Plant Industry of the United States Department of Agriculture containing statistics and general information of value to those engaged in raising flax, and under leave granted me to extend my remarks, I herewith present the same for printing in the RECORD: The following is the letter referred to:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF PLANT INDUSTRY,
Washington, D. C., January 25, 1915.

Hon. J. M. C. SMITH,
House of Representatives.

SIR: Your letter of January 14, addressed to the Director of the Census Bureau, requesting information regarding the production of flax and flax tow, has been referred to this department.

The principal States producing flax in this country, together with the acreage devoted to flax in each of these States during the year 1913, are given in the following list:

	Acres.
North Dakota	1,000,000
South Dakota	425,000
Montana	400,000
Minnesota	350,000
Kansas	50,000
Iowa	10,000
Colorado	10,000
Wisconsin	9,000

All of the flax in the States mentioned is grown for seed only. It is flax of seed type, and not of fiber-producing strains. The straw is short and coarse and does not produce fiber suitable for fine spinning. Furthermore, it is sown, harvested, and thrashed in a manner very different from the methods of handling a crop of flax for fiber production. From 1,000 to 2,000 acres of flax are grown annually in the region northwest of Port Huron, Mich., primarily for fiber production. This flax is grown from seed of fiber types and the crop is handled in such a manner as to produce fine spinning fiber similar to that produced in Ireland and in Russia.

Seed-flax straw, including the seed, as it is drawn in the bundle directly from the shock, can probably be purchased in the Dakotas and adjacent States at from $8 to $12 per ton. So far as I am aware, it is not placed on the market in this form at the present time, but five or six years ago several thousand tons were purchased in this condition by the International Flax Twine Co., of St. Paul, Minn.

Fiber-flax straw, including the seed, is purchased in the shock in the field or delivered at the scutching mills in eastern Michigan at $10 to $13.50 per ton. The price of the seed flax varies with the market price of flaxseed and with the quality of the flax. Fiber flax bears a much smaller proportion of seed and the price varies chiefly with the quality of the straw itself.

Flax tow prepared in the same manner as upholstering tow, suitable for paper making, may be purchased from the tow mills in the seed-flax regions at $18 to $30 per ton. Flax tow composed of carding waste and strippings from flax cards, suitable for making a paper board used in the shoe trade for counters, and commonly known as heel board, is imported from Europe. The ordinary price of this material heretofore has been about $30 per ton, but owing to the scarcity of flax, resulting in the closing of many of the flax-spinning mills, the price of this material is now from $70 to $80 per ton.

The straw of the seed flax, after thrashing, may be purchased in the Dakotas at from $2.50 to $4 per ton loose or about $4 to $6 per ton baled. Straw of the fiber flax is estimated to be worth from $20 to $30 per ton after rippling, thrashing, and retting. It is not placed on the market in this form.

Some of the mills in eastern Massachusetts engaged in the manufacture of heel board are now beginning to use flax tow from the Northwest to supplement the supplies of carding waste which have been used heretofore, and it is claimed that very satisfactory results are obtained in this manner.

Very respectfully,

WM. A. TAYLOR,
Chief of Bureau.

Veto Message on Immigration Bill.

EXTENSION OF REMARKS
OF
HON. HUBERT D. STEPHENS,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915.

Mr. STEPHENS of Mississippi. Mr. Speaker, frequent reference has been made in this debate to the fact that we who are favoring restricted immigration are the descendants of men who came from across the seas, and it is argued that because foreigners and descendants of foreigners have built up this great Nation it is wrong to turn other foreigners back from our shores.

Those who make this argument overlook a very important fact. It is only since 1820 that a record has been kept by the Government showing the number of immigrants that have come into this country.

An investigation of the records shows that a material change in the character of the immigration has taken place. Writers on this subject classify immigration as "old" and "new," the first class being those who came before 1883 and the second class being those who have come since.

Immigrants from England, Scotland, Ireland, Wales, Belgium, France, Germany, Norway, Sweden, Denmark, Switzerland, and the Netherlands comprise, very largely, the first class. Almost 95 per cent of the immigrants who came before 1883 came from those countries.

Since that date the character of immigration has almost entirely changed, and we find that nearly 90 per cent of it comes from Russia, Austria-Hungary, Greece, Italy, Bulgaria, Montenegro, Portugal, Poland, Spain, Syria, and Turkey.

It will be interesting to note some statistics taken from the report of the Commissioner General of Immigration, which show the number and per cent of illiterates from 1899 to 1909, inclusive:

Race or people.	Number over 14 years old.	Per cent of illiterates.
English	302,657	1.1
Finnish	123,415	1.4
French	81,449	5.4
German	566,579	5.1
Irish	381,095	2.7
Bohemian and Moravian	18,404	1.7
Dutch and Flemish	58,525	4.7
Scandinavian	483,049	.4
Scotch	95,073	.7
Welsh	15,191	2.0
Armenian	18,404	24.1
Bulgaria, Servia, Montenegro	80,854	41.8
Croatian and Slovenian	283,270	36.4
Dalmatian, Bosnian, Herzegovinian	23,270	36.4
Greek	170,513	27.0
Hebrew	744,395	25.7
Italian, North	311,243	11.4
Italian, South	1,517,768	54.2
Lithuanian	140,540	48.8
Polish	742,753	35.4
Portuguese	49,799	68.2
Roumanian	67,029	34.7
Russian	61,287	38.5
Ruthenian	113,931	51.0
Spanish	41,000	14.6
Slovak	312,954	22.1
Syrian	42,463	54.1
Turkish	15,408	58.9

This report discloses the fact that during the period mentioned less than 3 per cent of the "old" immigration could neither read nor write, while the illiterates among the "new" immigration numbered about 36 per cent.

How any intelligent man can fail to see a grave menace to our Nation growing out of this influx of illiterate foreigners is more than I can understand. Opposition to it can not be attributable to prejudice, as some contend, but rather to a strong desire to protect ourselves, our homes, and our country.

In my support of the bill I am not influenced by the demand for restriction of competition in the labor market, nor by the charge that foreign immigration has become a burden upon industry and is one of the chief factors in depressing wages; but I favor it from higher, better, and more important reasons.

The United States is very different from other nations of the world. Ours is a government of and by the people. They both make the laws and select their own agents to execute them.

Therefore it is important—indeed, absolutely necessary if our Government is to continue its existence—that our citizenship shall have, at least, education enough to enable them to view properly the manifold questions pertaining to our national welfare.

It will be seen from the figures given that more than 27 per cent of the present immigration is wholly illiterate, being unable to read or write any language. Of the southern Italians, more than 54 per cent can neither read nor write; neither can 59 per cent of the Turks, nor 68 per cent of the Portuguese. There are other nationalities with a percentage nearly as great.

While it is not contended that the ability to read and write is evidence of moral character, yet many who have given the subject much thought testify that there is a fairly constant relation "between illiteracy, the standard of living of the immigrant, his tendency to crime and pauperism, his disposition to congregate in the slums of the cities instead of going out to settle new parts of the country, and his failure to assimilate politically and socially and to have any but temporary interests in the country."

If this be true, then the literacy test would keep out large numbers who are dangerous, undesirable, and unassimilable, although it may prevent the coming of some who would make good citizens.

We spend millions of dollars annually to keep up the Army and Navy in order to be prepared to protect ourselves against the other nations of the world if war shall come; but we have not been nearly so careful to protect ourselves against the invading hosts of illiterates, criminals, and the morally unfit. We also spend millions annually in the cause of education. Why? Because we believe that education is helpful. Yet we have allowed the illiterates of other nations to come among us and add to the sum total of our own ignorance and illiteracy.

If ignorance be one of the greatest menaces to our Government, and no one will deny that it is, then I can not understand why anyone should object to the requirement that every foreigner, above the age of 16 years, coming into this country shall be able to read some language. This will not affect, except in slight degree, immigration from England, France, Belgium, Ireland, Germany, and other countries from which the better class of immigrants come, because in those countries the percentage of illiteracy is very low and in some of them even lower than in the United States.

Statistics show that not more than 3 per cent of the illiterates above the age of 14 years who come into this country ever learn to read and write. A large per cent of them congregate in the cities, they are clannish, follow their leaders, and fail not only to acquire the ability to read and write, but also fail to catch the true spirit of democracy and to develop a love for republican institutions.

The old immigration came hither inspired by a desire to obtain homes; they were willing to brave hardships and dangers, to spend and be spent in an effort to build a new nation; but it is not so with the new. A large proportion of them come here for what they may get from us in a material way. This is shown by the fact that only a small part of them bring their families; and that after they have made, what to them in the old country is a competency, they return to their native lands. During a recent year there was about $300,000,000 sent to foreign countries from the United States by foreigners residing here, thus taking out of circulation that large sum that ought to have been kept here.

The immigrants in the last 10 years, according to the report of the Bureau of Immigration, have carried out of this Nation over $2,000,000,000 to enrich their own countries; and consequently they have been a great and an unjust burden upon the honest labor here and they have despoiled the Nation of vast wealth.

That they have become a burden upon industry and one of the great factors in depressing wages I do not doubt; but I want to get back to the proposition that the illiterates should be excluded because of the effect of illiteracy on our institutions.

Some one, I do not now recall who it was, has splendidly stated the proposition that the true foundations of democracy are in the character of the people themselves; that is, of the individuals who constitute the democracy. These are:

First. Intelligence, the power to weigh evidence and draw sound conclusions based on adequate information.

Second. Manliness—that which the Romans called virility, and which, at bottom, is dignified self-respect, self-control, and that self-assertion and jealousy of encroachment which marks those who, knowing their rights, dare maintain them; and

Third. The capacity for cooperation—that willingness and ability to organize, to work together for a common interest and toward a common destiny, a capacity which we variously designate as patriotism, public spirit, or self-government.

Hundreds of thousands of foreigners come into our country every year who have no clear grasp of these foundations of democracy; many of them have never even dreamed that such principles exist. Such are entirely alien to our character, institutions, and instincts.

We believe in "law without despotism, liberty without license, religion without fanaticism." What do they know or care for these things? They can have no active sympathy with the efforts directed toward progress and the uplifting of mankind. Appeals for the cultivation of the finer side of their natures are not understood or go unheeded.

It is well to remember the warning sounded by Thomas Bailey Aldrich in his poem entitled "Unguarded Gates":

Wide open and unguarded stand our gates,
And through them presses a wild, motley throng—
Men from the Volgar and the Tartar steppes,
Featureless figures of the Hoang-Ho,
Malayan, Scythian, Teuton, Celt, and Slav,
Flying the Old World's poverty and scorn;
These bringing with them unknown gods and rites,
Those, tiger passions, here to stretch their claws.
In street and alley what strange tongues are these,
Accents of menace alien to our air,
Voices that once the Tower of Babel knew!

O Liberty, White Goddess! is it well
To leave the gates unguarded? On thy breast
Fold sorrow's children, soothe the hurts of fate
Lift the downtrodden, but with the hand of steel
Stay those who to thy sacred portals come
To waste the gifts of freedom. Have a care
Lest from thy brow the clustered stars be torn
And trampled in the dust. For so of old
The thronging Goth and Vandal trampled Rome.
And where the temples of the Cæsars stood
The lean wolf unmolested made her lair.

That we owe a duty to mankind everywhere, that we should lend every effort to uplift the men of every nation, I admit. But that does not mean that we should wreck ourselves or our Nation. Indeed, the greatest good that we as a Nation can do is to keep our Republic alive and show forth to the world that the highest blessings of life—the right to "life, liberty, and the pursuit of happiness"—are to be found alone in a free country and under republican institutions. If future history shall record us as another of the nations that lived for a time and then went down to wreck and ruin it will be a sad ending for a once glorious Republic, and it will set back the cause of liberty and free government for many centuries.

I have no sympathy with the idea that, as a Christian Nation, it is our duty to let low-bred, uneducated, unintelligent foreigners come among us in order that we may Christianize them and put them upon a higher plane of civilization if by so doing we are likely to sacrifice our own people, our own institutions, our own Government.

Is this selfishness, is it prejudice, is it un-Christian? I do not think so.

Gen. Francis A. Walker very splendidly expressed himself in these words:

If that man who careth not for his own household is worse than an infidel, the nation which permits its institutions to be endangered by any cause that can fairly be removed is guilty not less in Christian than in natural law.

Charity begins at home; and while the people of the United States have gladly offered an asylum to millions upon millions of the distressed and unfortunate of other lands and climes, they have no right to carry their hospitality one step beyond the line where American institutions, the American rate of wages, the American standard of living are brought into serious peril.

Our highest duty to charity and humanity is to make this great experiment here of free laws and educated labor the most triumphant success that can possibly be attained.

In this way we shall do far more for Europe than by allowing its slums and its vast stagnant reservoirs of degraded peasantry to be drained off upon our soil.

The perpetuity of our Government and its institutions depends upon the character and ideals of its citizenship. If that citizenship is of base character and low ideals of life, then will the foundations of government be base and low. There will be a change of political ideals just in proportion to the racial composition of our citizenship.

It is argued that we are able to assimilate this large foreign element, and that it will be converted into good American citizens. In a measure this has been true in the past. But there is a limit to all things. The human system is able to take into it a certain amount of strychnine and not be hurt by it; but a larger dose will cause death. So it is with the body politic, there may come a time when it will be killed by an overdose of immigration.

The danger to the Nation does not come from the anarchist or from the man who takes human life, but it consists in those insidious influences that grow out of a failure to understand the principles of free government and a consequent disrespect for them.

We are gradually drifting away from the old landmarks of the fathers, and it results largely from immigration, because a large number of these foreigners are ignorant of the fundamental, moral, and political truths underlying our Government and because their ethical and religious ideas are fundamentally different.

The history of our Nation has been a glorious one; we can look upon it with pride, while the nations of the earth view it with wonder and amazement. But we must remember this Republic, which has developed such splendid proportions, was formed by men who were possessed of moral as well as physical courage, strength of character, and withal breadth of mind. If it is to live, it must be supported and upheld by men of like kind. So, Mr. Speaker, I shall vote for this bill, believing firmly that it is an effort to preserve the integrity of American homes, American civilization, and American institutions.

Apportionment of Representatives in Congress Among the Several States Under the Thirteenth Census.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY.
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 2, 1915.

Mr. BAILEY. Mr. Speaker, I would like to direct the attention of the Members of the House to a bill—H. R. 20737—which I had the privilege of introducing January 9.

I think it might fairly be termed a bill for the emancipation of Members of Congress. It certainly may be called a bill providing for the emancipation and enfranchisement of minorities. In the bill itself it is described as one "to give to any State entitled to at least three Representatives in Congress the privilege of electing them by proportional representation." Perhaps, before going further, it would be well to allow the bill to speak for itself. It follows:

A bill (H. R. 20737) amending sections 3 and 4 of the act of August 8, 1911, entitled "An act for the apportionment of Representatives in Congress among the several States under the Thirteenth Census," so as to give any State entitled to at least three Representatives in Congress the privilege of electing them by proportional representation.

Be it enacted, etc., That instead of being restricted to the method prescribed in the act of August 8, 1911, entitled "An act for the apportionment of Representatives in Congress among the several States under the Thirteenth Census," any State entitled to three or more Representatives in Congress may, if its legislature so prescribe, elect its Representatives in Congress by proportional representation.

SEC. 2. That where the Representatives are elected by proportional representation, if the State is not entitled to more than nine Representatives, they shall be nominated and elected by the State at large; if the State is entitled to more than nine Representatives, they may, at the option of the State, be nominated and elected by the State at large or by districts, each of which shall be composed of a contiguous and compact territory and shall be entitled to the number of Representatives that as nearly as practicable is in proportion to the number of its inhabitants. Each of such districts shall be so composed that it is entitled to at least five Representatives. The districts of a State shall be determined in the manner provided by the laws of the State.

SEC. 3. That the election of Representatives by proportional representation shall be subject to the following regulations:

SUBSECTION A. The election shall be by ballot, which shall contain the names of the candidates for Representatives in lists, each of which lists may contain any number of names from one up to the full number of Representatives to be chosen in the State or in the district, as the case may be.

SUBSEC. B. I. Any group of electors, subject to such restrictions as the State may impose, may nominate one of the aforesaid lists, but no elector shall take part in the nomination of more than one list.

II. Each State shall have the option of permitting the use of party names and emblems in connection with the aforesaid lists, and may prescribe a primary for the selection of candidates of a group of electors.

SUBSEC. C. On the election ballots the several lists of candidates shall be printed in an order determined by the election authorities by lot. The names of the candidates on each list shall be printed in the alphabetical order of the surnames, and each name shall be followed by the candidate's home address. The name of a candidate shall not be printed on the ballot unless he has previously filed with the election authorities a written acceptance of the nomination over his own signature. The form of the portion of the ballot devoted to Representatives in Congress shall be substantially as follows:

FOR REPRESENTATIVES IN CONGRESS.

Directions to voters:

Mark a cross (X) opposite the name of one candidate only for whom you wish to vote. (If the candidate you vote for is found to be elected without your vote, or if he is found to have too few votes to be elected with it, your vote will be counted for some other candidate on the same list.)

Do not mark more than one name. If you spoil this ballot, tear it across once, return it to the election officer in charge of the ballots, and get another from him.

List 1.		List 2.		List 3.	
[Home address.] A.....		[Home address.] C.....		[Home address.] D.....	
" " B.....		" " G.....		" " L.....	
" " O.....		" " H.....		" " M.....	
" " P.....		" " J.....		" " N.....	
" " S.....		" " K.....		" " Q.....	
" " T.....				" " U.....	
" " V.....					
" " Y.....					

SUBSEC. D. The following method shall be used in determining which candidates are elected:

I. A ballot marked for candidates on more than one list shall be excluded from the count of the vote for Representatives in Congress. A ballot marked for more than one candidate on a single list, but not for candidates on more than one list, shall be counted as a vote for the list, but shall not be counted in determining the preference for any particular candidate on that list; the aggregate of such votes and the votes for each individual candidate on the same list constitute the total number of votes for the list.

II. The total number of valid votes cast shall be divided by the number of Representatives to be elected and the quotient shall be the full constituency.

III. The number of full constituencies contained in the total number of valid votes for a list shall be the number of candidates on that list to be declared elected on the first assignment of seats.

IV. After this first assignment of seats the remaining seats, if any, shall be assigned as follows: The total number of valid votes for each list shall be divided by the number of seats already assigned to such list, plus one, and to the list showing the largest quotient shall be assigned one additional seat. If two or more lists show the same quotient, the chief election official of the State or district, as the case may be, shall decide the tie by lot. This procedure shall be repeated until all the seats have been assigned.

V. The candidates to be declared elected from any list shall be those receiving the largest number of votes on that list.

SEC. 4. That to any vacancy that shall occur in the delegation of Representatives in Congress from any State or district, as the case may be, which has elected its Representatives by proportional representation under the provisions of this act, the chief election official of the State or district, as the case may be, shall appoint, to fill out the unexpired term, that candidate from the list on which the vacating Representative was nominated who of all the unelected candidates on that list received the highest number of votes.

SEC. 5. That all laws or parts of laws in conflict herewith are hereby repealed.

It will be noticed that its provisions are purely permissive. No State need resort to proportional representation unless it feels so inclined. If our southern friends have a fear of breaking up the solidarity which has so long been maintained, that is their affair. They are not asked to adopt an idea which for purely local reasons may be objectionable.

But I take it that in my own State of Pennsylvania a good share of the people may be expected to incline favorably toward a proposition so essentially fair. You see it does not involve taking anything away from anybody who is justly entitled to it. Its whole aim is one of simple square dealing. It would, of course, put the gerrymander out of business. It would open up political prison pens. It would largely destroy the influence of small and compact bodies, which in many congressional districts control the balance of power, and in doing so practically dominate both the majority and the minority. I have in mind a case in point. In a certain district the Republicans have a normal majority of approximately 1,200. In both the Republican Party and the Democratic Party there is a small number of prohibitionists, not party Prohibitionists, but believers in the prohibition policy. The Republicans can not carry the district without holding these, nor can the Democrats hope to win unless they can gain over the prohibition element. This balance of power controls the election. Yet in the total vote the prohibitionists represent a negligible fraction. Under the district system the tail wags the dog. The fly on the cart wheel makes it go round.

This is not representative government; it is not majority government; it is government by the minority, and often by the smallest minority. In many cases it resolves itself into a government of fanatics and impracticals.

I think I am not shooting much above the mark in saying that most Members of this House are in constant and mortal fear of this balance of power, our southern friends not less than our friends in the North, for the balance of power feared by the southern Member is in his own party, exerting itself as effectively in the primary as the same balance of power operates in the elections at the North. If Members will be honest with themselves, they will admit that they feel the necessity of paying constant court to this balance of power. For every thought they give to the great body of the constituency they represent they give ten thoughts, or perhaps a hundred thoughts, to that shifting and capricious element which is blown about by every political breeze and which judges a man not by the sum of his record, not by his fidelity to principle, not by his industry, not by his scrupulous regard for the pledges he has taken, but by some isolated act, by some word said or vote recorded to which that element can not subscribe.

The act in question may meet the high approval of a majority of his constituents; the word may have been the very one expected and desired by 95 per cent of the electors whose commission he holds; the vote may have been in accordance with their express or implied instructions; yet the 5 per cent, holding the balance of power in the election or at the primary, may throw him to the wolves.

This is almost certain to happen to many Members now on this floor as a result of their votes on prohibition and suffrage. It has happened to more than one as a result of their votes on canal tolls and the tariff. Yet if they could go or could have gone to the people on the broad basis of their general record they might have been or they might be secure in the result. It is only when a few malcontents are in control of the balance of power that an honorable career may be cut short and great talents and great industry denied to the service of the country.

Our system is supposed to be representative, but everyone knows that it is not truly so. What representation is there for a Democrat in Vermont or for a Republican in Texas? There are Democrats in Vermont, as there are Republicans in Texas, but they are as utterly denied representation in this great body as if they did not exist. They indeed go through the forms of exercising their citizenship. They vote for candidates for Congress. But for all the good their ballots do toward securing for them representation here they would as well stuff them into rat holes or chuck them into the kitchen stove. The only real purpose a Democrat serves in Vermont is to entitle the Republicans in that State to a larger representation in this House than they would otherwise get. But the Democrats might just as well be dead in actuality as they are politically for all the good they can do at the polls. The same is equally true as to Republicans in Texas.

I sincerely hope that in mentioning Texas none of my genial and good friends from that State will take offense. There is not one of them that I feel could be spared from this House. They are all men of ability and courage; they are leaders in this body; we all love them; we know their worth; we appreciate the splendid talent they contribute to the work of legislation and to party direction. It is with no invidious intent that this great empire of the Southwest has been mentioned in this connection. Only to point a moral has reference to it been made. Yet it is fancied that even the Slaydens and the Garners, the Callaways and the Burgesses, the Henrys and the Greggs, the Bealls and the Dieses, the Hardys and the Garretts, the Buchanans, and all the rest of that brilliant delegation will agree with me that the disfranchisement of rather more than one-fourth of the electors in Texas is not quite fair.

In a table which I shall ask to accompany this bill will be found an analysis of the returns for the congressional election of 1914 in 19 States, showing results under the present system as compared with those which would have been scored under the proportional system embodied in my bill.

CONGRESSIONAL ELECTION OF 1914.

Results under the present system of election compared with those under a proportional system.

[The errors of the present system, which would be corrected by a proportional system, are indicated by the figures in italics.]

States.	Total vote for Congressmen.	Number of Congressmen apportioned to the State.
Arkansas	43,133	7
Colorado	247,506	4
Connecticut	173,844	*5*
Illinois	1,021,315	27
Iowa	397,756	11
Kansas	483,683	8
Kentucky	323,293	11
Maine	141,046	4
Massachusetts	447,177	16
Michigan	429,861	13
Minnesota	322,811	10
Missouri	600,589	16
Nebraska	234,627	6
North Carolina	202,582	10
North Dakota	67,599	3
Ohio	1,062,983	22
Rhode Island	77,753	3
South Dakota	96,635	3
Washington	335,190	*5*

States.	Democratic.				
	Number of Democratic votes.	Per cent of total vote.	Number of Democratic Congressmen elected.	Number who should have been elected.	Gain or loss by proportional representation.
Arkansas	37,265	86.3	7	7	*0*
Colorado	118,211	47.7	3	2	*−1*
Connecticut	78,110	44.9	0	2	*+2*
Illinois	415,248	40.6	10	11	+1
Iowa	159,232	40	1	*5*	*+4*
Kansas	195,830	40.6	6	4	*−2*
Kentucky	173,374	53.6	9	7	*−2*
Maine	60,683	43	1	2	*+1*
Massachusetts	186,924	41.8	4	7	*+5*
Michigan	149,762	34.8	2	5	*+3*
Minnesota	87,305	27	1	3	*+2*
Missouri	318,567	53	14	9	*−5*
Nebraska	112,309	47.8	3	3	*0*
North Carolina	122,147	60.2	9	6	*−3*
North Dakota	23,396	34.6	0	1	*+1*
Ohio	484,248	45.5	9	10	*−1*
Rhode Island	35,190	45.2	1	1	*0*
South Dakota	37,752	39—	1	1	*0*
Washington	96,652	28.8	1	2	*+1*

States.	Republican.				
	Number of Republican votes.	Per cent of total vote.	Number of Republican Congressmen elected.	Number who should have been elected.	Gain or loss by proportional representation.
Arkansas	4,087	9.4			
Colorado	84,485	34.1	1	2	*+1*
Connecticut	89,000	51.1	5	3	*−2*
Illinois	440,171	43.1	16	11	*−5*
Iowa	207,472	52.1	10	6	*−4*
Kansas	188,106	38.8	2	3	*+1*
Kentucky	123,518	38.2	2	4	*+2*
Maine	60,318	42.7	3	2	*−1*
Massachusetts	219,993	49.1	12	8	*−4*
Michigan	218,445	50.8	11	7	*−4*
Minnesota	181,482	56.2	8	6	*−2*
Missouri	240,917	40.1	2	7	*+5*
Nebraska	100,780	42.9	3	3	*0*
North Carolina	79,662	39.3	1	4	*+3*
North Dakota	44,203	65.3	3	2	*−1*
Ohio	479,482	45.1	13	10	*−3*
Rhode Island	39,001	50.1	2	2	*0*
South Dakota	52,844	54.6	2	2	*0*
Washington	128,001	38.1	4	2	*−2*

CONGRESSIONAL ELECTION OF 1914—continued.

Results under the present system of election, etc.—Continued.

States.	Progressive.				
	Number of Progressive votes.	Per cent of total vote.	Number of Progressive Congressmen elected.	Number who should have been elected.	Gain or loss by proportional representation.
Arkansas	1,781	4.1			
Colorado	32,400	13			
Connecticut	6,734	3.8			
Illinois	123,833	12.1	1	4	*+3*
Iowa	19,095	4.8			
Kansas	74,401	15.3	0	1	*+1*
Kentucky	15,048	4.6			
Maine	17,958	12.7			
Massachusetts	33,683	7.5	0	1	*+1*
Michigan	47,700	11	0	1	*+1*
Minnesota	24,728	7.6	1	0	*−1*
Missouri	22,747	3.7			
Nebraska	14,200	6.1			
Ohio	51,962	4.8	0	1	*+1*
Rhode Island	1,321	1.7			
Washington	66,666	19.8	0	1	*+1*

States.	Socialist.				
	Number of Socialist votes.	Per cent of total vote.	Number of Socialist Congressmen elected.	Number who should have been elected.	Gain or loss by proportional representation.
Colorado	6,965	2.8			
Illinois	41,527	4.1	0	1	*+1*
Iowa	7,455	1.8			
Kansas	14,001	2.8			
Kentucky	4,235	1.3			
Maine	1,830	1.2			
Massachusetts	5,524	1.2			
Michigan	10,177	2.3			
Minnesota	29,296	9	0	1	*+1*
Missouri	17,149	2.8			
Nebraska	5,670	2.4			
Ohio	45,512	4.2	0	1	*+1*
Rhode Island	1,666	2.1			
South Dakota	2,688	2.7			
Washington	32,512	9.6			

In the case of the Prohibition Party and "other parties" the last three columns are omitted because no Representatives were elected by these parties and none should have been elected.

States.	Prohibition.		Other parties.	
	Number of Prohibition votes.	Per cent of total vote.	Number of votes.	Per cent of total vote.
Colorado			Independent, 5,445	2
Illinois	484		Socialist-Labor, 52	
Iowa	4,170	1	Independent, 332	
Kansas	11,345	2.3		
Kentucky	150		Independent and scattering, 6,968	2.1
Maine	257			
Massachusetts			Progressive Citizens, 1,053	
Michigan	3,346		Socialist-Labor, 341	
Missouri	602		Socialist-Labor, 607	
Nebraska	1,668			
North Carolina			773	
Ohio	1,779			
Rhode Island	575			
South Dakota	1,850	1.9	Independent, 1,501	1.5
Washington	10,230	3	Independent-Prohibition, 1,129	

NOTE.—This table is based mainly on the returns printed in the World Almanac. Where these returns were evidently incomplete or an error was suspected the authorities of the State in question were consulted.

Where two or more parties united in support of any candidate, the contribution of each to the candidate's whole vote was assumed to have been in accordance with its relative strength as shown in the districts of the State where it and the other party or parties involved ran candidates independently. Where a party which thus combined with one or more others in some districts ran no candidates independently in any district of the State, its contribution in the districts where it combined with other parties had to be neglected, as there was no basis for inferring its probable relative strength.

The number of Representatives who, as indicated in the table, should have been elected by any party, is in every case the number that would in fact have been elected by that party if the proportional system offered

(as an optional alternative) by the Bailey bill (H. R. 20737) had been in use and applied to the State as one district. If the proportional system of that bill had been in use and applied to the State as divided into two or more large districts—a method permitted by the bill—the result would have been approximately the same.

In brief it may be pointed out that in these 19 States, which include Arkansas, Colorado, Connecticut, Illinois, Iowa, Kansas, Kentucky, Maine, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Rhode Island, South Dakota, and Washington, the Democrats under the proportional system would have gained 23 and lost 14, a net gain of 9. The Republicans would have gained 12 and lost 28, a net loss of 16. The Progressives would have gained 8 and lost 1, a net gain of 7. The Socialists would have gained 3 and lost none. The Prohibition vote was so small that it entitled them to nothing.

While the proportional system would open political prison pens which now entomb minorities, while it would emancipate Representatives wholly or in large measure from enslavement to transitory and irresponsible minorities holding the balance of power, and while it would give us real and not pretended representative government, I think it would do something more even than this. I think it would give us a higher type of Representative—perhaps not in mental strength or patriotic purpose, but in freedom of action, in moral fiber, in special training, and in those higher attributes of statesmanship which are almost impossible of development under a system where the Representative must play the sycophant, where he must set his political sails to catch every vagrant breeze, where he must hesitate and compromise, where he must suppress and deny, where he must at every turn subordinate conviction to expediency, and where if he hopes to succeed and to keep his place he must play the courtier to office seekers and lend an attentive ear to special interests holding the balance of power. These interests may be of one sort or another. They may represent big business or the little red schoolhouse. They may represent some sect or some secret order. They may be as various in aspect and purpose as men are in their views of government and its functions. It all amounts to the same.

The man seeking a congressional career must do so more as a mere politician, with all the arts which that term suggests, than as a statesman; more as a timeserver and a tidewaiter than as a patriot and a worker toward large ends for the general good. The man who does not "do something" for his district under the present system is lost, no matter what his achievements may have been or what they may promise to be as a constructive legislator consecrated to the service of the people as a whole and to the perpetuation of the national ideals.

It seems to me, Mr. Speaker, that under the proportional system the chance for little men would be reduced, the chance for big ones immeasurably augmented. As a rule, big men are not skilled in certain arts which are indispensable in the game of politics as it must be played under existing rules. They do not know how to set up the pins. They know nothing of stacking the cards. They are guiltless of any knowledge of "practical politics." They have no nimbleness in shifting from one foot to the other. In dispensing patronage they are blunderers and fools. They have probably devoted so much time and so much thought and so much conscience to the study of the great problems of society that they have not even heard of the purely local issues which convulse Podunk and inflame Shakerag to the point of revolt. And so they make little, if any, progress if they do venture into the field of politics. The man who knows the boys and who has the gift of appealing to the latest whim or caprice is the one who carries off the prize. And he goes from success to success, not because he has stood for any great idea, not because he has performed any large service, not because he has actually listened to the voice of the people, but because he has managed to render that voice unintelligible by stifling it within political prison walls where only the clamors of a noisy minority with the balance of power can be heard.

Lest some should imagine that the proposed system is unworkable, it is proper to say that it is in practical and apparently satisfactory operation in a number of countries, notably in Belgium, Sweden, Switzerland, Denmark, the Union of South Africa, Tasmania, and parts of Germany. The senate of Ireland, under the home rule act, will be chosen under the proportional system, James Bryce, former ambassador of Great Britain to the United States, having been among its supporters. The vice president of the Belgian Senate thus testifies regarding the system:

> In Belgium * * * there is now no political group of any importance which would dream of proposing to suppress or even curtail the application of the proportional system.

Sir John McCall, agent general for Tasmania, thus testifies:

> We have demonstrated the ease with which the system can be worked. It has come to stay.

Deputy Speaker Talberg, of the lower house in the Swedish Parliament, adds his voice to the same effect:

> It has * * * distinctly raised the intellectual level of the representatives—

Adding that its adoption has marked—

> a great step forward in Swedish political life.

Prime Minister Lindman, of the same country, says:

> All the parties * * * appear * * * to like the new method.

And the leader of the Social Democratic Party in the lower house of the Swedish Parliament, declares that—

> The thought of returning to majority voting is certainly not now entertained in any quarter.

Testimony to like effect might be cited to much greater length, but this should suffice. It seems to me that no candid consideration of the matter can lead to any other conclusion than that proportional representation is in fact the fulfillment of democratic ideals in making it possible for the voice of the people to be heard—not the voice of some of the people, but of all the people. Is there any Member of this House who will say that he would deem this unwelcome? Are there really those among us who would stifle that voice when it rises from a minority or perhaps from a majority which has been overborne, as too often happens, by a mere handful holding the balance of power in a large constituency?

It is not inappropriate to mention some of those in this country who are committed to this great forward step in Democracy. Conspicuous among them is found the name of Charles Francis Adams, of Massachusetts. Dr. Charles W. Eliot, of the same State, is also an active propagandist in the movement. Ex-Gov. Lucius F. C. Garvin, of Rhode Island, Judge Ben B. Lindsey, Senator Owen, Moorfield Storey, Prof. Charles Zueblin, Jackson H. Ralston, Robert Treat Paine, Thomas Raeburn White, and many others whose names are familiar to most Americans are identified in an official capacity with the American Proportional Representation League; and among the honorary vice presidents of the organization are the Right Hon. Earl Grey, ex-Governor General of Canada, and the Right Hon. Lord Courtney, of Penwith, England.

Of course I can not expect favorable action on my bill at this short session of Congress. It was not brought in with any such hope. But it is respectfully submitted for the consideration of Members between the present time and the day in the succeeding session when a hearing will be sought for it on this floor. It seems to me that it has one high merit which should commend it to the patience of even the most conservative of our friends on this floor and in the country—it is entirely optional. It merely opens a door through which a liberated minority may emerge into a field that is its own whenever any State shall choose to avail itself of the opportunity. It thrusts nothing down unwilling throats. It offers no compulsion. It merely removes an obstruction that now lies in the path of Commonwealths which might be disposed to enfranchise their minorities and to elevate the standard of representation. In all modesty it is laid before you for your candid judgment; in all sincerity I venture to solicit that consideration for it at your hands which I feel it deserves.

Uniform Grading of Grain.

EXTENSION OF REMARKS

OF

HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 4, 1915.

The House had under consideration the bill (H. R. 17971) for securing the uniform grading of grain, preventing deception in transactions in grain, and regulating traffic therein, and for other purposes.

Mr. SLOAN. Mr. Speaker, this bill provides for the fixing of standard grades for the various grains of the United States and for the enforced recognition of these grades in our interstate and foreign commerce.

The Secretary of Agriculture has heretofore been granted authority for the establishment of grain grades, but without any means of enforcing the recognition of these grades in the

markets of the United States the establishment of the grades would be purely academic and of little value to the country.

This probably accounts for the fact that although this authority has existed for some years grades have not been determined or established in any of the grains except corn. This bill will require the speeding up by the Secretary of Agriculture of the grading and standardization of corn, wheat, oats, and other grains. Vitality will be given to that grading and standardization by requiring the inspection in the great markets of the United States of the various grains. This inspection will be carried out through a recognition of these grades and standards so established. Uniform grades and standards of the important grains which are produced in one part of the country and transported to other parts are almost as important as the standardization of coins used as mediums of exchange. The largest value of this standardization is not to the large handler of grain, although to him it will be of considerable value, but it is designed largely for the producer and the small handler. The large dealer in grain heretofore has, from his commanding view of the general markets, understood what the statement of various grades in the several different parts of the United States and foreign countries meant. He knew the difference between grades recognized generally for interstate shipment and also grades intended for foreign export or our own importation, but this the small dealer and producer did not generally know.

One of the largest considerations in all commerce designed to be fair between purchaser and seller is that, approximately speaking, the information of the one as to quality and condition, represented in certain commercial language, is equal to that of the other. With the varying standards throughout the country this was impossible, and of course the advantage would lie with the heavy handler rather than small dealer, just as in years gone by the large dealers in money and coin of the nations had a great advantage over the man whose energies were spent in earning a coin rather than discrimination between superior and inferior coins.

The subcommittee of the Committee of Agriculture, which sat during the heated period of 1914 for weeks and took evidence to establish a basis for this bill, consisted of Representatives Moss of Indiana, RUBEY of Missouri, DOOLITTLE of Kansas, HAUGEN of Iowa, and SLOAN of Nebraska. Witnesses were heard from various parts of the United States, representing the producer, small dealers, boards of trade, large elevator men, and exporters.

There was little disagreement arising over the advisability of standardization of grain grades and the desirability of a system of inspection for the enforcement of such grades and standards in interstate commerce. In the shifting of grain in this country, of that which is sold more than one-half leaves the States in which it is produced, so that the system which will be followed in the disposition of one-half or more of the market grain of this country is liable to control, or at least influence, the price to a large extent of that which is sold in intrastate.

At the outset there was a difference of opinion as to whether we should have United States Government supervision of grain grading in the United States or whether we should have Government inspection. The difference between these views amounted to this: Government supervision provided for the United States Government issuing licenses to persons in the great markets to inspect interstate and foreign grain commerce, while Government inspection meant that the Government should appoint inspectors who would be beholding to governmental authority entirely and should be paid out of Government funds or fees arising out of inspections made by governmental appointees. Under the supervision system the Government merely licenses, and does not have anything to do with paying the inspectors. I was among those who favored Government inspection, and in my opinion Government inspection will be ultimately adopted. But after full consideration and some debate I bowed to the will of the majority and sought to aid in making as strong a supervision bill as possible, being willing to await the results of a few years' experience to determine the advisability of greater Government activity and control in this work.

Perhaps the sharpest point of difference between those whose testimony we heard there was along the lines of difference between the interstate dealers in grain and those who export grain. Uniformity in grading and the designations of grades was of course necessary. The seaboard dealers asked to be permitted to have a different standard from those who dealt between the States. It developed in the evidence that the reason for such a request was that for years exporters had been purchasing grains at certain low designated standards and shipping them to foreign countries under a higher designation; as, for instance, wheat or corn purchased as No. 3 from the farmers and small dealers would be exported as No. 2, which, of course, was to the disadvantage of the original producer of the grain or to the small dealer who first shipped it. As the ultimate consumer in foreign countries would be measuring the farmers' No. 3 and No. 2 and giving it a different basis of value from what the farmer was obliged to recognize in his original sales, the committee wisely agreed that American grades designated by numerals, a monopoly of which this bill takes, should mean the same in the small stations throughout the grain belt and in Omaha, Kansas City, Minneapolis, Chicago, Boston, Philadelphia, Liverpool, Bordeaux, and Constantinople.

The denial of this double standard by the committee in framing this bill is the real basis of the complaint of the constituents of my friend, Mr. MOORE, of Pennsylvania.

If the purpose of this bill be carried out, the man who raises wheat or corn in the Northwest can read his market papers and can measure up No. 2 corn or wheat in his bin against the quoted grades of the same cereals in every quoted market of the globe.

The producer and the small dealer, whether it be in grains or in other classes of commerce, is usually disadvantaged by the fact that his information is not so accurate and complete as that of the larger operators. Endow him with equal information, which this bill to an extent attempts, and the handicap which he has borne will have been in part removed.

Grain grading in this way has become of perhaps more emphatic demand during the last year, owing to the fact that the duty has been removed from most of the American grains, especially corn, which in large quantities is being imported into this country. It developed upon the hearings, by overwhelming and uncontradicted evidence, that the importation of corn into this country recently from Argentina has reduced the price of that cereal on our markets from 10 to 15 cents a bushel. As the American farmer, under our new order of things, is compelled to compete with the farmer of Argentina, it is important that the corn imported—the same would be true of other grain—should be graded by some public representative, so that the market would establish the real quality and value of this competing imported article, instead of leaving it to the loose construction of men engaged, for political or other reasons, in decrying the amount imported or the relative value of the foreign grain which must be met and competed with in our American markets.

I am quite convinced that the bill itself, with such imperfections as it carries, but with such good purpose as it bears, and the fact that it furnishes the basis for what is expected will be complete governmental supervision, will pass and be of benefit to the grain producers and grain trade of the United States. [Applause.]

The Late Representative Bremner.

EXTENSION OF REMARKS

OF

HON. J. THOMPSON BAKER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 24, 1915,

On House resolution 711, paying tributes to the memory of Hon. ROBERT G. BREMNER, late a Member of this House from the State of New Jersey.

Mr. BAKER. Mr. Speaker, ROBERT GUNN BREMNER had individuality, force, and character. He could do things, and as much as other men might evade the onus of effort, so much and more he would engage in the struggle that intervenes between being common and uncommon.

His work shows what possibilities lie in the barest opportunity, for he was borne down for years by the torments of wasting physical pain and had no auxiliaries beyond his own personality.

His joyous countenance gave no sign of the suffering that racked his body. He was a conqueror. His great spirit and will triumphed over as many obstacles as ever beset the path of any man, and his loss is a large subtraction from the worth of the world.

Government Ownership.

EXTENSION OF REMARKS
OF
HON. JOHN N. GARNER,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 2, 1915.

Mr. GARNER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech by Hon. MARTIN DIES before the Merchants and Manufacturers' Association at Baltimore recently.

WASHINGTON, *January 30.*

Hon. MARTIN DIES in his recent speech before the Merchants and Manufacturers' Association in Baltimore took occasion to bitterly score the trend of events toward Government ownership. His remarks in full were as follows:

"As fellow shareholders with me in this great enterprise called government, I venture to direct your attention to some of our joint affairs, or, in congressional parlance, to resolve the body into a committee of the whole for the consideration of the state of the Union.

"I candidly confess that I am moved to this discussion by the hope that you may be brought to see certain public questions as I do, and thereby join me in furthering what I conceive to be the public good.

"You are manufacturers and merchants of this great metropolis, but I have not the slightest doubt that your true interests as citizens of the United States are in perfect accord with the true interests of every farmer and laborer of the district which I have the honor to represent in Congress. To my mind, 'what is good for one bee is good for the whole hive.' Men of large affairs and men of small affairs are essential complements to each other, and neither can long escape those general injuries which affect the others.

"As an observant student of current affairs, I give it to you as my conviction that all classes of men, from the richest to the poorest, in all parts of the Union, are suffering and are about to suffer still more from an overproduction of laws. Not all these laws are being ground out at Washington. Almost every State legislature is working overtime grinding out legislative grist.

PROGRESSIVE REFORMERS ARE FLOODING THE COUNTRY.

"The Congress and the country are simply teeming with so-called progressive reformers. All of these uplifters are active; many of them are honest, and some of them are intelligent. They have learned that a tablespoonful of salts is good for constipation, and from that perfectly rational premise they have excitedly jumped to the conclusion that a bushel of salts would render the entire human family 'healthy, wealthy, and wise.' In their boiling imagination the horse that does not run away with the cart is balky, and the legislator who hesitates to destroy the ancient landmarks is a reactionary. They are to be found in every political party, and their schemes for abolishing poverty by law and hastening the millenium by statute are as numerous as the stars of the firmament. They seem determined to put the entire human family in plaster of Paris to prevent the breaking of bones and the spraining of tendons.

"I wish I had the time to detail to you the complex and ramified dreams of this new school of thought—or, rather, thoughtlessness.

"At the risk of tiring you I venture to point out one of their many obsessions, that of Government ownership.

"They want the Government to own and operate everything from a Zebrula farm in Maryland to a railway system in Alaska. There are bills pending in Congress for Government ownership of coal mines, radium mines, farmhouses, armor-plate factories, and other properties and activities too numerous to mention.

OWNERSHIP ASKED BY MEN ON EVERY SIDE.

"The former Postmaster General and the present one have recommended to Congress the Government ownership of telegraph and telephone lines. The Secretary of the Navy has recommended to Congress the Government ownership of oil wells and refineries. The Secretary of the Treasury has recommended the Government ownership of ships of commerce. And so on down the line until every reformer has been heard from and every industry and every human activity has been tendered to the capacious maw of common ownership.

"If a business pays large dividends, like the oil business, we are told that the Government should enter the field. If it is a losing business, like railroading in Alaska, they say the Government should take it over.

"Gentlemen, we are no longer taking steps but strides in the direction of socialism. What is to be the effect of all this? How will business fare and how will taxpayers fare when Uncle Sam pays the men and manages the business of the country through politicians elected by the people? There need be no doubt if you will study Congress as the handler of pay rolls and the proprietor of business. Congress will do in the future as it has done in the past. It will go right on, from year to year, raising the pay of every employee of the Government that votes, voting new pensions, adding to the retirement list, and yielding to every organized demand that is made upon it.

"I will give you a few concrete examples of what the country may expect when Congress becomes the paymaster of this new army of Government employees.

PENSION ROLL TAKEN AS EXAMPLE.

"Take as a starter the million-name pension roll of the Government, which receives from Congress more money than the standing army of any European nation in times of peace. Congress stands in such dread of the pension vote that it does not halt when they have been given all they demand, but complacently hands over multimillions in excess of their demands. The country witnessed that spectacle in the case of the Sherwood pension bill.

"Then consider the case of the rural mail carriers, a smaller army than the pensioners, but no less valiant when a charge is ordered against the Treasury. The rural carriers began with a modest salary of $300 a year in 1896, and I believe Congress has added something to their pay every year until now they receive $1,200 a year, with life and accident insurance thrown in. In his last report the Postmaster General requested authority from Congress to have the rural mails carried by contract at a saving of $17,000,000 annually, but Congress did not dare to do such a thing, for Congress is standing for reelection, and the carriers are a great political power.

"Permit me to give you one other illustration. Our civil-service laws provide that when a civil-service employee ceases to be efficient his pay shall stop, but the departments at Washington are crowded with men and women who are unable to earn their salaries. Why are they not dismissed? Because public opinion will not allow it.

"So much for Uncle Sam as a paymaster. How does he perform as a business manager? A single example will give you a clear insight into the generous old gentleman's business sagacity. He is rich in timber resources; in fact, the most extensive owner of stumpage in the world. This stumpage is being sold off from time to time, and one would suppose some part of the proceeds would find their way to the Treasury. Not so. The army of high-salaried employees of the Forestry Service do not take in enough from the sale of timber to pay their salaries, and Congress taxes the people for the necessary millions to keep the business going.

OTHER CASES ARE SURE TO COME.

"There are other cases in point, and when we come to operate the railroad in Alaska, the telephone lines, ship lines, and oil wells there will be yet other cases in point.

"It is an old saying, but a true one, that everybody's business is nobody's business. Our Government is a large affair, and the idea prevails in all circles that this great and rich Government should be liberal with those who work for it.

"The rural carrier makes twice as much as the farmer to whom he delivers the mail, with half the labor and less than half the investment. Upon that basis, what will the Government conductor in Alaska receive?

"If Congress can not now resist the organized demand of the carriers, how will it be able to resist the organized demand of Government railway employees, Government sailors, and Government telephone operators? If a rural carrier transporting the mails in safety along the country roads of Texas demands life insurance, what will be the demand of Government sailors, who brave the sea, and Government brakesmen, who face the bitter cold in frozen Alaska? How will Congress answer the demands of Government telephone operators? Ah, there will be eloquence for you! The Congressman's constituent who is a conductor and the Senator's constituent who is a sailor will know how to get a job without being fit for it, a raise of salary without earning it, and a pension without deserving it. He will also find a way to stick on the pay roll long after he is able to stay on the job.

WHAT OWNERSHIP WILL CALL FOR.

"Government ownership of one thing in one place calls for Government ownership of other things in other places. Of what use is a Government railroad in Alaska unless there is freight to haul; therefore the Government must develop the coal mines. Of what use are Government ships without cargoes; therefore the Government must assemble them. Of what use are Government oil wells and refineries without pipe lines; therefore the Government must build them. Thus the activities of Government ownership breed like insects in the sun, and there is no place to stop short of socialism, where the individual is lost in a mass of inertia and absolute government becomes the master of all.

"I hold to the faith of the fathers that the government is best which governs least. I would leave the individual free and make the government his servant. I would give all men an equal chance in the race of life, without hobbling the feet of energy to await the approach of sloth.

"And that brings me to an important question which I wish to address to you. Indeed, if I had not wanted to propound this vital question to you I would not be here to-night.

"What are you doing to combat these false doctrines?

"What steps have you taken, what steps are you taking, to arrest the frenzy of the times? Are you doing your full duty as citizens of this free Government? I have but hinted in the most general way at these evils which assault the very foundations of our institutions, but that hint is sufficient to put prudent men on notice, and having that notice it becomes your duty to stop, look, and listen.

WHAT IS THE REMEDY NEEDED?

"Public opinion controls public men, and may I ask you without impertinence what you are doing to mold public questions? Have you taken pains to discuss that matter with your legislators in the State and in the Nation? I grant that your business demands your best attention, but the responsibilities of sovereignty are not to be neglected.

"The air is thick with fallacy. From every chautauqua platform paid orators thunder forth the heresies of socialism. You need not doze away and dream that the wave will break. It is rolling on unchallenged from victory to victory, and there are none to oppose it.

"Congress is not the leader, but the follower of public opinion. Congress follows the crowd that makes the most noise, and I stand before you to-night to tell you in the most solemn manner that it is your duty to make a noise against Government ownership, against socialism, against the untrained hands of theoretical statesmen who blindly tug at the pillars of the temple.

"And may the God of nations save this Republic from the dead sea of socialism, and the fruit thereof, which turn to ashes on the lips."

Mine Experiment and Safety Stations.

EXTENSION OF REMARKS

OF

HON. JAMES M. GRAHAM,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 3, 1915.

Mr. GRAHAM of Illinois. Mr. Speaker, this bill provides for the establishment of 10 mine experiment stations and a total of 15 mine safety stations, including those already existing. The object of it is to make intelligent investigations for the purpose, first, of ascertaining conditions in mining, quarrying, and other mineral industries, and, second, of disseminating the information thus obtained. In this way the lives and limbs and health of men engaged in these industries can be better conserved and much unnecessary waste avoided. The bill further provides that not more than three such stations shall be established in any one fiscal year. The necessity for the passage of this measure must be apparent to everyone who has even the slightest knowledge of mining conditions in the United States.

Under our system of government, police regulations, including laws for public safety and public health, belong to the various States, and this bill is not intended to change that condition. Indeed, Congress would not have the power to do that.

But the burden of making the necessary investigations in order to properly protect the health and the lives of men engaged in mining is too great a burden for many of the individual States, whereas the expense of carrying on these investigations is not a serious burden to the Federal Government; indeed, the cost to it would not be very much greater than the cost to each individual State.

How much wiser and more practical it is, then, to have these investigations made and the information obtained and disseminated by the Federal Government rather than by the 48 different jurisdictions which compose it.

The Bureau of Mines has already done some very good work in this direction. Investigations by it began in a small way in 1908, but they were limited in their scope to mine explosions. A series of explosions, resulting in very great loss of life, occurred shortly before that time, and suggested the necessity for more careful investigations than had been theretofore made. Since its establishment much good has been accomplished.

In the five years from 1902 to 1907 an average of 5.88 men were killed in the coal mines of the United States for each 1,000,000 tons of coal produced. In the five years from 1908 to 1913 this average was reduced to 5.38, a gain of one-half of 1 per cent. This of itself would justify every dollar expended for the maintenance of this service.

The world statistics of loss of life in the work on mining should make us blush for shame. No other nation seems so reckless of the lives of its worker as ours. In Belgium an average of 1.02 men lose their lives in the coal mines out of every thousand employed; in Austria, 1.04; in Great Britain, 1.36; in France, 1.69; in New South Wales, 1.74; in Germany, 2.11; in Japan, 2.92; whereas in the United States 3.74 men in every thousand lose their lives annually.

On a tonnage basis the record is better, but not as good as it should be. From 1901 to 1910 the average number of miners killed for each million tons of coal produced is as follows:

	Per million tons.
New South Wales	3.70
Great Britain	4.40
Austria	5.05
Belgium	5.56
United States	5.83
Germany	7.55
France	7.79
Japan	22.71

It is true that more men were killed in the coal mines of the country from 1908 to 1913 than were killed in the five years from 1902 to 1907. The average per year for the latter five years was 3.73, while for the five former years it is only 3.71. But that increase is due to the greater number of men employed, because relatively there was a decreased percentage of death from this cause. This is clearly shown by the fact that for the former five years one man lost his life in the coal mines for each 172,000 tons of coal produced, whereas in the latter five years one life was lost for each 188,000 tons.

These figures speak eloquently of the benefits derived from investigations made and work done in the narrow field given the bureau, and with the wider field of action which this bill will give it when it becomes a law a correspondingly large degree of benefit will result.

For the past two years—that is, 1912 and 1913—the Bureau of Mines has taken up the work of securing greater safety in metal mining, but statistics as to the good accomplished are not yet available. Our record for the year 1911—the last one for which statistics are available—is a very unenviable one. In Austria over 20,000 men were employed in the metal mines, and the average number killed was 0.49 per thousand; in Queensland over 11,000 men were employed and 0.90 per thousand killed; in Victoria over 14,000 men were employed and 1.35 per thousand killed; in Great Britain over 29,000 were employed and 1.48 per thousand killed; in Spain over 12,000 employed and 1.49 per thousand killed; in Japan over 80,000 employed and 1.76 per thousand killed; in New South Wales over 19,000 men were employed and 1.81 per thousand killed; in Italy over 49,000 employed and 2.36 per thousand killed; in France over 29,000 employed and 2.83 per thousand killed; in the Transvaal over 225,000 employed and 4.14 per thousand killed. The United States makes the worst showing of all with over 165,000 employed and 4.19 per thousand killed. This is a shameful record. Ours is the richest country in the world. Our great wealth can be largely traced to the production of coal and other minerals. That the men who go into the bowels of the earth and work under the most adverse conditions to develop our mineral resources and to add so materially to the wealth of the country should be neglected, almost abandoned, to unnecessary dangers is far from creditable.

As I have said, many of the States in which valuable minerals are produced in great quantities are so small and so lacking in resources that they can not bear the expense of necessary investigations for the purpose of determining the safest and best methods of doing the work in mines.

How necessary it is, then, from a humanitarian, as well as from an economic and industrial point of view, that the Federal Government should employ the most skilled men and the most successful and perfect devices and apparatus for ascertaining everything that can be ascertained for the purpose of promoting the health and the safety of the men who work in the mines, and when it is ascertained, of preparing and publishing and disseminating it among the people especially in the localities where it will do most good.

In 1908 we put our hand to the plow by making a small beginning. Let us not turn back. Let us go on and on until the field of investigation in this matter is so thoroughly cultivated that no opportunity will be neglected for improving conditions which at the very best will still be bad enough.

Cabinet Officers Before Congress.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MURRAY.
OF OKLAHOMA,

Wednesday, February 3, 1915.

CABINET OFFICERS BEFORE CONGRESS.

Mr. MURRAY. Mr. Speaker, the question of personal government as it would be disclosed in bringing the executive officers before Congress is a growing question in the progress, as a result of recent development, to our civilization. I have had occasion to study this problem from the standpoint of other governments and which later I shall be pleased to present to Congress, but as a preliminary discussion of this problem I shall be content with giving the remarks of the Hon. Perry Belmont, a former Member of Congress and once chairman of the Committee on Foreign Affairs, in an address delivered by Mr. Belmont before the American Club of Paris on July 2, 1914. Mr. Belmont has contributed much to this question by reason of his research of statutes of our Government and the so-called Confederate States, which I am sure will prove of interest to all who desire to investigate rightly this problem.

Mr. Belmont's speech on that subject is as follows:

The presence of members of the Cabinet in Congress is not suggested by the parliamentary systems of other governments. Those systems, in their fundamental principles, are so different from ours as to be hardly a safe guide for us. The suggestion belongs to the development of our own laws and must be discussed within its capacity of adjustment to our American system. We Americans have reached the point when we are asking ourselves do we or do we not want executive supremacy to assert itself with increasing emphasis, and has it gradually developed to such a degree as to require an effort in order to restore the equilibrium between the executive and legislative departments of the Government?

The inquiry is nonpartisan and impersonal.

SUBJECT RISES ABOVE PARTY INTEREST.

Equally nonpartisan and impersonal is the proposed plan to enlarge the intercourse between these two great departments, providing, through a mere change in the rules of procedure, for the presence in Congress of members of the Cabinet—the heads of the executive departments created by Congress to whom new duties can be assigned. No encroachment by the legislative branch upon the constitutional privileges of the President or of his Cabinet is suggested, and no invasion by the Executive of the jurisdiction of the legislative branch, nor does it involve any modification of the constitutional distribution and separation of the functions of the three departments of our Government, its distinctive and characteristic feature. Nor would such a change in the rules of procedure interfere with the existing methods of communication, by written reports or by the personal presence before congressional committees, of members of the Cabinet and subordinate chiefs of bureaus of the executive departments.

The subject rises immeasurably above party interests. Democrats and Republicans can unite in promoting this movement for better administrative and legislative methods. Their advantages have been advocated from the executive and administrative point of view by a former Republican President in 1912, and from the legislative standpoint by a Democratic Member of Congress many years ago.

The establishment of this form of accountability to Congress and to public opinion on the part of our executive departments would be far-reaching in creating an improvement of the public service in all its branches. The frequent presence of heads of departments before Congress would render more effective the Senate's power of confirmation and minimize the demoralizing influence of executive patronage over congressional legislation.

Although not affecting the stability of the Cabinet, its members would feel a greater individual and personal responsibility to the country for appointments made in the departments they represent. There would be more continuity of policy and consistency of treatment which those in the public service have a right to expect and which would greatly contribute to their efficiency. The requirements of the public service would become better known, rendering it more difficult to reward party service by appointments that do not meet the demands of an enlightened public opinion.

Whether our national and domestic policies are to be dictated by the purest idealism or not, the end does not necessarily justify the means, and the imperfections in the relations between the two great branches of our Government, which are constantly becoming more evident, should be remedied with the least possible delay. (On February 18, 1913, a resolution embodying the plan proposed in the North American Review, of January, 1912, was introduced in the House of Representatives by Mr. De Forest, of New York, granting to Cabinet officers the privileges of the floor of the House. It was referred to the Committee on Rules and no further action was taken. House resolution 846. Cong. Rec., p. 3442, 3d sess., 63d Cong.)

EXECUTIVE SUPREMACY.

It must be admitted that executive supremacy is accepted as desirable and even promoted by many who sincerely believe it to be of advantage. They are generally distrustful of legislative bodies, including the National Legislature, and approve of the full exercise of all the powers intrusted to the Executive, either in restraint of the legislative branch or in order to compel Congress to follow its will in formulating national policies and carrying them into effect. Very often these views are held by men of ability and character, who have themselves been successful in great constructive undertakings dependent upon executive qualities of high order. They therefore, and very naturally, are convinced that governmental affairs can best be conducted by similar methods. Immediate results are what they desire. They want a man for President who can "do things," even at the risk that the means employed might eventually prove harmful to our institutions or commit the country to a policy from which it would be difficult to recede if found undesirable. Results can be secured with greater facility and dispatch and with safety to our governmental system by open and responsible intercourse through which public opinion would make itself quickly felt rather than by the indirect and secret methods now tolerated. A President may influence the action of Congress by bargaining with Members in regard to appointments and legislation, or by the use of patronage to assist Members and Senators in elections, or in similar ways may render himself subject to condemnation. But public opinion, owing to the lack of direct communication, can be formed and become effective only very slowly, and generally after the injury to the public service, in all its branches, has been created and ill-considered policies have been adopted.

THE DEVELOPMENT OF ABSOLUTE DISCRETIONARY POWER AN UNINTERRUPTED GROWTH IN THE UNITED STATES.

The development of absolute and discretionary powers in control of the Chief Executive has been an uninterrupted growth in the United States. So accustomed has our country become to the exercise of powers of control by Executive orders and departmental rulings that political parties endeavor, every four years, to provide presidential candidates who are expected to become rulers, invested with an authority over which there is scarcely a restraint on the part of Congress, the coordinate branch of the Government. It is not a result accomplished through usurpation of arbitrary power by any of our Presidents, nor has it been brought about by general consent expressed in amendment of the Constitution. The enormous development of national wealth and industrial energy has created a collective pressure of local interests represented in an overwhelming mass of legislative measures, general and special, forced upon the attention of Congress. The resulting subordination by Congress of national and external or especially of foreign policies to the exigencies of internal or domestic policy has accompanied the centralization of power, as if by a law of gravitation, in the Federal Government, and has had the effect of largely diverting to the executive department the consideration of national policies, yielding to the President a practically exclusive control over them.

It is not idle popular curiosity which requires of the press the most detailed and minute descriptions of the personal characteristics of a presidential candidate. It is the man himself, his mental and moral qualifications for personal government, and not so much his political opinions and associations that are considered of importance.

The interest in the personality of an elected President is intense and even pathetic. Owing to the unerring instinct of the American people, telling them that in some way he has been invested by them with an almost unquestioned authority to rule over them during four or eight years in the control and direction of national policies, they realize that the future of the country may be favorably or unfavorably affected by him. Having elected him to the Chief Magistracy, it is a patriotic impulse which leads the great majority to attribute to him all the qualifications that should be required of a ruler possessing absolute discretionary power. In order that he may be given full opportunity to serve his country, there is a general disinclination to criticize the President's exercise of the powers temporarily intrusted to him, which of itself greatly magnifies them. Such an accumulation of unrestrained executive authority might become a more serious menace than it is but for the fact that it is held during a limited period only; but the temptations offered to an ambitious President to succeed himself may obviously involve harmful and even dangerous consequences to the country. (The Democratic Party adopted at the Baltimore convention of 1912 an emphatic platform declaration in favor of a single term for the President, which may be interpreted as the first official party protest against the continuance of personal government and an endeavor to put a check upon it. A joint resolution limiting the term of the President by a proposed amendment to the Constitution to one of six years was adopted by the Senate by a vote of 47 to 23, February 1, 1913, and sent to the House for concurrence. Mr. Clayton, of Alabama, chairman of the Judiciary Committee, called it up for action February 10, 1913, when it was referred to his committee, and no further steps were taken in the matter.)

The never-failing common sense of the American people may be counted upon to eventually dispel the fictions and exaggeration surrounding the presidential office, to establish a clearer point of view with regard to its functions and a more normal relation between the legislative and executive departments of their Government. Their corrective sense of humor is already telling them how absurd it is that the man whose nomination as a candidate for the presidential office is subject to all the accidents, surprises, intrigues, combinations, and even the bargains sometimes preceding and often occurring during nominating conventions, and who becomes, for the time being, their President, should suddenly, for the time being, develop into a sort of superman, endowed with infallibility. Too much is expected of our President from the moment he undertakes the duties of his office. If he exercises to the fullest extent the powers originally inherent in his office, and since yielded to him, he is accused by many of a form of usurpation, and if, acting with moderation, he refrains from such a course, he may be charged with weakness in his relation to Congress. His sincerity and the unselfishness of his motives become subjects of anxious discussion

with endless and futile reiteration, questions which only the final development of his policies and the judgment of history could determine. The impossible is required of him. The impossible is attributed to him.

THE ATTITUDE OF THE PRESS.

The mighty searchlight of the press is constantly turned upon him, leaving the legislative branch in comparative obscurity. His every word and gesture are depicted with dramatic effect by skillful writers. He appears far and near, across the national horizon, in gigantic proportions. He would be more than human did he not lend himself more or less to the illusions which so strengthen him in the popular imagination and in his actual domination of Congress.

As long as a legislative body performs its functions the course of legislation is practically the same. Tariff, currency, and all other important laws have their inception in our Congress, followed by many years of laborious consideration and amendment. The period of discussion and preparation, under rules of procedure, is usually about the same for all measures involving changes, until time finally ripens them for enactment. When that moment comes, under our present system and the prevailing exaggeration of the functions of the Chief Executive, the years of legislative labor, of public discussion, of political debate in and out of Congress, are forgotten. The President appears to the public mind as, in effect, supplanting the legislative branch as if, by some magic of words or of demeanor, to have been enabled personally to bring about the passage of such long-considered legislation, the enactment of which having been already decided upon. When to the powers of persuasion attributed to him is joined the weighty influence of the presidential office, by virtue of official control and distribution of patronage, Congress is indeed placed at an almost insurmountable disadvantage.

Under the present relation of the Executive Department to the National Legislature it is the office, not the man, that is accountable for an executive supremacy leading to personal government, and that enables a President to initiate and undertake personal, rather than national, policies at home and abroad.

Should such a system be maintained Congress would no longer remain a coordinate branch of the Government, but would become subordinate to the Executive. There are members of the National Legislature who believe that condition has already been reached.

THE CONGRESS OF THE UNITED STATES.

There is no legislative body in the world containing men of higher qualifications of ability and character for legislative and executive office, including the presidency, than are found in our Senate and House of Representatives. To have served with distinction many years in Congress greatly adds to the important qualifications for that great office and may be considered the most desirable.

The majority are men of good standing in their respective States and congressional districts, who fully deserve the consideration in which they are held by those whom they represent, and who know them. While this is true with regard to its individual membership, the collective membership of Congress is comparatively unknown to the country. It is the habit to decry the CONGRESSIONAL RECORD and although, as in the legislative journals of all other countries, features appear now and then that are open to criticism, speeches are delivered upon the floor of our Senate and House of Representatives that are the highest order of merit. Our congressional debates contain contributions of the greatest value to the subjects discussed, possessing a wealth of research and power of presentation which are more liable to excite the admiration of the representatives of foreign governments at the National Capital who, in the course of their duties, are called upon to read them, than of our own people. The reason of this is that we all feel it is a laborious and apparently useless task to follow the debates in Congress; nor is the press to blame if comparatively slight public attention is given to them. A complete change of attitude would undoubtedly be brought about if the intercourse between the legislative and executive branches of the Government were open, direct, and more responsible to public opinion. A discussion on the floor of either House between the leaders of the legislative branch and the heads of departments or members of the Cabinet, or what are now so erroneously termed the members of the President's official family, would go far toward restoring the equilibrium that should exist between two great coordinate branches of the Government of the United States. The press would certainly turn its full attention and devote a larger space to such open, verbal, and officially responsible intercourse. The knowledge that the country, through the agency of the press, would be fully informed of such discussions, would have a decided influence on the character of the debates. The membership of the House and of the Senate would, jointly with the Executive Department, address itself directly and officially to the whole Nation, the constituency which now daily hears, in various ways, from the President alone.

A government should be the machinery through which the sovereignty, with us the whole people, may enforce under constitutional form, the public administration of its will.

CABINET OFFICERS IN CONGRESS.

Our Federal Constitution distributes the functions of government among three departments—the executive, legislative, and judicial, which, for the better preservation of constitutional methods, shall be distinct and separate. But it does not contemplate a nonintercourse amounting almost to isolation nor does it intend such a wide separation between the executive and legislative departments as to leave them without facilities of communication most useful to the purposes of legislation and administration. Heads of departments have always communicated, in writing, with the legislative branch and have also been in the habit of appearing personally before the congressional committees having jurisdiction over measures affecting their respective departments. Such personal appearances of heads of departments before the congressional committees have increased in a surprising manner during recent years, and their frequency demonstrates the necessity of a more direct and open communication. There have been occasions when, during important debates and roll calls attention has been directed to the unofficial presence of members of the Cabinet on the floor of Congress for the purpose of making known the needs and policy of the executive departments. Such personal visits would be preferable and equally effective if made with publicity and responsibility that the proposed change in the method of procedure would require.

The Executive may initiate a policy which Congress resists, and the absence of an authorized means of oral communication may prevent the harmony of action necessary to the public welfare. When, on the contrary, there exists an agreement between the executive and legislative branches the intercourse resulting from a common purpose would be promoted by free, oral communications. The executive officers of the Government would be subjected to a more definite form of accountability, having great advantages over the purely parliamentary system. If the head of a department found that he was seriously opposed by a majority in Congress, there would be more than one course left open to him. He might resign; the President could then appoint some one to take his place, without being under the necessity of removing any other member of the administration. Or the head of the department might modify his views, submitting a new and more acceptable proposition, or the administration might decide to recede from their position and wait for a new congressional election to change the attitude of the legislature.

The heads of the departments were at first, with the exception of the Treasury, little more than mere adjuncts of the President. By subsequent acts of Congress, and especially since the tenure-of-office act, the relations between the heads of departments or Cabinet officers and the Chief Executive have been modified. The First Congress gave the President power to remove from office without the assent of the Senate. But during the administration of President Johnson the law-making powers declared in effect that the President can not remove even a Cabinet officer without the Senate's consent. Legislation during the first half of the nineteenth century gradually improved the intercourse between the legislative and executive branches of the Government, but the events of the Civil War arrested its further development.

NO AMENDMENT OF THE CONSTITUTION NECESSARY.

During the period of reconstruction and of the rapid industrial and commercial growth following it, Congress concentrated its attention chiefly on internal and local interests, and the subject was overlooked. In 1865 it was brought to the notice of the House of Representatives. Much has happened since in confirmation of the advantages of the proposed effort to minimize, without the slightest change of our Constitution, the dangers of personal government, and in order that the President be not permitted to initiate personal policies of which the consequences even so great and powerful a Nation as ours might have cause to regret. A resolution to permit the heads of executive departments to occupy seats on the floor of the House of Representatives was introduced March 3, 1865, by Mr. Pendleton, of Ohio, afterwards Senator of that State. Amendments to the rules of the House were reported from a special committee, which, if adopted, would have then changed the methods of carrying on the public business; but the urgency of the Civil War rendered it impossible to secure due attention to the report. Mr. Pendleton went to the Senate and there revived the subject in 1883, securing a favorable report from a special committee signed by Senators Allison, of Iowa; Blaine, of Maine; Ingalls, of Kansas; Voorhees, of Indiana; Butler, of South Carolina; Farley, of California; and others.

It is remarkable that in the year 1912 another statesman from the State of Ohio, a constitutional lawyer of the highest rank, a member himself of another President's Cabinet, should, at the conclusion of his own term as President, have advocated the proposed plan. No argument in its behalf could be made stronger than Mr. Taft's speech at the Lotus Club in New York, when he said:

"I doubt not that the presence of able Cabinet officers on the floor of each House would give greater harmony of plan for the conduct of public business in both Houses, and would secure a much more valuable legislation in accordance with party plans than we have now. On the other hand, the system would enable Congress to come closer to the Executive and more effectively obtain information as to each act, and compel a disclosure for the reasons justifying it, immediately at the time of the act, and keep the public more quickly advised by the direct questions of hostile critics which must be answered, of the progress of business under executive auspices."

He added:

"It would necessitate the appointing to the Cabinet of men used to debate and to defend their position, and it would offer an opportunity for the public to judge of the Executive and his administration much more justly and much more quickly than under our present system."

It may fairly be assumed that had Mr. Taft been reelected he would have formed a Cabinet such as he describes by appointing heads of departments having sufficient knowledge and experience of their duties to enable them to impart to Congress and to the country necessary information. Such qualifications would best justify their appointment to responsible executive offices.

His successor by his personal appearances before Congress demonstrates his conviction that direct communication between the executive and legislative branches is necessary. President Wilson, in taking the initiative at the outset of his administration, recognized the fact that we are the only country in the world where such direct intercourse does not exist, excepting in so far as he has endeavored to supply it. The frequent appearances of President Wilson have been of value chiefly as arguments in favor of the presence of his Cabinet, the heads of the executive departments, rather than of the Chief Executive himself.

The emphatic opinion so clearly stated by ex-President Taft and the attitude of President Wilson on the subject are in the highest degree persuasive and should be conclusive in favor of the proposed plan.

Only on rarest occasions, if ever, should it be considered necessary or advisable for the President to address Congress in person. Under the Constitution he should not and can not, with any advantage, be subjected to interrogatories, nor should he undertake to impart detailed information necessary to legislators. He has limited himself to the expression of his belief in the necessity of certain legislation along certain lines of policy, adding the weight and prestige of the great office he occupies and of the power with which he is temporarily clothed. It may be that the enactment of the legislation in question has already been practically decided by Congress, or that the personal appearance of the President, without the opportunity or privilege on the part of Members to put questions to him, intensifies an existing opposition.

The Constitution declares: "The executive power shall be vested in a President of the United States of America." It also declares that "he shall from time to time give to the Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary and expedient." Annual messages of Presidents Washington and John Adams were delivered in person, somewhat after the manner the sovereign of Great Britain delivers a royal speech, and the annual messages of the two first Presidents were answered by addresses from Congress. This practice was changed by President Jefferson, and ever since all presidential messages to either House of Congress have been delivered by a messenger and in writing, until the innovation introduced by President Wilson, who has repeatedly addressed Congress in personal appeals for the enactment of legislation deemed by him necessary.

The President must remain independent of Congress as to the manner in which he may choose to communicate information with regard to executive matters. The heads of the executive departments are there to aid him in the performance of certain duties, and so far are responsible to him alone. But Congress creates offices by law, and the creation of an office implies all that relates to its constitution. All the heads of

departments are creatures of congressional legislation. The legislative branch should not, and under the Constitution can not, require the President to come in person and answer interrogatories; but Congress, having created the offices held by the heads of departments, may assign new duties to them.

The Constitution does not contain the words "Cabinet officers" or "constitutional advisers." It says that the President may require the opinion in writing of "the principal officer in each department." And for this reason such officers are said to be "constitutional advisers" to the President. As it is within the scope of the law and the spirit of the Constitution that the executive officers or heads of departments may be admitted to discuss public measures on the floor of Congress, it is only a question of expediency whether or not such a change in the method of procedure ought to be adopted.

CONSTITUTION AND LAWS OF CONFEDERATE STATES.

The relation of the executive department and Congress engaged the attention of the men who formed the Confederate Government and modeled its constitution and laws upon those of the Federal Government. Long experience of the Federal system suggested to them, in framing their provisional and permanent constitution as well, that to allow the members of the cabinet seats on the floor of their Congress would be an improvement. They therefore preserved the existing provision of our Constitution, distributing the functions of government, and after the words "and no person holding any office under the Confederate States shall be a member of either house during his continuance in office," they introduced the following clause: "But Congress may by law grant to the principal officers in each of the executive departments a seat upon the floor of either house with the privilege of discussing any measures appertaining to his department." (Confederate States Constitution, art. 1, sec. 6.)

NOT THE PARLIAMENTARY SYSTEM OF OTHER GOVERNMENTS.

There are those who believe that to enable the heads of executive departments to appear before either House would not be the complete parliamentary system of other Governments, because it would not give to the Cabinet, not being permitted, under our Constitution, to vote as Members, the power to direct and control legislative action. It is much to be preferred that it should not. The parliamentary systems of Europe lead to much more instability than does ours. There the cabinet is little more than a committee of the legislature to carry into execution its general policy, and an adverse vote is generally taken to mean the resignation of the Government.

Changes similar to the plan here suggested, as applicable to our system have presented themselves for consideration during the history of American legislation, the annals of Congress containing debates upon the subject, when information was to be obtained through heads of departments.

DISTINCTION BETWEEN CHIEF EXECUTIVE AND OTHER EXECUTIVE OFFICES.

There is a distinction existing between the Executive Office of the President and the office of the several heads of the executive departments. A different rule should therefore be made to apply to each. The President is invested with the authority to make treaties and appoint foreign ambassadors and ministers, with the consent of the Senate. The Secretary of State is not required by the law creating his office to make report or give information to either branch of the Legislature; but whatever is said in respect to foreign affairs is usually said directly by the President in his annual message. Congress has not the power to compel the Secretary of State to give such information as might be required in respect to an appointment, the negotiation of a treaty, or the management of the foreign affairs of the country. But as to matters relating to the Department of State there is no reason why Congress should not claim and exercise the same power which is established in the law organizing the Treasury. To the Executive is given the power to carry out in secret certain measures of foreign policy. Yet, if Congress should invite the Secretary of State to the floor, even in regard to such matters, information which, in his opinion, should be made known, could in this way be communicated and with great benefit to the country.

The Secretary of Foreign Affairs (now the Secretary of State) appeared before the Senate July 22, 1799, in obedience to the following order, issued under the treaty-making power of that body:

"*Ordered*, That the Secretary of Foreign Affairs attend the Senate to-morrow and bring with him such papers as are requisite to give full information relative to the consular convention between France and the United States." (Annals of Congress, Vol. I, p. 52.)

During the Second Congress the following resolution was adopted:

"*Resolved*, That the President of the United States be requested to introduce an inquiry into the causes of the late defeat of the army under the command of Maj. Gen. St. Clair, and also into the causes of the detentions or delays which are suggested to have attended the money, clothing, and provisions and military stores for the use of the said army, and into such other causes as may in any manner have been productive of the said defeat." (Annals of Congress, Vol. III, p. 490.)

The same Congress adopted the following resolution: "That the Secretary of the Treasury be directed to report a plan for the reimbursement of the loans made by the Bank of the United States pursuant to the eleventh section of the act entitled 'An act to incorporate the subscribers to the Bank of the United States.'" (Annals of Congress, Vol. III, p. 723.)

LAW ORGANIZING STATE DEPARTMENT.

The law organizing the Department of Foreign Affairs, as then called, which was the first department created, does not direct the head of that department to make reports or give information to either branch of the Legislature. Nor indeed to this day does the Secretary of State make at the opening of Congress any formal report either to the President or to Congress. But whatever is to be said in respect to foreign affairs is said directly by the President in his annual message. The law of July 27, 1789, establishing his office declares that the Secretary "shall perform and execute such duties as shall from time to time be enjoined upon or entrusted to him by the President of the United States agreeable to the Constitution relative to correspondences, commissions, or instructions to or with public ministers or consuls from the United States, or to negotiations with public ministries from foreign states or princes, or to memorials, or other applications from foreign public ministers or other foreigners, or to such other matters respecting foreign affairs as the President of the United States shall assign to said department; and furthermore, that the said principal officer shall conduct the business of the said department in such manner as the President of the United States shall from time to time order or instruct."

On September 15, 1789, the name of the department was changed, and by the act of 1842 and 1856 the Secretary of State is required annually to lay before Congress: "1. A statement in a compendious form of all such changes and modifications in the commercial systems of other nations, whether by treaties, duties on imports and exports, or other regulations, as shall have been communicated to the department during all commercial information contained in the official publications of other governments which he shall deem sufficiently important. 2. A synopsis of so much of the information which may have been communicated to him by the diplomatic and consular offices during the preceding year as he may deem valuable for public information, specifying the names of any consuls or commercial agents who may have been remiss in transmitting commercial information," and other reports with the consular offices, statements of expenditures, etc.

WAR AND NAVY DEPARTMENTS.

Under these laws the Secretary of State is made directly responsible to Congress in regard to what is therein specified. The law establishing the Department of War was enacted August 7, 1789, and defines the relation of the Secretary to the President in similar terms; by subsequent acts enacted 1809, 1866, and 1868 the Secretary is required to lay before Congress annual statements of contracts and purchases, reports of bids for works, reports of examination of river and harbor improvements, abstracts of returns of States. Laws have been enacted giving the Secretary certain discretionary powers. The Navy Department is affected by similar legislation, Congress making the Secretary of War and the Secretary of Navy his agents in regard to certain specified acts without the intervention of the President.

TREASURY DEPARTMENT.

When Congress dealt with the Treasury Department the theory of legislation was different from that in respect to any of the others. The Secretary of the Treasury is not directed by Congress to conduct the business of his department in such manner "as the President of the United States shall from time to time order or instruct," but, as for enumerating certain specified things which the head of the Treasury has to do, he is required "generally to perform all such service relative to the finances as he shall be directed to perform," without saying by whose direction.

THE SOLUTION OF THE QUESTION.

The law organizing the Treasury may be accepted as the solution of this question. The head of that department can now, at any time either House sees fit to take action under the existing law, be required to give information in person, although he must await an invitation from Congress.

Congress, in creating the office of Secretary of the Treasury, declared that he "shall make report and give information to either branch of the Legislature, either in person or in writing," as either House may require, "respecting all matters which shall appertain to his office." From the time of establishment of his office the Secretary of the Treasury should never have been regarded as merely a member of what is known as the President's official family. The Constitution provides that "all bills for raising revenues shall originate in the House of Representatives." That is the special reason which has given to the House of Representatives the authority under the law establishing his office, which remains unamended and in its original form, to require (the word "require," not "request," is used) the head of the Treasury Department to deliver to Congress from time to time, in person and orally, whatever information may be in possession of the department. This does not mean that Congress can compel the Secretary of the Treasury to disclose an opinion which the President may entertain in respect to tariff legislation, but which the President, for reasons of his own, is unprepared to himself formally communicate to Congress. But from the head of the Treasury Congress may clearly compel information in regard to everything else appertaining to his department.

EXISTING LAW COVERING TREASURY SHOULD BE OBSERVED.

It is obvious that this Cabinet officer especially should be required to appear before Congress; and had the law establishing his office been observed our tariff and currency legislation would have been made clearer to the country and much more satisfactory results secured.

Congress, which made the Treasury Department amenable to its jurisdiction, can claim similar powers over the other executive departments. The annual written reports of the Secretaries, excepting that of the Secretary of the Treasury, are, in general, addressed to the President, and he may or may not, as he chooses, communicate them to Congress, although the custom is for him to send such reports with his annual message. Essential as these reports are for the purposes of legislation and to a proper understanding of the requirements of each department, they invariably need further information and explanation, which no one should be able to give so well as the head of the department himself or the chief of the bureau having its special subject in charge. Much of such information which can, safely for the public interest, be given in the private session of a committee might not be proper for the public session of the whole House.

The proposed plan for open and public intercourse would in no way interfere with the continuance of such committee work. Yet it has often happened that secret methods of the committee are undesirable and that there ought to be publicity of executive details. Such publicity is frequently even necessary to the purpose of an administration or as an exhibition of its policy. Official reports of the proceedings, or hearings, as they are called, before committees are therefore published. It is impossible for the membership of either House to give more than partial attention to them. They are there to represent States and congressional districts. They have special work to perform in the different committees to which they are assigned, and if they give the rest of their time to listening or taking part in what actually goes on in the deliberative assemblies no more can reasonably be asked of them.

PROLONGED AND EXTRA SESSIONS AVOIDED.

But a few words spoken by a competent head of a department would place the whole of Congress on the same vantage ground as members of a committee. The work of Congress would be greatly facilitated, rendering unnecessary the prolonged and extra sessions which have in recent years so often been forced upon the National Legislature.

When the heads of departments go before congressional committees they are received with the utmost official courtesy, even by Members admittedly hostile to them, and the committee of the whole Senate or House will equally preserve its official dignity. There need not be the slightest fear that the heads of our executive departments would be exposed to be badgered by all interrogatories put by inquisitive Members of either House, protected as they would be by carefully drawn rules and regulations.

Formulated into a joint resolution, the proposed change in the method of procedure would be somewhat as follows:

FORM OF JOINT RESOLUTION.

SECTION 1. *Be it enacted by the Senate and the House of Representatives*, That the Secretary of State, Secretary of War, Secretary of the Treasury, Secretary of the Navy, Secretary of the Interior, the Attorney

General, the Postmaster General, etc., shall be entitled to occupy seats on the floor of either House, with the privilege of discussing any measure appertaining to their departments under such rules as may be prescribed.

SEC. 2. That the said Secretaries, Attorney General, and Postmaster General attend the sessions of the Senate and the House of Representatives on ——— of each week and give information in reply to questions.

This would require the heads of departments to attend at stated times to give necessary direct verbal and responsible information to Congress, at the same time securing to them the right to take part in discussions relating to their respective departments.

That limits might be placed upon the right of inquiry the rules of the two Houses might be amended in a manner proposed by the select committee of which Mr. Pendleton, of Ohio, was chairman. Those admendments were intended for the House of Representatives only, but could be made to apply to the Senate as well, so that the Clerk of the Senate and the House of Representatives should keep notice books in which they should enter resolutions requiring information from any of the executive departments or questions intended to be propounded to any member of the Cabinet.

Notice could be given that the resolution of inquiry or question shall be brought up on ——— ———, or a certain day of a certain week, provided that no such resolution shall be called except by unanimous consent within less than three days after the due notice shall have been given. The Clerk could on the same day on which notice is entered transmit to the chief officer in the proper department a copy of the resolution or question, with the name of the Member proposing it and the day when it comes before the House or the Senate for action. The resolutions of inquiry could be taken up under the rules of the two Houses in the order in which they have been entered upon the notice book; the Member offering a resolution could state the object and scope of his resolution and his reason for desiring the information, and the Secretary or head of the proper department could reply, giving the information or the reasons why it should be withheld, and then, without further debate, the House could vote on the resolution, unless it be withdrawn or postponed.

"In putting any questions to the Secretaries or heads of the departments, no argument or opinion should be offered or any facts stated, excepting so far as may be necessary to explain the resolution of inquiry and the reason for which it has been offered. And in answering such question the Secretary or head of department, Attorney General or Postmaster General, should not debate the matter to which the resolution of inquiry refers, nor state facts or opinions other than those necessary to explain the answer or give the required information."

A resolution in somewhat such form is merely suggestive. The change in the rules of procedure would follow the lines regulating resolutions of inquiry now constantly addressed to the executive departments by Congress. These requests for information are often accompanied by the words "if not incompatible with the public interests," especially in addressing the Department of State, recognizing in this manner the constitutional right of the executive to withhold information the publication of which would be "incompatible with the public interest." Resolutions of inquiry, unless adopted immediately by unanimous consent, are referred to the proper committee having jurisdiction, and are usually answered after the lapse of a considerable time, the rapid course of events obliterating the subject from the public mind. Under the proposed change the public would be more quickly advised by direct questions which must be answered. Congress would more effectively obtain information at the time needed. The executive departments would retain constitutional independence of the legislative branch, but would be responsive to public opinion.

A presidential election is again within measurable distance. Shall we look for a ruler practically unrestrained by Congress, expected, and even tempted, to indulge in personal government, or for a President responsible, through his Cabinet, to the most enlightened constituency in the world, the American people?

Mine Experiment and Mine Safety Stations.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 1, 1915.

Mr. RAKER. Mr. Speaker, I am in favor of this legislation. It is supplying a long-felt want in the mining activities of the great mining industry of this country. The mining people of the West have been urging this legislation for many years.

On April 20, 1912, I introduced a bill, H. R. 22080, for mining experiment stations for northern California, and this bill was favorably reported by the Committee on Mines and Mining, but failed of passage by reason of the adjournment of Congress. The report of the committee was as follows:

The Committee on Mines and Mining, to whom was referred the bill (H. R. 22080) to establish a mining experiment station at Auburn, Placer County, Cal., to aid in the development of mineral resources of the United States, and to undertake any investigation or operation for the health and safety of persons employed in mining, quarrying, metallurgical, and other mineral industries, and for other purposes, having had the same under consideration, respectfully recommend that it do pass.

This bill is a substitute for H. R. 17033, which was introduced for identically the same purpose.

The bill is as follows:

"[H. R. 22080, Sixty-second Congress, second session.]

"A bill to establish a mining experiment station at Auburn, Placer County, Cal., to aid in the development of the mineral resources of the United States, and for other purposes.

"Be it enacted, etc., That there be, and is hereby, established at Auburn, Placer County, Cal., a mining experiment station which shall be under the supervision, management, and control of the Bureau of Mines.

"SEC. 2. That the Secretary of the Interior be, and he is hereby, authorized and directed to appoint as the superintendent of said mining experiment station one expert mining and metallurgical engineer, at a salary of $4,000 per annum; one chemist, at a salary of $2,500 per annum; and such other employees as he may deem necessary to carry out the provisions of this act; and for the purpose of inaugurating and maintaining the said mining experiment station, including the payment of salaries, purchase of equipment, supplies, expenses of travel, payment of rent, and other expenses of every sort incident thereto the Secretary of the Interior is authorized to expend annually a sum not exceeding $25,000.

"SEC. 3. That it shall be the province and duty of said mining experiment station, under the direction of the Bureau of Mines, to conduct inquiries and scientific investigations concerning the mining, preparation, treatment, and utilization of ores and other mineral substances, with a view to improving health conditions, increasing safety, efficiency, economic development, and the prevention of waste in the mining, quarrying, metallurgical, and other mineral industries, and as will facilitate the proper and efficient development of the resources of the public domain, and to disseminate information concerning these subjects in such manner as will best carry out the purposes of this act.

"SEC. 4. That nothing in this act shall be construed as authorizing the Bureau of Mines, or any employee of said bureau engaged in the work herein provided for, to undertake any investigation or operation in behalf of any private party, except for the health and safety of persons employed in the mining, quarrying, metallurgical, and other mineral industries; nor shall any of the regular employees of said bureau engaged in such investigations have any personal or private interest in any mine or the products of any mine under investigation."

This bill is introduced for the benefit of the mining interests of California and the Government generally, and to look after the health and safety of the miners. The Sacramento Valley Development Association, at a meeting held at Sacramento, Cal., on February 17, 1912, memorialized Congress upon this subject as follows:

"Whereas House of Representatives bill No. 17033, introduced by Hon. JOHN E. RAKER, entitled 'A bill to establish a mining experiment station at Auburn, Placer County, Cal., to aid in the development of the mineral resources of the United States'; and

"Whereas California leads all other States in the value of its mineral products, which for the year 1909 amounted to approximately $83,000,000; in 1910, $88,000,000; and in 1911, $90,000,000; and

"Whereas the proposed experiment station is in no wise a local matter, but is calculated to develop and improve the mining industry of the entire country and provide a greatly needed and exceedingly important educational opportunity to all persons interested in the mineral industries; and

"Whereas Auburn, Placer County, is centrally located with reference to the great mining districts of the Pacific coast, and very close to the city there are extensive deposits, including gold (quartz and gravel), ores of copper, iron, manganese, anomite and silver, galena and bismuth, and other minerals, such as granite, limestone, porphyry, marble, stentite, magnesite, borytasper, sclemite, asbestos, talc, kaolin, pottery clay, ocher, and quartz suitable for the manufacture of glass: Therefore be it

"*Resolved,* That the Sacramento Valley Development Association, in regular meeting assembled, this 17th day of February, 1912, does indorse said House bill No. 17033, and urges upon Congress the adoption of this bill as a matter of rendering material assistance to one of the greatest of the country's industries.

"The above resolution was unanimously adopted at the regular monthly meeting of the Sacramento Valley Development Association held February 17, 1912.

"O. H. MILLER, *Secretary.*"

The Nevada City Chamber of Commerce, of Nevada City, Cal., have memorialized Congress upon this subject as follows:

MARCH 31, 1912.

Hon. JOHN E. RAKER,
House of Representatives, Washington, D. C.

DEAR SIR: At a recent meeting of this organization it was brought to the notice of the members that through your good offices a large quantity of valuable publications are being received and placed on the shelves of the headquarters. This matter shows a discriminating appreciation of the needs of this locality and your interest in our welfare. We also note with pleasure that the bill introduced by you for the establishment of a mining laboratory at Auburn, in our neighboring county, has been changed to eliminate the possibility of interfering with the business of our assayers, and in its present form has our complete support. In accordance with a motion at to-day's meeting a vote of thanks was passed to you for your good work, and this letter is to inform you of the said action.

Trusting that you may continue to be successful in your efforts for the people of your district, we remain,

Very sincerely, yours,

NEVADA CITY CHAMBER OF COMMERCE.
W. W. WAGGONER, *President.*
GEO. B. FINNEGAN, *Secretary.*

The Auburn Chamber of Commerce have memorialized Congress upon this subject as follows:

AUBURN CHAMBER OF COMMERCE,
Auburn, Cal., February 7, 1912.

Whereas a bill entitled "A bill to establish a mining experiment station at Auburn, Placer County, Cal., to aid in the development of the mineral resources of the United States, and for other purposes" (H. R. 10733), has been introduced in the House of Representatives at Washington; and

Whereas the mineral production of California for the year 1909 amounted, in round numbers, to $83,000,000; in 1910, $88,400,000; and to upward of ninety millions in 1911; and

Whereas the mountains and valleys of Placer County contain an immense amount of mineral wealth, including gold both in quartz and gravel, ores of copper, manganese, tungsten, chromium, and silver (in the Ophir mining district, close to Auburn), galena, bismuth, and other minerals, such as granite, limestone, porphyry, marble, steatite, magnesite, baryta, spar, selenite, asbestos, talc, kaolin, pottery clay, ocher, and glass sand; and

Whereas Placer County is lately reported by the Census Bureau as being the second county in the United States in the number of producing gold mines, Siskiyou County, Cal., being first; and

Whereas Auburn is on the main line of the Southern Pacific, 126 miles from San Francisco, 657 miles from Los Angeles, and 868 miles from Seattle, thus being easy of access from east, west, and south, and as centrally located with reference to the great mining districts of the country as is practically possible; and

Whereas the project is in no way sectional, but calculated to develop the mining industry of the whole Pacific slope and of the entire country; and

Whereas such a station would provide an important educational opportunity for the young men of California and be the means of recruiting a trained force of men to develop the wealth of the country: Therefore be it

Resolved, That the Auburn Chamber of Commerce cordially indorses the said bill and urges upon Congress its adoption, and we also recommend other chambers of commerce and business organizations of the Pacific slope to take similar action; and be it further

Resolved, That copies of this resolution be sent to our Representatives in Congress and to kindred organizations on the coast.

Adopted.

JOHN T. BRAMHALL, *Secretary*.

The San Francisco Call, of California, of date February 19, 1912, speaking editorially upon this subject, says:

"NEED OF A SCHOOL FOR MINING PROSPECTORS.

"A mining experiment station for California would be a useful and valuable help for the promotion of this great industry, and in that view Representative RAKER has introduced a bill in Congress for the establishment in Placer County of an institution of this character.

"The Government has always been neglectful of this industry and was with difficulty persuaded to create a Bureau of Mines. Millions are spent annually on the Government Agricultural Department, and we believe this money is profitably used for the common good, but little or nothing is done by national agency to encourage or assist mining. The production of minerals, gold, oil, copper, and other products is one of California's leading industries, and it is properly the subject of scientific examinations and investigations for the ascertainment of the best and safest methods. It is an extremely hazardous trade, and hitherto this aspect of the industry has been little regarded.

"There is besides a wide field for metallurgical and petrological inquiry. The mountains of California have been explored in a hazardous way by gold seekers, and sometimes they have stumbled on other valuable minerals, but usually by accident.

"The fact is that we do not yet know the full metallurgical potentialities of the California mining region, and it is likely that a school for prospectors would bring valuable and unexpected results."

The American Mining Congress, which is composed of the most able and representative mining men of the West, at its recent annual meeting in the city of Chicago unanimously passed the following resolution:

"Whereas the development of processes of ore treatment capable of handling with profit the vast low-grade deposits and mine dumps of our mining districts is of the greatest importance to the mining industry and to all related industries:

"*Be it resolved*, That it be the sense of the American Mining Congress that the Congress of the United States be, and is hereby, memorialized to provide for the establishment, under the direction of the Bureau of Mines, of a metallurgical experiment ore-testing station or stations for the purpose of devising methods for the extraction of metals from low-grade ores and appropriate sufficient funds for such purpose.

"*Resolved further*, That the officers of the American Mining Congress draft a suitable bill providing for the proper carrying out of this resolution, and that copies of the bill and of this resolution be forwarded to the President of the United States and each Senator and Representative; and that the officers of the American Mining Congress use all honorable means to the end that such a bill may become a law, in view of the increasing importance and complexity of the mining and metallurgical industries, the deplorable waste in mining under present methods, and the great need of trained men to aid in improving these conditions and in developing greater safety and efficiency.

"*Be it resolved*, That the American Mining Congress, now in session at Chicago, urges the Congress of the United States at Washington to provide for aid and cooperation in the maintenance of mining schools in the several States in a manner analogous to that which has been done in behalf of agriculture.

"*Be it resolved*, That the members of the American Mining Congress and the friends of the mining industry throughout the country are hereby urged to cooperate in securing the proper legislation necessary to carry above purpose into effect."

There are many other organizations of business men throughout the West that are and have for some years past been very urgently appealing to Congress for relief in the manner provided by this bill. It should be remembered that while the National Bureau of Mines is doing a splendid work in its limited field and in a limited way, yet its energies are thus far practically entirely devoted to coal-mining industries. There has been no recognition thus far of the metalliferous mining industries of the West, and it is believed that that industry is entitled to consideration by the Government.

This bill was referred to the Department of the Interior for consideration, and the report of the Secretary of the Interior thereon is as follows:

DEPARTMENT OF THE INTERIOR,
Washington, April 1, 1912.

Hon. MARTIN D. FOSTER,
Chairman Committee on Mines and Mining,
House of Representatives.

DEAR SIR: Replying to your letter of March 21, asking for my opinion on House bills 22080, 22081, and 22088, relative to the establishment of mining experiment stations in the States of California, Colorado, and Utah:

The purpose of these bills is to provide for "inquiries and scientific investigations concerning the mining, preparation, treatment, and utilization of ores and other mineral substances, with a view to improving health conditions, increasing safety, efficiency, economic development, and the prevention of waste in the mining, quarrying, metallurgical, and other mineral industries, and as will facilitate the proper and efficient development of the resources of the public domain.

This purpose and the main features of these bills meet with my approval.

Such investigations will be helpful in the development of mining on the public lands of each of the States, both within and without the national forest reserves; and the necessary expenditures for conducting these investigations will be justified more than under ordinary conditions, for the reason that in these States the Government is itself largely interested in any and all investigations looking to the proper development of the mining and metallurgical industries.

I believe, however, that in each of these bills, instead of locating specifically in each State just where the experiment station is to be established, it would be wiser to leave the question of specific location to the department, so that the investigations might be conducted from time to time at whatever point there proved to be most need of investigations and where the investigations might be carried on under the most favorable conditions. Indeed, a movable location for each station might enable the department to carry out the purposes of these bills with greater economy and efficiency than could be done under any other plan.

Under the provisions of these bills there can be no possible conflict of interests between the investigations for which they provide and the work of private mining and metallurgicial engineers and chemists.

Very respectfully,

WALTER L. FISHER, *Secretary*.

The report of the Secretary, as will be observed from the above, is favorable. There is a suggestion that it would be wiser to leave the question of the specific location of the station to the Department of the Interior rather than fixing it at any particular place. The reason your committee has not followed that suggestion is because it is believed that in designating the place which is approved by various mining organizations and mining men the judgment and wishes of these should be considered in that respect.

Within a radius of 100 miles from the proposed location there is practically every known combination of gold, silver, lead, copper, zinc, iron, tungsten, and other mineral-bearing ores, and that a great deal of it is what is known as low-grade refractory ores—that is, ore which is difficult to treat. There are very large deposits and a great variety of it there, and the mining interests of the State have felt that there ought to be an experimental mining station in the mining regions, in charge of skilled chemists and metallurgists, for the purpose of not only analyzing and testing those ores but to devise, if possible, new means and processes of treatment—means and methods of aiding the mining industry and saving from waste and conserving the metal resources of the country and making the very valuable mineral substances in this region available for the use and general welfare of the Nation.

On behalf of the mining industry of the Pacific coast it was shown to your committee that the welfare of this Nation is very much dependent upon and affected by the conservation and economical production and treatment of the metals of the Western and Pacific Coast States; that the gold and silver, copper and lead, zinc and iron, vanadium and uranium, and other rare metals that are produced in the Sierra Nevada and other mountain regions are really the lifeblood of the business of this country and the basis of our prosperity; that the metalliferous mining industry is being neglected and has been neglected; and that metalliferous mining at the present time is at comparatively low ebb. It is believed by your committee that if the Government could assist in evolving processes of handling low-grade ores—that is, ores running below $10 per ton—thousands of mines would be opened and the wealth of the world would be added to by many hundreds of millions of dollars.

It was shown that there are a large number of valuable substances that can not under the present process be handled at all, and the problem of the rejuvenation and continued prosperity of the mining industry depends upon the establishment of the metallurgical experiment stations at which scientific and practical work along that line can be done.

The mining men of the Pacific coast and Sierra Nevada and other western mountains feel that the Government should take an interest in and assit in finding means of treatment of the low-grade refractory ores and get them into a merchantable condition. That will require experiments, expenditures, and skilled expert knowledge of the highest class. They prefer to have experts on the ground there to examine the ores and the metal formations as they exist in nature. The place designated in the bill is located in the center of one of the principal mining and metalliferous portions of the State and is advantageously and suitably located for a mining experiment station.

Auburn is on the main line of the Southern Pacific, 126 miles from San Francisco, 657 miles from Los Angeles, and 868 miles from Seattle, thus being easy of access from east, west, north, and south, and is as centrally located with reference to the great mining districts of the country on the Pacific slope as is practically possible.

The project is in no way sectional, but calculated to develop the mining industry of the whole Pacific slope and of the entire country.

The following shows the amount of money obtained from the sale of public mineral lands from 1901 to 1910, inclusive, and a statement of the mining interests and their past want of consideration:

Proportion of reclamation fund arising from receipts of sales of coal and mineral lands for the fiscal years 1901 to 1911, inclusive.

Years.	Reclamation fund.	Coal and mineral lands, aggregate.[1]	Coal lands, separate.[1]	Mineral lands, separate.[1]
1901	$3,144,821.91	$362,632.85	$200,116.35	$162,516.50
1902	4,585,520.53	462,723.20	171,641.81	291,081.39
1903	8,713,996.60	790,083.56	486,176.54	303,907.02
1904	6,826,253.59	685,668.65	385,276.97	300,391.68
1905	4,805,515.39	551,976.80	269,458.55	282,518.25
1906	5,166,336.50	799,899.27	523,905.72	275,983.55
1907	7,914,131.71	570,415.76	288,092.82	282,322.94
1908	9,416,875.95	886,942.69	599,920.44	287,022.25
1909	7,755,468.81	792,501.66	471,088.08	321,413.58
1910	7,028,185.73	890,385.91	618,828.04	271,557.87
Total, 10 years	65,357,106.72	6,793,220.35	4,014,505.32	2,778,715.03

[1] A deduction of 5 per cent on account of grants to all reclamation States, except Colorado, for purposes of education or of making public roads, has been made from the total receipts from sales of coal and mineral lands.

A small fraction of 1 per cent for fees and commissions of registers and receivers has not been deducted in preparing this statement.

The funds arising from the sale of public lands and set aside for the reclamation work in the public-land States, as indicated by the accompanying tabular statement, during the 10 years ending June 30, 1910, have approximated $65,357,000. Of this amount, $4,000,000 has been derived from the sale of coal lands, and about $2,779,000 from the sale of other mineral lands, making a total derived from the sale of mineral lands of $6,793,000.

During these 10 years this entire fund arising from the proceeds of the sale of all such public lands, including the $6,793,000 arising from the sale of coal and other mineral lands, has been devoted to the upbuilding of agriculture in the public-land States, and no part of this fund has gone to help the mining industry in any of these States.

During this time the mining industry in the public-land States has fallen far behind agriculture in progressive development. Many branches of the industry are showing the need of extended investigations.

The question now raised is as follows:

In view of the fact that the great reclamation work of the Federal Government is now under way, that the policies and principles of irrigation in the arid lands are now well established, that private enterprise is now developing numerous similar irrigation projects in each of the public-land States, and that the reclamation work of the Federal Government has now reached the stage at which the income from the sale of water rights will rapidly add to the funds arising from the sale of public lands and available for irrigation purposes, is it not right and feasible that at this time some considerable portion of the proceeds from the sale of mineral lands should, for a time, be devoted to investigations looking to the upbuilding of the mining industry in the several public-land States?

The principle of equity in this proposition has already been well established, in that the proceeds arising from the administration of the public-forest lands in the West have been largely reappropriated for the care and development of the forest lands; and the application of this principle in behalf of the mining industry would have been called for when the Reclamation Service was established but for the generous desire on the part of all parties in the West that the principle and the policy of irrigation, by both public and private agencies, should be inaugurated and fully established.

Now, however, that this has been accomplished, and that the mining industry in turn is in need of funds for investigations looking to its further development, the principles of right and equity in behalf of the mining industry should receive recognition.

Your committee believes that the welfare of the miner as affects his health and safety and as affects the general welfare of the whole country demands that due recognition and encouragement should be given to the metalliferous-mining industry and the miners of the West and Pacific coast, and recommends the passage of the bill.

On the opening of the Sixty-third Congress, on April 7, 1913, I introduced a similar bill, which was known as H. R. 113.

This bill, H. R. 15869, takes the place of H. R. 113 and other bills of a similar purpose. The report on this bill fully covers the entire field, and I will incorporate it as part of my statement on this most important question:

The Committee on Mines and Mining, having under consideration H. R. 15869, reports the same to the House with the recommendation that the bill be passed.

The pending bill has a double purpose: (1) To establish 10 mining experiment stations in important metal-mining regions in public-land States and 1 in Alaska, with a view to the advancement of the mining industry in those regions, and (2) to establish in the larger developed mining regions of the country 15 movable mine-safety stations for rescue cars, with a view to advancing more rapidly and in a more satisfactory manner the mine-safety education and mine-rescue work under the Bureau of Mines.

The bill now pending is expected to replace recent House bills Nos. 97, 113, 169, 1644, 1646, 1879, 4641, 8898, 9662, 9837, 11098, 11101, 15606, and 15869 of the Sixty-third Congress, looking to the establishment of individual experiment stations in nearly all public-land States, and House bills Nos. 14691, 15221, 15223, and 16195, looking to the establishment of individual mine-rescue cars or stations. Under its provisions will also be included the reconstruction and operation of eight existing mine-rescue cars now being operated under the Bureau of Mines.

This legislation has been prepared with considerable care. It is not based upon the plans or wishes of any one person or organization, but it has been drawn up as a result of a series of conferences among the miners, mine operators, mine surgeons, and engineers from different parts of the country, careful consideration having been given to the needs of the industry and of the country along the lines indicated.

The committee has heard only commendation from the miners and operators for the work of the Bureau of Mines as far as that work has gone, but criticism is general and emphatic concerning the slowness of the progress in that work due to lack of adequate facilities. The situation is well expressed by the following extract in a letter from John Mitchell to the chairman of the committee:

"As one of the advocates of the establishment of the Bureau of Mines, I have watched with interest the good beginning it has made; but I have noted with regret the inadequacy of its facilities for taking up even the matter of coal-mine accidents in a manner commensurate with the urgency and importance of that subject; also the omission from its work of investigations looking to safety and health conditions in the metal mines and investigations looking to the general upbuilding of the industry.

"In a movement of this kind the inadequacy of the facilities tends to bring discredit on the work, and thereby to discourage both those associated with it and those for whose benefit the movement was inaugurated. I fear it also indicates a failure to comprehend the importance and magnitude of the undertaking and the difficulties involved."

CONDITIONS SHOWING THE NEED FOR THIS LEGISLATION.

(1) That the mining industry of the country and especially the metal-mining industries in our public-land States are not keeping pace with the normal development of the country is clearly shown by the following data:

In the population of the public-land States west of the Mississippi and Missouri Rivers there was an increase from 14,800,000 in 1900 to 19,600,000 in 1910, an increase of 32 per cent.

The agricultural crops of the public-land States had a valuation in 1900 of $921,000,000, and a valuation in 1910 of $1,950,000,000, an increase of 112 per cent.

During similar periods the average annual valuation of all the mineral products in the public-land States increased from $287,000,000 during the period 1901 to 1905 to an average annual valuation of $358,000,000 during the period from 1906 to 1910, an increase of a little less than 25 per cent; whereas the production of the precious metals in the public-land States decreased from an annual average valuation of $136,000,000 during the earlier period (1901–1905) to an average annual valuation of $127,000,000 during the latter period (1906–1910), a decrease of nearly 7 per cent.

No better illustration could be given of the contrast in the treatment of these two great national industries than the fact that in spite of this lagging behind of the mining industry during this 10-year period the National Government expended for the reclamation of agricultural lands in these public-land States not only all of the moneys received from the sale of public lands for agricultural purposes, but also nearly $7,000,000 received from the sale of mineral lands.

The reduction in the number of men employed in the different metal-mining industries in the public-land States tells even more clearly than do the figures of production the falling behind of the mining industry. Unfortunately, the figures for the number of the men employed are not available for a majority of the public-land States.

Taking a single one of these States as an example, attention may be called to the fact that the average number of men employed in the metal-mining and metallurgical industries in the State of Colorado for the four-year period 1900 to 1903, inclusive, was 36,189; during the period from 1904 to 1907 this annual loss was reduced to 34,364; and during the four-year period from 1908 to 1911, inclusive, the number of employees was further reduced to 22,560.

(2) Among the causes of this lagging behind of mine development are the following: (a) The exhaustion now under way of the more easily discovered and richer ore deposits and the fact that other rich ore deposits are not now being discovered to such an extent as to replace those now being worked as they become exhausted; (b) the absence of known methods through the use of which many existing low-grade ore deposits can be profitably worked; (c) the wasteful methods now followed in many of the mining and metallurgical operations, which, while in many cases they still bring temporary profits to mine operators, are reducing the national wealth in a manner which can be remedied only by the discovery and use of more efficient methods of treatment.

(3) Of a number of our important mineral resources we have for both the present and future needs of the country but one inadequate supply. The utilization of certain of these important resources, as in the case of coal, oil, and natural gas, destroys them. Common prudence demands that through the necessary researches the Nation should learn how to use this one supply of its mineral resources more wisely and more efficiently or with less waste or loss than is now the case.

(4) The loss of life in the different branches of the mining industry is a discredit to the Nation. It calls for more extended inquiries and researches on the part of the Federal Government and a proper dissemination of the results obtained; it calls for more stringent police supervision or inspection by the States, and for more determined cooperative effort on the part of both the miners and mine owners in the way of making and enforcing safety regulations.

The National Government should do its full duty in this matter without further delay.

MINING, LIKE AGRICULTURE, WILL BE BENEFITED BY THE LARGER CONTRIBUTIONS FROM THE FEDERAL GOVERNMENT.

Congress is now appropriating as an aid to agricultural advancement nearly $28,000,000 per annum. These funds are being expended and the work authorized is being carried forward through a well-organized department with a Cabinet head and with nearly 14,000 employees.

That these large expenditures have resulted in still larger benefits to the country there can be no doubt; and one of the evidences of benefits is to be seen in the large increases in the aggregate value of the farm products of the country, which had an estimated value of less than $5,000,000,000 in the year 1898 and nearly $9,000,000,000 in the year 1912.

The conditions underlying agricultural progress differ as to many details from those associated with mining, but the broad, general principles of progress are the same; and the favorable response to the national aid for agriculture is itself an evidence of the result which can be depended upon if similar aid is extended to mining. Furthermore, the less extended actual experience growing out of the more limited expenditures through the Geological Survey and the Bureau of Mines on behalf of the mining industry furnishes specific evidence of the larger benefits which may be expected to result from larger expenditures in similar directions. Thus, under the Bureau of Mines, through a small expenditure, the saving in national wealth through stopping the waste of natural gas in a single season has aggregated more than $10,000,000, which is several times the total cost of the maintenance of the Bureau of Mines from its beginning.

The benefits which may be expected from more liberal aid to the mining industry will come (1) through the lessening of the unnecessary waste in the mining and treatment of the various mineral products; (2) through increased efficiency in mining operations by the improvement of health and safety conditions; (3) through the development of more efficient and cheaper methods in the treatment of low-grade ore deposits, which are either not now worked at all or are worked only in their richer parts or pockets. These benefits may come about either through the discovery of new methods in connection with the researches by the bureau itself, or through its activity in stimulating researches by private parties.

THE COUNTRY'S RELATION TO ITS TWO GREAT FOUNDATION INDUSTRIES.

A brief statement of facts will indicate in a general way what the National Government is doing to aid development of each of its two great basic industries, and what in turn these two industries are contributing yearly to our national wealth and progress. While the figures are not fully comparable in all respects, they will be found to be essentially correct:

AGRICULTURE AND MINING, THE NATION'S TWO GREAT FOUNDATION INDUSTRIES—WHAT THEY ARE DOING FOR THE NATION AND WHAT THE NATIONAL GOVERNMENT IS DOING FOR EACH OF THESE INDUSTRIES.

What these industries do for the nation:

	Agriculture, including forestry.	Mining and mineral industries.[1]
Number of employees	13,000,000	2,300,000
Yearly value of products	$10,500,000,000	$4,600,000,000
What each worker in these industries contributes to the national wealth yearly	$800	$2,000
What each industry contributes to the freight tonnage of the country yearly.....per cent..	22	60

[1] The scope here includes mining, metallurgical, and other mineral industries, as does the work of the Bureau of Mines.

What the National Government is doing for each of these industries:

Yearly appropriations.	Agriculture.	Mining.
For education:		
From direct appropriation	$2,500,000	Nothing.
From land grants	1,030,000	.....
From Smith-Lever Act for demonstration educational work	[1] 480,000	.....
For 52 experiment stations, one in each State and Territory	1,550,000	Nothing.
For general researches and other work to aid agriculture and mining	22,410,000	[2] $1,967,000
Total	27,970,000	[2] 1,967,000
Per capita contribution from the people of the United States for the advancement of these industries	$0.28	$0.02
Of this contribution the per capita expenditure for safeguarding the lives of 2,300,000 employees in the mining industry is about one-half of 1 cent per annum	.....	.005

[1] $480,000 for 1915; increasing to $4,580,000 for 1925 and each year thereafter.

[2] Of this amount less than $500,000 is expended under the Bureau of Mines in behalf of improvement of safety and health conditions among the 2,300,000 employees in the mining industry; the remainder (about $1,300,000) is expended for geology, topography, water powers, and other problems having to do with the commercial side of mining and other industries, under the Geological Survey; and $135,000 is expended under the Bureau of Mines for the commercial testing of the coal and oil used by the Government.

Nothing can show the national neglect of the mining industry more clearly than does the above tabular statement, in spite of the hazards of that industry and the other conditions which should appeal to the humanitarian as well as to the commercial instincts of the people. But another fact that tells the story with equal emphasis is that during the past 10 years, in addition to the large sums paid out of the National Treasury for the benefit of agriculture and the payment toward the reclamation of agricultural lands in the Western States of all funds arising from the sale of public lands in those States, even the proceeds of the sale of the Nation's mineral resources in like manner have gone not to aid mining but to the reclamation of additional agricultural lands.

WHY THE MINING INDUSTRY HAS RECEIVED RELATIVELY SO LITTLE NATIONAL AID.

Agriculture is much the larger of the two industries; it embraces a larger number of persons, more widely distributed, and each acting as an independent agent. Its products, supplying the country with food and clothing, bring this industry even closer to the lives of the people than is the mining industry, which supplies them with the fuel which cooks their food, heats and lights their houses (built largely of mineral products), operates and supplies a large share of the materials and all the machinery of their factories, conducts and operates largely their facilities for transportation and communication, and supplies more than 60 per cent of the total freight tonnage of the country.

But, more than the above, there must be some special reasons why the mining industry has received relatively so little aid from the National Government, and these are to be found, no doubt, in certain misapprehensions concerning the industry. Mining is usually regarded as an industry made up mainly of the operation of a few large, profitable properties, such as the old Comstock mines in Nevada, the Treadwell mine in Alaska, or the Homestake mine in South Dakota. It is usually considered to be an industry controlled by a few parties, the owners of which large properties would gladly avail themselves of an opportunity to unload on the National Government the cost of conducting researches in which they are particularly interested. Therefore it is usually considered as an industry which should be allowed, and even required, to take care of itself. These assumptions are far from correct.

The facts of the situation are: (1) These large, profitable properties are few in number; that, so far as known, their owners have never joined in a request for Government appropriation to aid the mining industry, nor have they been given any special consideration either in the establishment or in the plans of the Bureau of Mines. They have neither asked for assistance, nor have they endeavored to unload upon the Government any investigations of their own. On the contrary, at the request of the Bureau of Mines, a number of them have expended considerable allotments of their own funds on investigations which promise to be useful not only to them but to other less important mining developments in which they were in no way interested.

(2) While the number of large mines in this country is small, there is a large number of small mines. The records show that in the country as a whole there are about 40,000 coal mines, metal mines, and quarries and about 170,000 oil wells, operated to a smaller or larger extent in connection with the mining operations. In addition to these there is a large number of operating plants connected with the smelting and other metallurgical operations and various mineral industry operations in different parts of the country. Few seem to appreciate the importance of helping those who hold these small properties to find methods of operation by which they can be worked at a profit instead of being helplessly transferred to a few large corporations who alone may have the funds for developing the processes that will make such operations possible.

(3) The most urgent appeal for larger national aid to the mining industry comes from and on behalf of the 2,300,000 employees of the different branches of the industry, who are asking the aid of the Government in the development of safer and more healthful working conditions. This humanitarian appeal should be given precedence over calls for appropriations to advance commercial gains. It comes from employees working under hazardous conditions, and a majority of whom are unfamiliar with our language, our laws, or our institutions, who have not yet realized the good will of any government. They have been led to believe that the Government of the United States is interested in their welfare and was planning to aid in bringing about safer and healthier conditions in the mining industries of this country; but they are becoming discouraged as to the realization of such plans.

(4) Another important need to be met through these larger contributions to the aid of the mining industry is on behalf of the consumers or users of the mineral products distributed throughout every section of the country. These mineral products are coming to be more and more indispensable for use in the domestic life of the people as a basis of our manufactures, a basis of transportation facilities, and in supplying the products to be transported. Under normal conditions, as our mines become deeper and our mineral resources depleted, the per capita cost of mineral products is increasing, and one important purpose of the larger investigations authorized in the pending legislation will be that of finding out how this cost may be kept down to a minimum.

The increasing per capita consumption of mineral products is illustrated by the facts as to coal. The per capita consumption of coal in 1870 was less than 1 ton; it increased to 2½ tons in 1890, and to nearly 6 tons for the year 1913.

SOME SPECIAL REASONS WHY MINING SHOULD RECEIVE LARGER NATIONAL AID.

(1) In agriculture, with ordinary care of our soils, the country may be continuously supplied with annual crops. In dealing with the mining industry the fact should be kept in mind that the country has but one supply of mineral resources; that this one supply must meet the future as well as the present needs of the Nation; and that a century's experience points clearly to the fact that our needs for the more important of these resources, such as mineral fuels, precious metals, potash and phosphate deposits, will increase much more rapidly than will our population.

(2) While certain of our mineral resources, as in the case of metals, are destroyed rather slowly in use, other essential resources, such as coal, oil, and natural gas, are consumed or destroyed beyond recovery in use.

(3) In the utilization of certain of our mineral resources, such as the natural fuels, zinc, and some other of our metals, there are large losses or wastes which are believed to be unnecessary; and it is a wise duty of the National Government that it should aid in the prevention of such wastes.

(4) And more important than all the above in their appeals for the larger aid of the Federal Government are the hazards of the mining industry; the accidents which yearly result in such large losses of life, and the bad health conditions in many mines and metallurgical plants which affect adversely the vitality of employees. None of these conditions are met with in agriculture, but they are in a peculiar way characteristic of the mining industries; and these conditions alone more than justify this additional call upon the Federal Treasury.

PROPOSED MINING EXPERIMENT STATIONS.

The bill authorizes and directs the Secretary of the Interior "to establish and maintain in the several important mining regions of the United States and the Territory of Alaska 10 mining experiment stations." It is expected that these stations will be mainly in the public-land States. The exact location and the question of their being removed from time to time from one point to another is wisely left to the discretion of the Secretary of the Interior in order that the work of the several stations may be carried on at such places and in such manner as will best facilitate the metal-mining resources of the country.

There are located within the boundaries of the several public-land States large bodies of low-grade ores of different types for the efficient treatment of which there are no known methods. There are other large deposits that are being worked in accordance with methods that are highly wasteful of valuable mineral products. On the public lands in these States there are many mineral deposits concerning the value of which little is at present known. These and other associated problems, general in character, will be investigated by the several mining experiment stations to be established in such regions; and it is believed that the results of such investigations will be not only beneficial to the industry but also to the general public.

RELATIONS OF THE WORK OF THE MINING EXPERIMENT STATIONS TO THE WORK UNDER THE GENERAL APPROPRIATIONS OF THE BUREAU OF MINES.

It has been suggested that the work authorized for the several mining experiment stations to be established under this legislation might be carried on under the general appropriations for the Bureau of Mines. If these appropriations were sufficiently ample and stable, an arrangement of the kind suggested might be possible under the existing organic act of the Bureau of Mines, in the same way that the Department of Agriculture a few years ago might have established a series of agricultural experiments in each of the several States. But Congress at that time decided—and no doubt wisely—that with a view to giving such work a more stable basis and a more ample support it was better by formal act to establish agricultural experiment stations in each of the States and Territories, for each of which an appropriation of $30,000 per annum has been authorized.

The Committee on Mines and Mining, after a careful consideration of this question, has decided that it will be unnecessary to establish so large a number of stations for the work in mining as was done in the case of agriculture; but, nevertheless, that there should be at least 10 such stations established and maintained through an appropriation of $25,000 for each such station, in order that the local interests of the more important metal-mining regions in the public-land States might receive ample and continuous consideration.

COOPERATION OF THE STATES IN THIS WORK.

Section 2 of the pending bill authorizes the Secretary of the Interior "to accept lands, buildings, or other contributions from the several States offering to cooperate in carrying out the purposes of this act." It is considered wiser that the act should not make the cooperation of any State a condition of this appropriation, nor was such condition imposed upon the States in the making of the appropriation for agricultural experiment stations. It is practically certain, however, that in mining, as in agriculture, the interested States will cooperate and will cooperate liberally with the National Government in carrying forward this important work.

In support of the agricultural colleges in the several States the appropriations by the States themselves are now many times larger than those by the Federal Government; and in the maintenance of the agricultural experiment stations established by the National Government in each of the States and Territories the appropriations by the States and Territories for 1912 was $1,250,000, as against an appropriation of $1,545,000 from the National Treasury.

It is believed that under the bill as reported the Secretary of the Interior will be able to locate the 10 mining experiment stations and the headquarters of the 15 mine-safety stations, or rescue cars, at such points as will best serve the needs of the industry and the country, and that in doing this he will be able to secure the liberal

cooperation of the several mining States in the maintenance of these stations.

The following letter from the Secretary of the Interior throws light on several phases of this legislation, though it relates especially to the proposal for the establishment of the 10 mining experiment stations:

DEPARTMENT OF THE INTERIOR,
Washington, January 15, 1914.

Hon. M. D. FOSTER,
Chairman Committee on Mines and Mining,
House of Representatives.

MY DEAR DR. FOSTER: Replying to your letter of December 2, which asks for an expression of opinion concerning H. R. 1646, a bill to establish a mining experiment station in the State of Colorado, and for other purposes:

There is also before me a number of similar bills for the establishment of mining experiment stations in other Western States, some of which have already received the approval of the department.

Instead of proceeding with the consideration of the special bill now submitted (H. R. 1646), I beg to report that the general policy and purpose of these several bills, viz, the establishment of experiment stations in public-land States looking to the safer and more efficient development of the mining industry in these States, meets with my hearty approval and commendation.

I would suggest, however, instead of submitting to Congress a number of separate bills for the establishment of individual stations in specified localities, the adoption of the following general policy:

That there be prepared a single bill which would authorize the establishment in the public-land States and in the Territory of Alaska, on a basis in a general way similar to that indicated in the bill under consideration, of 10 mining experiment stations, these to be located at such points in these States and in the Territory of Alaska as would best facilitate the efforts of the Government in behalf of the proper development of the resources on the public lands and the less wasteful development of the mining industry in these public-land States.

There are more than 20 public-land States and the Territory of Alaska in which the mineral resources, and especially the metalliferous resources, are sufficient to constitute an important factor in our future national development. My reason for recommending this much smaller number of mining experiment stations—10 in all—is that in the development of the mining industry we do not have to contend with the varying climatic conditions found in the many different States, and it does not, therefore, seem to me necessary to establish mining experiment stations in each of these States as has been done in the case of agricultural experiment stations. Nevertheless, we do have marked differences not only in the nature of the mineral resources, but also in the conditions under which they must be developed; and the distances between mineral districts in the western half of the United States are so great that I think this number of stations, properly distributed throughout this great region, will be necessary for the proper economic prosecution of the work.

My reason for recommending that the exact location of each of these stations be left for determination at a subsequent date by the Secretary of the Interior is that this arrangement will make possible such distribution of the stations as will not only be most suitable to the proper development of resources, but will also make each station better supplement the work of each other station in carrying out the general purposes of this legislation.

In recommending the establishment of these stations in the public-land States, without, at this time, recommending the establishment of such stations in other parts of the country, the department is perhaps influenced by the fact that in these public-land States the Government is itself greatly interested in the proper development of the mineral resources in these lands; and owing to the large area of public land in these States which is nontaxable these States are less able financially to provide for such investigations than would otherwise be the case.

For a number of years Congress has been appropriating annually for the maintenance of experiment stations in behalf of agriculture in the several States an aggregate sum of nearly $1,500,000. In addition to this, in the public-land States, the Federal Government has expended during the past 12 years $77,150,180 in the reclamation work of making available additional agricultural lands; and of this sum more than $8,000,000 has come from the proceeds of the sale of mineral lands in the public-land States.

I mention these expenditures with no feeling other than that of approval; but in passing, I may call attention to the fact that the mining industry in this country does not appear to have had a square deal in the way of public recognition and aid. And in speaking of the mining industry, we need not especially concern ourselves about the profits of the few large mining companies. There are the many thousand small mine owners and prospectors struggling with difficult problems, there are the safety and welfare of the 2,000,000 employees in the various mining and mineral industries, and there are the other great national problems of waste in these industries, all of which should have our serious concern, and should have also the benefit of extended national inquiry and scientific investigation.

It would seem, therefore, that the annual appropriation necessary for the maintenance in the public-land States and in Alaska of these 10 mining experiment stations, is not only a reasonable proposition, but that it represents only a small part of what the Federal Government should do for the safer and more efficient development of the mining industries of this country.

Very truly, yours,

FRANKLIN K. LANE.

THE NEEDED ENLARGEMENT OF THE MINE-RESCUE CAR WORK, THROUGH THE ESTABLISHMENT AND MAINTENANCE OF 15 MINE-SAFETY STATIONS.

The continuance of large mine disasters and the increase of mine fatalities during the year 1913 as compared with the preceding year have brought from the country a demand for greater effort by miners and mine owners in carrying out reform measures for a more exacting inspection and police supervision by the States and for such a reorganization and enlargement of the facilities of the National Government as will carry forward its investigations more rapidly and result in a better safeguarding of the lives of miners and an improvement in the health conditions which prevail in many of the mining, metallurgical, and other mineral industries.

PLAN PROPOSED IS RESULT OF A SERIES OF CONFERENCES.

That this reorganization and enlargement is urgently needed is the net result of a series of conferences among representatives of the miners, mine operators, and State mine inspectors. At these conferences there was a careful consideration and discussion of the many phases of a greater mine-safety problem as related to the work of each of these agencies. It was the general opinion that the failure of the National Government to press various investigations to a conclusion was retarding the mine-safety movement.

The committee has carefully considered the situation and is of the opinion that the plan proposed in this bill for the enlargement of the equipment and operations of the Bureau of Mines is a necessary feature of any general plan to bring about more rapid progress in the prevention of mine accidents and in the improvement of health conditions in the mining and metallurgical industries. In any general movement for greater mine safety the Federal Government must bear its share. This plan does not represent the conclusion of any one person, but is rather the consensus of opinion of persons familiar with the situation, and it is believed by the committee to be urgently called for at this time.

MINE SAFETY WORK OF THE NATIONAL GOVERNMENT AND ITS RELATION TO THAT OF THE STATES, MINE OPERATORS, AND MINERS.

The following plan of cooperation in mine-safety work in this country has been discussed at these several recent conferences and has met with general acceptance as being in accord with existing law and custom. It is believed that this plan can and should be made more effective in the immediate future through the greater activity and hearty cooperation of the interested parties. The plan is as follows:

1. That the National Government shall conduct on a larger scale the necessary general inquiries and investigations, and that it shall promptly disseminate the information obtained among the miners, mine owners, and mine inspectors, in such manner as will prove most effective in bringing about the needed reforms in preventing mine accidents and in improving health conditions.

2. That each of the several mining States shall enact the needed improvements in legislation, and shall make ample provision for the proper inspection of the mines and the proper enforcement of the mining laws and regulations within their borders.

3. That the mine owners or mine operators shall install and maintain improvements which give reasonable promise of greater safety and better health conditions, as rapidly and as completely as the practicability of such improvements may be demonstrated by inquiries and investigations which the Bureau of Mines is conducting.

4. That the miners and mine operators shall cooperate both in making and in enforcing such rules and regulations as their own experience and as the investigations and inquiries in this and other countries show will aid in carrying out the purposes mentioned, especially such as will best safeguard the lives of the men who work underground.

THE WORK OF THE NATIONAL GOVERNMENT IS FURTHEST BEHIND.

Of the work of these four agencies in behalf of mine safety, that of the Bureau of Mines is most backward. It should, however, be in the lead. The State mine inspectors, mine operators, and miners have of late, through their growing interest in the safety movement, presented to the Bureau of Mines a larger and larger number of inquiries or appeals for information upon which to base their own activities. Such information is being sought for use as a basis for improved legislation in the States, or for a more rigid inspection of mines, or as a basis for better rules and regulations to be drawn up by the miners and mine owners. Improvements along all of these lines are being delayed because of the inability of the bureau to push a variety of its investigations to completion, and thereby supply the information needed.

Therefore the claim frequently set forth of late by the miners, mine owners, and inspectors, that the entire mine-safety movement is being held back by the lagging of the bureau's investigations, is unfortunately a true and reasonable claim.

THE MINE SAFETY WORK OF THE STATES, MINERS, AND MINE OPERATORS.

The work of the States in carrying out their part of this general program in mine safety is being carried forward in a reasonably satisfactory manner. The States are already expending in their inspection and police-supervision work more than the Federal Government is expending in all of its investigations in behalf of mine safety. Thus, for example, a single State, Pennsylvania, maintains a well-organized and efficient inspection force, which includes a chief and 50 district inspectors; it expends in the maintenance of this work $213,000 per annum, paying its district inspectors an average compensation of $3,000 each in addition to traveling expenses. All of the other coal-mining States maintain a system of inspection.

Many of the mine operators have inaugurated a system of operations in which the question of safety is considered of first importance. Something more than 170 mining companies, out of a total of some 3,000 large coal-mining companies and 12,000 smaller coal-mining companies, have individually, or through the association of two or more companies, established 76 mine-rescue stations, at which there have been installed some 1,200 sets of artificial breathing apparatus, besides the auxiliary equipment for first-aid and fire-fighting work. There are also 12 mine-rescue cars now operated by individual mining companies about their own local properties. The Bureau of Mines is endeavoring to stimulate such activity by private companies.

The miners are also taking up the work of safety and are appointing safety committees for the more active promotion of the movement; especially is this true in regions which have been visited by the Government mine-rescue cars.

The representatives of the States, the mine operators, and the miners are all cooperating with the Bureau of Mines in this safety work, and this cooperation should, from year to year, become more and more important a factor in the progress of the safety movement. But the movement is yet in its infancy, and has reached but a few of the 2,300,000 employees in the industry.

WORK OF THE NATIONAL GOVERNMENT FOR MINE SAFETY, AND WHY IT SHOULD COOPERATE IN THIS WORK.

The question as to whether the National Government should contribute to the advancement of its basic industries was settled affirmatively long ago. Congress is now appropriating for the advancement of agriculture, the more important of the two great basic industries, nearly $30,000,000 per annum, and its program of good work includes educational and experimental or research features and general inquiries.

More recently, and on a smaller scale, Congress has inaugurated a series of inquiries and researches looking to the advancement of the other of its two great basic industries—mining. When it is remembered that in mining we deal with serious occupational hazards and with resources of which we have but the one supply, and that this one supply is not only limited, but is consumed or destroyed in use, it will be seen that there are special reasons why the mining industry should be treated with a liberality at least equal to that applied to agriculture.

The work of the National Government for mine safety consists mainly in general inquiries and investigations applicable to the conditions in

all the States and in which all States are interested. It seems reasonable that this general work should be done by the National Government for the following reasons:

1. It is unreasonable to expect any one State to bear the cost of this work which is equally useful to all of the other mining States, and in which all the people in all the other States are directly or indirectly interested.

2. If such work were done by each of the several States the result would be a serious duplication of cost and effort and with varying results. If it were done by the private mine operators there would be still greater duplication and still greater variation in the results, and both the public and the miners would be suspicious of the results obtained.

3. By whatever agency the work may be done, the consumer of coal and other mineral products, representing the citizenship of the entire country, will bear the cost.

It will therefore seem proper that this general work should be conducted by the National Government, under such conditions as will command maximum public confidence and represent minimum duplication of labor and costs.

Furthermore, it is easier for the Federal Government than for the individual States or private companies to obtain information embodying the results of similar inquiries and investigations both in the United States and in the different foreign countries where mining operations are carried on.

EXISTING MINE RESCUE CARS AND STATIONS.

During the past few years the Bureau of Mines has been maintaining and operating during portions of each year six mine rescue stations and eight mine rescue cars, all of these being considered largely as an agency for the dissemination of information among the miners and those in charge of the management of mines and for the training of miners in mine rescue and first-aid methods. This has been primarily an educational work, though in connection with it a large amount of valuable data on mine conditions has been collected.

In order to carry forward this cooperative work in a proper manner, it will be necessary to reorganize and to enlarge the work of the mine-rescue cars or movable stations to a considerable extent.

EXISTING MINE RESCUE STATIONS.

The six stations maintained and operated by the Bureau of Mines during the last few years have been located at the following points:

Pittsburgh, Pa., occupying War Department buildings assigned temporarily for the use of the Bureau of Mines.

Knoxville, Tenn., occupying rooms in the Federal building. This station will be transferred to Jellico, Tenn., in the heart of the coal fields.

Birmingham, Ala., occupying a building erected by the Bureau of Mines on a site donated to the Government for this purpose.

Urbana, Ill., occupying rooms supplied by the State university.

McAlester, Okla., occupying temporarily a building constructed by the local miners and mine operators of the district, cooperating.

Seattle, Wash., occupying a building on the State university grounds that was erected for the Philippine exhibit at the Seattle exposition.

Each of these stations has been in charge of a foreman miner whose special business it was to give training and instruction in mine-rescue and first-aid work to such miners as came to the station for such training. When there are no miners applying for training at the station, the foreman miner in charge is authorized to visit the near-by mines and give instruction at the mines themselves, taking with him the equipment, usually one-half dozen helmet outfits and material for first-aid instruction kept at the station for training purposes. In case of a mine disaster in any of the coal fields near a station the foreman miner takes his rescue equipment to such mines and, with the aid of men trained by him in the immediate vicinity, renders such service as he can in connection with the rescue of the injured or imprisoned miners.

RELATIVE EFFECTIVENESS AND COST OF MINE SAFETY CARS AND FIXED STATIONS.

The average yearly cost of maintaining the existing fixed mine rescue stations has been about $3,200 per station. The average yearly cost of operating a mine rescue car under the existing inadequate system has been about $7,000 per car.

In relative effectiveness—that is, as a means of disseminating information and awakening interest and cooperation among the miners in the mine safety movement—the advantage is greatly in favor of the rescue car, for the reason that the work is carried on at the mines, where all the miners and mine officials can see it in progress and cooperate in the movement, and where the miners who are willing to take special rescue and first-aid training can do so without loss of time from their mining work or incurring expenses of travel and board elsewhere.

For this reason it would be well to discontinue the operation of such fixed mine rescue stations as are not located in the center of a thickly settled mining population and have their work carried on by rescue cars or movable stations. It is, however, considered advisable to maintain certain fixed stations which are so located, such, for example, as those at Birmingham, Ala., and McAlester, Okla., and the two new stations at Jellico, Tenn., and Norton, Va. These five fixed stations, already provided with buildings, can each be operated within its restricted sphere without being considered a part of the pending legislation.

EXISTING RESCUE-CAR WORK.

The mine rescue cars are distributed as follows:

Car No. 1, anthracite coal field, Pennsylvania, headquarters at Wilkes-Barre, Pa.

Car No. 2, Colorado-New Mexico coal fields, headquarters at Denver, Colo.

Car No. 3, Indiana-Kentucky coal fields, headquarters at Evansville, Ind.

Car No. 4, Kansas-Missouri-Oklahoma coal fields, headquarters at Pittsburg, Kans.

Car No. 5, Montana-Washington coal fields, headquarters at Billings, Mont.

Car No. 6, Wyoming-Utah coal fields, headquarters at Rock Springs, Wyo.

Car No. 7, West Virginia-Virginia-east Kentucky coal fields, headquarters at Huntington, W. Va.

Car No. 8, Lake Superior iron and copper districts, headquarters at Ironwood, Mich.

One car (No. 8) is devoted to work in the metal-mining fields.

The cars are out-of-date wooden Pullman coaches, purchased from and refitted by the Pullman Co. to meet the special needs of the Bureau of Mines work, after they had been removed from the regular service because of age and wear. In refitting these cars for the mine rescue work of the bureau one-half of each car is arranged with small rooms, containing office headquarters, certain equipment, and spaces for heating, cooking, eating, and for sleeping berths. In the other one-half of the car the lower Pullman berths have been removed and the entire space is taken up with mine rescue and first-aid equipment. The upper berths have been retained and are used as additional sleeping places for the man connected with the work, and especially for the extra men who, in the absence of other accommodations, may be housed on these cars in times of mine disasters.

The average cost of the seven existing cars—which have no steel underframe—including their refitting, has been about $1,750 per car, this representing mainly the cost of refitting the cars; but the cost of repairs has been heavy, ranging from $500 to more than $1,000 per car per year, in order to keep them in a reasonably safe condition for travel on the road. Railway officials now advise, as being necessary to safety, that all these cars be overhauled and that steel underframes be substituted for the existing weakened and aged wooden underframes.

The average cost of the inadequate equipment on these cars has been about $2,380 for each car.

PERSONNEL, EQUIPMENT, AND OPERATION OF EXISTING RESCUE CARS.

The personnel of the rescue cars in operation during the past few years has been, on each car, two miners, one to give training and demonstrations in the use of breathing apparatus and other life-saving equipment, and the other to train miners in first-aid methods, and a cook-janitor to take care of the car and its equipment and to supply the means for the miners and himself.

The equipment of each rescue car has comprised 8 to 12 sets of artificial breathing apparatus, together with the supplies used in the mine rescue training and demonstrations and the first-aid training and demonstrations, extra supplies of oxygen, and other materials used in the demonstration work and in actual mine rescue work at mine disasters, a limited quantity of fire-fighting apparatus, and sets of ordinary tools to be used in case of repairs on the car or in repairs rendered necessary in portions of the mine.

The operations of each rescue car may be considered as divided between the work in connection with mine disasters and ordinary preventive educational work.

PREVENTIVE EDUCATIONAL WORK OF EXISTING RESCUE CARS.

Under normal conditions each car is expected to be traveling from one mine or group of mines to another in a given coal field. The car stops at a given mine or group of mines for a week or 10 days. During this time the two miners give a number of general demonstrations of mine rescue and first-aid methods; and in addition to this they train from 5 to 10 men at each mine or group of mines in rescue methods and usually a larger number of men, often two or three times as many, in first-aid operations.

Whenever it has been possible, as has been the case at occasional intervals, that a mining engineer could accompany the car, in addition to the demonstration work mentioned above the mining engineer has given a number of public addresses to the miners and the managers of mines, illustrated with lantern-slide pictures, with inscriptions under each picture in different languages, showing in contrast the more dangerous and the safer methods of mining. In the work as it is proposed to enlarge it there will be a mining engineer with the car all the time; and in addition to the lectures and demonstrations he will make examinations into the mining conditions and advise the mine officials on the ground as to possible improvements. The mine surgeon will do the same as to mine sanitation and other health conditions.

WORK OF EXISTING CARS AT MINE DISASTERS.

While the rescue work of the cars is unquestionably important, the committee believes that the preventive educational work carried on by these cars is of still greater importance as a means of helping to prevent mine disasters. The aim of the educational work is to supply miners, mine foremen, fire bosses, and other mine employees with information concerning the latest safety methods and appliances, and to interest them and to secure their cooperation in the general movement for mine safety and better mining conditions.

When a mine disaster occurs in any coal field, the rescue car nearest the mine disaster is carried to the scene of the disaster as quickly as possible by the first passing train or by a special locomotive. When it arrives the two miners with the car, subject to the authority of the State officials, enter at once upon the rescue work at the mine, and they call into service to cooperate with them such additional miners in the vicinity as they may have already trained in rescue methods. In case of a large mine explosion, the two nearest mine rescue cars may be ordered to the scene of the disaster. Generally they are met there by two or more of the mining engineers of the bureau experienced in rescue work and whose business it is to examine into the nature and extent of the mine disaster as soon as possible after the disaster occurs.

CONTRAST BETWEEN THE OLD AND PRESENT MINE RESCUE METHODS.

Under the system now being practiced in this and other countries the pioneer work in entering the mine, while still perhaps full of wreckage and poisonous gases, is being done by men of a specially organized force wearing as may be necessary, artificial breathing apparatus, and carrying with them as precautionary measures safety lamps and small animals (usually birds), which are used for detecting the poisonous carbon monoxide, known as "white damp" by the miners. As rapidly as the ventilation of the mine can be restored, these trained men with artificial breathing apparatus are followed by experienced miners who, while taking every precaution, do not need to wear artificial breathing apparatus.

In connection with the organized system of rescue work along these lines during the past few years, some 80 men have been rescued from the mines by the trained men of the bureau, and some 500 miners have been rescued by other parties, many of these other parties having been trained in rescue methods by the men connected with the bureau.

This well-organized rescue work is in marked contrast with the older rescue methods in force a few years ago. This is illustrated by the experience at a Wyoming mine disaster in 1909 at which 40 miners lost their lives in an unorganized effort to rescue 20 miners caught in a mine explosion a few hours before.

THE NEEDED EXPANSION OF THE MINE SAFETY CAR WORK.

Each of the seven rescue cars operated in the coal fields during the past three years has been kept in operation during an average of five to six months each year, the full time that the cars could be operated with the funds available. Furthermore, it has not been possible to

keep on each mine-rescue car either a mining engineer or a surgeon, and for this reason not only has the work of the car been restricted in time but also restricted in effectiveness.

The experience during the past few years has shown that several of these cars were at the time of their purchase already too badly worn to permit of their being used for extended journeys, and in the case of several cars the cost of the repairs has already exceeded the original cost, so that even the present work can not be continued without the overhauling and repair of the cars now in the service.

Moreover, as regards several of the cars, although the railway companies have been willing to handle them on slow trains they have not considered it safe to handle these same cars on fast express trains, although, of course, speed is highly desirable in time of serious mine disasters.

Railway officials have therefore recommended that all of the existing rescue cars, except car No. 8, which was so treated at the time of its original purchase, should have steel underframes substituted for the wooden underframes which these old cars now have, and should be subjected to a thorough overhauling and repairing before being placed in service. They also recommend that in the purchase of new cars in connection with the proposed extension of this work, all of these new cars should have steel underframes. These changes are regarded as being necessary, not only for the safety of the cars themselves and the men traveling with them, but also to prevent the wrecking of the trains to which these cars are attached.

The enlargement of the work should take place along the following lines:

(1) Each of the eight existing mine rescue cars should be thoroughly repaired, and as a part of such repairs each of the seven cars now having old wooden underframes should be given a steel underframe.

(2) The equipment for each of the existing cars should be thoroughly overhauled and repaired and increased in quantity, so that in addition to the ordinary equipment required for the training and demonstration work there would be certain new equipment kept in the best possible condition for the hazardous work attending mine disasters. Among other items of equipment there should be special facilities for hoisting (a few men at a time), fire fighting, etc., for use when the ordinary equipment of the mine may be destroyed or so badly damaged as to be temporarily out of commission.

(3) There should be added to each car a mining engineer, a mine surgeon, and a stenographic clerk. (The duties of and need for each of these is stated below.)

(4) The total number of cars should be increased from 8 now in hand—7 in the coal fields and 1 in the metal-mining regions—to 15, through the purchase of 7 additional cars. Thirteen of these cars should be operated in the coal fields and two in the metal-mining regions.

(5) Each of these cars should be operated for a period of 11 months. The thirteenth car would be operated as a relief car for the other 12 in the coal fields, replacing 1 of the 12 cars during each succeeding month. Under such a system in the coal fields 12 cars with full crews would in this way be actually in full operation for the entire year. The 2 cars assigned to the metal-mine regions should each be operated for 11 months.

(6) There should be a headquarters organization located at some central point, probably at the Pittsburgh laboratories, under the general direction of which all of the cars could be operated. Here the necessary researches could be conducted, looking to the improvement of rescue equipment, together with the repairs of such equipment; and such other work could be done as would contribute to the efficiency of the entire work connected with such central organization. There would be a chief surgeon and a chief mining engineer who, in addition to guiding the work of the several mining engineers and surgeons on all of the mine rescue cars, would follow up their work by suggestions and cooperation in the organization of local first-aid teams at the different mines, and encouraging the reading of miners' circulars and other publications sent out by the bureau. Engineers connected with this central organization should also visit each mine a few weeks or months subsequent to the visit of the mine rescue car, with a view to seeing that the new interest in safety measures, occasioned by the work of the rescue car, is kept alive.

DUTIES OF THESE ADDITIONAL MEN, AND WHY NECESSARY.

The mining engineer will have charge of the car operations. He will arrange for and will join in giving the public demonstrations and illustrated addresses to be attended by all of the miners of the particular region where the car may stop. He will make a careful examination of each mine as to its safety conditions and will suggest possible improvements in equipment and methods. He will submit to the Bureau of Mines reports of all operations of the car, and more especially as to safety conditions and possible improvements at each mine or group of mines. His recommendations will be taken up with the mine owners with a view to securing their adoption. The services of an experienced mining engineer in charge of the work of each of these cars is of evident importance. Indeed, it may be regarded as essential to success.

The mine surgeon or sanitary engineer will make a medical examination of all the miners who may apply for training. This requires skill and experience. No miner should be accepted for rescue training who is not physically sound. The surgeon will himself superintend the training in first aid to the injured. Many physicians have protested against the former practice of the Bureau of Mines of having this training done by miners.

The mine surgeon will also make a careful examination into the health conditions in and about the mines, and will submit recommendations in behalf of such improvements to the mine management. This he will do on a basis of cooperation between the Bureau of Mines and the Public Health Service. He will give general illustrated lectures to the miners and other mine employees on possible improvements in health conditions. He will submit reports to the Bureau of Mines in connection with all operations relating to the examination and training of the miners and the examination of and possible improvements in the health conditions in and about the mines. At mine disasters the surgeon will aid in reviving the rescued miners, a work in which extended experience and skill is needed.

The stenographic clerk will assist the mining engineer and the mine surgeon in recording their examinations and inquiries and in the preparation of their reports to the Bureau of Mines and to the mine management. Inasmuch as the mining engineer, the mine surgeon, and the two miners will generally be absent from the car during the time of making their examinations and doing their training work, the stenographic clerk will at such times be in charge of the car, explaining its operations to visiting miners and mine operators, and will look after the instruments and other equipment kept on board the car. This work of the stenographic clerk would greatly increase the efficiency of all the other men on the car and would give the bureau such records of the work and of mining conditions as would not be otherwise obtainable.

Of the two miners, the foreman miner will carry out the training in connection with the mine rescue work and the first-aid miner that in the first-aid work, both under the supervision of the mine surgeon. In time of mine disasters both these miners will be expected to take part in organizing and leading the rescue work in the mines.

DO RESULTS ALREADY OBTAINED WARRANT THIS EXPANSION OF THE WORK?

This question may be answered in the affirmative without hesitation if the entire situation is considered. Some evidence of past improvement is shown by the accompanying statistical data, although the improvement is neither decisive nor regular. However, in the examination of these data the following facts should be understood.

(1) That the safety investigations of the Government since their inauguration in 1908 have been limited almost entirely to a study of mine explosions (which cause less than one-fifth of our total coal-mine fatalities); and in these explosion investigations the bureau's experimental coal mine—in which its most important experiments are to be conducted—was not ready for satisfactory work until 1913. Meanwhile the requests for funds with which to study, investigate, and develop preventive measures in connection with other and even more important causes of mine accidents have unfortunately had little response.

(2) Every year our mining operations enlarge, the number of men working in individual mines increases, and our coal mines become deeper and naturally more hazardous from increasing gas, falls of roof, machinery, and other conditions associated with greater depths and pressures. Therefore, unless suitable safety improvements are devised and utilized, the death rate in our mines will increase even faster than our mineral production.

The tabular statement given below will indicate some of the important facts relative to the loss of life in the coal mines of the country during the past 12 years. Taking the average death rates for the six years 1902–1907, inclusive, prior to the inauguration of the Government's investigations of mine explosions, and comparing these with the averages for the six years 1908–1913, inclusive, since the inauguration of these investigations, it brings out the following facts:

Average number of men killed in the coal mines of the United States per 1,000 employed:	
1902 to 1907, average for 5 years	3.71
1908 to 1913, average for 5 years	3.73
Number of men killed in the coal mines of the United States per 1,000,000 short tons of coal mined:	
1902 to 1907, average for 5 years	5.88
1908 to 1913, average for 5 years	5.38
Production of coal in the United States, in short tons, per fatal accident:	
1902 to 1907, average for 5 years—tons	172,000
1908 to 1913, average for 5 years—do	188,000

Production, number of men employed, and number of men killed in and about the coal mines in the United States in the calendar years 1902 to 1913, inclusive.[1]

Year.	Production (short tons).[2]	Number employed.[2]	Number killed.			Production per death (short tons).
			Total.	Per 1,000 employed.	Per 1,000,000 short tons mined.	
1902	296,687,066	510,437	1,895	3.71	6.39	156,563
1903	345,200,166	547,431	1,752	3.20	5.08	197,317
1904	339,164,812	573,373	2,004	3.50	5.91	169,244
1905	386,379,243	615,628	2,232	3.63	5.78	173,109
1906	407,835,003	631,086	2,116	3.35	5.19	192,710
1907	461,406,023	655,418	3,197	4.88	6.93	144,325
1908	404,932,764	672,794	2,449	3.64	6.05	165,346
1909	460,761,427	666,523	2,668	4.00	5.79	172,699
1910	501,596,378	725,030	2,840	3.92	5.66	176,618
1911	496,221,168	728,348	2,719	3.73	5.48	182,501
1912	534,466,580	722,662	2,360	3.27	4.41	226,469
1913	[3] 570,000,000	[3] 728,355	[4] 2,785	3.82	4.88	204,688

[1] The figures for production and number of men employed are from "Mineral Resources of the United States," U. S. Geol. Survey, except for the number of men employed in 1911, which were compiled by the Bureau of Mines.

[2] These figures represent the production and the number of men employed in those States in which records of fatal accidents are in existence. The figures are directly comparable with the number of men killed as given in the fifth column and are those on which the mortality rates are based. It will be noted that the portion of the industry not represented in the rates from 1902 to 1909 is small and that since 1909 the entire industry is represented.

[3] Estimated. Subject to revision.

[4] Does not include December fatalities in Kentucky.

Average number killed per 1,000 employed in the coal mines of the principal coal-producing countries for the 10-year period 1901 to 1910.

	India.	Belgium.	Austria.	Great Britain.	France.	New South Wales.	Germany.	Japan.	United States.
Average, 1901–1910	0.96	1.02	1.04	1.36	1.69	1.74	2.11	2.92	3.74

Average number killed per 1,000,000 short tons of coal mined in the principal coal-producing countries for the 10-year period 1901 to 1910.

	New South Wales.	Great Britain.	Austria.	Belgium.	United States.	Germany.	France.	India.	Japan.
Average, 1901–1910	3.70	4.40	5.05	5.56	5.83	7.55	7.79	9.00	22.71

Safety work by the Bureau of Mines in metal mining in the United States has been limited to the past two years (1912 and 1913). The year 1911 is the latest for which metal-mine accident data are available for other countries. The data for this one year will serve to indicate the relatively high death rate in the metal mines of the United States and other countries.

Countries.	1911	
	Number employed.	Number killed per 1,000 employed.
Australasia:		
New South Wales	19,360	1.81
New Zealand	7,400	.68
Queensland	11,091	.90
Tasmania	5,247	.76
Victoria	14,051	1.35
Western Australia	15,428	2.33
Austria	20,299	.49
France	29,988	2.83
Great Britain	29,025	1.48
Greece	6,764	2.07
Italy	49,498	2.36
Japan	80,896	1.76
Portugal	7,484	1.34
Spain	120,781	1.49
Transvaal	225,538	4.14
United States	165,979	4.19

(3) Among the more specific safety improvements that are being developed and are now being introduced in coal mining under the lead of the Bureau of Mines are: (a) A new type of quick-flame, low-temperature explosive, much safer than black powder for use in gaseous and dusty mines. There are now 116 different explosives of this new type manufactured by 18 different companies, and there is already in use (1913) more than 25,000,000 pounds of these explosives annually; (b) new types of miners' electric safety lamps and safety electric motors for use in gaseous mines. These and other improvements now underway in connection with safety measures, rescue and first-aid methods, and the general educational work inaugurated in connection with the mine rescue cars and stations during the past three years have won the cooperation of the miners and the mine operators, and the conditions are now favorable to the far larger cooperation of the miners and operators with the Bureau of Mines in its proposed larger work.

Many large mine operators have already put in force safety precautions to such an extent that the death rate in their own mines has been largely reduced, and in this work they have the cooperation of the miners and mine inspectors.

It should be remembered, also, in this connection that the mine rescue-car work has as yet reached only a small percentage of even the coal miners of the United States. But there is much evidence going to show that the miners and other mine employees who have attended the illustrated lectures and demonstrations given in connection with the work of the rescue cars have exhibited a much greater interest in the mine safety work of the bureau, have called for its publications in increasing numbers, and in other ways have shown a willingness to cooperate with the bureau and with the inspectors and mine operators in putting safety appliances and methods into practice.

The condition which, more than any other, is retarding progress in this great safety movement is the failure of the National Government to make adequate provision for the more rapid extension of its research and educational work. Miners and mine operators agree in commending the thoroughness and effectiveness of the work of the Bureau of Mines as far as it has been able to go, and in expressing their willingness to accept and act upon its advice and recommendations, but they complain of the long delays and of serious limitations in this work; and the lack of conclusions and of specific recommendations as regards many possible improvements in safety and health conditions are seriously holding back such improvements in all parts of the country.

PROGRESS OF THE WORK UNDER THE PRESENT AS COMPARED WITH THE PROPOSED LARGER OPERATIONS.

A careful estimate shows that at the rate of progress under existing conditions between 12 and 15 years would be required for a single visit of one of the existing rescue cars to each important coal mine or group of mines in the United States. If the enlargement of the work now proposed is carried out in full, a rescue car, with its demonstrational and other educational work, would visit each important mine or group of mines in the United States once in four years' time, and during this time the training work of these cars would be so extended that from 10 to 30 miners would be trained in rescue and first-aid operations at each important mine or group of mines in the country.

WHY THIS EDUCATIONAL WORK CAN NOT BE CARRIED ON BY PUBLICATIONS ALONE.

A large proportion of the men entering the mines in the United States each year come from the farms and villages of different European countries; they are unfamiliar with our language, our institutions, and our laws, and know little or nothing of mining.

A majority of the men now working in the coal mines of the United States to-day speak and read but little English. It is therefore difficult to reach these men through publications, even when the latter are prepared in the most simple and elementary manner.

The plan followed most successfully by the employees of the Bureau of Mines in reaching and interesting these men is through giving actual working demonstrations in mine rescue, first aid, and other safety measures and methods, and the giving of lectures, illustrated with lantern-slide pictures which contrast the safe and the dangerous methods. Each of these pictures used has a short, one-line description under it in four or more different languages most common among the miners. In these lectures and demonstrations local interpreters are used at intervals as the need for them may appear.

THIS DEMONSTRATION WORK AWAKENS NEW INTEREST AMONG MINERS AND IS GOOD WELFARE WORK.

Work of this kind develops a new interest in the safety work among the miners, and following the movements of each of the existing rescue cars this interest on the part of the miners is shown in their call for the publications which treat of the mine safety work.

So far as it has gone, this educational work is assuredly developing safer and better mining, and the leaders among the miners express the belief that if carried forward on a larger scale and in a more thorough manner the work can not fail to develop also better citizenship among these miners.

Certainly many miners in different parts of the country have expressed a growing interest in and friendly feelings toward the National Government, as they come to see the evidences that the National Government is interested in their welfare. On the other hand, the great majority of the miners have not yet seen evidences of any public interest in their welfare, and no one need feel surprised at their lack of interest in government. Their chief idea of government—brought with them to this country—is that of suppression or oppression. In the enlargement of the mine safety work now proposed the National Government certainly has its best opportunity to show to more than 2,000,000 of its citizens that it does have a real and an active humanitarian interest in promoting their welfare; and it can thereby gain their good will.

All this demonstrational and other educational work is of a pioneer character. If the mining conditions of the country can be improved and mining made safer and more attractive, men will stay with the mining industry in this country as they have been doing in other countries, and there would be less need of training a new army of miners each year. It will, therefore, be real economy to push the work more rapidly now.

There is every reason to believe that such educational work carried forward by the National Government under such methods as to win the confidence and cooperation of the miner will make for real progress in this industry in the same way that the national appropriations for educational work in agriculture have led to improvements and real progress in that industry, which are building up a greater public welfare.

COST OF THE PROPOSED ENLARGEMENT OF THE SAFETY-CAR WORK.

The cost of overhauling the eight existing mine rescue cars, of providing seven additional mine rescue cars with their full equipment, and of operating all of these cars throughout the entire year on the basis described above is shown in the tabular statement given below.

Of the eight existing cars, seven will need to be provided with steel underframes, to be substituted in each car for the worn-out wooden underframes which they now have, for reasons previously stated. This substitution of the steel underframes, together with the other needed repairs, will make the overhauling of seven of the existing cars cost about $3,000 per car. One of the eight cars already has a steel underframe, and its overhauling will be inexpensive. The estimates obtained covering the purchase of these additional cars indicates an average cost of about $5,500 per car.

Nearly all of the existing cars when originally constructed as new cars were valued at from $20,000 to $30,000 per car. They were purchased by the Bureau of Mines at from $1,500 to $2,500 each after they had been abandoned for ordinary usage by the Pullman Co.

The cost of repairing cars already in use, of purchasing new cars, and of equipping and operating the cars in accordance with the plan set forth are given in the following statement:

Cost of the cars:		
Repairs of 7 of the 8 existing cars, at $3,000 (providing each with safer steel underframes)	$21,000	
Purchase of 7 additional cars, at $5,500	38,500	
		$59,500
Cost of equipment:		
New additional equipment for 8 existing cars (estimated for in sundry civil bill, $30,000; if not incorporated in sundry civil bill, should be incorporated in this estimate), equipment for 7 new cars, at $4,500		31,500
Total cost of cars and equipment		91,000
Cost of operating 1 car:		
Services—		
1 mining engineer	$3,000	
1 first-aid surgeon	2,700	
1 foreman miner	1,800	
1 first-aid miner	1,080	
1 stenographic clerk	1,000	
1 cook and janitor	720	
		10,900
Maintenance—		
Travel of men when absent from car	1,200	
Subsistence of 6 men, at $1 per day on the car, 335 days	2,010	
Repairs to the car and equipment	1,200	
Supplies used in training	4,440	
Special extra material and labor at mine disasters	600	
		9,450
		20,350

Cost of operating in the field 15 cars, at $20,350 each		$305,250
Cost of headquarters, organization, and work necessary to successful operation in the field of the 15 mine rescue or mine safety cars (see par. 6, p. 16):		
1 mining engineer in charge	4,500	
1 mining engineer in charge of rescue organization work following the car operations	4,000	
1 chief surgeon	4,000	
1 engineer in charge of rescue equipment and methods	3,000	
1 engineer in charge of publications for supplementing rescue and first-aid demonstrations	3,000	
2 special assistants, at $2,400	4,800	
2 mechanicians for rescue equipment, at $1,800	3,600	
2 assistant mechanicians for rescue equipment, at $1,500	3,000	
2 safety commissioners for special organization work among the miners, at $3,300	6,600	
Special expert services for improvements in rescue equipment and methods	6,000	
3 stenographers and typewriters, at $1,500	4,500	
2 stenographers and typewriters, at $1,200	2,400	
Travel expenses and subsistence	10,000	
Shop equipment and supplies for rescue equipment, repairs, and improvements	10,310	
		$69,750
Total yearly cost of the mine safety work		375,000
Amount now expended for operation on the existing incomplete and inefficient basis of 8 existing rescue cars during current year (9 months) under the appropriations for mine-accident investigations		70,150

As will be seen from the above tabular statement the total investment in additional cars and equipment and in the necessary repairs of existing cars and the equipment proposed for these larger operations aggregates $91,000. This is not to be considered an additional appropriation, for the reason that these expenses might be covered in the following manner: It is likely that between two and three months would elapse following the passage of the appropriation act before all the additional cars and equipment and personnel of the various cars could be secured, and therefore that disbursements for operation might be conveniently delayed until three months following the passage of the appropriation act. By this date a three-months' portion of the proposed appropriation of $375,000 for the mine rescue work will be saved sufficient to cover the amount of the necessary investment in cars and equipment, and after that date the entire machinery of the enlarged operations would be operated continuously during the remaining nine months.

THE URGENT NEED OF ADDITIONAL MINE SAFETY INVESTIGATIONS.

The amount to be expended for the operation of the eight existing rescue cars operated on their smaller scale during seven to eight months of the current year is estimated to be $70,150. This amount may, therefore, be deducted from the existing appropriation of $347,000 for mine accidents, but in the opinion of the committee it should be allowed to remain as a part of that appropriation to be expended on long-delayed urgent investigations in relation to other mine safety improvements, which for lack of funds the bureau has not yet been able to take up. These investigations are as follows:

(1) Necessary extension of experimental mine work: Recent mine explosions render necessary during the fiscal year 1915 an increase in the allotment for the explosion tests in the experimental mine of $15,000 more than the allotment for this work during the current year. The results of the current year's experiments are highly encouraging as to the possible use of stone dust and dry clay as preventive of coal-dust explosions, but they also indicate the need of extending the dimensions of the mine to a considerable extent.

(2) Accidents from falls of roof: One of these is the falls of roof in mining, which causes from one-third to one-half the total loss of life charged against the mining operations in this country. This is an investigation requiring thoroughly trained technical knowledge. The loss of life from this cause during the last five years in coal mines alone has been more than 6,000 and the seriously injured 18,000 to 20,000.

The situation is not to be remedied by the claim that this class of accidents is due to carelessness. There is often a reasonable ignorance on the part of both the miners and the mine foreman concerning the nature of the roof rock and its behavior under different conditions of moisture and pressure. A thorough investigation of the problems, using both the practical experience of the miner and the technical knowledge of the engineer, can not fail to be helpful..

It has been urged that in this country we should follow the practice of Great Britain, in which country the proportionate loss of life from this cause during the past five years was less than one-half that in the United States. But the adoption of the British timbering practice in all our American coal mines would add $50,000,000 to $75,000,000 yearly to the cost of coal in this country, to be paid by the consumers of coal in all the States.

It is estimated that an investigation during the next few years, costing about $40,000 per annum, would probably find other and far cheaper methods of accomplishing the same result.

(3) Accidents from mine equipment: The loss of life from mining, haulage, and hoisting machinery, failure of signals, etc., in the coal mines of the United States during the past five years was 2,100 men, and more than 6,000 men were seriously injured. There is serious need of investigation in this subject, which as yet the bureau has not been able to undertake. It is estimated that such an investigation would cost $35,000 per annum.

(4) Accidents (other than explosions) from electricity: From this cause there have been many deaths and many serious nonfatal accidents in the mines of the country during the past five years. An investigation of this subject has thus far been beyond the means of the bureau, but it should be taken up without further delay. Such an investigation continued during the next few years is estimated to cost about $20,000 per annum.

(5) Accidents (other than explosions) from explosives in mines. During the past five years about 700 men have been killed and fully 2,000 have been seriously injured from this cause in our coal mines alone. In addition to accidents of this type, a large number of miners have suffered from the poisonous effects of the fumes or gases given off in metal mines and tunnels, where the ventilation is poor. Investigations into this subject to cost $20,000 during the fiscal year 1915 have been estimated for in the sundry civil bill.

(6) Improvements of health conditions in the metal-mining, metallurgical, and other mineral industries. A comprehensive investigation of conditions affecting the health of workers is one of the urgent existing needs of the mining industry. Such investigation would affect the health condition of one and a half million men employed in these several phases of the industry, and no one familiar with conditions will for a moment question its importance. In conducting it, the Bureau of Mines would have the active cooperation of the Public Health Service, which would study the different ways in which mine conditions affect the health of employees, while the Bureau of Mines would seek to ascertain the existence and the causes of bad health conditions and the methods of improving the same. A careful estimate indicates that the cost of the part of this work to be carried on by the Bureau of Mines would be $50,000 a year for the next few years.

The investigations to which attention has been called in the above statements, although possibly the most urgent, are by no means the only ones that should be made by the Government in any systematic and comprehensive attempt to increase safety, improve health conditions, and bring about a more efficient development in the various mineral industries.

SLOW PROGRESS IN THE PAST GOVERNMENT MINE SAFETY INVESTIGATIONS.

During the past two years, and especially during the past year, many complaints have come from both miners and mine operators of the slowness with which mine safety results were being obtained through the Bureau of Mines. Both operators and mine owners have shown a desire to inaugurate new improvements looking to greater safety and along any lines in which they could receive definite and satisfactory recommendations or advice; and within the bureau itself every effort has been made to press these inquiries and investigations more rapidly with a view to obtaining these results with less delay, but progress has been unfortunately slow.

In connection with the investigation of mine explosions, owing to the limited funds at the disposal of the bureau it has required three years to open up the experimental mine near Pittsburgh and get the same in proper shape for experimental researches. With more adequate facilities this could have been done within a single year. As another example, three years have been required for certain researches looking toward the development of miners' electric safety head lamps, all of which, with larger facilities, might have been done within a single year. We have found it difficult to give, to the miners especially, a satisfactory explanation of these delays.

THE ECONOMICS OF MINE ACCIDENTS AND HEALTH CONDITIONS.

No one likes to estimate the money value of a human life, but at times it becomes necessary to do this, especially in working out the economics of compensation acts. It is a reasonable estimate that during the past 10 years more than 30,000 men have been killed and more than 100,000 seriously injured in connection with the accidents in the mining industries of this country. It is impossible to estimate the number who have suffered from bad health conditions in many metal mining, tunneling, quarrying, metallurgical, and other mineral industry plants. It is impossible to estimate the number of men with health shattered through these conditions, who have had to give up their work years before their natural time or the number of dependents who have suffered thereby.

If it be assumed that each human life is valued at $3,000, it will be seen that the deaths alone in the mines have cost in the 10 years $90,000,000.

If each of the 100,000 seriously injured lost 20 days at $3 per day, a reasonable assumption, this represents $6,000,000 lost from this cause.

As to the metal mines, metallurgical plants, and quarrying operations, unfortunately there are few reliable data regarding health conditions in the United States; yet there are sufficient isolated figures concerning certain districts to indicate that the death rate from occupational diseases is even greater than the accident rate.

Whatever may be the value put upon a human life in arranging for a reasonable compensation, these losses of life and labor are national in their extent and character and fall ultimately upon the general public as representing the consumers of mineral products. Whatever the theoretical bases of value of these losses, the true cost falls directly upon the injured and upon the consumer. Also, whatever additional expenditures may become necessary on the part of the operators of mines, metallurgical, and other mineral industry plants to reduce this loss of life and labor must ultimately be a charge upon the general public as representing the consumers of mineral products.

It is important therefore, not only from the humanitarian standpoint, but also from the standpoint of economics, that everything possible should be done to reduce the loss of life and labor in the mining industry both through prevention of accidents and through the improvement of health conditions. It is also a matter of decided importance to the general public from both the standpoints that these improvements should be brought about at a minimum cost and in a minimum time. Real economy involves speedy accomplishment as well as efficiency in the improvements to be made.

It is important, therefore, from both the humanitarian and economic standpoints that the investigations by the National Government, with a view to better safeguarding the lives of the men connected with the more hazardous branches of the mining industry, should be conducted as thoroughly and as rapidly as the work can be done effectively in order that the improvements may be inaugurated without delay and to the fullest possible extent.

It is equally important that after the inquiries and investigations have been conducted and reasonable conclusions formed the information should be disseminated promptly and effectively among the miners and those who manage the mines.

The Late William R. Ellis.

EXTENSION OF REMARKS

OF

HON. WILLIS C. HAWLEY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 25, 1915.

Mr. HAWLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article printed in the Evening Telegram, Portland, Oreg., January 18, 1915.

The article is as follows:

William R. Ellis, the first Representative in Congress from the second congressional district of the State of Oregon, dropped dead in

his new home at 1089 East Everett Street at 10 o'clock this morning. Mr. Ellis, this morning, in apparently good health, had gone down in the basement to fix the furnace, and a few moments later Mrs. Ellis, who was alone in the house at the time, heard him groaning. She found Mr. Ellis lying unconscious on the floor. When Dr. C. J. Smith arrived at the house a few minutes later Mr. Ellis was dead. Death was due to hemorrhage of the brain. Mr. Ellis returned Saturday from a short trip to his farm near Cathlamet, Wash., in seemingly good health. Mr. Ellis was 65 years old.

William R. Ellis was born in Montgomery County, Ind., April 23, 1850. In 1874 he was graduated from the University of Iowa. Later he took a prominent part in politics and business affairs in the town of Hamburg, Iowa, where he settled. At one time he was mayor of Hamburg. He came to Heppner, Oreg., in 1883, and engaged in the practice of law. In 1885 Gov. Moody appointed him prosecuting attorney of the seventh judicial district, and in 1886 he received the Republican nomination, and was elected to the same office. He was reelected prosecuting attorney in 1888, and in 1892 he was the successful candidate for Representative in Congress from the second district. Mr. Ellis was reelected in 1894 and 1896. Upon the expiration of his term in Congress, March 3, 1899, Mr. Ellis was elected circuit judge in the Heppner district. Later he was reelected to Congress, retiring after six years of service.

With his family, Judge Ellis came to Portland a few years ago. His home at 1089 East Everett Street was only recently completed. Mr. Ellis is survived by his widow, one son, Edgard R. Ellis; a stepson, Robert Stott; and a stepdaughter, Mamie Stott. Mr. Ellis was a thirty-third degree Mason. Local Masonic lodges will have charge of his funeral.

Immigration.

EXTENSION OF REMARKS
OF
HON. FRANK T. O'HAIR,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. O'HAIR. Mr. Speaker, I have the profoundest regard and the highest respect for the wisdom, patriotism, and unselfishness of the President of the United States.

In the message in which the President vetoes the immigration bill passed by two Houses and two Senates of the United States the President states no new reasons why this bill should not become a law. I therefore feel no more hesitation in imposing my convictions against the judgment of the President than I would against the judgment of any other man who knows as much and reasons as profoundly as does the President. All I claim for myself is the same unalterable conviction to principle and duty to my conscience that I most willingly grant to the President and the few Members of the House and Senate who disagreed with the majority when this bill passed both Houses of Congress.

HAS THE PRESIDENT HEARKENED TO THE VOICE OF THE PEOPLE?

The President says in his message that if the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and reverse the policy of past generations, it is their right to do so. He further says that no successful political party has ever incorporated such a proposition in its platform, and that therefore he does not believe that the American people will indorse such legislation.

The Democratic House of Representatives in the last Congress passed by an immense majority a bill with the literacy test included. This was one of the prominent features of legislation passed by the first Democratic House which had sat in 14 years. The Baltimore convention specifically indorsed the legislation passed by that House. No criticism whatever was offered to this legislation. President Taft had vetoed the bill. The country understood that a Democratic House, which stood by an overwhelming majority for a literacy test in our immigration laws, had been enthusiastically indorsed in the platform upon which the President and the Democratic majority in this House were elected in 1912. As a matter of political policy, I believe that any candidate on the Democratic national ticket in 1912 would have been afraid to have announced from the stump that he opposed a bill providing for the restriction on aliens in the generous manner set forth in this bill.

I know it is all very fine and sounds befitting for any Christian gentleman to say that America has been, now is, and always shall be an asylum for all of the afflicted, persecuted, poverty-stricken, and ignorant people of this earth. We used to have a popular song that wound up by saying, "Uncle Sam is rich enough to give us all a farm." The time comes when all good things must end.

Self-protection is selfishness, yet it is the first law of nature. The time always comes when one more straw will break the camel's back. We must have some reasonable restriction. I, for one, am a believer in the mottoes, "Made in America" and "America for Americans." I have always believed more in home missions than in foreign missions, and so I may as well confess that to me this question must be considered with an eye single, first, to the welfare of Americans. This bill has passed the House by more than two-thirds majority. The Members of this House come directly from the people; they are close to the people of their respective districts. The bill passed the Senate almost unanimously—only seven Senators voting against it. The Senators represent the people of their respective States. The President was commissioned by the people to execute the laws of the land. I am forced to the conclusion that a great preponderance of the evidence shows that the people have spoken on this important question, yet I am also convinced that the President arrived at an opposite conclusion and that his judgment is not based upon his personal and private views, but, as he says, upon the broad and patriotic ground that the American people have not spoken, and that he does not believe they will stand by the overwhelming majority of all political parties that have indorsed this measure in both Houses of two Congresses.

WITH WHOM WILL THESE ILLITERATES FROM THE OLD WORLD COMPETE?

There is probably not a Member in this House who has not received letters, petitions, and telegrams from many of the great companies and captains of industries who employ labor, asking us to vote against the bill. Likewise we have been flooded with communications from toiling millions of American citizens, those who labor with their hands for their daily bread, and whose only object in life has come to be the protection of their wives and little children from hunger and distress, asking us to protect them as far as possible against the invading hordes of the Old World's diseased, criminal, insane, and ignorant classes. This literacy test is insignificant; it is really trivial. It requires a man who was bred, born, and raised in a foreign land to be able to read at least 30 words in his own language. It is claimed by the opponents of this bill that such a restriction imposes an unsurmountable burden upon many desirable immigrants. Can any fair-minded man look with much favor upon an alien seeking citizenship who has reached the period of man's estate without being able to read 30 words of his mother tongue? If he is worth having as a citizen, do you not think he ought to show enough ambition, industry, and appreciation to learn to read just a little? In God's name is American citizenship, with all of its advantages and protection, worth no sacrifice? Remember, these people are not asked to learn to read our language. We all know that such a restriction will not keep all of the undesirables out. We all know that scoundrels and criminals are very often educated, and that they will slide into our citizenship unless caught by some other restriction in this bill. I ask you the question, Has subscription to religious creeds and doctrines kept the hypocrite, ingrate, the selfish, and the scoundrel out of the church of God Almighty?

Suppose these ignoramuses who have not had the ambition to learn their own language and who have not had the manhood to force the opportunity to learn to read were captains of finance, and after they became citizens were expected to enter into competition with the great industrial chiefs of this country, instead of being in competition with the poor laborers. Do you suppose we would be getting these frantic appeals from these high places asking us to stand by the President's veto? Suppose another case—which is manifestly impossible—but, nevertheless, suppose that Members of this House knew that by striking out this literacy test there would enter the country one man who would settle in each and every congressional district in the United States who in the next election would be able to contest the seat of every Member of this Congress on equal terms. How many of the Members who are opposed to this bill would stand by their guns? How many of you would not seek the reasons we give you for voting for this bill? It often makes a world of difference whose ox is being gored.

About 1,300,000 foreigners came to our shores last year—enough people to make a city as large as any two of ours, saving New York, Chicago, and Philadelphia. The immigration authorities tell us that if this law had been in effect it would have turned back about 250,000 of that horde. Most of these people come from Italy, Austria, Russia, and the south of Europe. The educational test is ridiculed by the opponents of this bill, yet the President and his followers are the most scrupulous conservators of the civil-service propaganda. We have arrived at a period in our national development when most of the opponents of this bill, including the President, are

of the opinion that a man is not fit to carry the United States mail unless he has a common-school education, although the only requirement in the discharge of his duties is a good, strong, honest body and sense enough to know the roads in the neighborhood where the mail is to be delivered. It has got to be so that it is impossible for a man to get a job of being a janitor or a policeman without considerable educational qualifications.

One of the questions asked a policeman at his civil-service examination not long ago was the distance from the earth to the moon. The applicant said he would withdraw his application, as he believed he did not want to patrol that beat. It is indeed remarkable to we who believe in "America for Americans" and "America first" to understand why this slight literacy test which we propose to apply to utter strangers and foreigners should be looked upon as so unjust and un-American by those who rush to the defense of the civil-service regulations.

CONDITIONS CHANGE AND SOCIETY PROGRESSES.

It is pointed out that if the test had been applied one or two hundred years ago a great many good men would have been kept out of this country. I do not believe the proposition. Most of those who have come as illiterates would have learned to read and then came. But aside from that, conditions have changed. Of course we did not want restrictive legislation in the pioneer days. We did not need any antitrust laws in those days. We needed no laws governing railroads, flying machines, automobiles, submarines, and a thousand and one other things, for the very good reason that we did not have those things. Many volumes of law have been made necessary by the changes wrought in conditions. When this country was first being settled the foreigner who came here found a wilderness infested by wild animals and inhabited by wild men. They were called upon to clear the forests and drain the swamps. The Government owned practically nothing, except danger and disease, in which they could participate. Printed matter was scarce all over the earth. Those already here were as ignorant and more ignorant than those back at home. To-day when a man comes here and declares his intention to become a citizen he is at once vested with equal rights to life, liberty, and the pursuit of happiness with every other American citizen.

The American citizens of the past two centuries have built great public highways, railroads, canals, courthouses, State and Government buildings, schoolhouses, and a thousand other public institutions and affairs, in all of which the alien immediately becomes a partner and owns just as big an interest as any citizen who has lived here and paid taxes for a long life in building up these public institutions. Is it asking too much that this foreigner should be free from disease and crime and be able to read at least 30 words of his own language before taking him into a full partnership? If a man who is utterly uneducated is to be taken in, because we pity him and feel that it is our destiny to educate him and stand him on his feet, then why exclude the sick people and those afflicted with disease? We ought to take them in and doctor them up. They are worthy objects of charity and pity, and no doubt the Lord would bless us as a Nation if we would do it, but it comes back after all to the same fundamental principle, and that is that we must look after our own. God Almighty helps those who help themselves.

I have heard the proposition of protection to American industries and American capital until I am sick and tired of it, because in that connection I never hear any talk about protecting American labor. If the President and his followers are right, then it does not make any difference if all of the 1,300,000 foreigners who came here last year were uneducated it would be our duty to take them all in and educate them. When I meet a man in this day and age who can neither read nor write the language he can speak, I do not feel that he is as good a citizen as he would have been if he had had the energy and industry to have learned at least a few of the rudiments. It does not require money to learn to read; it does not require anything but a little bit of respectable ambition. Nobody taught Abe Lincoln how to read. He taught himself, and I do not suppose that he had much more time to study after his day's work was over than the ordinary European has to-day, and I expect that books and printed matter were as scarce in the forests of Illinois a century ago as they are in Europe to-day. No one claims that we need any more immigrants, especially of the ignorant classes. The fact is that we have all of the good American citizens already in our country to whom we can furnish profitable employment.

We who support this bill are not afraid that our position in life, our occupations and jobs will be in danger by permitting the ignorant of the earth to come here. Such people must necessarily compete in the market of muscle. We are fighting the battles, as we see it, for those who labor on the farm, in the shop, or anywhere else. I will say to the taxpayers of this country who are burdened with billions of taxes for the support of almshouses, hospitals, schools, penal institutions, and other places of charity, Do you want to add further to your burdens? These foreigners who are without the ability to read 30 words in their own language are without exception among the poor and dependent and among those who become public charges. I can only think of two classes of people who do not want to restrict free immigration in the manner provided in this bill. The first class consists of those charitable, unselfish humanitarians who think the people of the United States are rich enough and good and generous enough to take care of all of the unfortunates of this earth, and who also think it is our duty to provide indiscriminately for those needing help. The second class of people who are against the restrictions in this bill are those who compose the soulless combinations of greed, who want a large and ever-increasing multitude in the labor market, so that they may select the choicest human animals at the lowest possible wages to perform the labors required in their mills and other enterprises.

I say to you, Mr. Speaker, the restrictions provided in this bill are the beginning of a sane, practical policy of self-protection and self-preservation, a protection of American human beings.

Restriction of Immigration.

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. HAYDEN. Mr. Speaker, in his message returning this bill to the House of Representatives without his approval the President says:

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction in this fundamental matter, gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered. Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

I have no pride of opinion in this question. I am not foolish enough to profess to know the wishes and ideals of America better than the body of her chosen representatives know them. I only want instruction direct from those whose fortunes, with ours and all men's, are involved.

I shall not attempt to justify my vote in favor of protecting American labor by quoting from the Democratic and Republican national platforms of 1896, both of which declared in favor of restricting foreign immigration. These platform declarations might be called ancient history. I have received a more recent mandate from a higher authority, the deliberately expressed will of the people of Arizona.

At the last general election in my State there was submitted to the qualified electors an initiated bill commonly known as the "Eighty per cent citizenship law." This measure provided that any employer of labor in Arizona employing more than five workers at any one time shall employ not less than 80 per cent of qualified electors or native-born citizens of the United States. The text of the bill is as follows:

An act to protect the citizens of the United States in their employment against noncitizens of the United States, in Arizona, and to provide penalties and punishment for the violation thereof.

Be it enacted by the people of the State of Arizona:

SECTION 1. Any company, corporation, partnership, association, or individual who is, or may hereafter become, an employer of more than five workers at any one time in the State of Arizona, regardless of kind or class of work or sex of workers, shall employ not less than 80 per cent qualified electors or native-born citizens of the United States or some subdivision thereof.

SEC. 2. Any company, corporation, partnership, association, or individual, their agent or agents, found guilty of violating any of the provisions of this act shall be guilty of a misdemeanor, and, upon conviction thereof, shall be subject to a fine of not less than $100 and imprisoned for not less than 30 days.

SEC. 3. Any employee who shall misrepresent or make false statement as to his or her nativity or citizenship shall, upon conviction thereof, be subject to a fine of not less than $100 and imprisoned for not less than 30 days.

This bill was designed to prevent the glutting of an overstocked labor market by the employment of foreigners at low wages in competition with American workmen. It was also the hope of those who proposed this law that the effect of such a measure would be to provide a superior class of citizens for Arizona, citizens who would understand and maintain the principles upon which this Government was founded. When the ballots were counted last November it was found that 25,017 votes had been cast in favor of the 80 per cent citizenship bill and 14,323 against it, so that the measure was approved by a majority of 10,694.

Prior to the election at which this bill was approved every voter received a publicity pamphlet printed by the State which contained arguments for and against its adoption. The bill was thoroughly discussed at political meetings and in the newspapers. There may have been other bills which received a majority at the polls because they were provided with an alluring title and most people did not take interest enough to carefully read their contents; but there were none so careless or indifferent that they did not fully understand the language and the effect of this short measure.

And what are the qualifications of the electors of Arizona who adopted this law? The statutes of my State describe those who may register and vote, as follows:

Every citizen of the United States * * * of the age of 21 years or over * * * and who, not being prevented by physical disability from so doing, is able to read the Constitution of the United States in the English language in such manner as to show that he is neither prompted nor reciting from memory, and to write his name, shall be deemed to be an elector of the State of Arizona.

No person who is illiterate can vote in Arizona, and no one who believes in the American ideals of justice, liberty, and equality will deny that it is necessary to place a premium on education if we are to have intelligent government by the people. A people that has limited the suffrage to those who can read and write must certainly be in favor of the bill that is before the House, because every argument in favor of a literacy test for voters applies with equal force in behalf of a like test for those who would come here to enjoy the benefits of the Government that they have created.

It is true that three Federal judges in San Francisco have recently declared this Arizona law to be null and void, since it is in conflict with the fourteenth amendment to the Constitution of the United States. Good lawyers tell me that the Supreme Court of the United States will undoubtedly affirm this decision. I am not here to criticize the judges of the United States court who rendered this opinion, because I have no reason to believe that in this case they did otherwise than their plain duty in accordance with their oaths of office. I realize that constitutions are made to secure the individual in his rights, or, as one has said, to protect the minority from the tyranny of the majority. So long as we have written constitutions the majority can not rule in all things, and it is the duty of the courts to see that each individual, whether alien or citizen, is permitted to enjoy the advantages that the organic law grants to him. The people of Arizona are law-abiding and will therefore yield to the court's decree; but, whether the law that they have enacted is valid or void, there can be no question but that a vast majority of them are in favor of limiting the number of foreigners who can obtain employment in my State.

I am justified, therefore, in considering that the popular verdict on the 80 per cent citizenship bill clearly indicates that the people of my State are opposed to the continuance of the present unfair competition in the labor market and are in favor of promoting a higher scale of wages by limiting the supply of cheap labor that comes from foreign countries. Having approved this principle by such an overwhelming vote it can not be denied that the vast laboring majority in my State, organized and unorganized, is likewise anxious to provide some safeguard against the influx of illiterate alien workers by raising a barrier at the boundary and coast lines of the United States which those who would take the bread from their mouths must pass before they are given an opportunity to enter Arizona in search of employment. Under these circumstances I claim that I have a mandate from my people and that I am directly instructed to vote in favor of the restriction of immigration from the Old World and the Asiatic countries as well.

The President classifies the literacy test as arbitrary. I admit that such is the fact; but let us see just what this bill provides as the test which must be passed by aliens who desire to be admitted into the United States. The Burnett bill says that, in addition to idiots, epileptics, paupers, and certain other defective classes, the following persons shall also be excluded:

All aliens over 16 years of age, physically capable of reading, who can not read the English language, or some other language or dialect, including Hebrew or Yiddish * * *. That for the purpose of ascertaining whether aliens can read the immigrant inspectors shall be furnished with slips, of uniform size, prepared under the direction of the Secretary of Labor, each containing not less than 30 nor more than 40 words in ordinary use, printed in plainly legible type in some one of the various languages and dialects of immigrants. Each alien may designate the particular language or dialect in which he desires the examination to be made, and shall be required to read the words printed on the slip in such language or dialect.

Of course a literacy test is arbitrary. But is a restriction which says that a foreigner must be able to read 40 words in some language or dialect before he can land on our shores more arbitrary than the limitation in the act adopted by the people of Arizona that not more than one alien may be employed out of every five wage earners? As a matter of fact, all restrictions are arbitrary, for the simple reason that we must draw the line somewhere.

The literacy test as a proper restriction on immigration has been advocated for a number of years. This test has received the sanction of a commission appointed by Congress to investigate the immigration question in this country and abroad. After four years of study, eight out of the nine members of the commission reached the following conclusion:

A majority of the commission favor the reading and writing test as the most feasible single method of restricting undesirable immigration.

Were I to oppose this bill, it would be upon the ground that the words "and writing" have been omitted from the test which the alien must pass before he can come into our country. I understand that this part of the recommendation of the Immigration Commission was not followed, in the hope that the opposition to this bill would accept the reading test as a compromise. We now know that all such attempts to settle our differences are useless and that it would have been as easy to have enacted the entire literacy test into law as to secure the adoption of the reading test alone.

Those who plead for a more rapid development of our natural resources, particularly those who want to make available the mineral wealth of America in our day, say that without cheap foreign labor the mining of coal and low-grade ores can not be carried on at a profit. The same argument has been made in opposition to every movement in behalf of the safety and welfare of the miners. No longer ago than last summer, when we were considering the Alaska coal-leasing bill, this same financial objection was raised to the inclusion of the following provision in that act:

Each lease shall contain provisions for the purpose of insuring the exercise of reasonable diligence, skill, and care in the operation of said property, and for the safety and welfare of the miners and for the prevention of undue waste, including a restriction of the workday to not exceeding eight hours in any one day for underground workers except in cases of emergency; provisions securing the workers complete freedom of purchase, requiring the payment of wages at least twice a month in lawful money of the United States, and providing proper rules and regulations to secure fair and just weighing or measurement of the coal mined by each miner, and such other provisions as are needed for the protection of the interests of the United States, for the prevention of monopoly, and for the safeguarding of the public welfare.

I then said that if the cost of mining coal in Alaska was so high that these reasonable conditions in favor of the workers could not be complied with, then we had better let the coal lie in the ground. I am glad to say that this Congress approved the provision which I have just read and that it is now a part of the law.

The underlying reason for such legislation is that every true American believes that we ought to strive to maintain the American standard of living; that men who toil for long hours in unsafe and insanitary places, who are underpaid and overworked, do not make good citizens of a Republic where every man has the ballot in his hand. Therefore I say that if mining can not be carried on except by employing aliens who will work long hours for little wages in mines where men are cheaper than mine timbers we had better let the ore lie in the bowels of the earth where nature placed it until such time as American inventive genius finds a way to handle it at a profit while paying a living wage to those who mine it.

I would not seek to destroy the necessity that mothers invention. Did not the cyanide process make possible the recovery of gold that could not theretofore be profitably mined? Metallurgical engineers are now enthusiastic over the new oil flotation process as applied to the milling of low-grade copper ores. It is said that by this new process 6 or 7 more pounds of copper can be recovered to the ton. Should not the American miners have some small share in the benefits of this new method? Or shall we continue to foster and promote the immigration of foreigners who are so ignorant that they do not know the real value of the services that they render.

All industrial history shows that under normal conditions invention has been the handmaiden of higher wages. The invention of a new process may temporarily displace a number of workers, but ultimately the increased demand for a product at a lower price causes more men to be employed in the industry.

The worker can not be kept long in ignorance of the increased profits which the employer is enjoying, and the employer, either willingly or otherwise, is compelled to share at least a part of his prosperity with those who work for him. This economic law, however, does not hold good where the supply of available labor is unduly increased by the arrival of large numbers of ignorant foreigners who do not realize the extent of the values that their labor creates.

Our Republican brethren tell us that American labor is the best paid in the world, and then claim that credit for this fact is due to a protective tariff. Their argument might have merit if they had not permitted free trade in labor during all the time that high, and sometimes prohibitive, duties were levied against foreign-made goods. We all know, as a matter of fact, that the manufacturer did not pass on a fair share of the profits that he made by being protected from competition from abroad, because the labor supply in the United States was continually being augmented by hordes of workers from across the sea. I stand for a reversal of this old, unfair policy, and have voted to reduce the tariff on the necessities of life and to make it more difficult for aliens to drive out American workers from our mines and factories.

In conclusion I desire to read a paragraph from the message of the governor of Arizona to the second State legislature at the opening of the present session, less than a month ago. Gov. Hunt made the following statement in discussing the 80 per cent citizenship bill, every word of which is equally applicable to the measure now before us:

Under this heading it is not inappropriate to present the statement that of the total number of convicts in the Arizona State prison 55.5 per cent are of foreign extraction while the percentage of inmates native to the United States is 44.5 per cent. Turning for the time being to the State Hospital for the Insane we find that 55.1 per cent of the patients are of alien blood while 44.9 per cent of the total population of the institution are native to this country. Giving consideration to similar statistics from the State Industrial School, it is found that 68.1 per cent of the inmates belong either to the Mexican or other foreign races, while 39.1 per cent of the boys and girls detained at the school come from races which may be considered as native to the United States. Just why the State of Arizona should continue to encourage a kind of immigration that imposes upon the taxpayers between 50 and 60 per cent of the total expense incurred for the care of deficient classes is not readily observable, and is therefore submitted as a problem worthy of consideration by all those people who would throw the doors of the State wide open to aliens of every description.

The Constitution of the United States may prevent the people of Arizona from adopting a law limiting the number of foreign workers, but there is nothing in the Constitution to interfere with the enforcement of the immigration act that is before us. We have an opportunity to mitigate a great and growing evil. Let us do it to-day.

Prohibition and the Hobson Amendment—Speech of Hon. Sumner W. Haynes, of Portland, Ind., Late Candidate for United States Senator on the Prohibition Ticket.

EXTENSION OF REMARKS

OF

HON. JOHN A. M. ADAIR,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 2, 1915.

Mr. ADAIR. Mr. Speaker, some days ago, when the so-called Hobson prohibition amendment was before the House, I made the statement that the leading national prohibitionists of the country did not favor its passage. I quoted from Hon. Eugene Chafin, who was the candidate for President on the National Prohibition ticket in 1912, and who said of the Hobson amendment, "that of all the foolish and impossible schemes devised to destroy the liquor traffic this is certainly the worst."

I also quoted from Hon. William A. Brubaker, editor of a prohibition paper called the National Issue, who clearly points out the weakness of the Hobson plan.

Now, Mr. Speaker, I have here a copy of a speech delivered by Hon. Sumner W. Haynes, of Portland, Ind., at a prohibition convention held at Winchester, Ind., on Saturday, January 23. Mr. Haynes has been an active worker in the cause of temperance for more than 30 years; has been identified with the Prohibition Party all this time; has been nominated by his party a number of times for various places on the State ticket; last year he was the candidate of his party for United States Senator and made an active campaign and a splendid race.

In speaking of the Hobson amendment, Mr. Haynes says:

I have been constantly surprised at the Anti-Saloon League, the church, and temperance people generally, even some very loyal Prohibitionists, so persistently favoring the Hobson amendment.

Again, he says:

This amendment would have been of little worth. The demon of rum would have soon adjusted its affairs to the Hobson idea and hell would have been rampant in thousands of homes. Not being able to see why anyone who thinks the liquor traffic a crime should favor the Hobson amendment, I am just as much at a loss to see why anyone should mourn its demise.

Mr. Speaker, it has been my good fortune to have known Hon. Sumner W. Haynes both personally and intimately all my life. If there ever was an honest, energetic, honorable temperance worker, he is one. But few men, if any, have done more for the cause of temperance and have given the subject as much thought and study as has Mr. Haynes. He knows the difference between a real temperance measure and a makeshift. And that is the reason why he did not favor the Hobson amendment. There is so much of interest in his speech that I thought it worthy of being reproduced in the CONGRESSIONAL RECORD.

The full text is found in the Patriot Phalanx, a prohibition paper published at Indianapolis, Ind., and is as follows:

[Address by Sumner W. Haynes, of Portland, Ind., late Prohibition candidate for United States Senator, delivered before eighth district convention, at Winchester, Saturday, January 23.]

I am indeed glad of the opportunity to address you at this time. Another campaign is on us and I want to congratulate you in having a district chairman who does not know defeat.

It is true that at the general elections for over 40 years our cause has failed to get a majority of the votes cast, but at no time has it met with defeat. Each contest has proven our weakness only in numbers, but at that same time it has been a convincing proof—to ourselves and to a continually enlarging circle of the best citizenship of our country—of our strength. Not only is this true at this time, but the vote for our cause and party was never so large as at the last election, and for the first time we have chosen a Representative in Congress.

We have been so accustomed to magnify our weakness in numbers that we have felt unduly the unpopularity of our cause. A new condition is upon us. Our cause has become suddenly popular, and we find ourselves unable to know surely how to adjust ourselves to the change.

LEAVENED THE WHOLE LUMP.

We have held constantly to the truth that the liquor traffic is wrong, and that a part of this traffic is the manufacture for use. It looks as though this idea has about leavened the whole lump. The loaf is almost ready for the baking into a form that means for use, to be eaten. A sudden chill of compromise or improper treatment, a small jar of the oven, may cause the loaf to flatten out and fail at the very moment of success.

There will be no rest in the politics of this country until this question is settled by a change of policy of the whole Government from the present policy that the traffic is right to one that the traffic is wrong.

Our people know that under our form of government the people must establish the policy of State and Nation. Knowing this, they often seem slow in making the change. This can be accounted for largely from the fact that ours is a representative form of government, and the people rule and express their policies through the administration of affairs. The administration of the Government is always through political parties, and political parties often become self-serving to perpetuate themselves. When a great issue is at stake, demanding settlement at the hands of the people, of such a nature as to require a complete change of policy of the Government, this issue must of necessity be advocated by a political party.

In a hundred years the liquor problem has developed through all of the stages, from a purely personal matter, a moral question, a local question, a subject of State legislation, into the greatest economic-moral-political question of the century, and is up for settlement.

This we have said in every campaign and have believed what we said. Now thousands are saying the same who never said it before, and, best of all, they believe what they say.

MANY SIGNS OF PROGRESS.

Think of it—10 hours' discussion in Congress over the question that has been but yesterday kept in the background, could not get a hearing. This did not all come to pass in a night. A very faithful client of mine, who waited for months for me to come home so that I could look after some business for him, says to me, "How long are you going to keep this up?" I answered, "Until the liquor traffic is destroyed." He responded, "I want to see it accomplished, but the end is not in sight; I do not see progress that will justify the time that you do." I said, "Stop and think a moment. Ten years ago Portland had 17 saloons. There have been none here for seven years. This did not just happen. Some one has agitated and educated and persisted in such agitation until concerted action accomplished what even you are able to see." "Oh, I see; I see; keep on; but I want to see the end of the curse."

My friends, this is the cry that you hear on every hand from those who but yesterday were indifferent and unconcerned. But let us not become impatient to put the kneaded loaf into the oven before it is fully leavened. A short time ago, in a letter to the Patriot Phalanx, I suggested that the proposition offered by Hon. MARTIN A. MORRISON should be enacted into law, and that it would probably be advocated by our own Congressman when he was ready to introduce bills as a Prohibitionist. At the same time I commended Dr. Stanley's proposition to have petitions signed asking such action of the next Congress, backing our Congressman, should he take this position. Little thinking that the thought suggested would receive much attention, I find in this week's Phalanx a statement from one of the best and most devoted Prohibitionists in the State saying, in substance, "If Mr. MORRISON had secured the enactment of his proposition into law, he would have done more harm to the cause of temperance than he could have done it good by spending a whole life in Congress." I must say that I can hardly appreciate this statement.

COMING TO OUR RADICAL STAND.

In this connection I want to read a letter and my answer to it as part of my speech. This letter came from one of the best lawyers of the Far East, a learned Prohibitionist, one who studies issues well and has the habit of expressing clearly the thought that impresses him. I just notice that the letter is marked "Personal," so I am not privileged to give the name; but the thought belongs to you at this juncture:

"JANUARY 13, 1915.

"MY DEAR MR. HAYNES: I like your position in the Patriotic Phalanx of the issue of the 9th instant. The agitation is, of course, clearing the air, and it is for us to hold steady in all matters.

"You have, I take it, reflected upon the fact that while we have been charged with being 'too radical' and 'wanting all or nothing,' those who used this word against us now find it turned upon themselves, for the Prohibition Party never advocated as radical a proposition as has been undertaken lately in Congress, considering that the attempt is not only made to amend the Constitution, but to do this in the face of administrations which are unfriendly to the object proposed, and which actually keep an antagonistic policy in full operation. This presents a proposition somewhat similar to two bodies occupying the same place at the same time—which, I take it, is rather radical.

WHAT CONGRESS COULD DO.

"While I do not believe in 'trapping' antagonists, and think that only an open and manly course is truly strong, the vote in Congress revealed a majority in favor of submitting an amendment. To this may be fairly added a number who declared that they voted for State prohibition and believed that the correct method. That makes a large majority in the House. On the interstate-commerce feature this majority could act, if it has the political power—which I question—and a political majority in favor of prohibition could—

"Close the mail to the liquor interests.
"Close the parcel post to liquor ads.
"Close navigable waters and coast trade to the liquor interests.
"Could repeal the internal-revenue act of 1862, taxing liquors.
"Could substitute a sound fiscal policy instead.
"Could adjust treaties.
"Could make the District of Columbia, Territories, and all land over which the United States has jurisdiction prohibition territory."

Departmental power:

"Could probably prohibit the use of United States mails without legislation, or at least into 'dry' districts. Could specify that all should be branded as 'poisons'; I mean all advertising of liquors for beverage purposes, passing through the mails.

"The Treasury Department could refuse tax receipts to outlaws who could not show a State license or permit.

"The department could abrogate the rule prohibiting internal-revenue collectors testifying in the State courts against the liquor outlaws."

THE PROLICENSE PARTIES.

Administration:

"Could use the appointive power in a friendly way to aid prohibition in 'dry' States. Could act in some of the other cases, should the department fail to act.

"Do not understand me to mean that a prolicense administration can really do these things. Hence, we have the remarkable spectacle of attempting to do what all know will not be done, while all the time a number of things are overlooked purposely, which would, if done, give prohibition a fair trial in the States. I do not think that these prolicense parties can give any relief in the premises—that it is no longer a question of unwillingness, but inability. When a man may travel both east and west at the same time, then may a prolicense party travel backward and forward in one movement.

"I do not know that we are fully agreed in all these detail matters, but I do agree with you fully that the situation in Congress, now laid large before the country, permits even one man, sincerely committed to prohibition, to largely clear the air and help the American people to fully understand what a fundamental political question is embodied in the prohibition reform."

AGGRESSIVE FOR THE TRUTH.

To this I answered:

"JANUARY 15, 1915.

"I am pleased to have your letter and to know that you agree with me in seeing some glints of sunshine in the coming morning of the prohibition reform. I am sure we have been patient, but this patience has not all been exhibited in 'watchful waiting.' We have been aggressive in what we considered the truth and results are coming into view. I am more and more of the opinion that we must educate on this question before we can legislate to the point to be attained by the Prohibition Party. I am beginning to believe that this education is progressing about as rapidly as it can. All forms of agitation have had their day. Ours is the only one that has remained and is still far in the lead.

"We are to be congratulated, and so is the country, that the thought and the principles we advocate are not only leading but are really drawing all others to the common belief that the liquor traffic is wrong and that the policy of the State and Nation must be changed to agree with this belief and these principles. That this change must come through an administration committed to the policy and principles we advocate it seems is yet to be taught the people. Ours is the only party teaching directly in that direction. We, therefore, can only press on with greater vigor and persistence."

CHANCES FOR CONGRESSMAN RANDALL.

I believe that one Prohibition Party Congressman can break into the peculiar conditions that seem to have the majority in Congress to-day and make some show of the real thing. This has not been made to appear in the 10 hours' discussion on the 22d of last month. I have been constantly surprised at the Anti-Saloon League, the church, and temperance people generally, even some very loyal Prohibitionists, so persistently favoring the Hobson amendment.

Just think of the proposition: This was submitted as a fundamental principle, not simply a law that could be amended or repealed at will by the succeeding Congress. I, as a little boy, have a recollection of an old man Ruckwheat having a still on his farm in which he made whisky. He was so absorbed with his own affairs, and securing the necessary "red eye" to supply his family and friends, that he was not informed of the revenue law which took over to the United States Government the exclusive right to say who should distill or make intoxicants. Before that time there were plenty of restrictions of the sale, but the right to make for use in one's family was as free as making cider. Under that old plan drunkards were made and the same results followed. It was against just such that the old temperance wave rolled so high.

DEFECTS OF THE HOBSON PLAN.

This amendment would have been of little worth. The demon of rum would have soon adjusted its affairs to the Hobson idea and hell would have been rampant in thousands of homes. It is true that this proposed amendment offered an opportunity for discussion, and this discussion has done good. It has made it plain that, however earnest a great man may be to push the liquor traffic to the wall, he must have more than desire. The whole traffic is a crime, a poison, a curse to humanity, from the manufacturer to the furthest point of traffic, use, or trade. Not being able to see why anyone who thinks the liquor traffic a crime should favor the Hobson amendment, I am just as much at a loss to see why anyone should mourn its demise.

Let us up and on. We have discovered the lurking place of the beast. Let us beat the bush, drive it out in the open, where we will and must compel an open fight on the line of the utter destruction of that which lives only to murder and kill all that we love and hold dear. Let us not be distressed because those who see "as through a glass darkly" do not, can not bring to a successful vote that which does not yet treat the curse as a wrong.

Let us not hasten to put the half-leavened loaf into the oven of legislation, only to find that the hoped-for fully baked bread may be nothing but sour dough.

Now, as probably never before, we must stand firm. It may be hard to do, but a backward step, which falsely promises permanent advance, may cause us to halt short of our ambition and hope—the complete overthrow of the liquor curse.

The Taylor Efficiency System.

EXTENSION OF REMARKS

OF

HON. CHARLES F. CURRY,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 5, 1915,

On the bill (H. R. 20975) making appropriations for the support of the Navy for the fiscal year ending June 30, 1916.

Mr. CURRY. Mr. Speaker, I believe that industry, effort, and ability should be encouraged and rewarded; that competency should not be degraded to the level of incompetency; and that a lazy, mischief-making agitator ought not to be tolerated anywhere, but I do not believe that the last ounce of producing strength should be taken out of men each succeeding working day. The best mechanics are not always the most rapid workmen. Quantity of production should not be considered ahead of quality in fixing the rating of mechanics. I am therefore opposed to the so-called Halsey or Taylor efficiency system. The extra rewards it holds out for extraordinary effort would stimulate men to an unnatural and continuous daily mental and physical exertion that would wear them out in a few years, and make them old and decrepit before their time. Its system of disrating eliminates many of the best mechanics and workingmen, because they can not maintain the standard of speed without a sacrifice of workmanship.

I have received many protests against this stop-watch so-called efficiency system from mechanics in and out of Government employ; some of the complaints from men whom I know to be expert workmen. They tell me that it is impossible for them to maintain the standard of production required without sacrificing that careful attention to detail that good workmanship demands.

If the Government puts the efficiency system into operation in Government plants, all private concerns will feel justified in doing so in their plants, and soon all middle-aged mechanics will be crowded into subordinate positions, and finally out of employment, by young, active men who can do more, though not so good, work as the elder men.

Do you think that condition would benefit the public welfare? I do not.

What could the men crowded out of employment do? The only way they know how to make a living for themselves and their families is by working at their trades and accustomed labor. Most of them would be too old to learn to make a living in any other vocation, and under the efficiency system they would not be given an opportunity to do so even if they could.

It has been intimated by people who advocate the efficiency system that those who oppose it are or, to be consistent, should be opposed to the use of labor-saving machinery. That is not so. The more labor-saving machinery invented by American ingenuity and used, the better I will be suited, and the better it will be for both labor and capital. What I am opposed to is a system that makes a machine out of a man and treats him as such.

Congressman Sloan's Speech on William McKinley.

EXTENSION OF REMARKS
OF
HON. HORACE M. TOWNER,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915.

Mr. TOWNER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a short speech delivered night before last before the Republican Tariff League of Pittsburgh by Congressman SLOAN, of Nebraska, on William McKinley. I think it is appropriate on this the anniversary of his birth to publish it.

There was no objection.

The speech is as follows:

CONGRESSMAN SLOAN'S SPEECH ON WILLIAM M'KINLEY.

Gentlemen, I come from Nebraska prairies, which once in public estimate marred our national map as a desert waste. But Nebraska for decades past, bathed with rain and the dew and warmed by the kindly sun, her soil turned and tilled by the hand of intelligent industry, assumed with her neighbor States leadership in production of wheat for the family of nations. But more important, it yields corn, the cereal king, and alfalfa, the forage queen, which in turn produce for our eastern neighbors marbled beef, rainbow bacon, and ruby ham.

I come to this marvelous city among the hills at the mingling of the waters in their widened path to the sea. Here amid the valley and the mountain, where men go down into the earth and seize what the Carboniferous age deposited with which to treat the iron, which was old when that coal was green. This they bring up to make furnace flame and shape crudest ore into track of steel—steel which binds Nebraska to Pennsylvania. Over this iron path is borne our surplus meat and grain, and back are carried the burden bulks your mines have yielded. Along that path of steel lies that miracle of modern America, hitherto the greatest in the world—the home market for farm, factory, and mine.

In the name of the great American who in seeking the Chief Magistracy of the Republic pictured to the American people that home market with all its ideal advantages, who when he attained that proud position by the fair expression of the people's voice made that home market all his foresight had depicted. In his name and his memory we meet in this unequaled center of industry, now in an industrial pause, before this gathering of constructive partisan citizens, and by whose grace I speak to-night of William McKinley.

Talking about carrying coal to New Castle as compared with telling this tariff league about William McKinley! It would be stronger than that. It would be like carrying steel to Pittsburgh. You all know the story of this man. His ancestry lived in that part of Ireland which has furnished more great educators, merchant princes, captains of industry, great military commanders, and Presidents of the Republic than any other place of equal area on the globe.

I can only hope to merit your favor by a hurried sketch of those personal charms and qualities and abilities which endeared him to all, as well as those public achievements which made his place in history secure. Let me say, in passing: What period since his untimely taking off has so emphasized that security as has the last biennium? He had that Christian home life which blesses ambitious youth. He had and embraced the opportunity which the great Civil War presented. He did a soldier's part. He achieved a young soldier's fame.

From the ranks of the American bar he was recruited to the world's then greatest popular forum—the House of Representatives. Here he had that legislative experience which disciplines and drills into the make-up of a man that reverence for our Constitution and understanding of the three great well-balanced departments of our Government. His career there taught him how to deal with men and fitted him for executive duties. Fortunate is the American Chief Magistrate who has had congressional experience. Doubly fortunate is the country itself for that experience. As Executive he must, to some extent, control men and shape and direct measures. He should, however, do this by patriotic persuasion and not with a patronage bludgeon.

His distinctive achievement in Congress was the McKinley protective tariff law of 1892. True, in the angry waters of a political flood it bore him down like a cube of lead. Later, in his approval of its practical reenactment, the Dingley law of 1897, he found it a block of granite, a pedestal of power.

As governor of Ohio he governed well, and there further prepared himself to meet the Nation's call to the Presidency.

More than any other of our modern Presidents did he grow into the Presidency. Less than almost any of them did he run counter to, crush or thwart the ambition of national favorites. He was the people's choice, not the successful leader of a crowding, fighting faction.

In this day when convention mockery scorns the people's mandate and when seats of preferment at the side of power rewards slaughter of friends, it is refreshing and inspiring to recall the temptation twice presented to and nobly rejected by McKinley. Once at Chicago when Sherman was Ohio's choice and McKinley a delegate in his behalf. Again, at Minneapolis when President Harrison was a candidate and McKinley presided over the convention. A presidential nomination, with all its dazzling allurements strengthened by a general belief that his acceptance meant party success while his refusal would leave the issue in grave doubt, would have broken the barrier of loyalty in many a brilliant man. This was loyalty put to the supreme test. Subsequent events showed not only fortune, but wisdom for McKinley. Who will say that those manifestations of loyalty were not of supreme value to the Nation?

In and out of Congress McKinley achieved fame as an orator. His style was not the florid type of some sections and other days. Neither was it of that keen analysis and profound logic, types of which New England has furnished a number of illustrious examples. His excellence arose from the clear and convincing straightforward statement of large and controlling facts, presented in superb diction, which produced the persuasive effect of a demonstration. In his addresses, locality and special circumstances were kept in the background while broad national considerations and policies were pressed to the fore. He spoke in words that were not thunder nor speech a torrent, in phrases not alone of flowers, or sentences always of sunshine. But under the witchery of his words our valleys appeared greener, our plains broader, rivers larger, mountains higher, women fairer, men nobler, country greater, prospects brighter, and our flag became bright, fair, and beautiful as God's arched promise painted on the cloud.

He became President of all the people through the powerful aid of the East, the enthusiastic support of the West, and the approval though not the assistance of the South. His election was really determined just 20 years ago. Then, as now, by another Wilson tariff law, our home market had been opened to the surplus holders of the world. Then, as now, eager overpurchasing importers were vaunting their goods to laborless, moneyless men.

Elected upon a platform of protection, sound money, and every other approved American policy which has made our country great, that platform became the chart by which his administration was guided. This was in striking contrast to the recent Baltimore platform, which, used as a means of obtaining power, every plank thereafter was treated as a snag or sunken rock to be avoided or removed.

In Washington four days ago a caucus, yielding to the threat of disfavor and the blandishment of patronage, agreed to bind themselves and all their protesting colleagues to the violation of an antisubsidy platform pledge. And this notwithstanding that violation involved the starving, for lack of appropriations, the functions of government. It further involved a confession that, although kept in session for nearly the full 24 months of a two-year term, a Congress must adjourn leaving to its successor its principal function unperformed.

His administration was McKinley's administration. He heard suggestions, listened to advice, but took no orders. Intensely practical, he knew that enterprises were neither revived nor kept going by threat of hanging their owners or managers. In the smokeless chimney and blackened furnace he could see no psychological thrift. In the long bread lines he saw hunger that was not merely mental. An empty National Treasury presented to him a condition not merely metaphysical.

His viewpoint for the welfare of his people can be well understood in contrast with the central utterance of the Underwood tariff bill report. That report, speaking in behalf of that measure and forecasting the results of its passage, said "The future growth of our great industries lies beyond the seas." From McKinley's viewpoint could be seen the growth and success of our great industries within our national borders, bounded by the oceans and Gulf as well as the "unsalted seas" of the north. Civilization has been defined as "An enlightened selfishness." So a government should be selfish, favoring its own citizens against the citizens of the world, and have a prejudice fostering our own industries against the industries of the world. If I have read the speeches and papers of McKinley aright, he believed that the handiwork of Americans in factory, farm, and mine should be fairly protected against the competing products

of all other lands and climes, and that all competitive products which would enter our ports should bow to the American flag and pay tribute to our Treasury. McKinley, however, did not believe in unscaleable tariff walls or insurmountable barriers. He insisted that tariffs should be high enough to make a handicap in our own people's favor and maintain our better living, and so meet the additional cost of production thereby necessarily entailed. Ample protection does not mean exclusion. We build our homes to exclude excessive heat, storm, and rain, but not to prevent sunshine and ventilation.

Patient under criticism, unresentful to those whom he could easily punish, McKinley always held his purpose until unpreparedness had given way to full preparation. This was exemplified in the superlative degree before the opening of the Spanish-American War. A calm exalted courage was exhibited when called upon collectively by the ambassadors of the five leading powers of Europe. Did they overawe him? No. Into the face of power he looked like the eagle of the Nile with unblanched eye into the face of the sun, and maintained his poise and purpose. He hurled the Army and Navy against Spain, not for conquest, territorial acquisition, or large indemnity, but to give to the world a new principle, termed, "national disinterested humanity." And yet some historian statesmen tell us that the party of McKinley has contributed nothing new in the last 30 years.

Were we to compare McKinley with other Presidents whose passing have given them permanent place in our history, I would say, he was not cast in that heroic military mold which characterized Washington. He had not the learning of John Quincy Adams or Garfield. He was not a dreaming philosopher statesman like unto Jefferson. He had not the recurring subtle wit of Madison. He did not possess that complete mastery of language and expression which stamped Benjamin Harrison as the orator President of the Republic. There was not present the combative energy and unbrookable will of Jackson. He was surpassed in sturdy resisting self-assertion by Cleveland. In the appealing human side of man, far-reaching vision of great national questions, and that strength of character and intellectual grasp which placed Lincoln in a class by himself, McKinley did not reach the stature of our first martyr President. But of all these splendid qualifications in some of which each of these men were severally distinguished in the superlative McKinley possessed all to an eminent degree. Never in our history was there—I doubt if for centuries in our future there will be called to the presidency one who had or will have all these in such large degree as did McKinley. He was and will remain in public estimate the superb composite type, the most well-rounded, well-balanced, fully equipped, strongly endowed, typical American this continent has produced, hearkened unto and honored. No great quality befitting a great American in him was either lacking or dwarfed. He can well be designated in the highest sense the composite American, the constructive statesman, the constitutional President.

His policies were the policies of his party. He did not work Congress; he worked with Congress. He believed in teamwork between executive and legislative, but it was a united abreast teamwork and not the tandem of to-day.

On that fateful September day of 1901, at the fullness of his achievements, in the noonday of our Nation's restored prosperity, when full factories and fruitful farms were straining to meet a home market's demand, when every furnace flamed, every chimney evidenced activity below, every engine and freight car groaned under their burdens between the oceans, interest was low, money plenty, and our Treasury full, the tragedy of the twentieth century's dawn was enacted. An administration, the triumph of the nineteenth century's close, was ended, and McKinley, the man, sweetest memory of the twentieth century's morning, became an American immortal.

Ship Purchase Bill.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, January 19, 1915.

Mr. BRYAN. Mr. Speaker, under permission granted to-day I herewith present certain correspondence had by Mr. E. O. Drake, vice president of the Panama Railroad Co. Let it be remembered at the outset that the Panama Railroad Co. is simply another name for a Government bureau, as the entire capital stock of this "company" is owned by the United States Government. The insertion of this correspondence in the RECORD at this time is designed primarily to refute the unwarranted and inaccurate pretensions of certain Boston shipping interests who are opposing.

It is the wisest proposition that has been made to this generation on behalf of an American merchant marine. These shipping interests have gathered themselves about the Boston Chamber of Commerce and have caused that body, through one of its committees, in all sincerity no doubt, to send out a plea to Members of Congress against the pending ship purchase bill and on behalf of a scheme of direct subsidy. If the communication as sent out and extended in the RECORD of January 18 by the distinguished ranking minority member of the Committee on Merchant Marine and Fisheries of this body were accurate, I would not now challenge. I received a copy of the letter referred to and intended to take it up for answer during the coming debate on the bill after the Senate has exhausted its objection to the measure. But since the letter has gone into the RECORD I consider it my duty to present such data as I have for refutation of some of the claims set up, in order to arrest any wrong impressions that might be made.

I certainly have no intentions of reflecting on the able and astute business men who are looking after their own special interests in these matters. Commercial bodies all over the country are passing resolutions against this legislation. In many cases they have no reason they can state except just because; but we may all just as well agree that in fact and in truth

THERE'S A REASON

which underlies all the activity. The Shipping Trust everywhere is active. That organization never gets busy except "there's a reason." They are simply looking out for No. 1, a very natural trait.

Before calling attention to inaccuracies in the letter referred to and presenting my data, let us see who stand sponsors for the communication and its allegations. They all seem to be very splendid men.

First, it is signed by the Boston Chamber of Commerce, Mr. E. J. Bliss, president, and Mr. James A. McKibben, secretary. Mr. Bliss is a director of the Regal Shoe Co. and also of the International Trust Co.

In the letter the Boston Chamber of Commerce declares its opposition to ship-purchase bill because it would—

> Discourage private capital and personal initiative, and deter the development of an American shipping industry, so vital to the commercial progress of Boston, of New England, and of the whole United States.

The able members of this chamber of commerce then propose six specific schemes of getting more profits into the coffers of the Shipping Trust.

With the letter is transmitted a report of the committee of the chamber on merchant marine. This report contains the suggestions some of which I say are not accurate, and which I will take up later. The statements relative to the Panama Railroad Co. vessels—Uncle Sam's steamship line between Panama and New York—I will show to be inaccurate at this time.

First let us see who are the able gentlemen who compose this committee of the Boston Chamber of Commerce. They are very busy men, as their numerous interlocking directorates would indicate, so if they were not able to check up all the alleged facts that had been included in the report which they signed, they should not be blamed. I certainly do not attach to them the slightest blame. Here are the names and some of the activities of this eminently competent, but quite occupied, we must admit, committee:

E. G. Preston, treasurer S. S. Pierce Co.; director John Hancock Life Insurance Co., Boston Safe Deposit & Trust Co., Boston Confectionery Co.; trustee Home Savings Bank.

E. E. Blodgett, lawyer (Blodgett, Jones, Burnham & Bingham), director Coastwise Transportation co.

L. A. Coolidge, treasurer and director United Shoe Machinery Co.; vice president and director American Zinc, Lead, & Smelting Co.; director Boston Fast Collar Eyelet Co., United Xpedite Finishing Co.

P. E. Fitzpatrick, director Brown Durrell Co. (hosiery, underwear), Boylston National Bank.

Frederick Foster, lawyer.

Theodore Jones, treasurer and director Jones, McDuffee & Stratton Co. (glass, pottery, and lamps), Home Savings Bank, Brookline Trust Co.

Winthrop L. Martin, secretary and treasurer National Association Wool Manufacturers, was secretary Merchant Marine Commission 1904–5; associate member Society of Naval Architects and Marine Engineers; author of "The American Merchant Marine, Its History and Romance"; contributor to magazines on tariff, Navy, and merchant marine.

Robert S. Peabody, architect of firm Peabody & Stearns, director Massachusetts Institute Technology and Museum Fine Arts, of Boston, chairman Boston Park Commission.

Geo. F. Willett, president Eastern Leather Co.; United Printing Machinery Co.; Norwood (Mass.) National Bank; treasurer and director American Felt Co.; director general Chemical Co., Boston University, Daniel Green Felt Shoe Co., Massachusetts Employees' Insurance Associ-

ation, Merchants' National Bank, United States Worsted Co., Winslow Bros. & Smith Co. (sheepskins), Woonsocket Machine & Press Co., Winslow & Co. (naval stores).

These gentlemen say:

There is some precedent in the practice of other nations for Government ownership of railroads; there is none whatever for Government ownership of a merchant marine.

It is true that all the nations of the world, practically, except England, the United States, Turkey, and Spain, own their railroads—"some precedent"—but the impression made by the remainder of the statement will not quite bear out. Aside from the very extensive experience of Russia in Government ownership of a merchant marine, the other great nations have gone so far at ship subsidy and subvention as approaches very close to ownership. The title of the private owners is in almost every case subordinated to an effective Government claim. But in Russia the Arkhangelsk-Murman Steam Navigation Co. was chartered May 15, 1895, under Government control. The Government subscribed to 56 per cent of its capital stock, which in the gross amounted to 1,112,800 rubles—about $556,400. The dividend rate was fixed at 5 per cent. From surplus profits, if any, 1 per cent was to be paid to private shareholders, and of the balance 25 per cent was to be distributed in bonuses to the management and employees of the company, 37½ per cent added to the insurance fund, and 37½ per cent to be used for the rebate to the Government on the subsidy allowed. This Government-owned company owned 16 vessels of 11,187 gross *tons* and 10,038 horsepower.

In 1903 the Russian Government took over the Russian-Danube Steamship Navigation and provided by statute for the purchase and operation of additional new vessels. The management of the concern was placed under the bureau of merchant marine, department of merchant marine and ports. The Russian-Danube Navigation owned 14 vessels, 6,334 tons, 9,390 horsepower.

"The volunteer fleet" is another shipping organization owned and controlled by the Russian Government. This branch of the merchant marine was placed completely under Government control in 1902. The Government advanced to the volunteer fleet for the purchase of six new steamships 3,060,000 rubles, to be paid by the treasury in 1912 1,530,000 rubles and in 1913 1,530,000 rubles, this sum to be returned to the Government in full out of earnings in 20 years beginning in 1914. One of the regulations provides:

The reserves of the army and navy shall be given preference in appointments to the service in the volunteer fleet. The captains, mechanics, surgeons, engineers, sailors, and firemen of the vessels of the volunteer fleet shall be chosen chiefly from among members of the navy department, who are either in the reserves or on the retired list.

The volunteer fleet, January, 1914, owned 32 vessels of 116,422 tons and 98,460 horsepower. It seems that the taking over of these large divisions of the Russian merchant marine by the Government was prompted by a desire to put the ships onto a substantial and reliable basis which could not be secured under the greed of private capital. The splendid working of the new system is abundantly set forth in an unprejudiced article in Fairplay, weekly shipping journal (London), volume 62, page 447, February 26, 1914, as follows:

THE RUSSIAN VOLUNTEER FLEET.

[Extract from Fairplay, weekly shipping journal (London), v. 62, p. 447, Feb. 26, 1914.]

Since the year 1909, when the management of the Russian volunteer fleet was intrusted to the ministry of marine, and when the business of the concern was placed on something like a commercial basis, the results of its operations have improved considerably. Ever since 1885 that company has been the recipient of a yearly subsidy, amounting to 600,000 rubles, for the maintenance of a steamship service between Odessa or St. Petersburg and Vladivostok. Notwithstanding the State assistance, however, the company up to 1909 worked for the most part at a loss. Then, with the change in its managemeent, came a change in its prospects. In 1909, for instance, the net profit realized, not including the subsidy, amounted to 512,132 rubles; in 1910 there was a surplus of 561,563 rubles, in 1911 of 178,807 rubles, and for 1912 the net profit was 289,290 rubles. In view of this altered state of things it is not to be wondered at that the Government considers that the time has arrived for revising the subvention allowance. A bill, in fact, has been laid before the Duma providing that for the next 10 years—i. e., from 1914 to 1923—the Volunteer Fleet Co. shall receive a yearly subsidy of 178,383 rubles for the working of the above-mentioned main line instead of the yearly sum of 600,000 rubles, as hitherto. The Government takes it for granted that henceforward there will be an annual increase of about 110,700 rubles in the earnings and an average increase of about 36,000 rubles in the expenses. The new bill stipulates that there shall be, as formerly, 18 voyages in both directions every year. The ports to be called at on the outward voyages are to be Nicolaieff, Constantinople, Beirut, Port Said, Djedda, Hodeida, Djibouti, Colombo, Singapore, Hongkong, and Nagasaki, and on the homeward trips Nagasaki, Hankow, Shanghai, Hongkong, Singapore, Penang, Colombo, Djibouti, Hodeida, Djedda, Port Said, Beirut, Constantinople, Feodosia, and Batoum. Nine of the company's steamers must, under the new bill, be put into the Odessa-Vladivostok line; four of them must, however, on account of their age, be replaced by new ones, and these new boats must have a speed of 12 knots, must be fitted for both passenger and cargo traffic, and be of about 8,000 tons carrying capacity. In order to furnish funds for the payment of this new tonnage—which, as far as possible, must be built in Russian yards—the company is empowered to raise a loan of altogether 3,920,000 rubles—namely, of 600,000 rubles in each of the years 1915 and 1916, of 1,500,000 rubles in 1917, and of 1,220,000 rubles in 1918. The new steamers have to be installed in the service as early as 1915, and seeing that the Russian yards will be fully employed for a long time to come in executing orders received for the construction of war vessels, it is more than probable that some of the new boats for the volunteer fleet will have to be built abroad.

I have not now at hand further data to refute other statements, as I am sure I will be able to do later concerning Australian experiences and other statements as to "the net experience in Government ownership which the world affords," but the correspondence which I will now insert concerning the Panama Railroad Co. line—Uncle Sam's line between Panama and New York—so completely negatives the wild, inaccurate, and unconsidered statements as to that line as to leave little to be said. I hear denunciations of Industrial Workers of the World propaganda, but how about the berating of the Government in such a splendid achievement as the building of the Panama Canal, and especially the steamship side of the undertaking, which has certainly been as brilliant and successful as any undertaking in the history of man's achievements?

Read the record of reduced rates to one-half of the former rates, of revised agreements that protect American shippers to South American ports. Study the figures and determine whether Uncle Sam is a blunderer and the Shipping Trust is perfection. Put your fingers to your brow and ask yourself seriously why these steamship owners want to keep Uncle Sam from going further in the Government ownership and operation of steamships, and then turn to the letter of these Boston men of trade and commerce and shipping combines and contemplate the nerve of them as they submit their plan to transfer about $100,000,000 gold a year from the pockets of the people to their own coffers.

The following is the correspondence with Mr. Drake, which I will take occasion to discuss later, but the friends of the Shipping Trust also use the data:

PANAMA RAILROAD CO.,
New York, September 15, 1914.

Hon. J. W. BRYAN,
House of Representatives, Washington, D. C.

MY DEAR MR. BRYAN: Your letter of the 5th instant has just been received by me.

When the United States Government secured control of our company we were operating a steamship line between New York and Colon as a feeder for the railroad. It consisted of the steamships *Allianca*, *Advance*, and *Finance*, which were owned by the company, together with other chartered steamers that were secured from time to time, as warranted by the traffic.

The maximum freight rate then existing between New York and Colon was $8 per ton, and outside of a few of our employees, who were carried at lower rates, the prevailing fare for passengers was $75 each way.

The three steamers we had in the service were not, of course, of sufficient capacity to meet the demands for transportation of freight and passengers when the construction of the canal was commenced, and the Isthmian Canal Commission, the department of the Government in charge of the work, purchased the steamships *Colon* and *Panama* from the Ward Line and turned them over to us for operation on the basis of our company paying interest, charter hire, and depreciation.

The minimum freight rate was gradually reduced from $8 to $3.50 per ton, and is still effective, and practically all of our passenger accommodations have been availed of for the transportation of Government euployees. These demands have been so urgent that we have not been able to accommodate the tariff passengers desiring to sail on our steamers, who have consequently patronized the other lines running between New York and the Canal Zone.

When the steamships *Ancon* and *Cristobal* were purchased for the transportation of cement to the Canal Zone, they were turned over to us without charter expense, because it was realized that any charge of this character assessed against us would be reflected in the rate established for the transportation of cement; and with a view to reducing this to the lowest possible limit, we were relieved from the obligation of paying charter hire for the steamships *Colon* and *Panama* upon the understanding that cement would be carried on the *Ancon* and *Cristobal* at actual cost, and that in arriving at this cost we would credit the Panama Canal with the amount we would pay for the charter of the steamships *Colon* and *Panama*. As a result of this arrangement all of the cement carried by our steamers in connection with the construction of the canal has been burdened with a transportation charge of only $1.25 per ton of 2,000 pounds, while on tramp steamers that we have been obliged to charter from time to time because our steamers were not of sufficient capacity to carry all of the cement needed in the work, the Government has incurred an expense of from $2.25 to $3 per ton of 2,240 pounds.

Up to the middle of August, when we turned over the steamship *Cristobal* to the Quartermaster's Department for the return of American tourists in Europe, we were operating six steamers—the *Ancon* and *Cristobal*, the *Colon* and *Panama*, and the *Allianca* and *Advance*. The last two are the property of our company, the *Finance* having been lost in New York Harbor about four years ago.

Up to May 31, 1914, we have charged up $358,653.35 to the depreciation of steamers owned by our company; we have maintained a rate of $3.50 for rough goods between New York and Colon, and $4.50 per ton on general cargo, as against the $8 rate in effect previous to the time the Government assumed control of our company, and as against a rate of $6 that is now being charged by steamship lines operating vessels between New York and ports contiguous to the Canal Zone; we have carried thousands of employees of the Government and their families from New York to the Canal Zone at the $20

and $30 rates, as against the $75 rate prevailing by other steamship lines; we have competed with foreign lines for the freight traffic moving between New York and ports on the Pacific coast both north and south of Panama, without being parties to rebates, reduced freight rates, or concessions in passenger fares to the important shippers interested in this traffic; we have assisted in the development of traffic between the Atlantic and Pacific coasts of the United States as against the transcontinental railroads by allowing steamship cocarriers on the Pacific a proportion of the through rates sufficiently remunerative to enable them to maintain their steamers in the traffic and accepting a proportion for our Atlantic haul that in most cases results in a loss to our line; we have by the operation of our steamship line induced our Pacific Ocean carriers to agree to a gradual reduction in the rates to and from the United States and Pacific ports of Mexico, Central and South America, to the level of the rates to and from Europe, thereby doing away with the discrimination that has for years existed in favor of the European market; by our action in maintaining low and yet reasonable rates between New York and the Canal Zone we have saved the Government very considerable money in the shipments that have been forwarded by other lines that were forced to meet our rates, and notwithstanding all this the operation of the steamship line has been financially successful, as you will note by the following table:

	Profits.	Deficits.
1905	$157,245.49	
1906		$37,158.21
1907	158,562.95	
1908		178,810.67
1909	104,995.98	
1910	167,952.25	
1911	77,187.97	
1912		201,761.13
1913	221,489.92	
11 months to May 31, 1914	267,019.29	
Total	1,154,453.85	418,730.01

I believe the above will give you in a concise manner the result of the operation of our steamship line since its control by the Government, but if there are any further details that you require regarding expenses, earnings, charter, depreciation, or anything else that you think would be of any interest to you, I shall be very glad to furnish them to you.

Yours, very truly,

E. A. DRAKE, *Vice President.*

I then wrote 10 specific interrogatories on the various phases of the case, as follows:

SEPTEMBER 25, 1914.

Mr. E. A. DRAKE,
Vice President Panama Railroad Co.,
24 State Street, New York City.

MY DEAR MR. DRAKE: I have your very interesting letter of the 15th instant and have given same considerable study. I shall use the data it contains in connection with a discussion of the shipping bill which President Wilson is demanding of this session of Congress. I am an enthusiastic supporter of the administration policy along this line and desire to do all I can to support the same with such recordations as your operations afford. With this in view I want some further information from you and note your kind offer to furnish same if I so desire:

1. What was the amount appropriated by the Government to secure control of the Panama Railroad Co.? How much was put into the business by the Government?

2. In your estimates of profits or deficits for the several years, do you figure interest on this total investment? If so, at what rate?

3. When the *Colon* and *Panama* were purchased from the Ward Line was the amount paid for these vessels included in the investment, and was interest charged on that portion of the investment?

4. You speak of "charter hire." What was the amount you were to pay for "charter hire" to the Government on the *Colon* and the *Panama*? From the fact that you paid "charter hire," I infer that you did not include the original amount of the purchase of these vessels in investment on which interest was to be charged. At the same time I note that you paid interest as well as "charter hire." If there is further data in connection with this feature, so that I can make it perfectly plain in debate in connection with this letter of the 15th, please give it to me.

5. The *Ancon* and *Cristobal* were turned over to the Panama Railroad Co. without charter expense, you say, to effect a low rate on cement. Under that arrangement does the low rate of $1.25 per ton evidence the real cost of transporting this cement? That is, is it the cost of transportation as you would have incurred had you been a strictly private corporation without governmental protection, and could the tramp steamers have hauled the cement at $1.25 per ton if they had waived profits? Can you give me a fairly accurate approximation of the total amount saved by the Government on transportation of materials, supplies, and men to Panama during the construction of the canal by virtue of the Government's ownership of these vessels as compared with the amount the Government would have had to pay if it had not owned the vessels?

6. The *Finance*, you say, was lost in New York Harbor about four years ago. Was the value of this vessel included in depreciation or profit and loss? How was it accounted for?

7. Up to May 31, 1914, you have charged up $358,653.35 to depreciation of the steamers owned by the company. Does that sum cover all of the depreciation? In other words, are the vessels and property of the Panama Railroad Co. worth the sum paid for them less this depreciation?

8. On the subject of rates you say you have maintained a rate of $3.50 for rough goods between New York and Colon and $4.50 on general cargo, as against the rate of $8 previously in effect and $6 now charged to ports contiguous to the Canal Zone. Could a private corporation carry this freight and traffic at the same rate your are charging if profits were elimnated? It is persistently claimed by fellow members of the Committee on the Merchant Marine and Fisheries that your vessels are not self-sustaining. Is there any further data you can give me to controvert beyond doubt this claim?

9. On page 4 of your letter of the 15th instant you speak of doing away with a discrimination that has existed for years in favor of the European market in Mexican, Central and South American ports. Will you give me any data you can to amplify and demonstrate this feature both as to the nature and extent of the discrimination heretofore practiced and as to the reduction you have brought about?

10. In your itemized statement on page 4 of your letter of the 15th instant you show a deficit of $37,158.21 in 1906, a deficit of $178,810.67 in 1908, a deficit of $201,761.13 in 1912. What is the explanation for these deficits in these particular years? Your total profits for the years mentioned are $1,154,453.85. Your total deficits are $418,730.01. This makes the aggregate profits exceed the deficits by $735,723.84. Is this a true statement of the profits and is it a fact that the Government has actually made this much money by virtue of the ownership of these vessels during the time covered by their operation?

I realize that I am burdening you by these queries, but I shall appreciate very much full answers to them in order that I may demonstrate to Congress the fact that men employed by the United States Government are able to do things of this kind and have as much sense and as much efficiency as men employed by the private interests of the country, and the story of governmental waste and inefficiency is not borne out by the facts.

Thanking you for your kindness of the 15th, and thanking you in advance for such further information as you will be kind enough to furnish for immediate use, I remain,

Sincerely, yours,

J. W. BRYAN.

Mr. Drake answered as follows:

PANAMA RAILROAD CO.,
New York, October 2, 1914.

Hon. J. W. BRYAN,
House of Representatives, Washington, D. C.

MY DEAR MR. BRYAN: I take pleasure in submitting the following replies to the specific inquiries contained in your letter of the 25th ultimo, previously acknowledged:

1. The old French canal company was the owner, by purchase, of 68,888 of the total of 70,000 shares of the Panama Railroad Co., and when the United States Government bought the assets of the Panama Canal Co. for $40,000,000 it secured these 68,888 shares. My recollection is that they were valued at $7,000,000 by the representatives of the United States Government who arranged the purchase, but correct information regarding this, as well as concerning the cost of the remaining 1,112 shares purchased by the Government to secure complete control of the company, can undoubtedly be obtained from the files of Congress in Washington or from Maj. F. C. Boggs, chief of office of the Panama Canal, who is located in that city.

In considering this question it must be borne in mind that the Panama Railroad Co. operated a railroad across the Isthmus known as "Panama Railroad" and a steamship line between New York and the Canal Zone known as the "Panama Railroad Steamship Line."

As explained to you in my previous letters, the facilities of the steamship line were sufficient to take care of the commercial traffic that was offering up to the time the United States Government undertook the work of constructing the canal. The railroad the company operated across the Isthmus was also similarly situated, but in order to handle the large amount of material, supplies, and workmen required in the construction of the canal it became necessary to practically reconstruct the road and equip it with modern rolling stock that its previous commercial traffic did not warrant. There were two ways in which this could be accomplished—the company could either make these improvemenets out of its own or borrowed funds and charge the United States Government sufficiently high rates for the service rendered to warrant this expenditure, or apply to this purpose all of its own funds, borrow the additional moneys required from the United States Government, and charge rates for the transportation furnished to the Government that approximated actual cost.

The latter plan was determined upon, and the company secured loans of $650,000 from the Isthmian Canal Commission and $4,285,197.03 from the Government, making a total indebtedness of $4,935,197.03. All of these advances, with the exception of $372,234.92 that was expended in the rebuilding of our steamship *Allianca*, were applied to the retirement of the company's bonded indebtedness and the improvement of the railroad facilities at the Isthmus in order to enable it to handle the Government's traffic at low rates; and from the net revenues of the company these loans were repaid to the extent of $1,687,864.92, leaving a balance now due of $3,247,332.11, upon which, by act of Congress dated March 4, 1911, we are relieved from further payment on account of principal or interest.

As an indication of the low rates that we charged I would refer you to our annual report for the year ending June 30, 1913, which shows that although the freight traffic we carried for account of the Government was 56.67 per cent of the total traffic carried over the railroad only 17.60 per cent of the company's revenue was derived from this, the balance being the result of the carriage of commercial freight, which though forming but 39.50 per cent of our tonnage yielded 82.40 per cent of our freight revenue.

2. The correspondence exchanged with you related only to the operation of the steamship line. From the reply to inquiry No. 1 you will see that of the loans secured from the Government only $372,234.92 was applied for steamship purposes, and this was repaid.

Interest was paid to the Government on all the loans secured for the railroad's account to March, 1911; 4 per cent was the rate on loans secured for new equipment and construction, and 2½ per cent on the loans secured for the retirement of the company's first-mortgage bonds.

3. The steamships *Colon* and *Panama* were purchased by the Isthmian Canal Commission and are not the property of our company; they therefore do not appear in our capital account as an asset of our company.

My answer to inquiry No. 4 gives you the details of the interest payments to the Government on account of the use of these steamers by our company.

4. The steamships *Colon* and *Panama* were purchased by the Isthmian Canal Commission, at a cost of $1,312,000; we paid for the use of these steamers 8 per cent per annum on their cost, 4 per cent representing depreciation and 4 per cent interest on the investment. We also obligated ourselves to keep these vessels insured for their full value, to make all ordinary and extraordinary repairs, and at the expiration of their charter to return them in as good condition as when received, ordinary wear and tear excepted. In addition to the 8 per cent on their cost, we have also paid interest at the rate of 4 per cent on the value of the additions and improvements that were required to fit these steamers for our service, these latter amounting to $416,476.74.

On October 31, 1910, we discontinued making any direct payments for charter or depreciation, this being recovered from us through a relatively reduced rate that we established for the transportation of cement for account of the Panama Canal on the steamships *Ancon* and *Cristobal*. The total charter we paid to the Government up to that time was $585,947.04.

5. The rate of $1.25 per ton that we now charge for the transportation of cement on the *Ancon* and *Cristobal* was established by taking the actual cost of transportation, without any charge for charter, interest, or depreciation, and taking therefrom the amount per annum that we were paying for the use of the *Colon* and *Panama*. If we were a strictly private corporation without any control by the Government we could not possibly carry cement in steamships of American registry at anything like $1.25 per ton; nor could any other steamship owner operating even foreign steamers carry cement at this rate without incurring a heavy loss.

The highest rate we paid to a Norwegian tramp steamer was $3 per ton of 2,240 pounds, and we secured this only because the chartered owners had homeward traffic from Cuba that was available for the return trip. The lowest rate we secured from tramp steamers, even under the most favorable circumstances and with the assurance of full homeward cargo, was $1.60 per ton, but under ordinary conditions of the charter market an English or Norwegian tramp steamer can not make any revenue from the carriage of cement to Colon unless the rate is in the neighborhood of $2.40 per gross ton and full homeward cargo can be secured at paying rates.

It would not be possible for me to give you even an approximate idea of the amount saved to the Government on the transportation of materials, supplies, and employees by virtue of its ownership of our line, as compared with the amount it would have paid if it did not control the line. You will realize in a moment the difficulty of this task when you consider the following:

First. All employees have been carried to the Canal Zone at an expense to the Government of $40 for each adult; and all the employees and their families traveling at the expense of the employee have been carried at the rate of $20 or $30 for a journey of 2,000 miles, occupying nearly seven days, as against the tariff rate of $75 by other lines, which during certain seasons of the year when the tourist traffic is not important, apply a rate of $56.25 for the transportation of Government employees.

Second. The rates on all Canal Commission supplies is $3.50 per ton on rough goods and $4.50 per ton on general cargo, as against the previous tariff rate of $8 per ton.

The other regular lines have also been obliged to meet our rates in order to secure any share of the traffic, because the Government, although owning our line, does not patronize it exclusively.

6 and 7. The book value of the steamship *Finance* at the time this vessel was lost was $244,265.37; we received from the White Star Line as its share of our loss $33,333.33; the amount of depreciation figured on our books was $40,607.61; the balance of $170,324.43 was charged to profit and loss account.

The book value of the *Advance* and *Allianca* is $762,713.62; the amount of depreciation to May 31, 1914, is $318,045.74, thus making their net value on May 31, 1914, $444,667.88.

I consider that I am conservative in stating that the vessels are worth in the market their present value on our books. We could not replace them by steamships of American registry that are capable of giving us the service we now receive from them at anything like this amount, and they are worth more than their book value to us.

8. At the rates of $3.50 per ton for rough goods and $4.50 per ton on general cargo, our steamship line, which receives no assistance whatever from the Government or from the railroad company, is self-sustaining and earns a profit. If we were a private steamship line independent of any connection with the Government there would be no inducement to carry employees and their families at a $20 and $30 rate, because this does not much more than cover the cost of their subsistence, and we could take steps to secure good paying freight traffic that is now lost to us because we can not follow the practice of other lines in securing it.

9. The principal part of the freight traffic carried over the Panama Railroad was, up to a few years ago, the freight between Europe, Central America, Mexico, and South America in both directions. We had one steamship connection on the Atlantic running to the United States and eight running to Europe. Our cocarriers on the Pacific Ocean, with the exception of the Pacific Mail Steamship Co., operated steamers of foreign registry, and as a result of the various pooling and other arrangements that were and probably are still effective in connection with European traffic there was more or less a community of interest between the European-Atlantic carriers and the various carriers on the Pacific.

The traffic to and from Europe was always subject, more or less, to competition via the Straits of Magellan. This did not so seriously affect the traffic to and from the United States, but the result was that the rates to and from Europe were gradually reduced, while those to and from the United States were maintained.

For instance, on traffic to Central and South America the rates on high-grade cargo, such as laces, ribbons, silks, etc., were $9.94 per ton higher from the United States than from Europe, although the distance is 1,000 miles less. On cotton goods, domestics, linens, etc., the rates were $7.39 per ton higher; on canned goods they were $9.82 per ton higher, and on edible cargo, such as crackers, meal, flour, sugar, etc., the rates were $3.82 per ton higher. On shipments of clean coffee from these ports the rates to the United States were from $3 to $3.80 per ton higher; on sugar, $5.43, and on hides and skins, $13.30 per ton higher than the rates to Europe.

Our railroad across the Isthmus being the intermediate carrier had no justification under private ownership to reduce this revenue by insisting upon its cocarriers establishing rates to and from the United States on as low a basis as those to and from Europe, but by the operation of our steamship line we gradually brought about a condition of affairs by which the rates from the United States were lowered from time to time until they were finally on a level with those effective from Europe. This, of course, was not accomplished without considerable objection on the part of our Pacific Ocean carriers, some of whom even to this day feel we have unnecessarily reduced their revenues by lowering the rates from the United States to the level of those from Europe when, in their judgment, the rates from the United States should be higher than those from Europe, because the latter are not subject to the competition that exists on traffic from Europe.

We have also succeeded in gradually inducing our carriers on the Pacific to establish the same rates on shipments to the United States as on those to Europe, although, as a matter of fact, we have no right and no power by which this could be brought about. The principal disputes we have had with our steamship connections have been the result of this policy and of our refusal to increase rates from the United States when, because of charter or other conditions, all the various steamship lines in the world were engaged in raising their charges.

10. In 1906 the deficit of $37,158.21 was directly attributable to the loss on traffic due to the earthquake in San Francisco and to the diversion of some of our local and through cargo to the steamships of the Hamburg-American Line and the Royal Mail Steam Packet Co., which inaugurated that year a service between New York and the Canal Zone in opposition to our line.

In 1908 a deficit of $179,810.67 was due to our loss of tariff passenger traffic to the Royal Mail and Hamburg-American Lines and the carriage instead of employees of the Government, who with their families were furnished transportation to and from the Isthmus at the rate of $20 for each adult; the operation of five steamers on our line, which was imperative in order to maintain the food supply of the employees of the Government when the general and commercial cargo could easily have been handled with four steamers, and the falling off in our traffic of 14,823 tons; and the increase in charter expense of $129,749.69 for the hire of steamers while we were repairing the *Allianca* and making extensive necessary repairs to the *Colon*.

The deficit of $201,761.13 in 1912 was the result of the following conditions:

The Pacific Mail Steamship Co., which, as you know, is controlled by the Southern Pacific Railway Co., refused to exchange traffic between the Atlantic and Pacific coasts of the United States unless granted what was unquestionably an unreasonable proportion of the through rate. The Government offered every inducement to independent steamship lines to handle this traffic, and finally secured a connection. This independent line found it necessary to establish a service from Philadelphia in order to give their steamers on the Pacific sufficient tonnage to make their ships profitable. This Philadelphia service was discontinued by the independent line, and rather than lose the entire tonnage over the railroad we assumed the operation of this service. We knew at the time this would entail a heavy loss to our steamship line, but that it would be more than offset by the earnings of the railroad on the large amount of traffic it would continue to handle because of that service. Our loss in this connection was $70,037.20.

The Pacific carriers at one time brought more cargo to Panama than could be moved across the railroad to Colon in time to forward by our connecting steamers, because the facilities on the Isthmus were almost congested by the large tonnage we were unexpectedly called upon to handle by the Panama Canal and the inability of their operating officials to promptly release our cars. When the cargo was moved across the Isthmus we were obliged in order to prevent a block of all our facilities to secure a tramp steamer as a warehouse to receive it as fast as delivered from cars and to bring it to New York. The expense of this amounted to $21,739.20 and is properly chargeable to the railroad, but it is a steamship expense and has been charged to our steamship line.

Extraordinary repairs were required on our steamships, especially the *Colon* and *Panama*, which, as above indicated, are the property of the Government. The amount charged on this account during that year was $207,488.88.

An additional pier rental in New York City, because of the *Ancon* and *Cristobal* being turned over to us, cost $13,071.88.

The increased cost of stevedoring, as the result of handling a class of California traffic that had always been forwarded up to that time by steamers or sailing vessels operating via Cape Horn or the Straits of Magellan, and an increase in the rate of wages paid to stevedores, cost $65,519.73.

I trust this will satisfactorily answer all the inquiries you have made, and regret that on account of press of other important matters I have not been able to furnish this to you more promptly.

Respectfully,

E. A. DRAKE, *Vice President.*

I can not further discuss this matter now, but these data are furnished freely for full use in this debate by all sides. I am sure those who are proud of the splendid work of the Government in this crowning achievement of man at Panama have no cause to be otherwise than proud of the handling of these steamships.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. ROBERT J. BULKLEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 28, 1915.

Mr. BULKLEY. Mr. Speaker, the rural-credits bills H. R. 16478 and S. 5542 were prepared and agreed upon in joint sessions of the subcommittees on rural credits of the House and Senate Committees on Banking and Currency. My colleagues on the House subcommittee are Messrs. BROWN of West Virginia, STONE, SELDOMRIDGE, WEAVER, RAGSDALE, HAYES, WOODS, and PLATT.

I have submitted to the Committee on Banking and Currency the report of the subcommittee in support of H. R. 16478. The report is not quite unanimous, Mr. HAYES and Mr. PLATT dissenting from certain features of it. Under leave given me to extend my remarks, I now submit the subcommittee report in full, as follows:

The question of providing a suitable system of agricultural credit for the United States has been under anxious considera-

tion both in and out of Congress for a number of years past, and many bills intended to furnish the desired machinery of rural credits have been from time to time introduced. In several States legislation has been enacted, but there has been a prevailing belief that better results would be obtained through a Federal enactment designed to furnish a uniform system of land-mortgage banking that would operate throughout the whole territory of the Nation.

Under an act approved March 4, 1913, a special rural-credit commission, authorized to investigate and study in European countries the whole question of rural credits, was directed to visit Europe. On January 29, 1914, this commission rendered a report to Congress in which it recommended legislation. (S. Doc. No. 380, 63d Cong., 2d sess.)

Meantime the question of agricultural credit had been raised during the discussion of banking legislation when the Federal reserve act was being debated in the House of Representatives in July and August, 1913. Action was at that time deferred on account of the fact that it was deemed wise to confine the action then taken to commercial-banking legislation.

Recognizing the widespread popular demand, however, for rural-credit legislation, careful consideration has been given during the past session by a joint subcommittee representing the Banking and Currency Committees of the Senate and House of Representatives to the proper elements that should find a place in any legislation on this subject. It has been desired to make use both of the information provided by the rural-credit commission which visited Europe and of the exhaustive testimony taken by the subcommittee in question. The effort has throughout been that of ascertaining the actual needs of the farming community at the present time and of formulating legislation which would enable the individual farmer to provide himself with the capital needed by him for the proper development and exploitation of his land, as well as for obtaining title thereto and thus becoming an independent proprietor. It is believed that the experience of European nations, while instructive and useful, needed to be carefully checked and compared with American experience in order to avoid any danger of transplanting institutions that, although successful in their native soil, would not so well meet the needs of a different population and a different type of agriculture. To that end it has been sought to subject each element in the existing European systems to careful examination, and wherever a given suggestion or institution appeared in the main to afford a suitable basis for action to adapt it carefully to American requirements. Full study and consideration has been given to the testimony collected by the United States commission already referred to and to the legislation suggested by that commission in its report.

In general, the state of things existing to-day in American agriculture and calling for remedial legislation may be outlined as follows:

(*a*) There has been a great and well-known drift of population from the country to the cities and a corresponding proportionate or relative decline in the percentage of the population engaged in producing the raw materials of manufacture and the foodstuffs which come from the farm.

(*b*) A large advance in prices and the cost of living, which has been explained in many diverse ways by economists and students of the existing situation of industry and agriculture, is generally attributed, in part at least, to the relative decline in the amount of attention given to agricultural enterprise.

(*c*) Despite large advances in the methods of farming in vogue, due to improved agricultural education and better organization of farm life, American agriculture is far from being as efficient as it should be, this lack of efficiency being in a very material degree attributable to insufficient capital and the inability to get more except upon terms which rendered it unprofitable to apply such capital.

(*d*) The inability in many parts of the country to make farming profitable, the consequent drift of population away from the farm, and the incidental advance in prices of farm products may be relieved, at least in a degree, by any well-considered measure which will actually result in enabling the agriculturists of the country to obtain the means of improving their farms by the more scientific and thorough application of capital.

(*e*) While in part the difficulty of getting capital thus described is due to inadequate and unfair arrangements for the furnishing of short-term credit for periods running not over 12 or 15 months, the basic difficulty is believed to lie in the question of long-term credit, the furnishing of adequate long-term credit at a reasonable rate undoubtedly being necessary as a basis before a satisfactory provision for short-term loans can be made.

Believing that the first and fundamental matter to be disposed of is the question of long-term credit upon a proper and reasonable basis, the committee has therefore addressed itself primarily to that subject, and has developed a plan intended to enable the farmer to obtain upon reasonable terms the funds he needs in his operations. In order to appreciate the nature of the problem by which those who would frame such legislation are faced, it is desirable to devote some attention to the changes in American agriculture which have placed the farmer in a position which particularly calls for more capital. Among the factors which are worthy of special note in this connection is the rising price of land, due to growth of population and other factors; the increasing intensiveness of agriculture; the wider application of machinery to farming; and a variety of others.

One view of this general situation as to agricultural conditions and need for credit in the United States has been stated in a recent study by E. W. Kemmerer in the American Economic Review for December, 1912, as follows:

The chief reason for backwardness of the United States, as compared with Europe, with regard to agricultural credit may be briefly summarized as follows: (1) Our wonderful agricultural domain, where good land could be had almost for the asking, and where for generations land was so cheap and labor and capital so dear that intensive cultivation was generally unprofitable. (2) The prosperity of our farmers, who have not been forced by dire necessity to resort to credit as were the farmers of Germany at the middle of the last century, when the Raiffeisen cooperative banks were first organized. (3) The nomadic character of a considerable part of our agricultural population as it has moved continually westward in taking up new lands, and more recently as it has been retracing its steps or moving backward. (4) The isolation of our farmers in this country of large farms and "magnificent distances." (5) The rapid growth of the manufacturing and commercial business of the country—and that largely in the hands of the same class of people who control the bulk of the banking business.

Add to these circumstances the obstacles which farmers always encounter in the matter of credit, as compared with manufacturers and merchants, obstacles such as the uncertainty of crops and the strongly seasonal character of the farmer's credit demands, and we have a sufficient explanation of the backwardness of agricultural credit in this country.

To emphasize most of the causes, however, is to brand oneself as belonging to a past generation. Our domain of free arable land is practically gone; good farms must be bought, and for them ever-increasing prices must be paid.

The era of hand cultivation is giving way to that of farm machinery propelled by horsepower and even by steam, gasoline, or electricity, with its resulting great increase in the efficiency of labor. Eleven years ago the editor of the Dakota Farmer in his testimony before the United States Industrial Commission put the matter tersely, and with little exaggeration, as affecting his own section of the country, at least, when he said: "When I first worked out it took five binders to follow a machine, one man to rake off, and one to carry the bundles together. Now the hired girl frequently drives the machine that does the whole business." Some idea of the extent of this increase may be obtained by reference to the following figures compiled from census reports:

Value of farm implements and machinery in the United States.

Years.	Value.	Per cent increase.
1910	$1,265,000,000	69
1900	750,000,000	52
1890	494,000,000	22
1880	407,000,000	50
1870	271,000,000	10
1860	246,000,000	62

The increase in the value of farm implements and machinery per acre of land in farms from 1900 to 1910 was from $0.89 to $1.44, or 61.8 per cent.

An analysis of the figures for farm machinery by geographic divisions shows a marked difference in the rates of increase, but the tendency in all sections during the last 40 years has been decidedly upward, the greatest growth having been witnessed in the decade ending 1910. During that decade the lowest rate of increase in any section was that of New England, 39 per cent, and the highest that of the mountain States, 163 per cent.

Another development which is making larger demands upon the farmer for working capital is the increasing use of artificial fertilizers, the expenditure for which in the United States approximately doubled from 1880 to 1900.

As the result of such tendencies and of the rapid depletion of our free domain, farming in the United States is losing its old-time kinship to mining and becoming more like manufacturing: More and better machinery and more power are needed on most farms in the interest of efficiency. This calls for short-time credit. But a supply of good machinery requires a fair sized farm for its efficient utilization, hence the need for larger farms and for mortgage credit to make their purchase possible.

The farming population is becoming more settled now that the free lands are practically gone and the frontier has disappeared. The isolation of the farmer is rapidly becoming a thing of the past with the advent of rural free delivery, rural telephone, the automobile, and the parcel post. The farmer no longer buys gold bricks nor is duped by fraudulent lightning-rod schemes except in the pages of the comic supplements.

When seeking credit the farmer can offer better security than ever before. His markets are larger, better organized, more certain, and more accessible. The risk of crop failure is less, thanks to the wonderful progress of scientific agriculture. There are few pests which can not now be controlled by the intelligent farmer, who takes time by the forelock. The problem of moisture is growing less serious every year with the improvements in irrigation, dry farming, and the more scientific diversification in crops.

Conditions then point to an increasing need for agricultural credit and to improving circumstances for its safe development.

CHARACTER OF PRESENT CREDIT.

Assuming that the changing conditions of American agriculture are admitted, that the resultant need for capital is conceded, and that the urgency of the situation existing at the present moment in many States of the Union is recognized, the question must next be considered how far the farmer is at present supplied with the machinery of credit, how far this machinery is adequate, how far it can be improved upon without changing its structure or character, and how far an absolutely new type of credit institutions is called for.

When these questions have been satisfactorily answered, it will be possible to examine the methods of agricultural credit employed abroad and to discuss the application of these methods to American agriculture as well as to examine, finally, the extent to which new machinery must be evolved.

In this inquiry the topic most conveniently to be considered in the first instance will be the actual extent to which the farmer to-day succeeds in getting loans on the strength of his land, as indicating the extent to which he actually is obliged to work with borrowed capital. This may be considered through the medium of the statistics of the last census, they being, whatever their defects, the only complete and inclusive survey of farm-mortgage conditions throughout the whole territory of the United States.

From these it is found that in 1910 a total of approximately 4,000,000 farms owned wholly or in part by operators existed in the United States, and that of these approximately two-thirds, or 2,600,000, were free from mortgage, while 1,300,000, or one-third, were mortgaged. Of those thus subject to mortgage, the largest proportionate number were found in the East and West North Central groups of States, while the Middle Atlantic, South Atlantic, and East and West South Central States constituted a second group ranking after the one first mentioned in the number of mortgaged farms. The New England, Mountain, and Pacific States fell far behind in the number of mortgaged farms as compared with the other groups of States already referred to. The following table gives the precise details of this situation:

Divisions.	Farms or farm homes operated or occupied by owners.												
	Free from mortgage.							Mortgaged.					
	1910	1900	1890	Increase:[1] 1900–1910		Increase:[1] 1890–1900		1910	1900	1890	Increase:[1] 1900–1910		Increase:[1] 1890–1900	
				Number.	Per cent.	Number.	Per cent.				Number.	Per cent.	Number.	Per cent.

Pacific	96,039	77,990	60,135	18,049	23.1	17,855	29.7	55,894	29,757	24,240	26,137	87.8	5,517	22.8

[1] A minus sign (−) denotes decrease.

The census statistics show that in 1910 the average value of land and buildings per farm throughout the United States was $6,289. This figure was very much raised by the high valuation in the West North Central section, which ran to nearly $10,000; in the Mountain section, which ran to about $9,300; and in the Pacific, which ran to about $10,300. Had it not been for these three sections the average value of land and buildings would have been much less. The average mortgage per farm was $1,715, but this again was raised by very high mortgage averages in some three different sections of the country. Taking the two factors together, therefore, it may be said that the average mortgage indebtedness of $1,715, as well as the average farm valuation of $6,289, are figures that must be regarded as exceptionally high from the standpoint of any study of farm values and mortgage averages. A true estimate of the representative rather than the average valuation and mortgage would be considerably less than these amounts. Taking both, then, as distinctly within the limits of conservatism, it may be inferred that in order to provide for the borrowing of American farmers upon the existing basis it will be necessary to furnish a system which can loan considerably more than $1,715 to the individual owner, and that this must be protected by property whose ratio shall be considerably lower than that of 3 to 1. In view of the fact that in some parts of the country the average loan runs to $2,400, it does not seem as if a limit of $4,000 as the maximum amount to be lent under any mortgage-loan plan to the individual farmer would be too high, while on the other hand it would appear that in order to meet existing necessities and conditions it would probably be necessary to allow the proportion of value which might be advanced by way of mortgage to run to 40 or 50 per cent of actual values.

The detailed facts relating to actual mortgage loans in the United States, as collected by the Census Bureau, are represented in the following table:

Divisions or States.	Number of farms operated by owners: 1910.[1]				Per cent reported as mortgaged.[2]			Farms operated by owners owning entire farm: 1910.[3]						Ratio of debt to value, per cent.	
	Total.	Free from mortgage.	Mortgaged.	Not reported.	1910	1900	1890	Number.	Value of land and buildings.	Amount of debt.	Average per farm.			1910	1890
											Value.	Debt.	Equity.

[1] Includes Indian Territory.

While, however, the actual facts as to the amount of farm indebtedness and the amounts and relative proportions of farm loans are thus clear, it is very much less easy to ascertain the exact conditions under which the loans are made and the rates of interest that are paid thereon. These differ very considerably in different parts of the country, and it would probably be unfair to attempt any broad generalization with reference to them. A better method of study will be afforded by considering the situation in some representative sections and then pointing out the extent to which the conditions thus developed are probably to be taken as characteristic.

SOME REPRESENTATIVE INSTANCES.

A beginning may be made with the state of things in the Northwest, which is clearly set forth in an investigation as to the condition under which long-term loans are made in North Dakota. A report of this inquiry, made by Meyer Jacobstein in the American Economic Review, states:

Questionnaires were mailed to 200 representative banks, of which 125 reported, giving returns for 45 out of the 50 counties in the State. As there are 660 banks in the State, returns were obtained from about one-fifth of all the banking institutions. These replies show that the average farm mortgage runs for 4.94 years and that the average interest rate is approximately 8 per cent (accurately, 7.88 per cent). This 8 per cent does not include the expense of abstracting titles, examining the property, and the recording of the mortgage. These fees are invariably paid by the borrower. Nor does this interest rate of 8 per cent take account of the bonus that is frequently exacted in the newer regions from the borrower for the privilege of securing a loan; nor does it allow for the sum the borrower loses in paying his yearly interest in advance, which is deducted from the principal. In one county, for instance, a farmer had to pay a bonus of $50 for borrowing $1,000 at 10 per cent interest. The farmer secured $850, since $100 was deducted as interest on the $1,000 and $50 was deducted as a bonus. In this case the actual interest was considerably higher than the nominal interest rate of 10 per cent. While the practice of exacting a bonus is not common, it is generally the custom to deduct the entire year's interest in advance; assuming an 8 per cent rate, the farmer therefore pays $80 interest not on $1,000 but on $920, which brings the rate up to 8.7 per cent.

While the average prevailing rate, according to our returns, is approximately 8 per cent, the rate varies in different parts of the State, depending upon the local conditions. In the following table is shown the rate of interest by groups of banks and groups of counties:

Rate of interest on farm mortgages in North Dakota.

Number of banks.	Number of counties.	Rate of interest.
15	4	6 to 7
45	16	7 to 8
36	12	8 to 9
13	5	9 to 10
16	8	10 to 11
125	45	7.88

The 15 banks reporting less than 7 per cent rate are all located in the Red Valley counties, viz, Cass, Grand Forks, Traill, and Walsh. These are the most fertile and longest-cultivated counties in the State. On the other hand, the banks reporting a rate of 9 per cent or more are located, as a general rule, in the newer and more undeveloped counties in the western part of the State. The counties in the central part of the State average from 7 to 9 per cent. The rates are lowest in the eastern tier of counties and rise gradually toward the western part of the State, where the rate runs up to 10 and 12 per cent, which is also the rate in the eastern part of Montana.

That the 8 per cent rate is quite general for a large part of the State is evidenced from the fact that 25 of the 45 counties report an average rate of 8 per cent or more. In only four counties is the rate less than 7 per cent. One-half of all the 125 reporting banks charge 8 per cent or more and 110 charge 7 per cent or more. The following table shows the extent to which the several rates prevail in North Dakota:

Interest rates on farm mortgages in North Dakota.

Rate of interest.	Population.	Per cent.	Number of farms.	Per cent of State.	Farm acreage.	Per cent of State.
Less than 7.....	113,518	19.7	9,376	12.6	3,879,222	13.6
7 to 8.....	189,573	32.9	21,617	29.1	9,043,582	31.8
8 and over.....	273,965	47.5	43,367	58.3	15,503,846	54.5

It is clear from this table that at least one-half of the State is subject to the 8 per cent rate, only a small part enjoys a rate below 7, and in no county does the average fall below 6 per cent.

The above figures are conservative. They are based on returns submitted by bankers, who would naturally understate rather than overstate the rate of interest charged in their respective localities. Furthermore, we have a check on these bank returns in the replies received from the farmers. Questionnaires were sent to over 100 representative farmers residing in different parts of the State; 29 farmers, living in 22 different counties, reported an average of 7.91 per cent on first farm mortgages, which rate is only slightly higher than the rate returned by the bankers in 45 counties. As a rule the rates reported by bankers and farmers are nearly identical in their respective counties. It is safe to conclude, therefore, that the average rate on farm mortgages for the entire State is about 8 per cent.

The situation with respect to farm loans and rates of interest in some portions of the South was set forth before the joint committee on rural credits by W. B. Doak, of Clifton Station, Va. Mr. Doak told of his own personal experiences in the matter of borrowing money and said:

The average farmer, small farmer, is practically unable to finance his operations, and he must go to an agent and pay 5 per cent for the use of money two or three years on terms that are practically impossible. A mortgage can not be paid off in two or three, or even five, years, as people are well aware. * * *

The bank has been known to take out 12 per cent in advance. * * * Some lenders are very kind and considerate. On the other hand, many succeed in making themselves and their mortgages exceedingly offensive. Instances arise in which the borrower is known to have been intentionally and maliciously crippled in his credit or otherwise injured to enable the creditor or his friends to acquire a large and desirable place at great sacrifice by foreclosure. You can readily see how this necessity of having loans renewed every few years places a very powerful weapon in the hands of the people who lend money. It has a particularly disastrous effect upon farmers, because the farmer's place of business is also his home. It disturbs the rooftree, the unit and very foundation of democratic institutions. That is, to make the point perfectly clear, no purchaser of farm-land bank bonds could say he held a mortgage or trust against any particular farm and farmer. Anything he might do to disparage one would work against all and prove of no particular benefit to him. Hence, temptation to disparage any is removed. This difference alone, while quite impossible to reduce to figures, would justify the borrower in paying considerably more to get a farm-land bank to carry his loan.

All who have lived in the country realize how frequently opportunities offer by which men with influence may render the farming operations of any particular farmer unprofitable, namely, his taxes may be raised arbitrarily, personal credit denied at the bank, dealers refuse to handle his stock or crop at a fair price, his road or outlet to public road may be rendered practically impassable or outside interference make it almost impossible to get along with neighbors or help.

Mr. Leonard G. Robinson, the general manager of the Jewish Agricultural and Industrial Aid Society, of New York City, who has had much experience in the making of farm loans, described the existing situation in New England as follows:

We have applications for advice and assistance from farmers in practically every State in the Union. We have our own staff of expert investigators, and investigate not only the particular application, but the entire situation exactly as it exists in that locality. So I think we are pretty well posted on the rural credit situation of nearly every part of the United States.

Now, what is the situation? So far as my personal experience is concerned, I find that the situation differs very markedly in various parts of the country. In a general way you can divide the country into four parts, say, the East, where conditions are fairly tolerable; the Middle West, perhaps a little less so; the Northwest, where it is pretty bad; and the South, where it could not be any worse.

Each division has its own peculiar problems. You will find, for instance, that not only do conditions differ between States, but they differ between different localities within the State.

I have known, for instance, places where you would get a first mortgage with tolerable ease in one place and 25 miles away you could not get one for love or money. There are really no two places in the country that you could put on the same level.

In one place—take Connecticut, Massachusetts, or whatever place you may choose—there may live a retired farmer probably worth several hundred thousand dollars. He was probably born and raised there. What is he going to do with his money? If he invested in Government bonds, he would probably get something like 3 per cent interest or less. Knowing the situation in that locality he lends his money on farm mortgages and nets 5 or 6 per cent. And in this way you will find that the farmers in that particular section of the country are able to obtain mortgages with comparative ease and on fair terms.

Or, instead of a private investor, that neighborhood may have a thriving little industrial community where the men save their money. As a result there is a savings bank or a trust company practically doing the work that the private investor does in the other place. This is provided the little town or village has no other demands upon it. In places where business is rather brisk or where real estate is booming in the town itself the advantage of having a private investor or savings bank there is nullified by the other demands. The farmer is a little bit out of the way, and why should a man that has money to invest go out of his way 10 miles in order to make a loan to a farmer when he can invest his money right next door to him and among his own friends?

In other words, the farmer, when he has to compete for credit with the business man or promoter or real estate speculator, has a very poor show. In this way having local credit conditions favorable does very little good to the farmer. I have known of instances in New York, New Jersey, and other States where the farmer can not get a loan on gilt-edged mortgage on any terms, although the credit conditions there could be no better.

It is evident, therefore, that the trouble with our agricultural credit situation is the lack of the necessary mechanism by which this law of supply and demand can be regulated the same way as the law of supply and demand is regulated in New York or any other financial center.

The situation as to present methods of borrowing in the United States was also discussed before the joint committee on rural credits by Mr. John Cunningham, of Granville, Ohio, who said that in Ohio the average rate on "farm property by building and loan and other associations ranges from 6 to 8 per cent," while of the straight loan he said that the rate was "usually 6 per cent," and urged the adoption of a suitable measure of legislation on the ground that it was necessary both to reduce the interest and expenses of borrowing, and at the same time to obtain a system by which loans could be paid off on the installment plan.

Mr. Gordon Jones, president of the United States National Bank, of Denver, Colo., in describing the situation as to farm loans in the West, suggested that existing difficulties were partly due to the fact that much of the capital of farming regions was shipped out for commercial uses instead of being applied to the development of agricultural undertakings in the places where the savings originated. Mr. Jones said:

Our cities of the West have outgrown the agricultural sections. We do not have support enough from outside the cities to justify larger industrial or commercial undertakings. Because of this lack of a larger rural population our urban enterprises do not require all the capital the banks have available for them. We have got to have a consuming population as well as a producing one, and the surrounding country and towns furnish both. My views, thus expressed, will explain why I went abroad as an American commissioner. It was in order to see if I could not devise some system for safely lending money to the agricultural interests in order to more largely populate the rural sections. We have thousands of acres of land that await development, the best soil under heaven, and the surest water—irrigation—but our commercial banks can not loan on them; yet at the same time we have more funds than we know how to loan or can loan under existing laws in our own State.

Mr. H. S. Mobley, of Prairie Grove, Ark., sketched the situation in his part of the country, saying that 8 per cent was about the normal rate of interest on good farm mortgages in Arkansas, although he referred to the exaction of premium charges, outside of the interest, at very high rates. Long-time interest rates in some parts of the State, as ascertained through a State convention of farmers, were found to run from 10 to 11½ per cent. In addition, he expressed the opinion that rates of interest were certainly not growing lower with the passage of years.

According to Mr. John Sprunt Hill, of Durham, N. C.—

It is clear that there is something radically wrong with the facilities for borrowing money on farm lands in North Carolina. From general inquiry in many parts of the State the fact is revealed that few banks in North Carolina lend on farm land, and that the average farmer desiring to borrow money on his land is compelled to deal with the land-loan sharks, and is compelled to pay from 6 to 20 per cent on money borrowed. As a general rule he is subjected to many kinds of extortion, usury, and exploitation, and, naturally, the average farmer of North Carolina is very much dissatisfied with the present land-loan shark business and avoids borrowing money whenever possible. Frequently the land-loan shark preys upon the necessities of the distressed farmer, and, regardless of law against usury, without conscience, and without heart, gets all for the money loaned that his victim will pay. Another curious fact about this business in North Carolina is that the more remote the farmer lives from the money centers, the greater the usury, the higher the commission and renewal fees, and the more exacting the oppression and the extortion.

Mr. Clarence Ousley, of Fort Worth, Tex., asserted that there was no 5 per cent money in Texas, while on the other hand he took the view that unless the proposed system should result in a rate of interest below 8 per cent there was no use in "wasting time" in attempting legislation. At the present time, he contended, the tenant farmers in Texas who are buying farms "are paying 8 and 9 per cent interest" with security equal to four or five times the value of the loans thus made.

GENERAL SITUATION.

Without going further into an analysis of the testimony before the joint committee on rural credits and without attempting to submit further evidence drawn from other sources with respect to the actual conditions of making farm loans in the several States, it may be generally remarked that, in spite of the existence of reasonable rates of interest for loans made on the best farm-land security in some of the older as well as in some of the newer but more favored portions of the country, the farmer is in general obliged to pay, under existing conditions, too high a rate of interest for his money, is obliged to renew too frequently, is forced to accept unsatisfactory conditions with reference to the partial payment of his indebtedness, is

mulcted by unreasonable and unnecessary commissions, legal fees, and other exactions. If it should be possible to correct these conditions by introducing a system of farm loans at reasonable rates of interest, running for long periods, and providing for the gradual repayment of the principal, the cost of the capital engaged in agriculture would be immensely decreased. The effect of such decrease would be in the long run to render farming more profitable and thereby to encourage the movement of population into agricultural pursuits, a situation which would itself tend to relieve the pressure on the land and reduce prices of foodstuffs, besides checking tenancy and increasing farm ownership.

Considerable controversy has been developed within recent years with reference to the rate of interest that is actually paid by farmers at the present time for funds obtained by them upon the security of first mortgages on cultivated land. Many statements of rates of interest actually so paid have been put forward and these vary widely one from another.

The facts in the case seem to be that under favoring conditions the farmer is able to obtain loans upon first-mortgage security at a very reasonable rate, this rate being probably comparable with the rate which must be paid by the ordinary borrower for industrial purposes. On the other hand, it is also true that in many States and parts of States rates of interest on farm loans rise to an exorbitant figure, either because of the fact that the laws of the State are such as to throw doubt upon the character of the title to the land that can be secured in event a foreclosure becomes necessary, or because the would-be borrower is not in position to make known the merits of his property in any effective manner. In other cases, the situation is doubtless due to sheer scarcity of capital in the community or to the fact that there is an exceptional demand for such capital for purposes other than those of agricultural development, or because there is some special consideration which prevents the marketing of a note secured by first mortgage at a favorable price. Whatever the reason may be, the fact remains that the conditions of borrowing upon farm land undoubtedly vary very widely, as already stated, throughout the United States, and while it is true that in some portions of the country there is small probability that the conditions of borrowing can be much improved upon, in others there is much to be done. Undoubtedly the establishment of a more nearly uniform rate of interest for the farm loans of unquestioned quality would immensely aid in opening up the land of the States in which agriculture is still somewhat backward, and would consequently contribute largely to the improvement of agricultural conditions concerning which so much has been said in the past.

CONDITIONS OF BORROWING.

Analysis may next be made of the conditions under which the farmer in the United States is able to borrow. In general his loans are either obtained from banking institutions organized primarily on a commercial basis or else from individuals or corporations who are in the market for investment purposes and desire to lend upon landed securities. The national banks of the country have long been restricted by law in a way intended to prevent them from lending upon mortgage security, but in spite of this fact not a few of them have done so, the rate charged to the farmer being made correspondingly high. State banks have been able to lend upon land mortgages, but in the main they have been unwilling to make loans for a sufficiently long period.

The funds of individuals have been loaned on landed security upon mortgages running usually three to five years, but a costly agency system has been permitted to intervene between the farmer and the lender. Insurance corporations with large sums to invest have in many instances made large advances to farmers on land mortgage, and have frequently afforded the most stable and most economical source from which to draw capital for the requirements of the farmer. In reviewing the situation regarding farm loans, attention may therefore first be devoted to the insurance companies and their operations. The life insurance concerns have naturally done most of the lending upon mortgage.

According to information which has recently been compiled with reference to the extent of life insurance company loans on real estate 17 life insurance companies in the United States now carry in farm loans a little less than $520,000,000. The following table shows the farm loans carried by the 17 companies in question, arranged in order:

Northwestern Mutual Life	$95,729,431
Union Central	73,743,611
Mutual Benefit	71,303,303
Prudential	64,578,840
Ætna Life	56,838,802
John Hancock	38,253,492
Connecticut Mutual	30,452,925
National Life	26,689,934
Phoenix Mutual	$19,997,040
Travelers	12,101,289
Penn Mutual	9,534,616
Pacific Mutual	7,013,558
Provident Life	4,787,998
Fidelity Mutual	2,935,826
New York Life	2,661,186
Equitable Life	2,398,000
Manhattan Life	23,100
Total	519,143,588

The distribution of the loans thus made is of considerable interest, the several States in the order of their insurance loans ranking as follows:

Iowa	$100,119,913
Kansas	53,668,695
Missouri	53,667,415
Nebraska	53,165,368
Illinois	43,131,733
Indiana	40,686,288
Minnesota	33,078,638
Oklahoma	22,536,862
Texas	20,325,095
South Dakota	18,934,368
North Dakota	14,629,783
Ohio	14,034,375
Georgia	10,505,560
Tennessee	8,428,243
California	5,861,978
Kentucky	5,606,844
Mississippi	2,038,879
Colorado	2,017,028
Idaho	1,696,272
South Carolina	1,587,222
Wisconsin	1,398,241
Washington	1,347,387
Connecticut	1,220,476
New Mexico	1,111,994
Louisiana	954,461
Alabama	856,404
Arkansas	818,129
North Carolina	794,830
Oregon	639,451
Michigan	508,174
Utah	474,582
Montana	445,435
Arizona	411,973
Virginia	181,130
Pennsylvania	102,950
New York	90,000
New Jersey	62,465
Wyoming	43,200
Florida	16,000
Maine	3,500
West Virginia	2,820
Vermont	2,475
Total	518,998,106
Porto Rico	145,482
Total	519,143,588

Practically all of the farm mortgage totals for Alabama, Idaho, Louisiana, Mississippi, Montana, New Mexico, Virginia, West Virginia, Wyoming, and Porto Rico represent loans made by the Union Central Life Insurance Co. The Arkansas mortgages are held by the Union Central and the Phoenix Mutual. The Utah, California, and Colorado mortgages are owned by the Pacific Mutual and the Union Central. The Northwestern Mutual owns virtually all the Wisconsin, the Ætna all New York, the Penn Mutual and Provident Life all the Pennsylvania, and the Union Central and Mutual Benefit all the North Carolina loans. Of the $10,000,000 of loans made in Georgia 30 per cent are held by the Penn Mutual, Mutual Benefit, Prudential, Phoenix Mutual, and Union Central, in the order named, while the John Hancock owns the remaining 70 per cent. In Texas the John Hancock and Union Central are almost equally interested, with upward of $7,000,000 each; the Travelers' some $2,500,000, and the Ætna $3,500,000. Iowa's $100,000,000 consists of about $20,000,000 each held by the Northwestern, Ætna, and Mutual Benefit, and about $10,000,000 each held by the Connecticut Mutual and Prudential. While Texas, Georgia, Tennessee, and Kentucky have over $41,000,000, the other Southern States have not been much cultivated by the insurance investors. Practically all the companies included in this statement were, up to the time this compilation was made, steadily increasing their farm mortgages, especially the John Hancock, Prudential, and Penn Mutual. The New York Life and Equitable Life of New York have only lately begun to invest in farm loans. There are, however, about seven strong companies, including the Mutual Life of New York, Metropolitan Life, New England Mutual, Massachusetts Mutual, Germania, Home & Berkshire Life, with $370,538,106 in mortgages, which own no farm loans whatever.

LAND LOANS OF BANKS.

Attention may next be given to the land loans of the banks. It has been felt by those in charge of national banks that in many cases the best protection a bank could have would be a mortgage upon farm lands, and in spite of the prohibition of the national banking act directed against loans on farm land,

the officers of national banks situated in villages or in the midst of farming districts have thought it only a proper protection of their stockholders that they should from time to time require farm borrowers to put up mortgages with them in order that they might be safeguarded against loss upon loans to such farmers, notwithstanding that in many cases these loans were of the "short-time" variety, being intended to assist the farmer to finance his crop movement.

The various methods of evading the provisions of the national-bank act which have thus been employed hardly need enumeration. Perhaps the most common has been that of having a bank officer indorse the farmer's paper, the farmer thereupon giving to the officer a mortgage upon his land. In such a case the farmer was naturally unable to make any subsequent loans with his farm land as security pending the time when he should succeed in paying off the sum borrowed from the bank. In a smaller number of instances the bank has loaned money to the farmer upon the latter's note supported by a mortgage, with the distinct understanding that the note would be renewed from time to time without charge, so that the farmer would get accommodation for, say, three years. The most common purposes for which loans such as this have been made have been those of paying off purchase-money indebtedness for farms bought or of paying off outlays made to equip the farm. The trouble with the system has been not only in its evasion of the letter of the law but in the fact that the terms of the loans were necessarily too short, resulting in embarrassment to the borrower. An effort was made to remedy this situation in the Federal reserve act, passed December 23, 1913, where provision was made for comparatively long loans on farm lands by national banks. Section 24 of the act in question reads as follows:

> Any national-banking association not situated in a central reserve city may make loans secured by improved and unencumbered farm land situated within its Federal reserve district, but no such loan shall be made for a longer time than five years, nor for an amount exceeding 50 per cent of the actual value of the property offered as security. Any such bank may make such loans in an aggregate sum equal to 25 per cent of its capital and surplus or to one-third of its time deposits, and such banks may continue hereafter, as heretofore, to receive time deposits and to pay interest on the same.
>
> The Federal Reserve Board shall have the power from time to time to add to the list of cities in which national banks shall not be permitted to make loans secured upon real estate in the manner described in this section.

It has been assumed by some that under this provision it would be possible to make a very large extension of loans to farmers, and some have estimated the amount of capital thus rendered available as high as $500,000,000. Of course such estimates are based upon the assumption that the banks would go about as far as they could in expanding their loans—an assumption hardly warranted by the facts in the case. Even if they had done so, however, it would be necessary, in order to get the total amount of capital thus placed at the disposal of farm borrowers, to deduct from the total possible borrowing power thus made available the amount now actually lent them by the banks. As there are no statistics on the latter subject, the farm loans of the banks having been heretofore surreptitiously made, it would be impossible to say how much aid the Federal reserve act would extend even if it were availed of to the full limit of its power. Conservative students of the situation will necessarily conclude that whatever the aid to be derived by the farmer through this means may be, it will not be either sufficient in amount, adequate in kind, or altogether suitable in its method of supply. It was unwise from a strict banking standpoint to grant any such concession in a measure dealing with commercial banking, such as the Federal reserve act, and the action taken can be justified only by assuming that the liquidity gained through the new reserve provisions was so great as to much more than offset the tendency toward the tying up of funds which inhered in the mortgage provisions already cited.

The State banking laws vary much among themselves with respect to their provision for loans on real estate and farm land. In some States the latitude given to the banks with regard to the making of such loans is altogether too great. In others it is perhaps not as great as it safely might be under the existing conditions. But no matter what it might be, the fact remains that the State banks, as such, are hampered by the necessity of keeping their funds in a tolerably liquid condition, because most of them are, after all, primarily commercial banks, and, as such, have to hold themselves in readiness to meet the various demand drafts upon them from their regular commercial borrowers. Like the national banks, they are disposed to make the loans on real estate only as a subsidiary kind of business, to be engaged in when the volume of commercial business offering itself is insufficient to absorb their funds to a sufficient degree, and does not therefore enable them to carry on a volume of operations adequate to furnish them with the profit they desire. The State banks have not met the needs of the farmer for a long-term loan intended for the improvement of his farm or for the extension of his acreage, and in the nature of the case could not do so.

There are other classes of State institutions—that is to say, institutions organized under State laws—whose constitution and methods are such as to adapt them better for long-term loans than the so-called State banks. Conspicuous among these are the so-called building and loan associations usually organized on the mutual-stock plan which in some States, when properly supervised, have done good work in helping wage earners to become owners of homes. They have had but little scope in the rural districts owing to the fact that they were not organized on a basis that was altogether adapted to the methods of the farmer. As a rule, they have required small payments of cash on the installment plan at very frequent intervals, a condition in itself unfitting them in some degree for application to rural needs. At all events they have gained little hold upon the farmer, and hence within the most recent past the enactment of laws in some States providing for the organization of land banks and for combining savings and loan associations. The statutes of Wisconsin and New York may be cited as examples of what has been done in this connection, but of these it is enough to say that thus far they are too new to have gained very much success. The time of their existence has not been sufficiently great to permit an accurate judgment with regard to their adaptability to the conditions. There is, however, one generalization that can safely be made with regard to them. This is that their scope will always remain too narrow either for the earning of the best rates of interest in the most economical manner, or for the provision of the greatest safety for securities issued by and on the strength of mortgages taken to protect farm loans. The average American State has not a sufficiently varied agriculture to supply the ideal territory for the operation of farm-mortgage banking upon the proper scale. From this it necessarily follows that ultimate success will be attained from the standpoint of the farmer and of the investor both—these being in the last analysis identical—through the creation of a Federal system of lending upon farm lands. The prestige of such a system would moreover be necessarily greater than that of any system resting solely upon State legislation could be, while the power of the system to equalize and average or standardize conditions would necessarily be very much greater under Federal oversight and with a Federal scope.

Not much needs to be said of the private concerns which in various States have at times undertaken to make farm loans protected by first mortgages, place these mortgages in trust with some other concern, and issue bonds protected by the mortgages in question, these to be sold to investors, who thereby supplied additional funds for relending to other farmers upon first mortgage. There have been several attempts of this sort, and a number of such enterprises, more or less successfully conducted, are in operation to-day. Many have failed in the past. When successful, schemes of this sort have been operated purely for the sake of profit, and have not resulted in much reduction of interest to the borrower or in very much advantage to the investor. The effort has naturally been to skim off as large a middleman's profit between the borrower and the buyer of bonds as could possibly be obtained. The farmer, in short, in this case as in others, has been obliged to get his funds direct from the lender or through a middleman who exacted a high commission, as already stated. The legal expense, insurance against risk, middleman's profits, and the like, have consequently been excessive.

FOREIGN FARM LOANS.

With these conditions may now be contrasted the methods of extending loans prevailing in foreign countries. The experience of Germany is probably the most instructive, and gives a good general idea of the conditions of land-mortgage credit in Europe. A clear account of the situation in Germany, recently issued, has summarized the conditions there as follows (E. D. Fisher, Monograph on Agricultural Credit):

> The system of issuing bonds against agricultural mortgages was originally promulgated in Prussia by Frederick the Great in 1768, through the medium of cooperative associations, the so-called Landschaften. These Landschaften have proved themselves the most efficient type of such institutions, and all the others are more or less patterned after them.
>
> The Landschaften are corporations of a semipublic character. They are organized by the landowners of a given district—mostly the political unit—the "Provinz." The Government not only supervises them but furnishes a number of the officials. The governing boards, however, are elected by the members of the association and only approved by the Government, except the presiding officer, who is generally a representative of the State. The highest authority of each association is the "general-landtag," which is formed by delegates of the members of each association, and has the right to decide controversies and settle grievances. The Government does not at the present time give any financial support. The different boards of the Landschaften have full

authority in conducting the business of their associations as long as they comply with the legal regulations.

Every member of the Landschaft has a right to demand a mortgage loan on his property up to the extent determined by the by-laws of the association.

The mortgage bonds issued by the Landschaften are based on mortgages against the property of the members. With the Landschaften of the old type, the property of all the constituent members is pledged for the bonds; with the Landschaften of the new type, only the property on which the association has granted loans. Besides this security, the Landschaft itself is responsible for the bonds. The old Landschaften are the owners of considerable property acquired by them at the time of their organization, part of their holdings having been contributed by the Government. The new Landschaften have formed special guaranty funds to secure the prompt payment of interest and of maturing principal. The owners of bonds can not demand payment of the principal at their pleasure. The bonds are redeemed by the Landschaften out of the moneys received for the redemption of the loans granted to the landowners in stipulated amounts yearly or half yearly.

The old Landschaften pay the expenses of administration from the revenue of the property of the association. The new Landschaften do not own such property. The borrowers, therefore, have to pay a small contribution to cover the expense of administration. The borrowers have also to contribute to guaranty and sinking funds. In spite of these additional costs, the landowner obtains loans from the Landschaften at a cheaper rate than from other institutions for providing credit on agricultural property.

With the idea of still further increasing the efficiency of the Landschaften system, efforts have been made to bring about some kind of centralization. Several of the different Landschaften have been united in a Zentrallandschaft (central land society). The single Landschaften under this plan are not to issue their own mortgage bonds. Instead, the Zentrallandschaft issues uniform bonds. It was thought that this uniform-mortgage bond would be more salable than the old bonds and that it would become a factor on the international stock exchanges and money markets. The results of this movement, however, did not fulfill the expectations of its promoters. The new bonds did not show any marked advantage over the old ones and did not succeed in becoming a factor in the international markets.

The great factors of safety in the mortgage bond are: The integrity of the directorate, strict obedience to the by-laws and legal provisions, the experience and knowledge of the assessing experts of the Landschaften, and a centralized management. Since the German officials have always proved their integrity and have the public confidence, the quotations on the mortgage bonds show hardly any difference between the new and the old Landschaften. The quotations on the bonds and interest which they bear are determined by the condition of the money market at the time they are issued. Inasmuch as the business of the Landschaften is conducted entirely for the benefit of their members, without profit for the association itself, the rate of interest paid by the borrowing landowner also depends on the condition of the money market. Usually he has to pay between 3 and 4½ per cent interest. Various issues of mortgage bonds bear an interest of 3, 3½, or 4 per cent. More than two-thirds of them are of the 3½ per cent type, as is indicated by the statement of the outstanding mortgage bonds of the Prussian Landschaften for the year 1908–9. The outstanding mortgages in that year bearing interest at 3 per cent were 510,800,000 marks; those bearing interest at 3½ per cent, 2,221,700,000 marks; and those bearing interest at 4 per cent, 328,300,000 marks. The percentage of amortization usually varies from one-half to three-fourths of 1 per cent, dependent, of course, upon the length of the loan.

In the western part of Prussia and in other States of Germany there are no Landschaften. These sections have developed another type of institution which serve the same purpose. Their business transactions are in the main similar to those of the Landschaften. They lend to the landowners against mortgages and also obtain the necessary funds by issuing mortgage bonds. These institutions, the so-called Landeskreditkassen, differ, however, from the Landschaften essentially as to their organization.

The Landeskreditkassen are public institutions. They are conducted by the government of the respective States or by the Provinces. They serve the landowner in the first place, but do other business besides. They bring some revenue to the State or whatever public body may own them. Consequently the Landeskreditkassen are not so favorable to the landowner as the Landschaften.

The administrative body of the Landeskreditkassen consists of public officials. The borrowing landowners have no direct influence with the administration. They are, however, in a position to affect the administration directly, for the representative assemblies have control of the Landeskreditkassen.

The Landeskreditkassen are usually allowed to make loans only within the district for which they are founded. They do not lend money solely to farmers, but also on city properties and to public corporations. Furthermore, several Landeskreditkassen do some banking business beyond lending on real estate. In former times they had one advantage over the Landschaften, inasmuch as they lent money to small farmers, while the Landschaften did business solely or mainly with the great landowners. To-day the Landschaften have changed their policy and grant loans to the small farmers as well. The Landeskreditkassen still outstrip them in this line of business, but the real cause is not an unwillingness on the part of the Landschaften to give small credit. These small loans are fewer with them, because in the district in which the Landschaften transacts business the big landowners predominate, while in the western part of Prussia and in the the banks comply with all legal provisions. Otherwise the Government kassen—the land is divided into small units. At the end of 1908 the Landeskreditkassen had outstanding loans in the amount of 1,775,600,000 marks.

There is still another set of institutions which furnish credit on real estate, the so-called Hypothekenbanken. These also lend on property and issue mortgage bonds to secure the necessary funds. They, however, differ entirely from the institutions described above, inasmuch as the mortgage banks are purely private business enterprises, with the main purpose of making profit.

For the sake of safety the Government has enacted general laws in order to regulate their business. These mortgage banks have to apply for a charter, while other corporations of limited liability are not compelled to do so. Having obtained the charter, the mortgage banks are subject to a careful supervision by Government officials, who see that the banks comply with all legal provisions. Otherwise the Government officials do not interfere with their business.

The mortgage banks are permitted to issue 10 times or 15 times the amount of their paid-in capital. They are forbidden to pay higher interest on the bonds than they receive for their outstanding loans against which the bonds are issued. They are further forbidden to grant loans exceeding 60 per cent of the value of the property pledged. The Governments of the several sovereign States of Germany may, however, allow the mortgage banks to lend on rural property on the borders of the respective States up to two-thirds of the value. Otherwise the business of the single-mortgage bank is not limited to any particular section.

These mortgage banks play an important part in the credit system of Germany. In the total amount of their business transactions they have exceeded the business of the Landschaften and the Landeskreditkassen combined, but the great bulk of their loans is granted on city property. In rural districts the mortgage banks can not successfully compete with the cooperative institutions. The mortgage banks of Germany granted 9,504,000,000 marks in loans on mortgages at the end of 1908. Of this total amount only 591,000,000 marks were loaned on rural property. The outstanding bonds of the mortgage banks aggregated 9,238,000,000 marks, and their capital stock plus reserves 1,093,000,000 marks. The banks were able to pay an average dividend to their stockholders of 7 to 8 per cent.

The Credit Foncier of France is essentially a mortgage bank similar to the German mortgage banks. The French institution, however, is a central bank. The Government, therefore, takes a greater interest in the conduct of its business and also appoints some of its officials. The Credit Foncier was founded in 1852. In 1856 began the movement for centralization, and the bank secured control over the few other mortgage banks then in existence. To-day it has not only a practical but a legal monopoly.

Its method of conducting business is patterned in the main after the German Landschaften, but the Credit Foncier is a private corporation operating for profit. Its profits are, however, limited, for the interest paid by the borrowers must not exceed the interest which the institution has to pay on its outstanding bonds by more than six-tenths of 1 per cent. It may grant loans up to one-half of the value of the property pledged. Besides loans on real estate the Credit Foncier is allowed to lend money to public corporations, which is not secured by mortgage. The outstanding bonds of the institution are not permitted to exceed 20 times the amount of its capital stock.

The development of the Credit Foncier is very similar to that of the German mortgage banks. Its business is also conducted mostly in urban districts. Of all its loans, aggregating 6,126,900,000 francs, only 1,278,500,000 francs is based on rural property. Thus the German farmer is better able to obtain money on mortgages than the French farmer.

The essential differences between the methods of farm lending which prevail in Europe and those existing in the United States are the following:

First. In the United States the supply of loans is sporadic and occasional; there is no general unified system of lending to the industry of agriculture as a whole, but every loan is based upon an individual tract of land.

Second. Abroad loans are secured by individual tracts, but the investor who buys a bond representing partial ownership in the aggregate of the loans is protected by the general solvency of the industry of agriculture as carried on over a great territory.

Third. In consequence of the foregoing conditions the loans made in the United States are for short terms without definite pledge of renewal at expiration.

Fourth. Abroad farm loans are made for long terms with the idea of repayment from the profits of the industry over a term of years.

THE PROPOSED PLAN.

We may now state the plan embodied in H. R. 16478 and S. 5542, which has been devised for the purpose of meeting the credit necessities of the farmer and of securing to him all those opportunities for the obtaining and application of capital which are enjoyed by the European cultivator.

The plan referred to seeks to meet the situation already described by providing a special mechanism capable of furnishing long-term farm loans, slowly payable by the borrower, while at the same time it gradually draws the funds of investors into the business of agriculture by making available to them a low denomination first mortgage bond, amply protected by securities deposited with representatives of the Government after they have been inspected and purchased from farm-loan associations which originally made them, by a set of mortgage banking institutions of unquestionable solvency.

In brief, the proposed plan would create a set of national farm-loan associations, each with a capital of $10,000 or more, according to the requirements of the locality in which each association might be established. Such farm-loan associations would be organized in farm-loan districts whose limits would be laid out by representatives of the Federal Government and which would, therefore, be presumably inclusive of a sufficient territory to afford an ample basis for the operations of the loan association, while at the same time it would be sufficiently restricted to prevent these institutions from becoming interested in mortgages secured upon property located at a great distance from the home office of the association.

In organizing these associations the cooperative principle would be invoked by virtue of the requirement (sec. 5) that every borrower from any of the loan associations shall be the owner of stock of a par value not less than 5 per cent of the amount of his loan as a condition precedent to being granted the accommodation. It is probable that in most cases the stock of the loan associations would be taken up entirely by those who were obtaining loans secured by a first mortgage upon their

lands. In order to prevent the loan associations from going too far and thereby incurring obligations which their capital would be inadequate to protect, provision is made that the total obligations incurred by any such loan association shall not exceed 20 times its capital.

It has not been deemed wise to permit the loan associations established under the bill to engage in ordinary banking, receiving deposits, and otherwise competing with commercial banks. The business which the loan associations do is of a totally different type, and will be best accomplished by confining these concerns to a uniform and limited character of operations, thereby preventing them from expanding their dealings too broadly and at the same time relieving them of the danger of lack of expert knowledge or management which they would incur were they to undertake to do too many kinds of business.

It is clear that the loan associations would not, under these conditions, being debarred from receiving funds on deposit, be able ordinarily to lend more than the amount of capital that might be supplied to them by their constituent stockholders at the outset unless some other means were provided for enabling them to get additional funds. This means is afforded by the creation of 12 land-mortgage banks, one to be situated in each of 12 districts similar in extent to the Federal reserve districts created under the Federal reserve act of December 23, 1913, although not necessarily coterminous with the latter. There would thus be, if the mechanism provided by the act worked out as is supposed, the same number of Federal land-mortgage banks as of Federal reserve banks, there being one institution of each kind for a territory similar to and very nearly identical with that included in each Federal reserve district.

Such land-mortgage banks would find their occupation in purchasing from their constituent stockholders, who under the terms of the act would be largely national farm-loan associations, the first mortgages of which the latter had become possessed in the process of making their loans to the persons entitled to borrow of them. Their profits would be due primarily to the fact that they would be able to obtain from the public by means of the issue of bonds the funds that they needed to continue the purchase of these mortgages from the loan associations, and would be able to get these funds at a rate of interest decidedly lower than that charged by the loan associations to their customers. Under the act a free difference of 1 per cent between the interest received by the loan associations and that to be paid by the mortgage bank on its bonds is provided for, the said difference to be divided equally between the loan association and the mortgage bank.

Just as the loan association will under the plan provide itself with funds by selling its mortgages to the mortgage bank, so the mortgage bank will in turn provide itself with more funds by placing these purchased mortgages in trust with a Government representative and selling to prospective investors, in quantities to be determined by Government authorities, bonds which are taken by the investors as partial titles to the ownership in due proportion of the mortgages which are thus deposited with the Government representative.

The land banks, in order to be permitted to sell bonds, are required under the terms of the bill to deposit their mortgages in specified amounts with the Federal reserve agent of the district in which the land-mortgage bank is situated. The land-mortgage institution applies to the reserve agent for permission to issue a series of bonds, and the reserve agent makes a favorable or adverse recommendation to the Federal Reserve Board, which in turn authorizes or refuses, as it may deem best, the issue of such bonds. When the bonds are issued they are to be sold by the mortgage bank to any buyers who may choose to invest in them.

It is thus seen that three distinct elements are provided by the act as together making up the process of lending:

First. The actual task of examining and passing upon loan applications, performed by the national farm-loan associations.

Second. The process of checking over and testing the mortgages which grow out of these loan operations and of reselling to investors titles to proportionate parts of the general mass of mortgages purchased by such mortgage banks from the loan associations, a process performed by the Federal land banks.

Third. The process of holding in trust for the protection of the investors and of all parties concerned the actual securities created by the means already indicated during the time that the bonds based upon these securities are outstanding, performed by Government representatives, known as Federal reserve agents.

A separate category might be made of the work of the Federal Reserve Board, to which is intrusted the ultimate power of determining the conditions under which bonds shall issue, or, indeed, of deciding that they shall not issue at all. The actual steps in the process, so far as they are of a positive nature, are, however, included in the three descriptive classifications already enumerated above.

STARTING THE BANKS.

One further feature in the general scheme deserves separate notice. This is the feature of the plan whereby provision is made for governmental interposition designed to start the enterprise on an unquestionable basis. Such Government interposition is found in two distinct elements in the plan: (1) A provision that in case the stock in the Federal land banks is not taken up within a reasonable length of time by individual investors or farm-loan associations, it shall be taken up to a certain minimum amount by the Government itself; and (2) a provision that under certain carefully restricted limitations the Federal Reserve Board shall, if it desires to do so, have power to call upon the Secretary of the Treasury to purchase bonds issued by the Federal land banks up to an amount which shall not in the aggregate in any one year exceed $50,000,000. As to the first of these provisions, it may be noted that the Government subscription to stock parallels that which was included in the Federal reserve act, and which did not in that case result in placing any burden upon the Government, inasmuch as the stock was amply subscribed up to the amount specified without the necessity of any such intervention. There is a difference between the situation which existed under the reserve act and that provided under the proposed farm-loan act, inasmuch as under the former there already existed a strong body of nearly 7,500 institutions which were practically obliged to take out stock in the new reserve banks, whereas the farm-loan system of institutions is still to be brought into existence. As to the second, a somewhat more extended notice seems to be called for at this point, while further details regarding its application will be furnished later in the discussion. The broad question of the Government's relation to agricultural credit may be considered now.

The methods of developing a rural-credit mechanism have been stated by Prof. E. W. Kemmerer in a study of the agricultural situation, elsewhere referred to, as follows:

> If the time is ripe for a greater use of bank credit in agriculture, how is that credit to be obtained? Broadly speaking, four methods may be mentioned, only the last two of which are deserving of much attention at the present time. They are: (1) Establish Government agricultural banks; (2) adopt the Egyptian plan of a Government guaranty to an agricultural bank established with private capital; (3) encourage the farmers to organize cooperative credit societies on some such plan as the Raiffeisen or Schulze-Delitzsch banks of Germany; (4) utilize more effectively in the interest of the farmer our present banking machinery and improve it where it is defective.

Of these methods that which is preferred by the committee as a result of its investigations is a modification of the plan numbered (3) above. It has been found in many respects, however, that the German plan of agricultural cooperation is not well suited to the United States, and consequently modifications necessarily have been introduced. It has, moreover, been thought that the idea of Government guaranty, although not needed in the full sense in the United States, might to advantage be applied in a limited form through the use of public credit for the purpose of giving stability to the securities issued by the agricultural banks and of insuring that they shall be free from unfair attack by interests that might attempt to depress them in the market. It is also believed that the Federal Government, by indicating a degree of interest in the welfare of the system practically expressed in a willingness to take a comparatively small amount of its bonds under specified conditions, would be giving indisputable evidence of its genuine interest in the situation and guaranteeing the country at large its assistance in maintaining the plan and successfully carrying it into operation.

For this reason it has been deemed best to include in the proposed plan a section providing for the use of Government credit under carefully limited and controlled conditions in connection with the starting of the system of agricultural loan institutions. The main features of this plan are as follows:

(*a*) The amount of farm-loan bonds to be taken by the Government under any conditions shall not exceed $50,000,000 annually.

(*b*) No bonds whatever shall be purchased by the Government unless upon recommendation of the Federal Reserve Board, through whose hands all recommendations for Government purchase must go, and without whose approval such recommendations would not be considered in any event.

(*c*) No applications to the reserve board for Government purchases shall be made except under very carefully specified conditions.

(*d*) The reserve board may, at its discretion, by the use of proper care in fixing the terms under which farm-loan bonds are to be sold, practically set aside all reasonable possibility that any such application would be presented.

(e) Under no circumstances whatever can the Government credit be used to purchase bonds already on the market and which, therefore, had been taken up by buyers. This would mean that the Government credit could not be used for the purpose of manipulating market prices, and that whatever beneficial results followed from its use would accrue to the issuers of the bonds originally, who in the long run would be the farmers of the country.

It is not intended in this discussion to enter into any general debate on the propriety of what is known as "Government enterprise," "paternalism," "socialism," or any of the other standard phrases relating to the subject. It may be noted that whereas the proposed bill might conceivably, under very carefully guarded conditions, require the expenditure of $50,000,000 a year of public funds for bonds ultimately certain to be redeemed, the Federal Government at the present time is spending very nearly that amount in its rivers and harbors appropriation bill and many times that amount annually for military and naval purposes. Its expenditure on public buildings, though not nearly so large, is large enough to afford an item distinctly comparable with any amount that is at all likely to be called for under the proposed measure. These are the facts with reference to the working of the section of the bill referred to, and they should receive consideration before mere conjectures, speculations, or expressions of opinion with reference to the "principle" embodied in any particular plan.

DETAILS OF PLAN.

Having thus stated the proposed plan in general outline, it will be well worth while to view the proposed bill section by section:

Section 1 is intended to provide for a short title for the act, the designation "Federal farm-loan act" being suggested as a suitable title, parallel to the designation "Federal reserve act."

Section 2 defines, for the sake of convenience and accuracy in later use, the term "farm mortgage" as used in the bill.

Section 3 provides for the appointment of an officer to be known as a "farm-loan commissioner," who shall have charge of the executive and administrative routine of the new system, subject to the oversight and direction of the Federal Reserve Board. He would bear somewhat the same relationship to the Federal land banks and farm-loan associations that is borne by the Comptroller of the Currency to the national banks and Federal reserve banks under existing law.

Section 4 provides for the technique of organizing the proposed farm-loan associations. It substantially follows the procedure laid down in the national banking act, with the necessary modifications designed to adapt the provisions more closely to the requirements of the farm-loan plan.

Section 5 provides for the issue of the shares of farm-loan associations and for the capitalization of these institutions. The lower limit of capitalization has been set at $10,000, that being the sum originally recommended by the agricultural credit commission and being considered sufficiently low to permit its being subscribed in practically any district likely to make good use of the loans the system is designed to provide. It will be observed that a partial payment plan modeled after the system widely employed by building and loan associations has also been embodied in the section relating to the issue of stock, thereby permitting small savers to apply their accumulations to the purchase of shares if they so desire.

One provision of the section which calls for attention is seen in the clause requiring that 50 per cent of the capital stock of each farm-loan association shall be paid in cash while permitting the balance to be paid in first mortgages, at the option of the subscribers. The theory of this provision is that it makes little difference whether the capital is paid in money, which is promptly disbursed to borrowers, or is paid in obligations of such borrowers without the intervention of actual money. The percentage of cash required might, with entire safety, be much reduced below the 50 per cent called for; but it is believed that that proportion will wisely be exacted in cash as a proof of good faith, a margin of direct protection against loss in a liquid form, and a means of extending loans to persons who want to invest actual wealth in the further improvement of their holdings.

Section 6 is intended to outline in general terms the powers and responsibilities of the officers of farm-loan associations, following in general the ideas of the national-bank act, with such additions and adaptations as are deemed advisable. Among such adaptations the most conspicuous is that which calls for the appointment of an appraisal committee from among the board of directors. Inasmuch as the Federal land banks, later provided for, are to purchase the mortgages taken by the farm-loan associations, it is deemed wise to give the land bank of the district one member of the appraisal committee, while an additional safeguard is provided in the authority granted the farm-loan commissioner to remove any member of the appraisal committee of any farm-loan association and to order the appointment of a successor.

Sections 7 and 8 provide for the business of farm-loan associations. The bill makes the maximum term for which farm loans can be made 30 years, and permits the loans to be canceled if desired at the end of 5 years. The 30-year maximum has been determined upon, after considerable investigation, as representing a period amply long to permit farmers to pay off the original obligation out of the savings obtained year by year from the product of the farm itself. The permission granted to make loans for shorter periods or to cancel the loans at the end of 5 years by paying the amount of principal and interest still remaining to be disposed of is intended to permit the farmers to take advantage of a specially successful business or unusual harvests in order to relieve themselves of debt. While under some conditions it might appear that the granting of this power to individual borrowers would be injurious, because it would disturb the adjustment of relationship between the lending institution and its customers, and might throw back into the hands of the loaning institution funds of which it would be unable to dispose to advantage and on which, therefore, it might be obliged to lose the interest, the belief of the framers of the bill is that in the United States, with its rapid industrial and agricultural developments, there is no ground for any serious fear of this sort, as there will for many years be ample opportunity for investment of all available capital in the form of loans. The provision for amortization is fully explained in other portions of this report and needs no additional comment here.

It is deemed wise to fix a maximum limitation upon the amount of the loan that can be made to any one person, partly as a protection to the farm-loan associations themselves, which will naturally be institutions of comparatively limited capital. By referring to the tabular view taken from the Census Bureau at another point earlier in this report it will be seen that the maximum limit fixed in this section for the amount of the loan which may be made to any one individual is considerably larger than the average farm loan secured by mortgage in the United States. The requirement that the mortgage shall represent a loan not exceeding 50 per cent of the actual appraised value of the land mortgaged is an ordinary precaution following commercial practice and by no means burdensome. The other specifications are those which are suggested by experience as a mere matter of prudence.

Section 9 provides for the division of the country into land-bank districts substantially similar in area and extent to the reserve districts created under the Federal reserve act. It is required, however, that these districts shall as nearly as possible be made to contain a whole number of States without fractions in order to avoid confusion and division in the mortgages made under the laws of the States in question.

Section 10 vests the power of oversight over the whole system in the hands of the Federal Reserve Board. The board is intrusted with the power to organize and charter land banks and to review and alter the rate of interest charged by farm-loan associations. Power to control issues of farm-loan bonds is likewise bestowed and the board is granted authority to recommend to the Secretary of the Treasury the purchase of bonds issued by the land banks, should such purchase be deemed needful. The making of reports, appraisals, and so forth, and the exercise of incidental powers is of course included in the section.

Section 11 is a general permission to the Federal Reserve Board under proper conditions to admit State loan associations or analogous institutions to the privilege of doing business with land banks, and of using mortgages obtained from such institutions as a part of the basis of security for issues of farm-loan bonds when the latter are needed. This provision, it is believed, will unite existing institutions to the proposed system and will prevent any conflict of views or opinions in the several States, beside providing Federal land banks with an immediate source of securities upon which to issue bonds.

Sections 12 and 13 provide for the creation of land-mortgage banks to be entitled "Federal land banks." As elsewhere explained, it is proposed that these institutions devote themselves to the purchase of mortgages from the farm-loan associations, paying for the same in cash and hypothecating them in blocks of suitable size with the Federal reserve agents of their respective districts, the latter being then expected to attend to the details of issuing to the farm-loan associations the bonds which it desires to sell as representing the mortgages it has hypothecated. It will be observed that the section makes provision for selling stock both to individuals and to national farm-loan associations, the latter being required each to subscribe for $1,000 of stock upon entering into business relations with a

Federal land bank, the principle here being that of maintaining the cooperative idea, as in the case of the farm-loan association.

In order, however, to make sure that the Federal land banks are actually called into existence and begin operations in a systematic manner, at approximately the same date, thereby rendering possible the inauguration of a general and inclusive system of farm-mortgage loans and of bonds based thereon, it is provided that the Government of the United States shall, in the event that the minimum capitalization of $500,000 in the case of each bank is not subscribed by farm-loan associations or by the public, take out the balance of the share capital for itself. This provision, it seems proper to note, is parallel to the provisions contained in the Federal reserve act, which required the Treasury to make a similar subscription for the shares of Federal reserve banks. No such subscription, however, had to be made in that case, and it is entirely possible that the moral support given by the provision would in this instance, as in that of the Federal reserve act, insure the subscription of the share capital without further intervention on the part of the Government.

Section 14 is the usual provision for insolvency and receivership. Its only distinctive feature is the provision that contingent liabilities of farm associations shall be included as a debt provided for out of the funds held to the credit of a farm-loan association by the Federal land bank of its district.

Sections 15 and 16 describe and prescribe the limits of the business which may be transacted by Federal land banks. It will be observed that, except for the purchase and disposition of a suitable banking house, the land bank is practically limited in its operations to the purchases of mortgages, the depositing of them with the designated authorities, and the flotation of bonds based thereon, together with the necessary banking and trust operations naturally growing out of these functions. A limited banking function in the strict sense of the term is provided, in that the land banks are suffered to hold and transfer funds for the farm-loan associations which own their stock.

Section 17 prescribes the conditions under which application for farm bonds may be made by Federal land banks when they have determined to float an issue of such securities. The plan is to have any such land bank make a tender of securities to the Federal reserve agent of the district in which the land bank is situated. It is assumed that the agent will examine the mortgages, and in case he finds them satisfactory will promptly transmit the application relating to them to the Federal Reserve Board, with a recommendation that the bonds issue as desired.

Under ordinary conditions this would mean that the bonds would be issued as a matter of course, the agent's recommendation regarding them being considered final, owing to his knowledge of local conditions. Inasmuch as, however, it will often appear that the state of the investment market the country over requires a broader study than the agent is able, or perhaps has the information, to conduct, the act provides that the reserve board may at its discretion reject in whole or in part any such application. A further safeguard intended to protect the holders of bonds is found in the power given to the board to call at any time for additional security to protect the issue. Moreover, it is contemplated by the terms of section 17 that the mortgages shall be transferred to and retained in the custody of the reserve agent himself, thereby assuring the bondholder against the possibility of any dishonesty on the part of those in whose custody the securities might be placed. In order to make the bondholder doubly secure and to prevent differences in marketability between the bond offerings of different Federal land banks, it is further provided that every land bank shall obligate itself to become pro rata responsible for the bonds issued by other land banks under the permission of the board. This makes the bond issue national and uniform.

Section 18 is a specific provision that under no circumstances shall any mortgage be accepted as the basis for the issue of land bank bonds, unless it is a first mortgage made under the provisions of the law as set forth in earlier sections. This guarantees the bondholder against any possibility of the legal acceptance of any mortgage of a less satisfactory variety as protection behind the securities whose high character and absolute safety it is intended to assure.

Section 19 is intended to prescribe the conditions under which mortgage loans in various States may become eligible as a basis for the bonds which it is intended to issue. One of the greatest difficulties that has been encountered in connection with farm loans in the past has been the different character of the legislation of the several States in regard to the land titles, mortgages, methods of recording, and other matters of a similar sort. Obviously it would not be desirable to permit the proposed bonds to issue if they were based upon farm mortgages of doubtful soundness, or whose foreclosure might be hampered by obstacles that had been thrown in the way of foreclosures as a result of State legislation.

The whole tenor of the proposed act, therefore, makes it a matter of simple justice to require that the Federal Reserve Board, before admitting the mortgages made in any State to eligibility as a basis for the protection of farm-loan bonds, shall make careful investigation into the nature of the laws under which such mortgages are made in the several States. Should it find that the laws of a given State are inadequate to afford ample protection to the rights of mortgagees, it would naturally feel itself compelled to declare such mortgages ineligible, while, on the other hand, action on the part of such State designed to correct defects in its laws might at any time place its mortgages in a perfectly satisfactory position. Evidently the section as proposed may be made a highly effective resource in promoting uniformity of legislation as to mortgage loans and in eliminating provisions that are injurious to the borrower and unfair to the investor. At the outset it may easily appear that there is uncertainty regarding the laws of a given State, and so a provision is inserted whereby, instead of making the mortgages secured on land in that State totally ineligible as a basis of bond issue, the board may simply require satisfactory insurance to be furnished before the mortgages in question are accepted. This fully safeguards the bondholder and makes it possible for bond issues to proceed without waiting for the making of legislative changes in the statutes of the State in question for the purpose of bringing the mortgages into harmony with requirements, whatever these may be, that have been determined upon as standard.

Section 20 provides for appraisal of farm lands by the proposed farm-loan commissioner, he being authorized to appoint appraisers to visit farm-loan districts, gather information, and make a general report regarding the land values therein. On the strength of the information thus obtained it is made the duty of the farm-loan commissioner to prepare a schedule stating the maximum acre valuation of the district. This schedule would furnish the upper limit of the values at which farm lands could be accepted in making loans. The essential purpose of the provision is to afford a check in the hands of Government representatives upon the lending powers of the different associations. It is seen that indirectly this would be equivalent to a control of the basis upon which the bond issue must rest, and would signify that such issue would be backed by values constantly within the control or under the oversight of the Federal Government, through the Federal Reserve Board, and proximately through the farm-loan commissioner.

Section 21 fixes the denomination in which farm-loan bonds are to be issued and establishes the basis for issuing series of such bonds. It has been considered best to make the lowest denomination bond $100, as it is believed that class of investors to whom these securities are likely to be sold will hardly be attracted by bonds of much lower face value. The figure $100,000, which is set as the minimum amount of any series, was set at a low point in order to make it possible to issue series of bonds at frequent intervals under the changing conditions that are likely to present themselves from time to time, particularly during the early history of the system.

It will be observed that the work of actually providing the engraved bonds has been intrusted to the Comptroller of the Currency, as in the case of notes issued by the national banks, in order to secure uniformity in their text and appearance and a high standard of workmanship in their preparation. Convenience is promoted by depositing the bonds in the subtreasury or mint of the United States nearest to the place where they are to be issued. The provisions of the latter part of the section relative to the avoidance of counterfeiting and the like are practically adapted from those contained in the Federal reserve act.

Section 22 is intended to provide for the retirement of outstanding bonds. It is evident that when the bonds actually mature they will, like any other securities, have to be paid off in cash at face value. It might easily, however, be the case that a Federal land bank which had deposited mortgages with a Federal reserve agent to secure an issue of outstanding bonds should find that some of these mortgages were maturing from time to time. It would then be under the necessity of placing with the reserve agent an equal amount of mortgages to take the place of those thus maturing or of cash or of outstanding bonds issued by itself or some other land bank, any of these being permissible under the terms of section 22 and by the general theory of the proposed bill itself as an offset to indebtedness. It is clear that this provision would permit a land bank, should its bonds be at a discount in the market, to make some profit by purchasing them at less than par and placing them with the reserve agent as protection for the outstanding bonds behind which they are thus deposited. As the bonds approach maturity they would, of course, approximate to par, finally reaching that figure when due. Such an operation would tend to

maintain all bonds at par, a result desirable if it can be accomplished without too much sacrifice and expense.

Section 23 contains two distinct provisions. The first is merely a general authorization to farm-loan associations to offer mortgages for sale to Federal land banks and to the latter to purchase and pay for such mortgages.

The second requires the land bank purchasing mortgages in this way to return one-half of 1 per cent per annum upon the total of the unpaid amount of notes secured by the mortgages to the farm loan association from which the purchase was made. The purpose of this provision is merely that of providing for a division of profits between the land banks and the loan associations.

Sections 24 and 25 are intended to provide a general reserve of 20 per cent and a series of special reserve funds to be maintained by Federal land banks against mortgages which they had taken at varying rates of interest. As this provision is technical in its purpose and nature, it may properly be considered at some length. It will have been observed that what is especially desired in this legislation is the establishment, so far as possible, of a single uniform and reasonable rate of farm-mortgage interest on a flat basis throughout the country and a similar flat uniform rate of bond interest to be taken by investors throughout the country on the capital which they put up on the strength of bonds. The spread, or difference, beween these two rates would in that case be uniform, and, under the terms of the proposed bill, would amount to 1 per cent, this amount being divided between the local associations and the land-mortgage banks as payment for their services. Owing, however, to differences of economic condition between different parts of the country, it would be unreasonable to expect for some time to come that a flat or uniform rate of interest on farm loans could be established. On the contrary, it is quite certain that it could not. Nevertheless, supposing that farm-loan associations in all parts of a given district made loans in good faith upon what they considered to be perfectly sound landed security within their area of operation, it must be assumed that these mortgages thus made are equally satisfactory one with another. The difference in rate can be justified only because of a difference in risk, and yet this difference in risk is something which can not be recognized by the system of land banking herein proposed. Because of this difficulty, a different plan is suggested. Under this, as presented in the bill, the different farm-loan associations will lend at reasonable prevailing rates of interest in their several districts, and will, when they desire to do so, present their mortgages to the land banks, which will take them at par. The plan provided in sections 24 and 25 requires the land bank to put aside the surplus of interest upon such mortgages originating within a given State, and to accumulate it for a reasonable period for the purpose of bearing such losses as may be incurred on the mortgages. For example, if the State of Montana were included within a farm-mortgage district having headquarters at Minneapolis, and if the prevailing rate on the mortgages in Montana should be 8 per cent, while the Federal land bank of the district was selling its bonds at 5 per cent and adding 1 per cent for its own profit and that of the farm-loan association, it is evident that there would be a surplus of 2 per cent on the Montana mortgage.

This surplus, under the terms of the section now under consideration, would be accumulated by the land bank, and out of it would be paid such losses as might be incurred on the different mortgages in the State of Montana. If after a reasonable period experience should show that the amount of the accumulation was unnecessarily large, the section would permit the return of the excess to the persons from whom it had originally been drawn.

Section 26 deals with defaulted loans and provides that in the event that the default occurs in amount sufficient to more than exhaust funds available for the protection of the loans defaulted, the responsibility shall be transferred to the farm-loan association from which the mortgage was first purchased, the association being given the option, however, of putting itself in the position of the defaulting borrower—making good his payments when they fall due or of repurchasing the mortgages from the land bank.

Section 27 relates to the division of the earnings of farm-loan associations, and provides for the gradual accumulation by each such association of a surplus of 20 per cent of its capital at the rate of at least 2 per cent of its capital per annum, such annual accumulation to be, however, not less than one-fourth of the net earnings. Dividends may be declared whenever 2 per cent is available after deducting the amount required to be carried to reserve, and such dividends may be increased until they amount to 6 per cent. In the event of earnings above 6 per cent, such earnings are to be carried to reserve account, and in the event of a dissolution of a loan association the reserve is to be transferred to the Federal land bank of the district. Reference to section 25 shows that in the case of the land bank surplus earnings above 6 per cent go to the Government.

Section 28 provides for exemption of the land banks and farm-loan associations from taxes, all taxation except that upon such real estate as they may hold being nonapplicable to them. The purpose is to attract funds into the loan associations and land banks, and it is believed that the public purpose served by the system is sufficiently great to warrant this exemption from double taxation. Precisely how much this exemption may be worth is a matter of opinion which will be more fully discussed at a later point in this report.

Section 29 is intended to amend the postal-savings act so as to permit the trustees of the postal savings to purchase farm-loan bonds instead of United States bonds whenever they see fit, and to direct them to employ the funds in the purchase of the farm-loan bonds whenever the latter are below par. The purpose of the section is to create a steady, if small, public demand for the new bonds, and to assist in keeping them at par should there be a tendency toward the sagging of prices.

Section 30 provides for the purchase of farm-loan bonds by the Treasury Department under specific conditions. These conditions are such as, it is believed, will make the actual purchase of bonds by the Treasury a rather remote contingency. The subject, however, is one that has attracted much attention, and it will consequently be given special consideration later in this report.

Section 31 relates to examinations and provides for the appointment of farm-loan examiners, the said examiners to examine both the loan associations and the land banks at least twice each year. The provisions of the section have been adapted from those dealing with similar subjects in the national-bank act and the Federal reserve act, while penalties for malfeasance in office on the part either of examiners or of directors are also included. In the latter part of the section receiverships are provided for, and a distinguishing mark of insolvency is described as the refusal of any farm-loan association to substitute fresh mortgages for those under which a default has occurred. The general provisions as to receivership are adapted from the similar provisions contained in the national-bank act.

Section 32 merely provides a lump-sum appropriation of $50,000 for the purpose of carrying on the mechanism of the new system and paying salaries to those engaged under it during the first year of its existence.

AMORTIZATION.

The proposed bill is based upon the idea of amortization of loans made upon mortgage security for long periods to farm borrowers. This is a principle of debt payment widely used in Europe and to some extent in the United States, but less thoroughly known here. The principle which underlies it is, of course, the same that is used by life insurance companies in computing their annuities and in fixing their rates of payment. There is nothing unfamiliar or untried about it, although there has been very little experience in its application to land mortgages in this country.

Because of the lack of general information concerning the working of the plan, it has been deemed well to afford here some details concerning the practical operation of the principle. It may be employed either for the cancellation of the principal of a loan or for the purpose of providing for the "writing off" of premiums paid for bonds and other securities that are purchased above par. Under the bill as offered it will be found desirable in various connections to employ the amortization idea in both these connections, and hence it is worth while to set forth both in their proper light.

Attention may first be given to the application of the amortization idea to premiums on bonds and other securities, and for the purpose of setting this forth as clearly as possible use is made of a discussion of the subject recently issued by the New York insurance department, and explaining the subject somewhat as follows:

Amortization is the gradual charging off and extinction of the premium or crediting and extinction of the discount involved in the purchase of securities. It is to be distinguished from the practice of charging off the entire premium or crediting the entire discount immediately at the time of purchase, or the practice of carrying the security at the purchase price until maturity and then charging off the premium or crediting the discount, because the practice of making one charge or credit, either at purchase or maturity, makes the loss or gain, as the case may be, unduly large either at the beginning or the end of the life of the bond, and the bond is therefore carried at an unduly low or an unduly high value; whereas amortization, by spreading this loss or gain over the entire period during which

the bond is held, results in giving to the purchaser the exact periodic income upon the basis of which the bond was purchased.

There are two methods of amortization in practical use—the scientific method and the pro rata method. These give approximately similar results except in the case of long maturities and large amounts.

By the first method the amortized value of a bond is always the price at which it would sell at the date as of which the amortization is made if sold to net the same interest return as that at which it was purchased. For example, a 7 per cent bond maturing in seven years and costing $1,181.59 would be bought on a 4 per cent basis. To find its amortized value three years hence, when it will have only four years to run, resort must be had to bond tables for the price of a 7 per cent bond running four years on a 4 per cent basis, which is $1,109.88. This figure then will be the investment or amortized value of the bond three years from now, and the difference between that and $1,181.69, the price paid, will be the amount which will have to be written off for amortization during those three years.

Or, for example, a 3 per cent bond maturing in seven years and costing $939.47 would be bought on a 4 per cent basis. By a similar reference to bond tables it will be found that the price of a 3 per cent bond having four years to run on a basis of 4 per cent is $963.37. This latter figure will be the investment or amortized value of the bond three years hence, and the difference between that and $939.47, the price paid, will be the amount for which credit should be taken for amortization during the three years.

The following tables show the treatment to be accorded to the two bonds above mentioned for the several six months' periods, according to the scientific method of amortization.

Amortization of premium on a 7 per cent bond purchased Jan. 1, 1905, on a 4 per cent basis, maturing Jan. 1, 1912, interest payable semiannually, the purchase price being $1,181.59.

End of period.	Gross interest received.	Net or actual interest.	Reduction or premium amortization.	Investment or amortized value.
Jan. 1, 1905				$1,181.59
July 1, 1905	$35.00	$23.64	$11.36	1,170.23
Jan. 1, 1906	35.00	23.40	11.60	1,158.63
July 1, 1906	35.00	23.17	11.83	1,146.80
Jan. 1, 1907	35.00	22.94	12.06	1,134.74
July 1, 1907	35.00	22.69	12.31	1,122.43
Jan. 1, 1908	35.00	22.45	12.55	1,109.88
July 1, 1908	35.00	22.20	12.80	1,097.08
Jan. 1, 1909	35.00	21.94	13.06	1,084.02
July 1, 1909	35.00	21.68	13.32	1,070.70
Jan. 1, 1910	35.00	21.42	13.58	1,057.12
July 1, 1910	35.00	21.14	13.86	1,043.26
Jan. 1, 1911	35.00	20.86	14.14	1,029.12
July 1, 1911	35.00	20.59	14.41	1,014.71
Jan. 1, 1912	35.00	20.29	14.71	1,000.00

It will be observed that the net or actual interest during each half-year period is exactly 2 per cent on the investment or amortized value at the beginning of the period, and that the total of the column "Reduction or premium amortization," $181.59, is the exact amount of the premium at purchase.

Amortization of discount on a 3 per cent bond purchased Jan. 1, 1905, on a 4 per cent basis, maturing Jan. 1, 1912, interest payable semiannually, the purchase price being $939.47.

End of period.	Gross income.	Interest received.	Increase or discount amortized.	Investment or amortized value.
Jan. 1, 1905				$939.47
July 1, 1905	$18.79	$15	$3.79	943.26
Jan. 1, 1906	18.86	15	3.86	947.12
July 1, 1906	18.95	15	3.95	951.07
Jan. 1, 1907	19.02	15	4.02	955.09
July 1, 1907	19.10	15	4.10	959.19
Jan. 1, 1908	19.18	15	4.18	963.37
July 1, 1908	19.27	15	4.27	967.64
Jan. 1, 1909	19.36	15	4.36	972.00
July 1, 1909	19.43	15	4.43	976.43
Jan. 1, 1910	19.53	15	4.53	980.96
July 1, 1910	19.62	15	4.62	985.58
Jan. 1, 1911	19.71	15	4.71	990.29
July 1, 1911	19.81	15	4.81	995.10
Jan. 1, 1912	19.90	15	4.90	1,000.00

It will be observed that the above gross income, made up of the interest and the amortized discount, during each period is exactly 4 per cent per annum on the investment or amortized value, and that the total of the column "Increase or discount amortized," $60.53, is the exact amount of the discount at purchase.

The simple or pro rata method of amortization is based on the simple process of charging off the premiums or crediting the discount in equal amounts at semiannual periods during the life of the bond. The amount to be charged off at each semiannual period is ascertained by dividing the premium or discount by the number of semiannual periods through which the bond will have to run to reach maturity.

Taking the example given above of a seven-year 7 per cent bond purchased on a 4 per cent basis, to wit, for $1,181.59, the premium is seen to be $181.59. Dividing this sum by 14, the number of semiannual periods through which a seven-year bond must run before maturity, gives $12.97 as the amount to be charged off semiannually for amortization. To ascertain the amortized value of the bond three years hence, this semiannual amortization, $12.97, may be multiplied by six, the number of semiannual periods in three years, the resulting $77.82 being deducted from the purchase price, $1,181.59, thus leaving $1,103.77, the amortized value three years later by the pro rata method, which compares with $1,109.88, the accurate amortized value as of the same date, as shown above.

Taking the example of the seven-year 3 per cent bond purchased on a 4 per cent basis, to wit, $939.49, the discount on this purchase is $60.53, which, divided by 14, the number of semiannual periods, gives $4.32, the amount to be credited semiannually for amortization. (The 5 cents carried over in division are to be added to the amortization for the first period, making it $4.37 instead of $4.32.) To ascertain the amortized value of the bond three years hence, multiply this semiannual amortization, $4.32, by 6, the number of semiannual periods in three years, which gives $25.92, to which is to be added the 5 cents carried over in division, as above stated, making $25.97 the amortization for the three years. Adding the $25.97 to the purchase price, $939.49, gives $965.46 as the amortized value at the end of three years, as compared with $963.37, the accurate amortized value as of the same date, as shown above.

The following table shows the treatment to be accorded to one of the bonds above mentioned for the several six-months' periods according to the pro rata method of amortization.

Amortization of premium on a 7 per cent bond purchased Jan. 1, 1905, on a 4 per cent basis, maturing Jan. 1, 1912, interest payable semiannually, the purchase price being $1,181.59. The extra 1 cent produced by division is disposed of in the entry for the first period.

End of period.	Gross interest received.	Net or actual interest.	Reduction or premium amortization.	Investment or amortized value.
Jan. 1, 1905				$1,181.59
July 1, 1905	$35.00	$22.02	$12.98	1,168.61
Jan. 1, 1906	35.00	22.03	12.97	1,155.64
July 1, 1906	35.00	22.03	12.97	1,142.67
Jan. 1, 1907	35.00	22.03	12.97	1,129.70
July 1, 1907	35.00	22.03	12.97	1,116.73
Jan. 1, 1908	35.00	22.03	12.97	1,103.76
July 1, 1908	35.00	22.03	12.97	1,090.79
Jan. 1, 1909	35.00	22.03	12.97	1,077.82
July 1, 1909	35.00	22.03	12.97	1,064.85
Jan. 1, 1910	35.00	22.03	12.97	1,051.88
July 1, 1910	35.00	22.03	12.97	1,038.91
Jan. 1, 1911	35.00	22.03	12.97	1,025.94
July 1, 1911	35.00	22.03	12.97	1,012.97
Jan. 1, 1912	35.00	22.03	12.97	1,000.00

We may now turn to the use of the amortization idea in connection with the payment of a loan by the installment plan. It is customary to say that such a repayment may be made either by the sinking-fund method, the annuity method, or the installment method. As a matter of fact, the sinking-fund method is seldom employed, comparatively speaking, and attention may therefore be concentrated upon the other two plans. As an example of the working of these plans the following tables are offered:

Table showing the repayment of a loan of $1,000 in 10 years with interest at 5 per cent per annum by an equal annual installment of principal and interest combined.

Year end.	Due at beginning.	Interest at 5 per cent.	Total owing.	Repayments.		Total.	Balance at year end.
				Principal.	Interest.		
1	$1,000.00	$50.00	$1,050.00	$79.51	$50.00	$129.51	$920.49
2	920.49	46.42	966.51	83.49	46.02	129.51	837.00
3	837.00	41.85	878.85	87.66	41.85	129.51	749.34
4	749.34	37.46	786.80	92.05	37.46	129.51	657.29
5	657.29	32.86	690.15	96.65	32.86	129.51	560.64
6	560.64	28.03	588.67	101.48	28.03	129.51	459.16
7	459.16	22.95	482.11	106.56	22.95	129.51	352.61
8	352.61	17.63	370.24	111.88	17.63	129.51	240.73
9	240.73	12.03	252.76	117.48	12.03	129.51	123.25
10	123.25	6.27	129.52	123.24	6.27	129.51	Nil.
	1,000.00	295.10		1,000.00	295.10	1,295.10	

Table showing the repayment of a loan of $1,000 in 10 years with interest at 5 per cent by equal annual installments of principal only.

Year end.	Due at beginning.	Interest at 5 per cent.	Total owing.	Repayments.		Total.	Balance at year end.
				Principal.	Interest.		
1	$1,000	$50	$1,050	$100	$50	$150	$900
2	900	45	945	100	45	145	800
3	800	40	840	100	40	140	700
4	700	35	735	100	35	135	600
5	600	30	630	100	30	130	500

	1,000	275	.....	1,000	275	1,275	.....

In this connection it is worth while to present also the amortization table submitted by Senator FLETCHER in his testimony before the Joint Committee on Rural Credits, based on a rate of interest at 4½ per cent, the table in question having been developed by Dr. A. L. Butt, of Adairville, Ky. The table is as follows:

Amortization table for note or bond of $1,000. Rate of interest 4½ per cent; annual payment, $67.439; time, 25 years.

Year.	Principal.	Interest.	Principal retired each year or period.	Total amount retired up to end of each year or period.	Unpaid principal at end of each year or period.
1	$1,000.00	45.00	22.44	22.44	977.56
2	977.56	43.99	23.45	45.89	954.11
3	954.11	42.93	24.50	70.39	929.61
4	929.61	41.83	25.60	95.99	904.01
5	904.01	40.68	26.76	122.75	877.25
6	877.25	39.48	27.96	150.71	849.29
7	849.29	38.22	29.22	179.93	820.07
8	820.07	36.90	30.54	210.47	789.53
9	789.53	35.53	31.91	242.38	757.62
10	757.62	34.09	33.35	275.73	724.27
11	724.27	32.59	34.85	310.58	689.42
12	689.42	31.02	36.41	346.99	653.01
13	653.01	29.39	38.05	385.04	614.96
14	614.96	27.67	39.77	424.81	575.19
15	575.19	25.88	41.56	466.37	533.63
16	533.63	24.01	43.43	509.80	490.20
17	490.20	22.06	45.38	555.18	444.82
18	444.82	20.02	47.42	602.60	397.40
19	397.40	17.88	49.56	652.16	347.84
20	347.84	15.65	51.79	703.95	296.05
21	296.05	13.32	54.12	758.07	241.93
22	241.93	10.89	56.55	814.62	185.38
23	185.38	8.34	59.10	873.72	126.28
24	126.28	5.68	61.75	935.47	64.53
25	64.53	2.90	64.53	1,000.00	.....
			1,000.00		

There are two main distinctions to be drawn between the above methods; first, as regards the actual repayment of the loan, and, second, as regards the charge upon the rate of revenue accounts of the successive years of the repayment period. The installment and annuity methods both provide for the actual repayment to the lender each year of a definite proportion of the loan or of the loan and interest combined. The sinking-fund method, on the other hand, contemplates the provision annually of an installment of such amount as will, if set aside, invested, and accumulated for the prescribed period, provide for the repayment of the loan in one sum at the end of the period. Power is given, however, under certain conditions to apply part of the sinking fund in repayment of the loan during the prescribed period of repayment.

The method of obtaining the rate of amortization is a matter of mathematical calculation easily carried out by the use of logarithms.

AMORTIZATION UNDER PROPOSED BILL.

It will be observed that the proposed bill provides for the making of loans upon an amortization basis extending over a period of 30 years. This is equivalent to saying that the borrower may get his loan for a period approximating 30 years, and that he will be expected during the life of his loan to make payments at specified intervals, such as to cancel the amount of his indebtedness at the end of the period for which it was originally obtained. A number of interesting questions are necessarily raised in connection with this method of dealing with the borrower. The underlying assumption is, of course, that the farmer ought to or desires to pay off his obligation gradually, or at all events that he desires to make regular investments of capital in his farm such as will render the worth of it greater and will thereby entitle him to greater credit. The amortization plan may bring about either of these results. If a farmer borrows for 30 years at 6 per cent, his annual obligation is computed at a figure that is sufficient to carry the interest upon the unpaid balance of his loan and at the same time to reduce the principal by an amount that is sufficient to extinguish the whole of this principal at the time the loan expires.

VALUING FARM LANDS.

The fundamental question in judging of the soundness of the proposed plan or of any similar system will ultimately be found in the character of the basis established for loans under it. If the security is not adequate the loans will prove unsatisfactory and the percentage of losses will be such as to take the profit out of the business or even to hazard a portion of the capital involved in the operation of the system. Fundamentally this problem of securing a satisfactory protection for the loans reduces itself to the question of valuing the land upon which the loans are placed and of avoiding overestimates; in other words, of obtaining a correct and thorough appraisal of lands. This is always a difficult matter to deal with, and implies two important elements:

(a) The establishment of a rigid maximum percentage of value as the limit to loans.

(b) The provision of a thoroughly careful and conscientious system of valuing the lands.

After careful examination of the facts in the case, the committee has deemed it best to name 50 per cent as the upper limit of the actual value of the lands which may be advanced as a loan. This leaves, it is thought, ample protection for deterioration in values, if any, owing to causes over which the farmer has no control, while at the same time the general body of loans will be strengthened even beyond the 50 per cent margin by the fact that the borrowed capital obtained through the system will in many cases be devoted to the improvement of the soil and consequently to the enlargement of the actual worth by which the mortgages are safeguarded.

With reference to the question of appraisal, the ultimate reliance must, of course, be placed upon the work of the farm-loan association which advances the funds in each given case. With this institution, in the last analysis, must rest a determination as to any particular advance, and its judgment should be final, because it must itself, under the proposed measure, incur the sacrifice resulting from bad judgment. A great deal can, however, be done to minimize the results of sporadic bad judgment and to place the responsibility for each decision where it belongs. The following points embodied in the proposed legislation should be given particular attention because of their bearing upon this matter of the responsibility of the loan association in connection with the selection of security.

(a) Under the proposed plan the farm-loan association is required to appoint a distinct appraisal committee whose duty consists in valuing parcels of land as the basis of loans.

(b) This appraisal committee is checked in its operations to a certain extent by the fact that it is to include a member who is not a stockholder of the association and who is appointed by a source which has nothing at all to do with the association itself.

(c) Under the form of farm-loan associations recommended, in which a largely cooperative type of enterprise is fundamental, the constant effort of the members of each such association will be to supervise other members who are also borrowers in order to see to it that no one individual obtains too large a line of credit or a loan so large that he will be unable to make use of the funds thus advanced to him in an advantageous manner.

(d) Provision is made for requiring every farm-loan association to take back and redeem any mortgage on which default has occurred, so that the mere fact that a loan association has disposed of mortgages does not relieve it of responsibility therefor. In view of the fact that a farm-loan association is permitted to make loans aggregating 20 times its capital and surplus, it will be necessary for the association to be constantly on the watch in order to prevent its capital from becoming impaired through the necessity of bearing the loss on mortgages returned to it on account of default.

(e) Under the cooperative plan as worked out, the loan association will find it more and more difficult, as the stock taken out by borrowers increases approximately to the limit set by the clause fixing 20 times the capital and surplus as the maximum of permitted loans, and hence an automatically operating check will be afforded with respect to the possibility of an undue increase of loans.

In order still further to safeguard the mortgages accepted by each farm-loan association, provision has been made in the bill for a general reserve fund, which is to be accumulated out of earnings for the purpose of providing still further against possible impairment of capital due to the necessity of covering losses on loans upon which default has occurred. Added to this general reserve fund, moreover, will be a series of additional special reserves made up from the excess interest charged upon mortgages in those States where rates are unusually high on account of the presence of a large risk element. The working of these special reserves will be discussed more fully at another point. It is sufficient just here to refer to the working of the special reserves in their relation to the protection of the mortgages.

QUESTION OF INVESTMENT.

In the final analysis the consideration to be regarded as determining the success or nonsuccess of a land-mortgage system will be the extent of response made by investors who are asked to supply the capital needed for agricultural development. If it turns out that such system as may be provided attracts capital from those who possess it and successfully places it in the hands of the men who are able to use it in the development of agriculture, the system will be accounted successful. This at once opens a twofold issue, since it raises the question whether the land-mortgage system will be regarded as sufficiently safe by investors to induce them to intrust their savings to it and at the same time whether it will be sufficiently attractive to them to induce them to do so. It is generally conceded that Government securities are safe enough to warrant investors in placing their funds in them for a "long hold." But this does not mean that many investors, least of all many small savers, habitually buy Government bonds. On the contrary, in spite of their security, they are not popular with the men who are simply savers and nothing more. The question of safety may be dealt with elsewhere; and at this point attention may be concentrated on the problem whether the proposed bonds could be made sufficiently attractive to induce investors to take them up.

It is seen that, granting the safety of the system as already suggested, this question of attractiveness constitutes the crux of the whole matter. If the bonds are not attractive to investors they can not be sold, and if they can not be sold it will be impossible to get the capital which is absolutely needed for the further development of the mortgage system. Unable to sell their bonds to investors the land banks will speedily find their capital permanently tied up, and they will thus be unable to purchase fresh mortgages from the farm-loan associations, which will in a like manner find that their capital has been sunk in a permanent investment from which they can not expect to free it within any brief space of time.

On the other hand, if the rate of interest paid upon the bonds is made too high it may be successful in attracting capital from pockets of buyers of bonds, but the convenience of the farm borrowers will be but little enhanced. It is true to-day in most parts of the United States that a man with sound and safe land to offer as security has but little difficulty in getting capital on first mortgage if he be willing to pay a sufficiently high rate of interest.

The difficulty has been found partly in the fact that the farmer was oppressed by the excessively high rates of interest he was called upon to pay, and could not see his profit in borrowing more funds for the development of his farm in view of the fact that the returns reasonably to be expected from the use of the money would inevitably be absorbed in the payment of the interest. The rate of interest, in other words, must be kept sufficiently low to afford some positive benefit to the farmers of the country as compared with the rates they are now paying, otherwise legislation would be of no service whatever.

Briefly stated, the real issue in the matter is that of selecting a rate of interest which will be at once reasonably attractive to the investor and reasonably advantageous to the farmer as compared with existing rates. We may examine the situation first from the standpoint of the investor, in order to ascertain about what rate of interest must be paid him in order to induce him to take the new agricultural bonds off the market under satisfactory conditions. In consideration of this problem it will be well to proceed first by ascertaining the actual rates of interest paid to-day upon sound bonds issued by responsible concerns engaged in stable business, and then to ascertain how far, if at all, the proposed bonds would have the advantage of such securities upon the market.

In the following table is presented a list of selected standard bonds with the prices at which the same actually sold upon a recent date in the open market, this being intended as a guide to the real conditions existing to-day with reference to the sale of such securities in the country's primary market for such securities:

In studying the probable market that would be enjoyed by land-mortgage bonds, it is worth while to devote some careful attention to the actual financial and investment situation as it now exists. This matter has recently been made the subject of an elaborate investigation by Mr. W. H. Williams, a responsible authority. Mr. Williams's facts regarding the securities situation are in part stated as follows:

The broad, general results of my investigations are stated in tables which show the yields respectively obtained upon investments in bonds and in preferred stocks of the different classes, at the average prices of each calendar year from 1903 to the end of the first half of 1913.

Bonds.

Years.	Government.	Public utility.	Industrial.	Selected railroad	Eastern railroad.[1]
1903	3.25	4.63	5.69	4.10	4.06
1904	3.30	4.60	5.81	4.05	4.03
1905	3.29	4.43	5.19	3.91	3.93
1906	3.43	4.56	5.18	4.01	4.04
1907	3.70	4.91	5.76	4.30	4.31
1908	3.70	5.11	5.90	4.30	4.42
1909	3.61	4.71	5.16	4.08	4.11
1910	3.77	4.79	5.25	4.21	4.26
1911	3.80	4.77	5.17	4.21	4.26
1912	3.85	4.80	5.18	4.26	4.30
1913 (6 months)	3.91	4.90	5.35	4.41	[2]4.47

[1] Exclusive of convertible issues. [2] Covers first 8 months.

In order not to burden this portion of the statement, the detailed explanation of the method used in ascertaining these prices and yields, with lists of the securities used, has been omitted.

The following table shows the yields obtained upon investments in the preferred stocks of railroads and industrials, respectively:

Rate of yield, preferred stocks, based on market quotations.

Years.	Railroad.		Industrial.	
	Bid to yield.	Asked to yield.	Bid to yield.	Asked to yield.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
1903	4.57	4.43	7.27	7.16
1904	4.54	4.43	7.33	7.23
1905	4.22	4.13	6.34	6.25
1906	4.29	4.21	6.32	6.21
1907	4.92	4.68	6.97	6.72
1908	5.07	4.84	7.09	6.78
1909	4.49	4.38	6.13	6.05
1910	4.69	4.47	6.23	6.08
1911	4.72	4.56	6.25	6.12
1912	4.73	4.59	6.16	6.09
1913 (first 6 months)	4.95	4.81	6.42	6.29

Examination of the two foregoing tables shows that the net income yields of all groups, except the industrial group, were in the first half of 1913 higher than in the year 1903.

During the panic years 1907 and 1908 the income yields considerably rose, but in the case of the railroad and Government securities the average yields for those two years were lower than at present. This is important. The depression of securities caused by the panic of 1907 lasted but a short period. The fall in prices began in the autumn of 1907 and recovery was under way several months before the end of 1908. Thus the rise in yield during this period was due to temporary conditions and can not be taken as a gauge of the trend of investment values. Moreover, business depression leads investors to diminish their purchases of speculative securities and to increase their purchases of

gilt-edged investment bonds. Since 1909, however, the depreciation has been confined mainly to those classes of securities which are generally termed "high grade," and can not be said to be due to business depression.

The extent of the depreciation in the value of the different groups represented in the table can be seen most clearly by comparing the average yield, based on market prices, of the year 1909 and six months of 1913:

	1909	1913
	Per cent.	*Per cent.*
Government bonds	3.61	3.91
Public utility bonds	4.71	4.90
Industrial bonds	5.16	5.35
Railroad bonds	4.08	4.41
Eastern railroad bonds	4.11	[1]4.47

[1] Eight months.

	Bid to yield.	Asked to yield.	Bid to yield.	Asked to yield.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Railroad preferred stocks	4.49	4.38	4.95	4.81
Industrial preferred stocks	6.13	6.05	6.42	6.29

Based on the yearly averages, the railroads are now compelled to pay more for their capital than at any time within the 11 years. The railroad preferred stocks, likewise, now offer a higher yield than since the year 1908, and the depreciation in this group of securities has been almost continuous since that time.

In 1903 the average yield for all these eastern railroad securities was 4.06 per cent, whereas for the eight months of 1913 it rose to 4.47 per cent.

The separate averages of securities for the individual railroads in the eastern group follow the trend of the general average. This is shown in the table which follows:

TABLE III.—*Summary of average yields of eastern railroads.*

Railroad.	1903	1904	1905	1906	1907	1908	1909	1910	1911	1912	8 months 1913
Baltimore & Ohio Railroad bonds	4.268	4.217	4.074	4.194	4.412	4.556	4.225	4.378	4.389	4.456	4.690
Central Railroad of New Jersey bonds	4.032	3.915	3.827	3.975	4.170	4.148	3.923	4.049	4.111	4.140	4.303
The Delaware & Hudson Co. bonds [1]	4.316	4.167	4.219	.....	.....	4.326	4.036	4.198	4.207	4.205	4.411
Delaware, Lackawanna & Western bonds	3.847	3.825	3.727	3.907	4.234	4.218	3.917	4.106	4.106	4.213	4.406
Erie Railroad bonds	4.199	4.219	4.054	4.217	4.527	4.881	4.428	4.661	4.550	4.520	4.656
Lehigh Valley Railroad bonds	4.317	4.230	4.047	4.115	4.398	4.307	4.106	4.193	4.213	4.264	4.426
New York Central Railroad bonds	3.737	3.774	3.746	3.818	4.084	4.191	4.046	4.133	4.202	4.222	4.378
New York, Ontario & Western Railroad bonds	4.020	3.970	3.870	3.970	4.200	4.180	4.050	4.120	4.200	4.290	4.504
Pennsylvania Railroad bonds [1]	3.993	3.876	3.788	3.848	4.066	4.191	3.937	3.938	4.025	4.041	4.118

Philadelphia & Reading bonds	3.890	3.866	3.797	3.885	4.165	4.215	3.937	4.159	4.121	4.194	4.273

[1] Average does not include convertible bonds.

As for governmental securities, the same authority shows that securities issued by governmental authority have been during this period the highest grade of investment—that is, they carry the greatest certainty of payment of the periodical income and of the return of principal at maturity. Consequently investors who desire these features above all others purchase them, and as an offset to the small risk they buy at prices that give small income return. The principal distinction between governmental obligations and other securities lies in the difference between public and private credit. States and cities are not organized and conducted to earn profits. Hence there is no limitation upon public credit by the necessity of showing profits, as in the case of private enterprises. Taxing power, not profits, is the basis of public credit, and there is no limit on taxation but the will of the body politic. Moreover, taxing power can be determined with reasonable certainty in advance. This is not the case with profits on which private credits are based. These involve the element of business risk, and when profits fail private credit fails.

The causes underlying the recent increase in the net income rate on State and municipal bonds can be readily explained. A general rise in interest rates would cause the securities giving the smallest return to be exchanged for those affording a higher return. This causes a large number of these securities to change hands, and as the number of buyers willing to purchase them at their former income yield has become greatly reduced, they can find a market only when offered at much lower prices. Hence the advance in income yield has been intensified.

Another potent cause of the decline in value of State and municipal securities is the immense increase in the amount of these securities that has been put out within the last decade, the volume of these issues being greater than the market would take at former low rates. All this is clearly shown in the table of annual amounts of new State and municipal bond issues, with the comparative interest rates thereon, from 1902 to 1912, inclusive. The data in the table show that, excluding bonds taken for the sinking fund of New York City, there were annual State and municipal issues distributed among different interest rates and aggregating as follows:

Percentages of total put out at different rates of interest.

[From compilations of Commercial and Financial Chronicle.]

Years.	Amount issued.	3½ per cent or less.	4 per cent.	4 and 4½ per cent.	5 per cent and higher.	Unknown or unusual.
1902	$143,590,868	58.58	23.99	3.01	8.70	5.72
1903	152,281,050	47.38	31.18	5.88	11.97	3.59
1904	238,929,204	51.87	31.30	5.05	9.92	1.86
1905	183,080,023	47.24	30.23	7.61	13.24	1.68
1906	201,743,364	17.92	59.55	7.24	12.18	3.11
1907	227,643,208	7.44	43.16	30.36	15.06	3.98
1908	313,797,549	5.91	39.51	33.22	17.73	3.63
1909	329,358,486	8.85	49.08	14.86	24.31	2.90
1910	307,013,386	6.26	30.98	34.97	25.00	2.79
1911	395,069,205	1.69	32.12	40.25	23.90	2.04
1912	383,150,828	1.25	26.41	43.63	25.98	2.73

The remarkable features of the foregoing table are:

1. The almost uninterrupted increase in new issues in both good and bad business years; and

2. The constant tendency to put out bonds at higher interest rates.

Thus in 1911 the new municipal bonds amounted to almost three times the amount put out in 1902. Only a very small part of municipal issues is due to refunding. The great bulk of them is due to rapid development and public improvements, and to the desire to "boom" the cities through large outlays. As a result, "assessment values," which are at the basis of municipal credit, have been greatly enhanced.

According to a United States census report on the financial statistics for cities for 1911 the indebtedness of 184 cities, having a population of 30,000 or more, at the close of the fiscal year 1911 amounted to $2,618,107,501, representing an increase of 8 per cent over the previous year. In the words of the report:

The figures show that, taken as a whole, the cities are increasing their costs of government (including outlays) faster than their revenues, and as a result are increasing their indebtedness even faster.

In order to find a market for the avalanche of new municipal obligations it has been necessary to offer higher returns. The municipal bonds bearing an interest rate of 3½ per cent or less, which in 1902 comprised 58.58 per cent of the total new issues, had practically ceased to be put out by 1912, in which year they were but 1.25 per cent of the total. On the other hand, the bonds issued at 5 per cent and above, which in 1902 were but 8.70 per cent of the total, in 1912 amounted to 25.98 per cent.

Inasmuch as in many States the laws prohibit the sale of new State or municipal obligations for less than their par value, the changes in the interest rates on such new bonds are a good index of the changes taking place in the interest rate on long-term obligations.

Mr. Williams further discusses the question of investment merits of public utilities in the following language:

The so-called public-utility companies as now organized are of more recent origin than the railroads. Formerly each company in this group confined its operations to a single locality, was little known to investors outside of its own community, and the amount of its securities was not large enough to find a place on the leading exchanges. The market for the securities was thus restricted. Moreover, the physical equipment and the mechanical processes connected with the operations of these companies were not standardized. Consequently the degree of business risk was greater than in railroads. These factors for a long time placed the public-utility securities below the railroads in the scale of investments. Changes in recent years have considerably altered this condition. The creation of immense public utility and industrial corporations has permitted them to issue large blocks of securities at relatively high income yields that find a place in the general investment market in competition with standard railroad securities. A computation of the Commercial and Financial Chronicle shows that during the period from January 1, 1910, to September 30, 1912 (two and three-quarter years), public-utility companies absorbed through bond and note issues (exclusive of stock) more than $750,000,000 of capital, of which a very small part, about $75,000,000, was for refunding. These public-utility companies are no longer local concerns dependent on the welfare of one community, but are national and international in character. Electric and other processes connected with the furnishing of public utilities have been standardized, thus minimizing instability of value and losses due to obsolescence. Public-utility cor-

porations are reaping the advantage of industrial growth and higher standards of living, thus enabling them continually to expand their earnings.

This steady tendency toward the expansion of earnings in public-utility enterprises arises both from the rapid growth in size of cities and towns and also from the broader use made of such utilities. According to the United States Census Bureau the urban population of 1910 was 46.3 per cent of the total, whereas in 1890 it was but 36.1 per cent and in 1880 29.5 per cent. This concentration is likely to continue as the United States passes from a predominantly agricultural to an industrial nation.

Mr. Williams discusses the investment position of industrial securities in very much the same general way, calling attention first of all to the fact that such securities are the most recent class of long-term public investments, and have until lately occupied the lowest rank as such, while the growth in the scale of production and in the size of industrial concerns has given them a better and more important place in many exchanges, now that the experimental stage with not a few of them has been passed. Thus, although the income yield of such securities was very high in former years, when business risk played a large part in determining values, their yield now is tending to conform to that of other classes of investment. In this way the industrial issues are gradually moving from the so-called "speculative" category to the so-called "investment" category, entering into competition with railroad and other securities, and thereby tending to drive the latter to a basis of value somewhat similar to their own. Summarizing his views on this subject, Mr. Williams says:

One of the potent factors which has given stability to industrial concerns, thereby gradually placing their securities in the "investment" class, is the fact that through ownership of a number of plants located in different sections of the country there is a distribution of risk, not only as regards the possibility of shutdowns through fire or accident, but also because of the less likelihood of tie-ups through labor troubles. Thus, a difficulty in one plant may not materially affect the business of the company as a whole. Orders for goods can be transferred and manufactured in other plants. Moreover, through a proper distribution of the plants, there is a tendency toward increased economy in the distribution of the products.

Finally, in closing the discussion of the relative income yields of industrial and railroad bonds, Mr. Williams says:

It should be noted that the bulk of the railroad bonds offered publicly during the period 1901 to 1903 were to yield the purchaser less than 4½ per cent, and that it was unusual for bankers to advertise railroad bonds to yield above 5 per cent. More than two-thirds of the industrial bonds offered during the period, however, were at or above a 5 per cent basis.

But during the two-year period from July 1, 1911, to June 30, 1913, the new issues, amounting to $1,000,000 and over, to public utilities and industrial companies which were advertised as "investments" were much more numerous and, in addition to bonds, there were large offerings of notes by all classes of companies. Confining the attention to bonds, we have a record in the latter period of $105,299,000 of railroad issues offered at 5 per cent and above. Within the same yield range we have a record of $251,099,000 public-utility bond offerings and $222,200,000 industrial offerings. If note offerings are included, the growing competition between railroads and other concerns in the investment market becomes more manifest. The public offering of railroad notes 10 years ago was unusual. But in the two-year period from July 1, 1911, to June 30, 1913, we have a record of $335,267,000 of such railroad securities—exclusive of receivers' certificates—that were offered publicly at an advertised price in amounts of $1,000,000 or more. Of these approximately 80 per cent were at an income yield of 5 per cent and above. In the same period we have a record of $165,331,000 public utilities and $98,100,000 of industrial notes offered within the same yield range.

We may now endeavor to compare with the showing thus made the figures for the actual yield of Government bonds in various countries of the world. When the National Monetary Commission was conducting its inquiries it made a comparative analysis of bond prices and rates of interest in various nations, with the result that a table was prepared showing the situation as then existing in the following light:

Average annual net price of Government bonds of England, France, Germany, and United States, 1878–1909.

Years	English consols.			French rente, 3 per cent.	German Imperial loans.			United States bonds.			
	3 per cent.	2¾ per cent.	2½ per cent.		4 per cent.	3½ per cent.	3 per cent.	4 per cent, of 1907.	4 per cent, of 1925.	2 per cent, of 1930.	3 per cent, of 1908–1918.

The quotations for English consols, French rentes, and German imperial loans from 1878 to 1907, taken from "Materialien zur Beurteilung der Zusammenhange zwischen dem öffentlichen Schuldenwesen und dem Kapitalmarkte," Berlin, 1908.

The quotations for United States bonds compiled by U. S. Treasury Department.

VALUE OF FARM-LOAN BONDS.

A question which may be considered for the light it throws on the value of the proposed bonds is the effect upon the value of bonds likely to be produced by exemption from all taxation. There is no positive or authoritative information with reference to this subject, inasmuch as it is not generally practicable to get data showing the prices at which given bonds have sold when subject to taxation and the prices at which they have sold when not thus subject. About the best that can be done is to obtain conservative opinions on the subject and to contrast the selling values of bonds of the same approximate strength some of which are sold subject to taxation while others are sold free of tax. A beginning may be made by comparing the prices which are realized from New York City bonds, which are free of State taxation, and of the Federal normal income tax.

New York City bonds.

3½s, '50–'54, reg	85¼	86¼

The effect of the proposed plan, assuming that it operated as supposed upon the actual value of the farm-loan bonds, may be analyzed by considering the present state of the bond market as observed under various conditions.

Attention may first be given to the value of Government securities at the present time. Current quotations for Government bonds on the New York Stock Exchange are as follows:

United States Government bonds.

BID FEBRUARY 3.

2s, reg., 1913	99
2s, coup., 1930	99
3s, reg., 1918	101½
3s, coup., 1918	101½

3s, Pan., '38, reg	98½
3s, Pan., '61, reg	101½
3s, Pan., '61, coup	101½

Examining these figures in detail, we may omit from consideration the bonds whose values are affected by the fact that they are available for circulation, deposits of national banks, inasmuch as these securities are evidently influenced by extraneous conditions that have no necessary relationship to the actual investment value of the securities themselves. Eliminating these, it will be observed that the 3 per cent Panama bonds are quoted at 100 to 102. If it be assumed that the actual value of a Panama Government bond is thus slightly above par, the conclusion would necessarily be that the borrowing power of the Government was in the neighborhood of 3 per cent flat.

As a matter of fact, the general verdict of bond experts is that this price is a purely artificial one for Government bonds to-day, and that it is due merely to the fact that the bulk of the securities of the Government are kept off the market on account of the fact that they are used by the banks in their maintenance of outstanding circulation. What Government bonds would sell for under other conditions is more or less a matter of conjecture so far as any active figures are concerned, but the prevailing opinion seems to be that the Government would probably have to pay 3½ per cent in order to borrow at par under ordinary circumstances. Some light on the situation is obtained from a study of the prices obtained for bonds of the State of New York, which were ruling for 4 per cent bonds at about 101¾ before the outbreak of war abroad. In other words, the credit of the State of New York was very nearly on a 4 per cent basis. New York State bonds are, of course, free of the normal Federal income tax and of many classes of local taxation. New York City bonds, 4¼ per cent of 1960, were selling at about 101¼, while New York City fours of 1958 were selling at 99¼, or thereabouts. Thus the credit of New York City, its bonds being exempt as in the case of the State securities, is in normal times slightly below a 4 per cent basis. If we assume that the Federal Government could hardly do much better than 3½ per cent and that the highest State and local credit now rests on an approximately 4 per cent basis—or slightly below that—we shall probably not be far from the truth.

On the other hand, privately issued bonds, which are subject to taxation of various kinds and which are issued under the varying conditions imposed upon them by their issues, are generally selling on a basis very much less satisfactory to-day than in years past, notwithstanding that just before the opening of war in Europe they were for the moment somewhat better in their quoted values than they were some few months ago. Among well-known bonds listed on the New York Stock Exchange and regularly traded in there the following may be cited as examples (the prices being those which were quoted just before the opening of the European war):

Atchison, Topeka & Santa Fe general fours, 95¼; New York Central fours, 99½; United States Steel fives, 103; Reading general fours, 95½; Northern Pacific fours, 95½; Baltimore & Ohio fours, 94; Southern Pacific fives, 101½; Louisville & Nashville fives, 104; Virginian Railway fives, 99.

The destruction of capital during the current war will still further depress the values of long-term bonds bearing a fixed rate.

Many other quotations conveying substantially the same information might be cited, the general purport being identical with those already given. It is fairly to be concluded that at present a thoroughly good industrial and railroad bond carrying a rate of 4 per cent interest, long period, will sell decidedly below par, while 5 per cent bonds of the same kind are likely to be quoted slightly above par. To sell a good bond—long-term industrial or railroad—on a par basis, very nearly 5 per cent must be allowed at the present time. This, as seen from the foregoing statements, must be regarded as about 1 per cent or a little less above the rate of interest carried by thoroughly good State and city securities exempt from taxation to the extent already noted, and probably about 1½ per cent above the rate which would be carried by Federal securities sold under competitive conditions. Of course there are variations from this broad general statement, both upward and downward, but it may be fairly accepted as representing the general situation with sufficient accuracy.

The difference in net income yield between Ohio municipal tax-exempt bonds and similar Ohio municipal bonds without the tax-exemption advantage is about one-half of 1 per cent, and it was found that the depreciation caused by the financial disturbance incident to the European war was rather more severe in the case of taxable bonds of this character than in the case of the tax-exempt bonds. This comparison in the income yield of taxable and tax-exempt bonds in Ohio is interesting and throws some light on how much benefit may be expected from the tax-exemption feature. It should be noted, however, that it is practically impossible to say to what extent this difference is influenced by the local tax rate and local conditions.

The conclusion must be drawn from this showing that the Federal land-bank bonds, if sold free of tax, could not hope to find a market, supposing them to be offered to investors as an independent proposition without outside aid, upon a basis much, if at all, better than that which is enjoyed by good long-period industrial and railroad securities, except to the extent that the said land-bank bonds were enabled to enjoy a more favorable market through their exemption from taxation.

It can not, however, be assumed that the land-bank bonds, if placed on the market simply on their own merits, would sell upon as favorable a basis, waiving the question of taxation, as the best privately issued bonds. There is no good reason for supposing that they would be regarded by investors as much more satisfactory than the average of the mortgages by which they were protected. At the present time one of the largest mortgage institutions of the United States, which loans upon city real estate security entirely, is making a net rate of interest of 6½ per cent on the average of its loans, and while it has outstanding an issue of bonds bearing 4 per cent, these were placed a good while ago and simply maintained through the substitution of new mortgages for those that expired. It is not believed that another issue of bonds could be placed at the same figure again to-day. If it be true that the farmer obtains loans in the most-favored parts of the country to-day at a rate of 5½ per cent, all expenses included, it would seem probable, in view of the facts already cited, that bonds protected by these mortgages would have to offer investors very nearly or quite 5 per cent in order to sell at par. The exemption from taxation would put them on a slightly better basis. In the committee's plan, however, it has been estimated, after very careful consideration, that a margin of 1 per cent between the rate charged the farmer and the rate borne by the bonds will have to be allowed in order to cover expenses of administration. This would mean that the bonds secured by mortgages of the kind already referred to would, in order to allow for the estimate for expenses of administration, have to sell very nearly on a 4 per cent basis; that is to say, practically upon a basis of equality with the highest grade State and municipal bonds now on the market. They would, therefore, not only have to equal from the very start the best privately issued securities, but they would have to compete successfully with high-grade State and local bonds, and this although they would not be expected for several years to be regarded as seasoned securities.

Unless this state of things can be established as to the sale of the bonds, it can not be expected that the funds of investors will turn to them rather than to the State, municipal, and high-grade railroad securities, upon which to-day a rate of decidedly more than 4 per cent clear can quite easily be obtained. Certainly the idea that any considerable amount of capital would be available for the purpose of taking up such securities could hardly be regarded as valid.

Therefore, unless the investor is assured of the attitude of the Government toward these bonds or is made certain of the firm belief on the part of the public authorities in their absolute solidity, while at the same time convinced that the influence of the Government will be thrown on the side of stability in their prices, he will necessarily hesitate about investing in these new issues, pending the time when they shall have slowly proved their worth.

NEED OF STANDARD INVESTMENT.

One side of the agricultural-credit problem which has received little consideration, but which is deserving of much more attention than has been accorded to it thus far, is seen in the need which is felt by the ordinary investor for a standard security which can be purchased by him with his savings in the assurance that it will be, so far as can reasonably be predicted or expected, a sound and stable investment which will continue to yield him a stated rate of interest. In former years the real estate mortgage, and particularly the farm mortgage, was a favored type of investment with the small saver. At one time the process of investing in these mortgages was carried so far as to result in the taking up of doubtful loans in the West, where farming conditions were speculative or where loans were made by inexperienced or careless agents whose principal idea was to get the largest amount of commission, irrespective of the safety of the lender or of the success of the cultivator who obtained the advance. In such case the security promptly turned out to be miserably inadequate, and in many instances large losses were inflicted upon investors who held mortgages upon tracts of land scattered over large areas in the Western States. One effect of this period of loss upon farm investments was to discourage the individual from employing his savings in that way, and within recent years he has in many parts of the country turned to railroad and public-utility bonds and stocks.

While his confidence in these securities has often been justified, it has frequently happened that the investor was disappointed, and that the securities he purchased either deteriorated in value, as has been the case with some railroad securities, the deterioration occasionally reaching very large figures, or that the interest was suspended for one reason or another, leaving the investor without income upon his savings, while he was frequently obliged to carry his holdings for an indefinite period in the hope that they would ultimately recover at least a part of their original value. Discouraged by the apparent inability to obtain an investment that is honestly managed, investors have in not a few cases been driven to the plan of relying upon savings banks exclusively. The latter institutions, although frequently reliable, are now restricted in most States by laws which greatly limit their income-earning power, and are in any event subject to rather heavy expense of operation. The result is, therefore, that the small investor, unable to inform himself very satisfactorily with respect to the relative merits of securities, is obliged either to take too great a hazard or to content himself with the very low rate of interest which can be realized upon savings bank deposits. No one can say how greatly this state of things has tended to discourage savings in the United States during the past decade, but it has undoubtedly had a great influence, owing to the feeling on the part of many investors that it is more difficult to know what to do with savings than to accumulate them. If a thoroughly satisfactory investment yielding a moderate rate of interest could be placed on the market under conditions practically amounting to public oversight, and if this investment could be standardized so as to make it equivalent to partial ownership of a blanket mortgage upon the tillable land of a large section of the country there would undoubtedly be many buyers for the securities as soon as their merits and safety had become thoroughly well recognized. This has been the experience in other countries where land-mortgage bonds, issued under suitable conditions and with adequate protection, have maintained a decidedly high price as compared with other securities yielding a corresponding rate of interest.

The proposed bill would provide for such a standardized investment, and would place it within the reach of the investor who had only a few dollars to put aside. It would offer the bonds in low denominations and under conditions that would make them practically marketable at any time. Moreover, it should be noted that the proposed bill has been so framed as to reduce the margin between the amount received by the investor and the amount paid by the cultivator to the lowest possible terms, only 1 per cent difference being permitted in the long run to be retained by the farm-loan associations and land banks jointly. That is to say, if the farmer pays 6 per cent upon his mortgage loan, the buyer of the bonds which are based thereon will receive 5 per cent. This is a much smaller charge for administration and management than can be arranged for under any conditions practically that can exist at the present time. To-day the farmer who borrows money at 6 per cent on a three-year basis will ordinarily pay a commission of from 1 to 3 per cent to the agent who provides him with the funds. This makes the actual cost of his loan anywhere from 6⅓ to 7 per cent per annum for the three-year period, at the end of which time he will be obliged to pay the same commission if he desires to renew the loan a second period of three years. The commission thus paid is entirely eliminated under the proposed plan, inasmuch as the cost of the system is borne by securing from investors a lower rate of interest than that which is charged to the farmer, such reduction in rates being rendered possible by reason of the fact that the consolidated mortgage or its constituent parts—the bonds—has a higher degree of security, and hence the power to command a lower rate than can ever be true of the individual mortgage which is protected simply by a single piece of real estate. This amounts to saying that the middleman's profit between the investor and the actual user of the capital is reduced to its lowest terms or is eliminated entirely, since it is cut to a figure which simply covers the actual cost of providing the capital and services necessary to carry on the machinery whereby the process of financing the farm borrowers is conducted.

It may be broadly stated that the benefit to the community arising from the furnishing of a standardized security readily available to the small investor would be as great a benefit to him as will the furnishing of a standardized loan readily available at a reasonable rate to the farmer who wishes to make use of a larger capital in his farm operations. It will be welcomed by the investor, as soon as he becomes acquainted with the facts in the case, quite as much as by the cultivator.

An Absence of Preparedness.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, February 5, 1915,

On the bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. MOORE. Mr. Speaker, one of the odd things about all this talk of preparedness for war is that it entirely overlooks some of the most essential features of national protection, to wit, the equipment of our coast line with means of ingress and egress suitable to the size of the vessels we construct for naval purposes. Gentlemen deal with the question of battleships, torpedo boats, and the like as if they were to be built, repaired, equipped, and operated forever, and only upon the high seas. They discuss the problem of preparedness for war very much as some of the political economists of the country have discussed the development of our merchant marine, solely as an all-ocean proposition. We are now dealing with the item that relates to torpedo destroyers. We will appropriate a tremendous sum of money for this purpose and for other naval construction with an unconcern as to the preparedness of our rivers and harbors that is little short of astounding. On more than one occasion the attention of the House has been called to the inadequacy of many of our inland rivers and waterways for vessels of commerce, to say nothing of our vessels of war. I have referred to the inadequacy of the Chesapeake & Delaware Canal to accommodate torpedo boats of the Navy that were subsequently driven in at Cape Hatteras.

Only in September last one of the smallest of the torpedo boats of the Navy grounded in the upper Hudson River because there was an insufficient depth of water. With these conditions prevailing along the coast, in rivers, and inside passages that would be of great strategic importance in times of war, it would seem that in building these small craft, as well as the larger naval ships, without improving our waterways to render them service, we are putting the cart of preparedness before the horse of neglect.

TOO BIG FOR THE CANALS.

That the House may understand some of the difficulties that would confront the Navy Department, if it should desire to pass its small vessels or its supply ships inland in the event of naval operations along the Atlantic coast, I present herewith a letter from the Secretary of the Navy which bears directly upon the subject. It will be noticed that such vessels as the Secretary says could be passed through the existing canals between New York, Philadelphia, Baltimore, and the South are almost exclusively of the smaller type, some of them tugboats and others ready for the scrap heap. It is doubtful whether under present conditions the Navy Department would risk send-

ing any of the vessels which the Secretary indicates could conform to the canal limitations as to depth and width. Former Secretaries have been asked to make this test and have not deemed it wise to permit it. Secretary Daniel's letter is as follows:

NAVY DEPARTMENT,
Washington, December 23, 1914.

MY DEAR MR. MOORE: I have the honor to acknowledge the receipt of your letter of November 21 on the strategic value of the inland waterways between New York and Chesapeake Bay.

There is no immediate opportunity for making a test of the canals from New York Bay to Delaware Bay and from Delaware Bay to Chesapeake Bay. The characteristics of these canals are well known to the department and are briefly as follows:

A draft of 7 feet can be taken through the passage from New York Bay to Delaware Bay and 9 feet from Delaware Bay to Chesapeake Bay; the greatest speed permitted in the canals is 4½ statute miles per hour. A vessel with a speed of 10 miles, running in daytime only, can make the passage in 2 to 2½ days under favorable conditions.

The size of vessels using the canal is limited by the locks and bridges.

As limited by the characteristics of these canals, with regard to draft, locks, and bridges, the following United States naval vessels can pass through the Delaware & Raritan Canal from New York to Philadelphia:

(a) Eighteen of the nineteen torpedo boats (*Farragut* excepted). All of the above boats are either in reserve or assigned to State naval battalions and are being disposed of more or less regularly as circumstances permit.

(b) Five small gunboats, namely, *Callao*, *Pampanga*, *Panay*, *Samar*, and *Sandoval*. All of these boats are now in the Philippines except the *Sandoval*, which is assigned to the New York Naval Militia.

(c) A few of the converted yachts might be passed through on a very light draft, although all draw too much water normally.

(d) One tug, the *Pawnee*, located at New York yard, and possibly a few others on light draft.

Measurements of mastheads above water line should be taken in the above cases in order to assure passage under 50-foot stone arch at New Brunswick, N. J. In some cases the removal of masts may be found necessary.

The Chesapeake & Delaware Canal is 12 miles long, with three locks, each 220 by 24 by 9 feet draft. All bridges have draws, and maximum speed permitted is 4½ miles per hour. Toll rates are subject to change. Inquiry as to shoals should be made prior to passage. The Delaware River from Philadelphia to Delaware City, the northern terminal of the canal, has ample water for ships which might pass through the canal, but below Chesapeake City, the southern terminal, Back Creek, into which the canal opens, is difficult of navigation, having a narrow and crooked channel, 120 to 150 feet wide, with shoals on each side. Pilots may be had, but creek is too narrow for anchorage. Below this creek the channel of Elk River is easily navigable.

The following ships of the United States Navy will pass through the Chesapeake & Delaware Canal:

(a) All torpedo boats—19 in number. The same notes apply in this case as in subparagraph (a) above.

(b) Seven small gunboats, namely, *Callao*, *Pampanga*, *Panay*, *Quiros*, *Samar*, *Sandoval*, and *Villalobos*. The same notes apply in this case as in subparagraph (b) above.

(c) Five converted yachts, namely, *Aileen*, *Elfrida*, *Huntress*, *Oneida*, and *Sylph*. Some few others might be passed through in light condition. These vessels are mostly assigned to State naval battalions, and are being gradually disposed of.

(d) Eight tugs, namely, *Accomac*, *Hercules*, *Iwana*, *Massasoit*, *Narkeeta*, *Pawtucket*, *Penacook*, and *Pentucket*. A few more might be sufficiently lightened to permit their passage.

The above information is based upon drafts at normal load displacement.

The length and breadth of locks in both cases will take all submarines, but the drafts over sills of 7 feet and 9 feet are prohibitive. Possibly some few submarines might be brought to a draft of 9 feet, but only by the removal of oil fuel, storage batteries, and other essential units. This is, however, doubtful.

It will thus be seen that it is impracticable for submarines to use these canals under war conditions, when the submarines would have on board all their equipment, unless such changes are made in the characteristics of the canals as will permit the passage of vessels drawing not less than 13 feet, which is the average draft of a submarine when running on the surface. Fifteen feet of water should be provided for a vessel drawing 13 feet, in order that maneuvers can be conducted without difficulty.

Very sincerely, yours,

JOSEPHUS DANIELS,
Secretary of the Navy.

Hon. J. HAMPTON MOORE, M. C.,
House of Representatives, Washington, D. C.

CIVIL WAR VALUE OF WATERWAYS.

From a paper by Capt. Philip Reybold, of Wilmington, Del., whose father was instrumental in passing troops through the Chesapeake & Delaware Canal about the time of the Baltimore riots, we obtain valuable information not only as to the commercial but the military importance of these inland waterways prior to and during the Civil War. It is a timely story, illustrating the disadvantage to which this country would be put in attempting to recover from its neglect of such an inside passage as the Chesapeake & Delaware Canal in the event of a blockade or if it should suddenly become necessary to operate inland with the smaller vessels of the Navy:

LANDLOCKED NAVIGATION ALONG THE ATLANTIC COAST.

[By Capt. Philip Reybold, Wilmington, Del.]

"The National Government should own the canals along the Atlantic coast and make them free as they have done on the Great Lakes. Coastwise-bound vessels at present run the risks of outside voyages.

"The imperative commercial necessity for a deep-water canal between the Delaware and Chesapeake Bays is shown, when it would reduce the distance by water between Philadelphia and Baltimore from 430 to 112 miles, a saving of 318 miles, or 74 per cent; and between Baltimore and New York, from 435 to 298 miles, a saving of 137 miles. This in itself would be ample justification for the expenditure of a very large amount of money by the Government.

"A more convincing and practical one, however, is the economy which would be effected by the great reduction in distance between populous centers of industry. It would not only be beneficial to the whole Atlantic seaboard, but would give employment to a vast number of American citizens. The commerce of the country is the source of all the Nation's vital energy and it is the source from whence comes most largely the revenues for paying the Nation's expenses, and the waterways along the seacoast should be continually improved until the transportation of commodities is reduced to the lowest possible figure. The best protection our industries can have is a policy that will insure cheap freights, and any means whereby the distances which separate the economic centers of the country from one another can be diminished must be welcome, for it increases our strength in our industrial world. Everyone who desires to send or to receive goods wishes for cheap freights, and the aim of a healthy transport policy should be to diminish as far as possible the unproductive cost of transportation, and this can be done by cheap inland transportation, which places the economic centers as near as possible to one another, and a well-planned system of transportation which makes the best possible use of local resources and local advantages will build up a prosperous trade.

"There is no question as to the desirability of this deep-water canal between the Delaware and Chesapeake Bays if this Nation should have war with an alien power. This waterway then would be of inestimable value in the matter of transporting supplies beyond the reach of the enemy, and for the passage and harbor of the United States coast defense vessels.

PROVED ITS EFFICIENCY.

"The value of the Chesapeake & Delaware Canal as a means of coast defense was proved during the Civil War by the following circumstances:

"Immediately after the riot, which occurred in the city of Baltimore on April 19, 1861, when the Sixth Massachusetts Regiment was passing through that city on its way to the defense of Washington, all the bridges as far north as the Gunpowder River on the line of the Philadelphia, Wilmington & Baltimore Railroad were burned by the Confederates, so there was no means of transporting the troops on the seaboard to Washington by rail. April 20, 1861, the Government seized all the steam propellers lying in or about Philadelphia that could pass through the Chesapeake & Delaware Canal. These boats were then sent down the Delaware River and through the canal to the Chesapeake Bay to meet the troops at Perryville, Md., and thence convey them down the bay to Annapolis and thence by rail to Washington.

"From this time forward, until the end of the war, the Chesapeake & Delaware Canal became a most important part of the inland waterway which the Government used for the trans-

portation of supplies of every sort for the Army. They were brought from as far north as Narragansett Bay down through Long Island Sound through the Delaware & Raritan Canal, down the Delaware River, through the Chesapeake & Delaware Canal, down the Chesapeake Bay, through the Albemarle & Chesapeake Canal, through the Albemarle and Pamlico Sounds, and so on down to Beaufort, N. C., a distance of something over 1,000 miles, at all times protected from the cruisers of the Confederate Fleet which scoured the coast.

ESCAPED HANDS OF HOSTILE FLEET.

"The proof of the necessity of getting the valuable, in fact invaluable, supplies out of the reach of the Confederate cruisers, and the further proof that had they gone outside they would have fallen prey to the *Alabama, Florida, Archer, Florida No. 2,* and *Tallahassee* is fully proven by the record which shows the capture of the bark *Tacony*, June 12, 1862, just off Cape Hatteras—that is to say, just outside of and above the southern part of the inland waterway above referred to. Then again the capture of the revenue cutter *Caleb Cushing* in the port of Portland, Me., June 27, 1863, by the Confederate privateer *Archer*, the attack on the steamer *Chesapeake* off Cape Cod, in December, 1863. On July 10, 1864, the steamship *Electric Spark*, bound from New York to New Orleans on her maiden trip, was captured between the Chesapeake Capes and Sandy Hook by the Confederate steamer *Florida*. In the summer of 1864, the Confederate steamer *Tallahassee*, an iron steamer of 500 tons and 13 knots, carrying a crew of 180 men and officers, escaped through the blockade from Wilmington, N. C., and made her first capture off the Delaware Capes, and in the next three weeks captured and burned 33 vessels. The most important capture was the *Adriatic*, from London, which was burned near Fire Island; in other words, any shipping that ventured outside this inland waterway was sure to fall prey to the Confederate cruisers.

"For the use of transportation in these canals and bays, constituting this line of inland waterway from Narragansett Bay to Beaufort, N. C., the United States Government seized and chartered during the war 144 propeller steamers, 89 steam tugs, and 842 freight barges, in all 1,075 boats, which were used in the passage of these canals.

"The whole subject of the chartering and seizure of these boats during the course of the war for the purpose of transportation of Government supplies to the Army through this canal system is set out in full in Executive Document of the House of Representatives, No. 337, of the second session of the Fortieth Congress. Inasmuch as there were in all 3,612 vessels seized, chartered, or employed by the Federal Government during the war throughout the entire country it will appear that nearly one-third of this whole number was used in this particular system of canals.

GOVERNMENT RECOGNIZED IMPORTANCE OF CANALS.

"It is plain to be seen from the importance these canals were to the Federal Government during the war, more particularly the Chesapeake & Delaware Canal, that had it not been for the existence and use of this last-named canal and the hurrying of the troops to Washington just after the Baltimore riot, the grave possibility of the capture of Washington might not have been averted, when no other means were presented to the Government for forwarding troops. This is further proved by the shipment of the New Jersey troops from Trenton, on the afternoon of Friday, May 3, 1861, on board 16 propeller steamers, which, passing down the Delaware River and through the Chesapeake & Delaware Canal, arrived at Annapolis on Saturday evening, May 4, and were then shipped by railroad the next morning, May 5, for Washington, where their presence at the front materially aided the national defense.

"It will be remembered that the route through Baltimore, by reason of the burning of the bridges, was still closed May 15, 1861, when the Philadelphia Volunteers, 3,000 strong, under Gen. Cadwalader, had to be shipped from Perryville to Baltimore Harbor by means of the steamers seized during the preceding month, and that the troops used by Gen. McDowell, when he crossed the Potomac on May 23, 1861, and took possession of Arlington Heights and Alexandria, were most of them transported either through the Chesapeake & Delaware Canal, or via Perryville and Annapolis, because the burnt bridges did not allow the use of the Philadelphia, Wilmington & Baltimore Railroad; in fact, these bridges were not rebuilt for use until after Gen. McDowell's advance.

"The Potomac River was closed and fortified by the Confederates by a series of batteries below Washington and extending to the mouth of the river, and it will be further remembered that the Confederate scouts had advanced as far as, and were stationed at, the Virginia end of the Long Bridge, so that after the burning of the bridges on the Philadelphia, Wilmington & Baltimore Railroad, the night after the Baltimore riot, there was but one single route for the shipment of Federal troops from the North along the seaboard to Washington.

SUPPLIES TIED UP.

"It was impossible, on account of the temper of the people in Baltimore, to obtain possession of any boats at that port; the Confederate Government controlled and patrolled with its boats the Chesapeake Bay as far north as the mouth of the Potomac River, and the Federal Government had absolutely no means of transportation upon the Chesapeake Bay until the boats were sent through the Chesapeake & Delaware Canal, so that even had the Federal Government been able to transport its troops as far as Perryville on the eastern shore of the Susquehanna River, it still had no means of transporting the troops from thence to Annapolis and so on via Annapolis Junction to Washington by railroad, until the boats seized at Philadelphia had passed through the canal, when they afforded the only means of furnishing troops for the defense and for the salvation of the National Capital.

"Remembering that the burned bridges were not reconstructed before the early part of June, 1861, the whole key to the Federal situation lay in the use of these boats, and in the use of the Chesapeake & Delaware Canal, as a means for the shipment of both men and supplies to the front.

"After the action between the *Merrimac* and the *Monitor*, March, 1862, which opened up and cleared the Chesapeake Bay through to Norfolk for the Federal sea forces, the sending of vessels which were converted into gunboats through the Albemarle & Chesapeake Canal into the Albemarle and Pamlico Sounds opened and established and kept established for the rest of the war this inland waterway from Narragansett Bay to Beaufort, N. C."

COMMERCE NEEDS THE CANAL.

I also append a letter written by F. S. Groves, agent of the Baltimore & Philadelphia Steamship Co., to the United States engineer in charge of the Delaware River improvements. This letter was in answer to a request for an expression of opinion as to the necessity for certain improvements at the Delaware Breakwater. In addition, I submit an editorial from the Philadelphia Inquirer which appeared in December last and before the recent agitation of the alleged submarine operations of the German Navy around the coast of Great Britain:

BALTIMORE & PHILADELPHIA STEAMBOAT CO.,
Philadelphia, December 24, 1914.

Col. GEORGE A. ZINN,
Corps of United States Engineers,
815 Witherspoon Building, Philadelphia.

DEAR SIR: In reply to yours of the 21st instant. Our steamers are all operated through the Chesapeake & Delaware Canal. No doubt the improvement in your letter would be an advantage at times to the trade, but it seems to me the present facilities are sufficient for some time to come. I have operated a number of outside vessels at different periods and have never had a complaint from a captain about the Delaware Breakwater, but I believe in the future when the trade increases such an improvement will be of considerable advantage.

I am particularly interested in the development of the inland waterways, which, in my opinion, are of more vital importance than the improvement of the harbors by the Government, as they particularly apply to the development of our water-borne or coastwise commerce, and it is time the Government turned its attention in this direction instead of spending such large amounts in deepening the approaches to the sea, which is more to the advantage of deep-draft foreign ships, while our present depth of water to and from the principal ports is more than ample to accommodate our largest coastwise steamers, the maximum draft not over 23 feet.

The purchase of the Chesapeake & Delaware Canal by the Government is, in my judgment, the most important water legislation before the Government. This is the principal link in the proposed chain of waterways, and would do more to develop the Atlantic seaboard commerce than most people not familiar with the conditions can conceive, both from a military and commercial point of view. The present canal has long outgrown its usefulness and capacity to handle the tonnage offering. It has reached its limitations, and its ownership and improvement by the Government would be of tenfold more value to the country at large than any other water improvement proposed.

This company, which I have the honor of representing, has operated through this waterway for over 70 years, and we are thoroughly convinced of its great advantage and possibilities. We operate a daily line between Philadelphia and Baltimore for

freight and passengers, except when interrupted by canal repairs, which happens most every winter, and makes a break in our service frequently 30 days or more. This interruption is very serious to our business. The repairs are to the locks, which are practically worn out.

Our steamers, of which we have four, are the maximum size to operate through the canal. In the summer months we have double service—day line and night line. The present depth of the river is ample for these boats, except at Hamburg Cove, above Delaware City, where we have to leave the channel near New Castle and go around the cove when the water is shallow, and much farther than if the channel were straight from the main ship channel above Fort Delaware, all of which no doubt you are very familiar with.

As a matter of fact, when the canal is taken over by the Government and improved a very large proportion of the trade, both barge and steamer, that now goes down the Chesapeake Bay via Cape Henry from Baltimore, etc., will come up through this canal and go via Cape May to New York and the East. Then your suggested improvement at the breakwater at the mouth of Delaware Bay will be advantageous.

To answer your questions as to what the improvement I suggest would mean in dollars and cents to this company, it would be altogether a matter of guesswork. Our steamers to-day are 210 feet long and 23 feet 8 inches beam, draft loaded—350 tons—9½ feet. With the improved canal our boats would be 350 feet long, 40 feet beam, and draft about 15 feet; so you can judge there would be considerable increase, and all other tonnage seeking the waterway would increase proportionately to ours. There is to-day a large fleet of barges trading through this canal that carry 800 tons dead-weight cargo and 500,000 feet of lumber; their carrying capacity is 25 per cent greater for outside service. You can realize what wider beam and more depth would mean to 100 or more barges. Further than this, all the Atlantic seaboard ports have been and are to-day controlled by links of railroads, and what is shipped coastwise is very limited, as the steamship lines operating from these ports are also controlled by the railroads, and the ports for this purpose are also limited by the railroads; consequently a great many of the seaboard ports have no direct water connection; and yet there are a great many independent railroads that would like the connection to develop their territory, but are prevented by the more powerful corporations; but the inland waterways that would open up barge competition, which is the cheapest known mode of transportation, would act like a great trunk line, and the barge lines would be fed through every port on the Atlantic coast in both directions for all heavy commodities at rates greatly to the advantage of the manufacturer, shipper, and consumer. This would be followed by fine, fast, and commodious steamboat lines, which would be of great benefit in equalizing both rates of fare and freight, and this great inland waterway would be a free trunk line to all comers and a boom in the development of the entire seaboard, the value of which I would not like to guess at, but I will venture to say will far exceed the Panama Canal traffic.

Yours, truly,

F. S. GROVES,
General Manager.

[From the Philadelphia Inquirer.]

BRITISH COASTS VULNERABLE.

"Commenting on the sudden raid of the German fleet upon the east coast of England, many writers have asserted that this is unprecedented in more than a hundred years, some holding Paul Jones responsible for the last raid and others going much further back. The alleged invulnerability of the British Isles is apocryphal, although their comparative isolation has been an immense factor in safety for centuries. From the day when Cæsar first crossed the Channel until now the British Isles have repeatedly been invaded at one time or another and only remnants are left of the original Celtic tribes in Wales, Cornwall, Ireland, and Scotland. Jute, Saxon, Angle, Dane, and Norman have poured in until the British population is composed of many Teutonic elements.

"It was not until Great Britain began to develop her sea power that her immunity became notable. Since the days of Elizabeth no foreign foe has made an important lodgment, save with the approbation of the mass of the people, as in the case when William of Orange came over and took the throne. The Duke of Monmouth, the Old Pretender, and the Young Pretender made temporary lodgments and important campaigns, only to fail. At various times the French landed in England or Ireland, but made no impression. Napoleon in 1804 gave the British a scare by his preparations at Boulogne, which came to naught.

"The greatest scares Britain has had have come from this country. John Paul Jones, with a daring equal to that of the Germans, entered Whitehaven and burned some of the shipping. He landed on one of the Scottish islands where he was born and scared the inhabitants, but he accomplished little of military value. In the War of 1812 the American privateersmen did much more damage. They did not actually make landings, but they hovered around all of the islands, cutting out shipping and driving the Admiralty and British merchants to a state of frenzy. Indeed, one of the greatest factors in bringing about the peace which was signed 100 years ago this week was the daredeviltry of these famous privateers which destroyed shipping worth millions, made insurance rates prohibitive, and caused great distress all over the manufacturing districts of the United Kingdom. This made the war unpopular in England, just as it was beginning to become popular in this country, and the end was soon reached."

THE BRITISH CAPTURED WASHINGTON.

Mr. Speaker, Congress still refuses to vote sufficient money to take over and improve the Chesapeake & Delaware Canal or to construct another waterway that will relieve the congested commerce of the Atlantic coast, or place it in a position for easy maneuvering in the event of war. The river and harbor bill, as it now comes from the Senate, has numerous new projects for the West and for the South, but the Atlantic coastal waterways, where the population is thickest are given the frozen hand. It is strange how in these days of economy we can risk so much of our money where there is no need and no danger. It seems to be of immense importance that we should keep at work upon the great inland rivers, where battleships or torpedo boats will never float, and upon great irrigation projects which are bountifully provided for in the sundry civil bill just reported, but apparently it continues to be a matter of indifference whether the great cities of the coast line shall have the ordinary facilities for doing business in times of peace or a reasonable chance to be successfully defended in times of war.

Five years ago the European traveler who suggested an invasion of Belgium would have been told that under existing peace conditions such a proposition would be ridiculous. We do not look for the invasion of New York or Boston or Norfolk, and yet the very Capital of this Nation was invaded by the British in 1814 and some of our most treasured memorials were destroyed. The Potomac River is not much different now from what it was then. The Chesapeake & Delaware Canal is substantially the same as it was in 1829. There has been no improvement in width or depth in the Delaware & Raritan Canal since 1834, and yet we are told that we are amply protected and that our inland waterways are sufficient for commercial purposes. It is the willing horse that bears the burden.

The Wage Earner and the Bonus.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 5, 1915,

On the bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. MOORE. Mr. Speaker, in connection with the amendment offered by the gentleman from Illinois [Mr. BUCHANAN], which contemplates the abolition of the so-called bonus system for work in the navy yards, and in explanation of the queries made by me as to the effect of a similar amendment already tacked onto the Army bill, I append the following protest from the Frankford Arsenal Association of Philadelphia, Pa.:

THE FRANKFORD ARSENAL ASSOCIATION,
Philadelphia, Pa., January 28, 1915.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

DEAR SIR: The committee named below, representing 400 employees of the Frankford Arsenal, earnestly protest against the legislation in the Army bill depriving us of our premium rate of compensation, which was established at this arsenal over five years ago to the mutual satisfaction of all concerned. The enactment of this legislation means an annual loss to us of about $44,972. You are requested to use your utmost endeavors to have this legislation struck out by the upper House of Congress or so modified that we will not be deprived of our increased earnings under the premium system.

Very respectfully,

JOSEPH B. MOSS,
HARRY G. PENN,
JOHN JESBERGER,
Committee.

Immigration.

EXTENSION OF REMARKS
OF
HON. JAMES MANAHAN,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. MANAHAN. Mr. Speaker, during the debate on the immigration bill the gentleman from Kentucky [Mr. POWERS] asked me a question, and in replying I made the observation that something in the neighborhood of 30 per cent of his constituency is illiterate. This estimate was made from recollection of the general character of the section from which the gentleman comes. The gentleman from Kentucky corrected my statement and asserted that the illiterates in his district "over 10 years of age" were less than 20 per cent. Possibly my offhand estimate of the total illiteracy, including that of infancy, was unfair. To do exact justice in the matter, I have consulted the census reports of 1900 and 1910 and find that my original statement was not mathematically accurate to the last decimal point, although it justly reflected conditions. I now speak from official records.

The gentleman from Kentucky [Mr. POWERS], who so insistently opposes the coming of immigrants who can not read, represents 15 counties, in one of which he was born. In 1900 the illiteracy of males of voting age ranged from 15.2 per cent in Laurel County to 35.7 per cent in both Leslie and Clay Counties. In four counties the illiteracy of males of voting age exceeded 30 per cent, while in four counties it was less than 20 per cent, the average being approximately 25 per cent. In 1910, the last census taken, two counties only showed over 30 per cent of males of voting age to be illiterate, and the general average of the whole district was reduced to 21.4 per cent, showing a slight awakening.

Mr. Speaker, I wish to give the gentleman from Kentucky credit personally for trying to lift his people out of the darkness of ignorance. He tells us in his biography that he served Knox County as superintendent of schools for six years, and I note in the census returns that at the end of that period only 25.5 per cent of the men of that county of voting age were illiterate. I note also from these census returns that in Russell County, as well as in Laurel County, the percentage of illiteracy has increased instead of diminishing from 1900 to 1910, although there was not one illiterate foreign-born man in Russell and only nine in Laurel County when the 1910 census was taken.

The gentleman suggests that these figures include the negroes, but he can find little comfort in the census reports. In one-half of the counties of his district the illiteracy of the native whites—males of voting age—runs from 20.6 to 30.1 per cent, while in the other half it runs from 13.3 to 19 per cent, the average of the whole district being approximately 20 per cent.

It will be observed also, Mr. Speaker, that the census returns show that in Leslie County, where over 30 per cent of the native whites—men of voting age—are illiterate, and not one illiterate foreign-born man was found by the census taker. In fact, the gentleman represents six counties—Cumberland, Harlan, Leslie, Monroe, Rockcastle, and Russell—in none of which was there in 1910 a single illiterate foreign-born man, and three other counties had only one in each. Apparently the gentleman has no foreign-born constituency to offend, and so many of the native whites can not read that he has little to fear from his constituents, no matter what he says upon this floor.

Mr. Speaker, I was personally gratified to observe in scanning the census returns that in the five darkest counties referred to, in every one of which the illiteracy of the men over 21 years of age exceeded 25 per cent in 1900, there was not one man, illiterate or otherwise, who was born in Ireland. If any Irishmen were there, they were so ashamed that they had hid themselves when the census takers came around.

It will be conceded, I think, that the gentleman's district is in bad shape intellectually, and as it is a part of the United States geographically, I feel at liberty to suggest two remedies.

First, bring in from southern Europe as many immigrants, with bright eyes, warm blood, and active brains, as can be persuaded to become constituents of the gentleman. This influx will in due course of time overcome the staleness of the native American stock disclosed by these census reports.

Second, I suggest that the gentleman from Kentucky ask unanimous consent to print as a public document the alphabet, the first reader, and the multiplication table, so that he can, under his frank, send them to the illiterate voters whom he has the honor to represent.

If these remedies fail, I urge the gentleman to resign and go home and teach his neighbors to read instead of working here, with men of like motives representing similar constituencies, to shut the door of this Nation in the face of more ambitious, if not more deserving, people.

Mr. Speaker, the following statistics are compiled from volume 11, on population, of the census reports of 1910:

Percentage of illiterate males of voting age in the eleventh congressional district of Kentucky, by counties, showing also for each county the percentage of native white men of voting age who were illiterate in 1910.

Name of county.	In 1900.	In 1910.	Illiterate white men of voting age, 1910.	
			Native born.	Foreign born.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Bell	26.2	19.9	18.5	25.6
Clay	35.7	29.3	29.3	.....
Clinton	26.3	19.5	19.0	.....
Cumberland	30.1	25.8	24.4	.....
Harlan	30.4	30.3	26.6	.....
Knox	25.5	22.1	21.7	.....
Laurel	15.2	17.3	17.3	5.0
Leslie	35.7	30.6	30.1	.....
Monroe	15.8	18.4	14.9	.....
Pulaski	19.1	13.9	13.3	.....
Rockcastle	22.4	21.6	21.3	.....
Russell	16.3	17.1	16.8	.....
Wayne	25.8	21.4	20.6	.....
Whitley	20.2	13.7	13.3	.....
Average	24.6	21.4	20.3	.....

McCreary County was, since the census was taken, carved out of Whitley, Wayne, and Pulaski Counties, and her population is included in the foregoing.

Veto Message on Immigration Bill.

EXTENSION OF REMARKS
OF
HON. HENRY T. RAINEY,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. RAINEY. Mr. Speaker, this bill which has passed Congress twice, and has been twice vetoed—once by a Republican President and now by a Democratic President—provides, in my judgment, for very proper immigration restrictions. The bill has been twice vetoed for the reason that it contains a literacy test. The literacy test simply requires that aliens over 16 years of age, who are physically capable of reading, shall not be admitted to this country unless they can read at least 30 words in the English language or in some other language or dialect, including Hebrew and Yiddish. We expend in this country every year for the purpose of educating our citizens over $700,000,000 in money. Some of our States have an educational qualification for voting. More of them will have an educational qualification in the near future. We proceed upon the theory in this country that the man who is educated makes a better citizen and is more loyal to American ideals than he can be if he is ignorant. There is nothing unreasonable in a qualification of this kind, in my judgment.

The great mass of our people who pay taxes will find, if they consult their tax receipts, that the school tax they pay is usually the very largest item. Is it possible, in view of the sacrifices our people so willingly make to educate the youth of the land, that they are willing and anxious to accept from foreign lands uneducated, ignorant immigrants, and open up to them the opportunities this great Republic presents?

For over 100 years the country has accepted seriously the advice of Washington in his Farewell Address and has endeavored to "promote, as an object of primary importance, institutions for the diffusion of knowledge." This admonition

has been literally followed in every State in the Union. Has not the time come to say to the horde of immigrants who come to us now from the south of Europe you must be able at least to read 30 words in your own language before we can open up to you the opportunities this country affords; before we can afford to permit you to mingle with the great masses of the people in this country?

Not long ago Representative BURNETT, chairman of the great committee which has reported out this bill, was in Sicily investigating this very question, and while there he inquired as to why the people of that section of the world were no longer troubled with the bandits who infested the mountainous sections not many years ago, and the answer was: "They are gone, nearly all of them; they are in America."

The greater portion of the present objectionable immigration comes to us through New York, and the governor of New York is now calling upon the Federal Government to assist the State of New York in caring for the weak, feeble-minded foreigners who are pouring into that State from abroad. In 1911 there were in the civic hospitals of New York State 5,700 patients. One-half of them were foreigners. In 1912 there were 31,000 patients in 14 State hospitals in New York, and 41 per cent of them were of foreign birth. It has been estimated that in New York 60 per cent of the occupants of charitable institutions and insane asylums are foreigners. A great Democratic President more than a hundred years ago, with the foresight which always characterized him, was able to see the conditions coming which actually confront us now. Thomas Jefferson said:

While we are providing for the fortification of our country against the foreign foe, I am in favor of fortifying it against the influx of undesirable immigration.

It is no answer, now, to say that many of the immigrants who reached this country prior to 1883 could not read and write; that their descendants are now among our best citizens; and that, although they could not read and write, they made good citizens themselves. In those days the land vent was still open, and the Government was able to give away farms, and a man could have a farm by simply asking for it and living on it. Our public domain is gone. Public lands capable of producing crops have nearly all been given away, and to-day from the best classes of our agricultural population thousands and thousands of skilled farmers are crossing our northern boundary into the great Canadian Northwest. Last year there landed on our shores over 1,300,000 immigrants. The influx of immigration is not quite so large now, on account of the fact that the nations of Europe are engaged in a destructive war; but when the war closes we may expect a larger immigration than ever. Prior to June 30, 1910, and after July 1, 1819, nearly 30,000,000 immigrants were admitted to the United States. From 1819 to 1883, 95 per cent of the total immigration from Europe originated in the United Kingdom, Germany, Scandinavia, the Netherlands, Belgium, France, and Switzerland. The immigration prior to 1883 was exceedingly desirable, and we were able to add to our population the very best of the red-blooded peoples of these north of Europe countries. The immigration prior to 1883 from these countries has been referred to as the "old immigration," but after 1883 there was a rapid and distinct change in the character of the influx of European immigrants. From that time to this 70 per cent of the movement originated in southern and eastern Europe, and the "old immigration" movement in the last 30 years has materially declined. The immigrants who come now are unskilled laborers. They do not go to the land. They remain in the congested centers of population. The report of the Immigration Commission, representing the work of the commission for three years, and contained in the 41 volumes of its report in 1910, finds that there is an oversupply of unskilled labor in the basic industries, and the commission recommends such legislation as will restrict the further admission of unskilled labor, and eight of the nine members of this commission, after four years of study, reached this conclusion, which they expressed in the following language:

A majority of the commission favor the reading and writing test as the most feasible method of restricting undesirable immigration.

Recently conclusive proof has been submitted showing that the shipping, steel, and mining corporations of the country have financed the opposition to this bill. In the days of the old immigration there were no great ships capable of carrying hundreds and thousands of immigrants. The old stock from the countries of northern Europe came here in sailing vessels, occupying weeks and weeks of time making the long journey across the Atlantic. The immigrants who come here now from the south of Europe arrive in great steam-propelled ships, quickly crossing the Atlantic, and a large portion of the profits of these great shipping corporations comes from the one million and a quarter immigrants they bring to this country every year.

Cheap labor from the south of Europe may add materially to the profits of a Shipping Trust; the great Colorado mining corporations, financed with Standard Oil money; and the great steel corporations, anxious always to employ the cheapest kind of labor in order to increase to their stockholders the amounts paid out in dividends; but these considerations do not influence me. I prefer to keep up the high standard of American manhood. The best way to protect American labor, in my judgment, is to protect it from this tremendous influx of cheap, unskilled, ignorant foreign immigration from the south of Europe. Much of the south of Europe immigration is desirable, but the desirable immigrants from the south of Europe or from any other country in this new century are able nearly always to read and write. I have voted always for a bill containing this test. I shall again to-day vote for this bill. I believe the country demands this legislation.

It may be that it has not been incorporated into party platforms, but the fact remains that prior to the last election this bill passed Congress by an overwhelming majority. It was made an issue in the congressional and senatorial elections throughout the country last fall by the Shipping Trust, by the mines, by the steel corporations, speaking through the National Liberal Immigration League, supported by their contributions. It was opposed, as it always has been opposed, by the American Federation of Labor, and I think also by the great mass of the people of the United States. Candidates for Congress and candidates for the Senate alike were questioned upon this subject by the proponents of legislation embodying a literacy test and by the opponents of legislation of this character. It may not have been incorporated in a party platform, but this question was an issue in the elections of last fall, and the result was the election of a Congress and of a Senate believed to be again overwhelmingly in favor of this legislation, and the vote upon this measure may show that two-thirds of the membership of the present House still favor the literacy test. If the measure fails to receive the necessary two-thirds in this Congress, whose life expires so soon, the fight will go on, and the Sixty-fourth Congress may disclose a sufficient number of votes in favor of this measure to pass it over a presidential veto, if it should again be vetoed.

The Ship-Purchase Bill and Our Merchant Marine.

EXTENSION OF REMARKS

OF

HON. RUFUS HARDY,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 2, 1915.

Mr. HARDY. Mr. Speaker, under leave to extend my remarks, I desire to place in the RECORD something of interest to the general public on the subject of the pending ship-purchase bill and our merchant marine. I noticed in a city paper a day or two since this paragraph:

ON SHIP BILL—MANN, GARDNER, AND HUMPHREY ACCUSED STATE DEPARTMENT HEAD OF HAIRSPLITTING AND EVASION.

Despite qualified denials from the State Department, three Republican Members from the House asserted late to-day their belief that the department has received from the British Government a notice that Great Britain would object to the purchase of interned ships by this Nation under the ship-purchase bill, or otherwise.

It so happens that I believe I know Great Britain has done no such thing. Such statement must have been made with the hope of forcing the State Department to make public the delicate and intimate relations and communications between our Government and Great Britain. I am scarcely at liberty to say how I know it, but I do know that the policy of Great Britain with reference to the commerce to this country, whether it shall be carried in ships of the Government or in ships of private individuals, has been and will be in the friendliest spirit, and that all the talk about Great Britain attempting to cripple our commerce, or having any desire to do so, is absolutely false. I had not intended, however, to go into a discussion of that matter. What I did wish to do was to present a discussion of the ship-purchase bill and of our merchant marine, and I desire to place in the RECORD a speech I have prepared to deliver to the New York Republican Club next Saturday, which is as follows:

"Mr. Chairman and gentlemen, permit me to thank you very sincerely for the honor you have conferred on me and to say that I regard it as an evidence of patriotism that you, a Repub-

lican club, have invited me, a Democrat, to address you. My own creed is perhaps liberal. I am not a socialist, a paternalist, or a centralist. On the contrary, I am strongly an individualist and for local self-government. But I am a patient student of history and of facts, and I favor as much of socialism, paternalism, and centralism, and am ready to abandon as much of individualism and localism as I may believe consistent with my obligation to support the Constitution and essential to the general welfare. Dismissing preliminaries, I will proceed to discuss the questions named in your letter.

"First, in regard to the ship-purchase bill now pending in Congress. The report of the committee on merchant marine of the Boston Chamber of Commerce relative to this bill, made on January 9, is a remarkable document. I can only touch it in high places. The first sentence states that there is no precedent whatever for Government ownership of a merchant marine. In this sentence there is error, for Russia has made quite an extensive experiment in that field; Brazil has done likewise, as doubtless have many others, the United States among the number. The second paragraph of this report mentions this experiment of the United States—the New York to Colon steamship line—only to misstate the facts about it.

"It states that the Government has operated that line at a nominal bookkeeping profit of 2 per cent for 10 years, with insurance, depreciation, and interest charges disregarded, and refers in footnote to Mr. E. A. Drake, vice president Panama Railroad Steamship Co., for confirmation.

"I have in my possession a letter from Mr. Drake in which he gives all the facts connected with the operations of that steamship line from the date of its acquisition by the Government as a part of the Panama Railroad Co. up to the present time. He shows that the steamship line was acquired as part of the property of that railroad in the purchase from the French Canal Co. of its assets for a total sum of $40,000,000, and that the value of the railroad and ships included in that purchase was estimated at $7,000,000. He shows that the railway company at the time had a bonded debt outstanding, and after its purchase the Government of the United States spent $4,935,197.03 in retiring the bonds and improving the property of the company. Only $372,234.92 of this sum was used on the ship line. That was spent in rebuilding the *Allianca*. Of the total sum there was repaid to the Government $1,687,864.92 from the net revenues of the company. The company, besides this, paid interest to the Government on the money advanced by it up to March 4, 1911, on which date the company was relieved from payment of the balance due the Government, then amounting to $3,247,332, in consideration of very low rates and charges for services to the Government.

"The freight paid by the Government upon all its shipments had been reduced from a maximum rate of $8 per ton to an average rate of $3.50 to $4 per ton, thus saving to the Government millions of dollars, and at the same time causing private steamship lines, sometimes performing service for the Government going to Colon and to near-by ports, to reduce their rates to like reasonable charges. In addition to this, Mr. Drake shows that the passenger fare paid by employees of the company before this purchase averaged about $75 per passenger; that the Government-owned line transports all its employees at rates ranging from $20 to $30 each, as well as all parties visiting the canal under the auspices of the Government, Members of Congress and other officials included. Moreover, Mr. Drake's letter declares that up to October 31, 1910, the company paid the Government for the charter of the two vessels, *Colon* and *Panama*, 8 per cent on its investment, 4 per cent being intended to cover interest on the investment and 4 per cent being intended to cover depreciation, both of which sums are reasonable. These vessels were bought by the Government at a cost of $1,312,000. The letter shows that for every dollar invested, at least up to that time, the Government was paid ample charter fees, interest, and depreciation charges. On October 31, 1910, the Government made a special trade with the Panama Canal Steamship Co. under which the company was relieved of further payment of interest on the cost of these two vessels and charter fees, and so forth, on its agreement to carry the cement required in the construction of the Panama Canal at $1.25 per ton, which would have cost if carried by tramp steamers an average of between $2.60 and $3 per ton. Mr. Drake's letter did not state, so I wrote to Maj. Boggs and found that the company had carried for the Government since that date 540,578 tons of cement, thus paying or saving to the Government about $700,000.

"These letters of Maj. Boggs and Mr. Drake are accessible to any and all of you, and will show that both the positive statement and the inference to be drawn from the report of this Boston committee are without the pale of reason.

"Steamers of a Government-owned line would, if built in the United States, says Boston, cost more than competing foreign-built ships, which is true—alas, too true—if the Government were compelled to buy them so. But the Government will not be fool enough to pay two prices for her ships, and therein lies the great fear and bitter hostility to this bill of those who fight it. As to the labored denial of any emergency requiring this or some other measure to build up our merchant marine, I need only ask you gentlemen by what craft prior to this war was the great commerce of our people carried? It was carried in the vessels of Germany, England, France, Italy, and of the European world. Of these vessels many of the English have been converted into war vessels, all of the German have been removed from the seas, and a great many of the French are no longer available; and it seems to me, when we know these facts and the cruel prices being charged us for transportation, that it is the most brazen insolence to tell our people that there is no urgent need of additional vessels to carry our commerce or additional measures to build up our merchant marine in the future. So much for this report.

"Now, then, the Boston Maritime Association has issued a circular in opposition to the ship-purchase bill, dated January 15, 1915. The first eight pages of that circular are devoted to the question of possible foreign entanglements that would arise if the Government of the United States should become itself interested in any vessels sailing the foreign seas, especially if bought from any power engaged in the present war, and on this point opposition Senators and newspapers more largely dwell than on any other. It seems to me that one single sentence answers every contention of those who oppose this bill on account of foreign entanglements, and that sentence is simply this:

"The danger of entanglements by reason of the Government buying foreign vessels and putting them into trade would be no greater and it would be no less than would be the danger of entanglements arising out of our citizens buying the same vessels and putting them into trade, for the simple reason that our Government would and will go just as far to protect the vessels of its citizens as vessels of its own. This statement may sound broad, but it is true. It is not possible that the great Government of the United State does not consider the pecuniary rights of its citizens as sacred as the pecuniary rights of itself. Would our flag be more sacred to a Government into whose ports the ships of the United States have entered than it would when flying on the ships of a private citizen of this country duly registered? There can arise no question of foreign controversy with regard to a vessel owned by the United States in the merchant business that would not arise regarding a vessel owned by any citizen of the United States. The only possible difference would be that the bona fides of the Government purchase would, I think, never be questioned. It might be different as to a naval ship, but as to merchant ships the question is the same. Therefore if on the ground that it might involve us in international entanglements we refuse to pass this bill, on the same ground we ought to stand idly by and tell our people to make no effort to obtain vessels for private ownership in order to conduct the great foreign commerce of our country, rather we ought to warn them not to buy any ships from the people who are at war.

"So much for the ship-purchase bill.

"The intimation in the circular of January 15 of a return to a policy of discriminating duties contains, I fear me, the real hope of all the opponents of the ship-purchase bill. If they can secure either a subsidy or return to the policy of discriminating duties, that would be the favor they want; but, mark you, it must be large to satisfy them. The circular declares: 'Nothing but our own ineptitude bars the way to our return to the Jeffersonian system of discriminating duties. If these are made large enough, a sufficient number of ships will be attracted from the coastwise trade to meet our most pressing needs. Upward of 34 of our coastwise vessels have already entered our foreign trade. The railroads will temporarily profit, and the domestic business will suffer, but'—and so forth.

"In these sentences the opposition to this bill shows its cloven foot. It appears that the high freight rates prevailing in our over-seas trade has already diverted 34 of our coastwise vessels from coastwise to foreign trade. It is well known that the rate of freight in our coastwise trade was and has been for years far higher than the freight rates on the ocean, but conditions are such now that our coastwise vessels are leaving the coastwise trade to engage in the more profitable, because of the more unconscionable, rates now paid in the transoceanic trade. Thirty-four vessels! This new opportunity to rob our people in the over-seas trade is too rich a morsel to be refused, and nothing would please the railroad companies better than to have a still

greater number of the coastwise ships diverted to the transoceanic trade. Consequently we have a long pull, and a hard pull, and a pull altogether, from the shipping interests and the railroad interests, who all hope to prevent any substantial steps being taken by the Government which would have the effect of fixing reasonable rates in the transoceanic trade. They would like to be permitted to charge such rates as they see proper in the transoceanic trade and at the same time to raise their railroad rates on account of the diversion of the coastwise ships. Many of the coastwise ships belong to the railroads. If they can double or quadruple their ship earnings and raise their railroad earnings, of course they will divert their ships.

"Mr. Chairman, need one make further argument to illustrate that there is an emergency and need for something to be done except to state that to-day we are paying $15 a bale for the transportation of cotton from Galveston to Bremen, whereas 12 months ago we paid $1.50 per bale? Is it not sufficient that the freight rates for all classes and kinds of commodities, whether they be contraband or noncontraband, whether going to neutral countries or warring countries, have advanced from 200 to 1,000 per cent during this war?

"The man who says there is no need for something to be done speaks not only without knowledge but with reckless indifference to the general welfare.

"And so our Boston people think that nothing but our own ineptitude bars us from the discriminating-duty policy, and they say that if we were to adopt that policy steamships will, of course, be needed, and that would give capital some assurance, and there would instantly arise a demand for all the labor in the United States available. I presume if that policy is not adopted they will refuse to see need for more ships. Mr. Chairman, if the prices now being paid, and likely to be paid on account of the scarcity of ships, are not sufficient to cause our shipbuilders to put all of their factories at work overtime, what more would do so? And while on that question I wish to prophesy. If the Government should pass the bill in question and should to-morrow offer to have built five vessels of a certain construction, to cost each about $1,000,000, to be delivered in the harbor of New York on a certain date, I dare to predict that with open competition with all the world the vessels would be built in the shipbuilding yards of the United States.

"And I do so because I know and the shipbuilders themselves have admitted to us that the metal material that goes into these ships is cheaper in America than elsewhere. We have the timber on our own shores; we would not have to ship it from abroad, and the only possible element in which they may cost more here than abroad would be in the element of labor, and in my opinion labor is not more scarce to-day in the United States than it is in Europe. The shipyards in Europe are busy for their Governments. Our shipbuilders can underbid them and yet reap a golden harvest. Instead of spending their time fighting this bill they ought to be straining their resources to build ships for the ship market and getting ready to build any ships the Government would need under this bill at a lower price than Europe can.

"Mr. Chairman, leaving this bill, which is but incidental, after all, to the main question, permit me now to discuss the great question of the American merchant marine. I believe that I can guarantee to the United States in 10 years' time the greatest merchant marine in the world if she will take my prescription. I have listened to speeches of the advocates of discriminating duties and of subsidies. I have endeavored to find what reason they assign for our inability to compete on the ocean and for the final fading away of our American merchant marine. In desperation they always urge a subsidy or discriminating dues. None of them were ever known to suggest any other remedy or change in our laws.

"Mr. Chairman, from 1815 to 1860 this country had a great merchant marine. It was true then as it is true now that the scale of wages in the United States was higher than the scale of wages in any country of continental Europe or in Great Britain. It was true then as it is now that to some extent the sailors on American vessels received higher wages, but it was also true then as it is not true now that our shipbuilders built ships not only for the United States and her merchant marine, but they built ships in competition with and for the nations of the world. American ships were built here and sold all over the world and they engaged in all the trade of the world.

"It is also true that in 1815 we had the policy of discriminating duties and had had from the foundation of the Government, but it is likewise true that that policy was inaugurated simply in retaliation for discriminating duties levied against our merchantmen and our ships by other countries, particularly by Great Britain. And in 1815 the party then in power sought by treaties and by law to abolish discriminating duties, and passed a law at that time authorizing the abolishment of discriminating duties against all nations who would adopt a like liberal policy toward us, and from the year 1815 to 1828 every administration, whether Whig or Democratic, every single, solitary administration, sought to abolish all discriminating duties imposed by every nation upon our ships and by us on their ships, provided there could be an agreement. And it is true that the end of them came in the administration of Andrew Jackson in 1828, after a long, hard struggle to secure it, after having negotiated not one but dozens of treaties with other nations, securing equality as to ship treatment and the abolishment of discriminating duties between the United States and the other nations. In 1828 the last obstruction to a free sea for the commerce of nations was removed, the last remnant of discriminating duties was swept away, and our ships were allowed to enter the ports of Great Britain, and their ships to enter our ports on equal terms.

"I reiterate the fact that wages were then higher in this country than they were in England, but all our shipbuilders and merchantmen then asked was a free chance and a fair fight on the open seas and they believed they could beat the world. Under that belief in 1828 discriminating duties were abolished, the sea was open, America entered the contest, and from 1828 to 1860 she built ships in competition with the world, and sold them and sailed them in competition with the world. But in 1861 the great Civil War broke out. Our merchant ships were then wooden ships. The war swept off many of them. It gave England something of an advantage in shipbuilding over and above us, and when the war ended we found ourselves not only without the necessary number of merchant vessels, but we found ourselves to a large extent outstripped in the process of building ships.

"Instead of then permitting our people with the genius of Americans to strive to build up their shipping in competition with the shipbuilders of the world, by giving them free ship material, we applied the policy of protection to such material, and every piece of iron, every piece of steel, every element of metal that went into the construction of a ship was placed under a high tariff, so that England, then, being in advance of us with reference to the iron and steel products going into ships of modern construction, our producers of such articles were able to charge a far higher price than obtained in England, and consequently our shipbuilder was handicapped and ceased to build ships for the foreign trade. He might have fought the iron trade and struggled for free ship material, and he would have gotten it had he tried; but he chose rather to stand in with the iron people, as all special interests are wont to do, and to content himself with being given the sole right to construct ships for our coastwise trade. In building these ships he could afford to pay any price for material because foreign competition was prohibited, and so he began to build only for the American coastwise trade vessels for which he could charge his own price.

"At the end of the Civil War we were still carrying some 33 per cent of our foreign trade in our vessels, old left overs that we had from the period before the war, but as every year rolled by the number of our vessels upon the seas grew less—the old ones sank, were lost, burned, disappeared, and no new ones took their places, and in the period from 1865 to 1910 we had dropped from 33 per cent just after the war to 8 per cent of our foreign traffic carried in our own vessels; and of that 8 per cent practically the only part of it worth considering was fostered by the Government by subventions.

"Mr. Chairman, could it have been otherwise? I read from an address by Mr. James J. Hill, just recently published, in which he makes this categorical statement:

> "Vessels built in the United States cost from 50 to 100 per cent more than the same vessels built abroad, and therefore the American merchant marine can not compete with the foreign merchantmen."

"Now, Mr. Chairman, with that statement, which is true, I want to present to you the reasons why I think our merchant marine has vanished. But before doing so I wish to present to you what the ship subsidists claim as the reason. They say it is because of our antiquated navigation laws. I ask them what are these antiquated laws? Sometimes they endeavor to scrape up a law, and say that our laws require greater accommodations and conveniences for the crew. I ask them to point out such requirements, and they are unable to do so. On the contrary, the only law that we have on the subject is one providing crew space, which in the United States is 72 cubic feet for each member of the crew and in Great Britain it is 120 cubic feet. Then they say it is because our law provides a higher scale of food for the men; but I read the law to them, and while it does give a food scale, it also says that this scale may be altered by agreement, which is always done. Then they say that our ships have

disappeared from the sea because of the greater cost of operation, and that that is because we pay higher wages to the crews who operate the ships. But, I ask them, is that a matter of law? Certainly not; but what about it? It is a fact that the seamen on American vessels under American registry may be of any nationality under the sun, and they are not required to be Americans. It is also a fact that the wages of the seaman employed are fixed by the port in which he is engaged and not by the flag under which he sails. If an English vessel in the harbor of New York finds it necessary to secure the services of a seaman, that vessel must pay New York wages to secure the seaman. If an American vessel in the harbor of Liverpool finds it necessary to secure a seaman, that vessel will only pay Liverpool wages to secure the seaman, and whatever the flag under which a seaman sails he receives the wages of the port in which he is engaged.

"So that whether the sailor be on an English, German, American, or Chinese vessel he is not paid by the flag he floats under, but by the port he engages in.

"Now, Mr. Chairman, that being the case, I want to call your attention to a sure enough antiquated law which it is sought to cure in the seaman's bill which we have been seeking to pass, the purpose of which is to abolish arrest of seamen for desertion. Under our law and treaties we bind ourselves that if a seaman comes from Liverpool or Bremen or China to New York and there deserts his ship he is not, as you and I would be if we had failed to fulfill our contract one to the other, subject to civil process, but he is a criminal. Our constabulary, under our treaties, arrests that seaman in the port of New York, places him in chains, and puts him on board the ship from which he has deserted. The result is that the foreign shipowner may engage his men for a round trip from Naples or Liverpool, contracting to pay him the wages prevailing in that port, and if the seaman sees proper to quit him in New York, where the sun is brighter and the skies bluer, we put the hounds of the law after him and put him back on board his ship. The result of that law is that they can engage their labor in the cheapest port possible and keep the sailors going back and forth, and our Government helps them to do it. This law for the enforcement of a civil contract by criminal process does not work both ways. The shipowner may take a crew from New York to Naples and, if he sees fit, dismiss the crew and take on a crew of Italians at the cheapest scale of Nea- You can not compel him to keep his crew; but if they desert, politan wages for another round-trip voyage to New York. they are arrested and he carries them back to Naples. Now, while our shipowners have the same rights under these laws and treaties, I think it likely the foreign shipowner has better opportunity to profit by them. The seaman's bill will abolish arrest for desertion. Its operation will be that when skilled seamen come to our ports and find an opportunity to secure better wages here, it will be so that now and then, unless the shipowner is willing to raise their wages to reasonable sums, they will desert and get employment on some other ship.

"In 5 or 10 years, under the operation of the law which makes the seaman for the first time a freeman, the men who sail on merchantmen in and out of the harbor of New York will receive living wages, and all of them practically the same wages. If men are free, you can not work them side by side at vastly different wages. It will come to pass that American or foreign ships will only pay better prices for better men, and the cost of the crew will no longer be a hindrance to the operation of our merchant marine.

"Capt. W. A. Wescott, president of the Masters, Mates, and Pilots of the Pacific, has been before our Committee on Merchant Marine many times, and has, I think, impressed everyone with whom he came in contact as a conservative, splendidly informed, truthful, and able man. He gave me these figures as to cost of operation of an American ship of 6,000 net or 8,000 gross tons:

Officers and crew, 42 men; average wage per month, $62.16⅔; per year $746; total per year	$31,332
Fuel, 3,500 to 4,000 horsepower, oil, $150 per day	50,000
Food and supplies	10,000
Interest on cost ($500,000), 6 per cent	30,000
Depreciation, 5 per cent	25,000
Repairs, 5 per cent	25,000
Insurance, 5 per cent	25,000
Total	196,332

"Labor cost percentage .159 plus.

"If our ships cost the same as foreign ships, all the items other than labor would be the same on foreign as on American ships.

"It is believed that under the 'seaman's bill,' 'abolishing arrest for desertion.' wages of seamen in our foreign trade on American and foreign ships will be absolutely equalized. That is largely true now, since no law prevents our shipowners hiring even Chinese crews, and many foreigners are employed on even our coastwise vessels.

"But our officers must be American citizens, and subsidy hunters claim that requirement kills our merchant marine. Capt. Wescott prepared for our committee a very interesting pamphlet of 21 pages, giving the rate of pay of masters and mates on practically every American ship in our foreign merchant service, and also the rate of pay of the like officers on a great number of ships in the British merchant service. On page 4 he gives the pay of those officers on *Congress*, a United States ship of the Pacific Steamship Co., of 7,985 gross tons:

	Per month.
Master	$225
Chief mate	125
Second mate	100
Third mate	85
Fourth mate	75
Total	610

"On page 18 he gives the pay of commanders, answering to our masters, on 43 vessels of the White Star Line. They range from £400 to £1,400 per annum, the lower pay being on cargo vessels only. It is hard to make a close comparison, but in addition to the pay it is shown that British officers receive very substantial privileges and emoluments not received by American officers at the ship's expense, such as full bonus without deduction for periods less than three months off duty, full sick pay for three months, leave of absence up to three weeks annually on full pay, etc. Frankly, I think the British and American pay of their commanders or masters is about equal. As to those below that rank, corresponding to the American chief mate, second mate, third mate, fourth mate, he gives, on page 14, the pay in the Canadian Pacific Railway Pacific Service the following:

	Per month.
Chief officer, answering to our chief mate	$125
First officer, answering to our second mate	90
Second officer, answering to our third mate	80
Third officer, answering to our fourth mate	70
Placing pay of commander at	225
Total	580

"This would make a difference in the aggregate pay of American and British officers of $30 per month, or $360 per year in favor of the American, on a vessel of 6,000 net tons, if we ignore the special advantages enjoyed by the British officer, which I have mentioned, and would amount to one-fifth of 1 per cent of the total cost of operation of such a ship as I have described.

"But these calculations are all made under the supposition that the British and American vessels cost the same. If the American vessel costs 50 to 100 per cent more, then the items of interest, depreciation, repairs, and insurance in her cost of operation will be from $50,000 to $100,000 more per annum, and of course competition is out of the question.

"Mr. Chairman, has it ever occurred to you when you hear people say, 'We are unable to compete on account of higher wages,' that England proportionally pays a much higher wage when compared with the wages paid by the Italian shipowner or the German shipowner or the French shipowner, than we do as compared with England? Yet England holds the sea while paying higher wages to her officers. She is mistress of the sea. And is it possible we have grown so weak that we are unable to compete under conditions similar to the conditions under which England competes with the balance of the world?

"I confidently prophesy that if we shall put our merchantmen upon the sea, with equal privileges, no hamperings, no restrictions, no restraints, they will hold their own with the Englishman, the Frenchman, or the German. But permit me to make this further statement: That the men of all nations are yet governed by self-interest, and we are no exception to the rule; and you as an individual contemplating shipowning are confronted by the question when you desire to engage in transoceanic traffic of whether you will sail your ship under the American flag or under the English flag. You are confronted by the proposition that if you put it under the American flag you must pay from 50 to 100 per cent more for it than if you put it under the English flag, and that all other conditions are equal. Mr. Chairman, which flag will it be, patriot though you are? I know and you know that every man within the sound of my voice under the present conditions will buy the English ship and run it under the English flag, and that is all there is to it, and he will do it because it is utterly impossible for him to do otherwise. Permit me to give you some figures. Take a vessel that in England would cost $600,000. It is a magnificent merchant vessel. That vessel built in America would

cost $1,000,000. Now, you and I are thinking about engaging in this trade, and you are a patriotic American and pay $1,000,000 and buy the American-built vessel and I buy the English vessel, not being so patriotic. We will consider that the cost of the money is the same to us, as we both issue bonds. You use a million dollars of it and buy your vessel, and I use $600,000 of it and buy my vessel. And now we start on the same business of carrying freight between Liverpool and New York, or wherever we wish to go. To begin with, the first year you are compelled to pay marine insurance on $400,000 more than I am. And 6 per cent on $400,000 is $24,000 that you pay for marine insurance more than I do; and then you pay 5 per cent on $400,000 more than I do, which is $20,000 more than I pay for interest; and then the average annual repairs on vessels is about 5 per cent, which will cost you again $20,000 more for repairs than I pay.

"The life of a vessel is supposed to be 20 years. Now, Mr. Chairman, at the end of 20 years you will have spent for insurance, interest, and repairs $64,000 more a year than I. At the end of 20 years you will have spent $400,000 more in original cost and $1,280,000 more than I in interest, repairs, and insurance. You might have been a better patriot than I when you bought that ship, but if there was anybody dependent on you or your welfare they ought to have had a guardian appointed for you. Is it any wonder that under these circumstances the business man buys the English ship and puts it under the English flag? Is it any wonder that under these circumstances our merchant marine disappeared from the seas? Mr. Chairman, if you will not take my prescription, I am absolutely sure you will not have an American merchant marine. If you will take my prescription, I am just as sure that you will have an American merchant marine. The American Federation of Labor very recently, in a great national convention, unanimously adopted this resolution, introduced by Mr. Andrew Furuseth, of the Seaman's International Union: '*Resolved*, That we urge upon Congress to so change our registration laws that any vessel rated in the highest class of any responsible classification society may be registered as an American vessel, to sail in any trade, provided that she be compelled to carry citizens of the United States as licensed officers.' This resolution contains my prescription for the American merchant marine.

"As our laws now stand we have a so-called free ship bill. An American citizen may buy a ship where he pleases and obtain for it American register, but by the same law we restricted his right under it to engage only in the foreign trade. We said, 'You may fly the American flag, but we will give you absolutely not one privilege under that flag that you do not have under the British flag.' On the contrary, you will lose certain privileges which you have under the British flag. It is true that Great Britain permits any ship to engage in her British Isles coastwise trade.

"England is not afraid that foreign ships will take her home trade away from her; but England is a little selfish, too, and only English ships can engage in the coastwise trade of her great colonies. Under the American flag you will lose that privilege. Besides this, England has negotiated many treaties of reciprocity, under which her ships may enter the coast trade of many countries. You will not have that privilege under the American flag. Mr. Chairman, not a foreign-built ship would be under our flag to-day under that law but for the benefit of our neutrality and national standing during the present war, and after the war every one of them, if our laws remain the same, will go back under some foreign flag. But if you will permit the ship that bears the American flag, under American register, and owned by Americans, though built abroad, to engage in our coastwise trade, then that ship has obtained a privilege of value. Then when it comes from Liverpool with cargo to New York and goes back by way of New Orleans or Galveston to obtain a return cargo to Europe, it will not go empty, as it does now, but will bear a full cargo of freight from New York to New Orleans or Galveston, and all along its route it will be earning money and be at great advantage over the English vessels, which can carry none of our coastwise trade.

"Please understand that this is not all I would have. Nothing but nature has the right to be prodigal. Civilization ought not to waste the labor of her sons, and therefore I would have no barren voyages, but our coast should be open to all ships, as the coast of England is. But if before I die I may see the dawn of a better day breaking by the adoption only of the policy set forth in the resolution of the Federation of Labor which I have presented, I am willing to say, 'Now let thy servant depart in peace.' Our shipbuilders, though they will not believe it, will be profited, also, in the end by such a law. They will not only build the bulk of the tonnage for our coastwise trade but millions and millions of tonnage for the overseas trade and for the trade of other countries. You can no more drive our shipbuilders out of business than you can the shipbuilders of England.

"The United States Steel Corporation, the Bethlehem Steel Co., and others can put out cheaper iron products than any other shops in the world, and they have to use American labor. All the other material that goes into a ship we have more readily at hand than any other country, so that it is foolish to talk about destroying our shipbuilding industry, in which we have about 32,000 workingmen engaged. But even if that industry were injured, we ought never to have put ourselves in our present humiliating condition to protect the special industry of 32,000 men. We have crippled American commerce by that foolish policy in this present year alone more than enough to have placed those 32,000 men on a pension roll for all time. Struggle brings strength. Our shipbuilders will learn the lesson of standardizing, which they say they have not done in the past. They will adopt economies, and just as sure as the sun rises, by improving their management, by having vast quantities of work to do and a vast market for their output, they will do as our shoe manufacturer, our iron and steel producer, our machinery men, and every other large enterprise of the United States have done, and they will become sellers to the world. Mr. Chairman, there was a day when, as a nation, we were strong and self-reliant shipbuilders, merchantmen, and seamen, and when, under conditions like the present, we would have gone out over the world the proud masters of commerce and of the sea. God grant such a day again."

How the Tariff and Freight-Rate Discrimination Affects the Steel Business.

EXTENSION OF REMARKS

OF

HON. ANDERSON H. WALTERS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 8, 1915.

Mr. WALTERS. Mr. Speaker, a very fair and correct statement of the effect of the tariff and freight-rate discrimination on the steel business is contained in the annual report of William H. Donner, president of Cambria Steel Co., to the shareholders of that corporation. The report of the activities of the Cambria Steel Co. during the general depression of business is an emphatic refutation of the oft-repeated charge that steel manufacturers came to the aid of politicians by unnecessary and unwarranted cessation of active operations. I deem the statements of the president of Cambria Steel Co. of such vital importance that they are inserted herewith:

EXTRACT FROM THE ANNUAL REPORT OF PRESIDENT WILLIAM H. DONNER, OF THE CAMBRIA STEEL CO.

* * * * * * *

During the year 1914 the steel industry suffered a curtailment of operations and a decrease in prices, though the labor rates established in 1913—the highest ever paid by your company—were maintained, and these conditions are unmistakably reflected in the results of the year. The net earnings per ton of finished product were the smallest in the history of the company; your annual net earnings were less a few years ago, but since then approximately $8,000,000 have been spent in improvements and the production of your works increased and diversified. Prior to August the new tariff law was the chief disturbing factor, permitting foreign manufacturers to quote exceedingly low prices, which the American mills were compelled to meet. Later the European war completely unsettled financial conditions throughout the world. In October the financial situation was relieved and has since been gradually improving.

With most of the large steel plants of Europe tied up on account of the war, foreign competition is now virtually suspended; but in the steel trade contracts are made so far ahead that it is almost impossible to secure an advance in prices after they are once lowered until there is evidence of sufficient business to fill up the mills. No one in the steel business can tell just how seriously the present tariff will affect the manufacturers or their employees until it has been tested under various conditions. Those connected with the industry must bear the burden of this tariff experimentation, while those without employees to consider or investments to protect have nothing to lose.

THE TARIFF A BUSINESS MATTER.

It is to be regretted that the tariff can not be considered broadly as a business proposition and handled on a scientific basis. Many persons are attracted by the theory that the steel industry in this country needs no protection because of our superior plants and the greater efficiency of American labor. In this day and age of skillful engineering and wide intercourse, however, it is not possible to have more economical plants in America than elsewhere, except temporarily. The foreign manufacturer is able to undersell in this country because of higher priced labor in the United States, which adds to the cost of plants as well as operat-

ing costs. Foreign laws also permit a closer cooperation among the manufacturers in both domestic and export trade. In periods of prosperity abroad the foreign mills can sell their entire output more profitably outside of the United States, but when their markets fail it is quite an advantage to them for the American tariff to be low enough to permit their selling a portion of their product in America, even at cost if necessary, to help pay fixed charges and maintain their organizations. This policy is very beneficial to the foreign manufacturer, but demoralizes the American market. Thus a tariff that is harmless to the steel industry of the United States one year may be ruinous the next, depending upon the business of our foreign competitors. It is unfortunate that these facts are not more generally known and appreciated.

CANADIAN COMPETITION.

We are experiencing some competition on rails from Canada. Under our existing tariff law rails from foreign manufacturers are admitted free into the United States. On the other hand, the Canadian tariff tax on United States rails is $7.84 per gross ton. Thus are we handicapped to the extent of $7.84 per ton on rails for shipment into Canada in contrast with the free entry of the Canadian product into the United States.

The tariff tax on American pig iron into Canada is $2.80 per gross ton. In competition with blast furnaces in Buffalo, Canadian furnaces just across the border have an advantage of $2.80 per gross ton on Canadian business and can ship pig iron into the United States free of any tariff tax. Early in 1914 Canadian pig iron was sold, delivered Philadelphia, at a price which would not have yielded any manufacturer in the United States interest on investment. It probably did not yield the Canadian manufacturer a profit, but the sale helped maintain his organization and keep his furnaces in blast at the expense of American labor and manufacturers, besides upsetting prices in this country.

TARIFF AFFECTS INLAND STEEL PRODUCERS.

There is probably no manufactured product in this country the demand for which fluctuates so violently as steel, depending upon general business conditions. It has been described as "either a feast or a famine." With cheap ocean freights from foreign countries, a very low tariff (in some instances none), and special import railroad rates, American manufacturers of steel are heavily handicapped. It has been erroneously stated that the tariff affects American manufacturers in a few coast cities only. On the contrary, the import rail freights on steel are lower from ports on the seaboard to many interior points where you do business than the rate from your works in Johnstown to these same points, a few instances of which may be seen in the following table:

Freight on wire and bar iron via rail.

Freight rates.	Per hundredweight.	Distance.
	Cents.	*Miles.*
Domestic, Johnstown to Chicago	20.4	545
On import, Baltimore to Chicago	[1]18	782
On import, New Orleans to Chicago	[2]17	930
On import, Galveston to Chicago	[2]17	1,148
Domestic, Johnstown to St. Louis	25.1	696
On import, New Orleans to St. Louis	21	718
On import, Galveston to St. Louis	21	864
Domestic, Johnstown to Cincinnati	17.3	387
On import, New Orleans to Cincinnati	12.5	836

[1] Wire only. [2] Bars only.

Pittsburgh rates are 1½ cents less than Johnstown rates to western points.

The freight discrimination in favor of imported steel is unfair and should be adjusted. There never was a time when the steel industry needed low transportation rates for assembling raw materials and distributing its products more than it does to-day, notwithstanding the fact that the railroads need and should have more revenue.

As American workmen are protected against the importation of foreign labor, it is inconsistent not to protect them against the product of foreign labor. That the higher American wage level is a decided advantage to our public welfare is virtually admitted by all, but it should be understood that to maintain this standard a fair tariff tax is necessary.

In 1914 your company and its subsidiaries paid $12,288,651 in wages directly to its own employees. In addition to this, over $16,000,000 were paid for freight and material purchased, a large portion of which sum of course was applied to the labor employed in production and transportation of same.

It is unjust that foreign makers of steel, who, on account of cheaper labor, can build and operate their works for less money than American manufacturers, should be permitted to sell their product in this country and demoralize prices whenever conditions suit their convenience without paying a substantial tariff tax. They compete with and displace American labor and manufacturers, who have their capital invested in this country and continuously pay municipal, county, State, and Federal taxes, those paid by your company during 1914 amounting to $516,368.

America is by far the largest producer and consumer of steel in the world, and under fair business conditions should maintain her supremacy. The present tariff will necessitate the use of rich and cheaply mined ores and restrict expansion of the steel industry. New steel works under construction in this country will of necessity be completed; others will require additions to round them out so as to operate economically. All operations, from mine to finished product, must be consolidated in order to derive any profit. American capital invested in the steel industry must make the best it can out of the present uncertain situation. The Cambria Steel Co. has not hesitated to improve its works, and has also given its shareholders all that it has been possible to distribute. Trade is far from normal, but the market is broadening and we hope for better business. Specifications received in December were larger than in November and have been more than maintained during January. Although the future can not be predicted, with a continuance of the large trade balance in America's favor as established in December, it would seem that business should continue to expand, and your company is in excellent position to take advantage of any improvement.

Respectfully submitted, by order of the board.

WILLIAM H. DONNER, *President.*

PHILADELPHIA, PA., *January 28, 1915.*

On Contraband of War.

EXTENSION OF REMARKS

OF

HON. B. P. HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 6, 1915.

Mr. HARRISON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article written by John Bassett Moore, which appears in the Washington Post of February 5, 1915.

The article is as follows:

CONDITIONAL CONTRABAND SHOULD BE ABOLISHED WHEN NATIONS NEXT CONFER, SAYS JOHN BASSETT MOORE—UNITED STATES AND GERMANY, AT HAGUE CONFERENCE, VOTED AGAINST BRITISH PROPOSAL THAT PRINCIPLE OF CONTRABAND BE ABOLISHED ALTOGETHER, SAYS INTERNATIONAL LAW EXPERT—"APPALLING TO REFLECT" WHAT WOULD BE PRESENT STATE OF OUR COMMERCE IF CONTROL OF SEAS WERE CONTESTED BY HOSTILE FLEETS, HE POINTS OUT.

[By John Bassett Moore, former counselor of the State Department and foremost American authority on international law.]

Unhappily we are at present witnessing the progress of one of the greatest wars the world has ever seen. Apart from the exceptional stimulation of certain branches of industry, the effects of such a conflict upon commerce are necessarily injurious; and in those effects neutrals as well as belligerents are involved. In place of the regulated competition which exists in time of peace, commerce and industry, when war supervenes, become subject to extraordinary restrictions and limitations. Of some of these obstructions the character and scope have been definitely determined, while of others the nature and extent have not yet ceased to be a subject of controversy.

Taken as a whole, these obstructions may be divided into two categories, comprising (1) those that proceed from the duties imposed upon neutrals, and (2) those that proceed from the rights belonging to or asserted by belligerents. For convenience they may be discussed in this order.

UNNEUTRAL ACTS DEFINED.

Viewed from the Government point of view, unneutral acts may be divided into two classes: (1) Those that neutral Governments are obliged to prevent and (2) those that neutral Governments are not obliged to prevent. A neutral Government is not permitted itself to commit any act that may savor of aid to a belligerent. It may not, for instance, furnish arms or munitions of war or give or lend money to either belligerent; but the question of what a neutral Government may itself do and the question of what it is obliged to prevent its citizens from doing are two distinct things. For reasons of convenience, which more or less lie at the foundations of all law, neutral Governments are not required to assume the entire supervision and control of the commerce of their citizens in the interest of belligerents; but belligerents are permitted to protect themselves against injury by means of certain recognized measures.

The duties of neutral Governments in this regard are fairly well defined. As enumerated in the statutes of the United States, which have served as a model in these matters, they embrace the prevention (1) of enlistments of men for belligerent service and (2) of the construction, fitting out, or arming of vessels of war, or the augmentation of their force in men or materials for such service.

These inhibitions affect commerce only in so far as they place a restriction upon the building or fitting out or arming of vessels for purposes of war; but it is important to note here a distinction which forms the basis of the law in regard to the manufacture and shipment of arms and munitions of war. The comment is often made that it is strange or illogical that a neutral Government should forbid its citizens to build ships for a belligerent, while it permits them to manufacture and sell arms and munitions of war without restriction. But the distinction is substantial and has an historical origin.

HOSTILE EXPEDITIONS BARRED.

The first conception of neutral duty was that which required a Government to prevent the enlistment of men or the organization of hostile expeditions within its territory for the purpose of taking part in a war in which it was itself neutral. This was not an unnatural or unduly burdensome obligation, and it was by an extension of this conception that the duty was imposed upon neutral Governments of preventing their territory from being used for the purpose of fitting out or arming vessels of war for belligerents. In other words, such fitting out or arming was likened to the setting on foot of a hostile expedition.

But when we come to consider the rights belonging to or asserted by belligerents for their own protection, we enter the sphere of serious interference with neutral commerce. Generally speaking, the breaking out of war between two or more countries does not take away the right of neutrals to trade with them. Any denial of that right must rest on specific grounds and can be asserted only by specific measures. And in order that a government at war may protect its acknowledged interests, there is conceded to it what is called the belligerent right of visit and search, which signifies the right of a belligerent man-of-war to visit and search on the high seas the merchant vessels of neutrals for the purpose of ascertaining whether they are violating the laws of war; and in case there should be disclosed a reasonable ground of suspicion that such a violation is in course of commission, to take them in for adjudication by a prize court.

BELLIGERENT RIGHT OF VISIT.

The belligerent right of visit and search is only a means to an end, and the end with which it is chiefly concerned is the prevention of any infraction of the law relating to blockade and to contraband. The impulse of the belligerent is to cut off his enemy altogether and to prevent him from getting anything from the outside. The neutral, on the other hand, naturally desires that his trade should not be unduly hampered by an armed conflict to which he is not a party. During the wars of the seventeenth and eighteenth centuries and the early part of the nineteenth century, which so largely related to contests for col-

onies and for commerce, or, in other words, for monopolies in trade, a constant struggle went on between belligerents and neutrals as to their respective claims. This struggle related chiefly to three measures, namely (1) blockade, (2) the treatment of enemy's property, and (3) contraband of war. In the end an agreement was reached as to blockade and the treatment of enemy's property, but the question of contraband, although it at one time seemed to be in course of adjustment, was not definitely settled.

OBJECT OF BLOCKADES.

The object of a blockade is to cut off all intercourse with the enemy so far as the blockade extends. It will be recalled that during our Civil War all the ports of the Confederacy were blockaded, with results that became more and more appreciable as time wore on. Blockade respects neither the nationality of the ship nor the nationality or character of the cargo. The penalty of an attempt to break a blockade is confiscation both of ship and cargo, no matter what the character of the goods may be. In former times attempts were often made to forbid access to belligerent ports by proclamations of blockade which were not actually enforced. These were known as paper blockades. But this practice was eventually done away with, and the principle as announced in the declaration of Paris of 1856 came to be universally accepted, that a blockade, in order to be binding upon neutrals, must be effectively maintained; that is to say, maintained by a force reasonably sufficient to prevent entrance to the blockaded port.

The contest as to the treatment of enemy's property was at length ended by the establishment of the principle that such property should not be subject to capture when borne on a neutral ship. This is known as the rule that "free ships make free goods." By what was called "the common law of the sea" the fate of a cargo depended upon the neutral or enemy character of the owner. If it belonged to an enemy, the ship, though neutral, was seized and carried in, in order that the goods might be confiscated. Even apart from the difficulty that may often arise in determining the question of property, this practice was extremely vexatious to neutrals. By the declaration of Paris of 1856 it was declared that the goods of an enemy should be exempt from capture on board a neutral ship. This rule was universally accepted, even by the powers which, because of the inhibition of privateering, declined to adhere to the declaration as a whole; and on the outbreak of the War with Spain, in 1898, was proclaimed by the United States, one of the nonadhering powers, as a principle of international law.

CONTRABAND SUBJECT TO SEIZURE.

But the rule that an enemy's goods are not subject to capture on a neutral ship is subject to a notable exception, namely, that of contraband of war. If the goods are contraband, the ship and cargo are subject to seizure, just as before. Nor does the rule that blockades must, in order to be binding, be effectively maintained affect the question of contraband, except so far as it may tempt belligerents to strike at each other by adding to the articles embraced in that category; and it is quite possible that this temptation may be increased by the difficulties and hazards which the invention of submarines has added to attempts to maintain men-of-war on a blockading station before a hostile port. Indeed, no matter from what point the subject may be approached, it is evident that contraband, both in itself and in its relation to other rules, has been for a number of years and still is the question of capital importance as affecting trade in time of war.

At the present moment a negotiation is in progress between the United States and Great Britain in regard to the exercise of the right of visit and search, particularly in relation to the question of contraband. Into the discussion of this pending negotiation it would not become me now to enter further than to remark that the representations of the United States were not only friendly in tone, but were evidently inspired by the desire to reach an arrangement which should be duly considerate of the interests of all concerned, of belligerents and neutrals alike. But, no matter what arrangement may be made, it can, in the present state of the law, hardly be expected to be more than a makeshift. The question requires for its eventual adjustment a more radical solution than any of the compromises attempted in recent years have offered. If, instead of the naval supremacy now exercised in its own interest, and in that of its allies, by the largest consumer of our agricultural products and foodstuffs, the control of the seas were actually contested by powerful hostile fleets, it is almost appalling to reflect upon what might be the present state of our commerce. The bare suggestion of such a predicament, for the study of which conditions in the more or less distant past furnish ample materials, justifies us in giving to the subject our most serious consideration, for we must look to the future as well as to the present.

CLASSES OF CONTRABAND.

Since the days of Grotius, articles have been divided, with reference to the question of contraband, into three classes—(1) those primarily and ordinarily used for war; (2) those of double use, i. e., capable of being used either for peace or for war; (3) those not at all useful for war. Articles in the last category are altogether excluded from the domain of contraband. The first and second classes have lately been denominated "absolute contraband" and "conditional contraband." Previously it had been usual to speak of the articles embraced in them as "absolutely" contraband or "conditionally" contraband; and this phraseology is, in my opinion, much to be preferred. To speak of articles as "absolute contraband" and "conditional contraband" seems to imply that these articles are in themselves somehow to be considered as contraband and can be saved from condemnation as such only by some process of exculpation. In reality no article is intrinsically contraband, either "absolute" or "conditional." Even arms and munitions of war are not contraband when they are not destined for a belligerent. There is, in other words, no such thing as contraband without destination for a hostile use.

The practical and substantial distinction between articles absolutely contraband and articles conditionally contraband is that the former become contraband merely upon destination to a belligerent country, while articles conditionally contraband may be shipped directly to a belligerent country unless it be affirmatively shown that they were destined for a hostile use. This distinction has been clearly maintained both by the United States and by Great Britain. It was laid down in the British Manual of Prize Law, and was definitely set forth by Lord Salisbury during the Boer War, when, in a communication to the United States, he said:

"Foodstuffs with a hostile destination can be considered contraband of war only when they are supplies for the enemy's forces. It is not sufficient that they are capable of being so used; it must be shown that this was, in fact, their destination at the time of the seizure."

POSITION OF THE UNITED STATES.

The position of the United States had been equally clear and unequivocal. Indeed, for more than a hundred years the United States had sought altogether to exclude from the category of contraband raw materials and foodstuffs. In the treaties with Prussia of 1785 and 1799 the United States had gone so far as to agree that even arms and munitions of war when seized as contraband should not be confiscated, but that the captor should pay for them if he converted them to his own use or pay damages if he only detained them. In many later treaties, culminating in that with Italy of 1871, the United States, while admitting the principle of contraband, included in it only articles primarily used for war. In 1898, during the war with Spain, the United States, being then a belligerent, designated as articles "conditionally contraband" only the following:

"Coal, when destined for a naval station, a port of call, or a ship or ships of the enemy; materials for the construction of railways or telegraphs, and money, when such materials or money are destined for the enemy's forces; provisions, when destined for an enemy's ship or ships, or for a place that is besieged."

When, in March, 1904, the Russian Government, on the outbreak of the war with Japan, published instructions to its naval commanders which forbade the conveyance of contraband "to Japan or to Japanese armed forces," and denounced as contraband "foodstuffs," including all kinds of grain, fish, fish products of various kinds, beans, bean oil, and oil cake, the United States protested, and, acting coincidently with Great Britain, secured the modification of the instructions to a certain extent, though not to the extent desired.

UNITED STATES PROPOSITION OF 1907.

Such was the position of the United States up to the second Hague conference in 1907, in which the subject of contraband came up for discussion with a view to a general international agreement. In that conference the delegation of the United States submitted, in the first instance, a proposition the precise scope of which is at least open to interpretation. According to this proposition "conditional contraband" was to "consist of provisions, materials, and articles which are employed for a double purpose, in peace and in war, but which, by reason of their character, or special qualities, of their quantity, or by their character, quality, and quantity are suitable and necessary for military purposes, and which are destined for the use of the armed forces or for the military establishments of the enemy." The things to be included in the category thus described the belligerent was to designate, prior notification to neutrals being a prerequisite to seizure or confiscation.

The British Government, on the other hand, proposed that the principle of contraband should be abandoned altogether, and that the right of visit should be confined to the ascertainment of the merchant vessel's neutral character. Lord Reay, in explaining this proposal for the British delegation, adverted to the fact that, while it had in spite of all efforts been found to be impossible to prevent belligerents from obtaining the munitions which they needed, the attempt to do so had, by reason of the increase in the tonnage of ships, the carrying of mixed cargoes, the lack of any single destination of ship or cargo, the multiplication of the number of articles used in war, and the development of railways and other means of transportation by land, become more and more futile on the part of belligerents and more and more injurious to neutrals. Upon the strength of these reasons, which as we recite them to-day have a prophetic sound, it is not strange that 26 of the powers represented in the conference voted for the British proposal, while only five voted against it. Among those five we find the United States, in association with France, Germany, Russia, and Montenegro. Japan, Panama, Roumania, and Turkey abstained from voting. With the exception of the United States and Panama, all the American countries voted for the British proposal, as also did Austria-Hungary, Belgium, Bulgaria, Denmark, Greece, Italy, the Netherlands, Norway, Portugal, Servia, Spain, Sweden, and Switzerland.

Recalling the treaties between Prussia and the United States in 1785 and 1799 for the virtual abolition of contraband, it is singular to find the United States and Germany, acting together as two of the five powers which voted against its abolition in 1907; but, although the United States voted against the British proposal it is gratifying to note that Admiral Sperry, on behalf of the United States delegation, after the British proposal had failed to secure the unanimous approval of the conference, maintained the historic American position that the right of capture should be confined to articles agreed to be absolutely contraband. But no agreement was reached.

DECLARATION OF LONDON.

Such was the international situation immediately prior to the so-called "Declaration of London." This declaration, which was signed on February 26, 1909, by representatives of Austria-Hungary, France, Germany, Great Britain, the Netherlands, and the United States, was designed to furnish a uniform law for the administration of an international prize court under one of the conventions adopted at The Hague in 1907. As is well known, prize courts are courts of the captor's country. For this reason they have been supposed to be susceptible to national influences and prejudices, and they may even be controlled by national legislation. It was, therefore, a real step in advance in the development of international relations when Germany and Great Britain submitted at The Hague conference in 1907 plans for the establishment of an international court of appeals in prize cases.

But when the powers whose representatives assembled in London in 1909 came to provide this court of appeals with a uniform law they were not so fortunate. It is far from my intention to criticize the work of any particular delegation in the naval conference by which the declaration of London was framed; but a cursory examination of the text of the declaration suffices to show that it was the result of compromises, and that these compromises proceeded upon concessions to conflicting tendencies rather than upon a uniform principle. No doubt this was necessary in order to secure a unanimous agreement at the conference, but the results were not harmonious.

FAVORABLE TO NEUTRALS.

In two particulars the provisions of the declaration, so far as they relate to contraband, were favorable to neutrals. They proposed to make a neutral destination in the case of conditional contraband conclusive of innocence, thus abolishing in respect of that category the doctrine of continuous voyages, and they undertook to establish a "free list," comprising articles (one of which was raw cotton) which were not to be declared contraband. But when they came to deal with "conditional contraband" the provisions of the declaration were not so fortunate. Under "conditional contraband" there were grouped

14 classes of articles, including such things as "foodstuffs," "forage and grain suitable for feeding animals," "gold and silver, in coin or bullion," "fuel," and "lubricants," and "clothing, fabrics for clothing, and boots and shoes, suitable for use in war"; and to the 14 enumerated classes belligerents were, except so far as restrained by the "free list," to be permitted to add other articles "susceptible of use in war" as well as in peace.

With regard to the articles enumerated or to be enumerated it was provided, article 33, that they should be liable to capture if "destined for the use of the armed forces or of a Government department of the enemy State, unless in this latter case the circumstances show that the articles can not, in fact, be used for the purpose of the war in progress." As to the proofs of such destination the terms of the declaration were complicated. A hostile destination was to be presumed, article 34, "if the consignment is addressed to enemy authorities or to a merchant established in the enemy country, and when it is well known that this merchant supplies articles and material of this kind to the enemy," or "is destined to a fortified place of the enemy or to another place serving as a base for the armed forces of the enemy."

ENEMY USE PRESUMED.

These grounds of inference are so vague and general that they would seem to justify in almost any case the presumption that the cargo, if bound to an enemy port, was "destined for the use of the armed forces or of a Government department of the enemy State." Any merchant established in the enemy country, who deals in the things described, will sell them to the Government; and, if it becomes public that he does so, it will be "well known" that he supplies them. Again, practically every important port is a "fortified place"; and yet the existence of fortifications would usually bear no relation whatever to the eventual use of provisions and various other articles mentioned. Nor can it be denied that in this age of railways almost any place may serve as a "base" for supplying the armed forces of the enemy. And of what interest or advantage is it to a belligerent to prevent the enemy from obtaining supplies from a "base," from a "fortified place," or from a merchant "well known" to deal with him in his own country, where, the entire community being subject to his authority, he can obtain by requisition whatever he needs if dealers in commodities hesitate to sell voluntarily. No doubt the advantage of such prevention may readily become greater if the enemy be, like Great Britain or Japan, an insular country with no adjacent countries bounding it by land to draw from.

NOT INTERNATIONALLY BINDING.

The declaration of London was approved by the Senate of the United States. In Great Britain a bill was passed by the House of Commons to give it effect; but an adverse agitation, partly due to the supposed menace to the country's food supply, having sprung up, the lords withheld their assent, and the declaration never became internationally binding. In view, however, of the place it has occupied in international discussions, and of the action of certain Governments in regard to it, it can not be left out of account in the consideration of the subjects to which it relates.

The difficulty with what that great lawyer and judge, Lord Loreburn, has called the "labyrinth of shifting presumptions" applied by the declaration to "conditional contraband" is that to be caught in its mazes may mean ruin even to the most well-meaning and candid merchant. The supposition that all chances may be taken, provided an impartial court of appeal is to render the final judgment, can scarcely be regarded as a commercial conception. Even the eventual escape of his property from confiscation may not console or save from bankruptcy the merchant whose fortune, and possibly a certain amount of borrowed capital, have been tied up in prolonged detention, attended with suspension of business, costs of litigation, possible deterioration of goods, and probable loss of a market. The interests of commerce can not be properly conserved under such conditions, and it is highly desirable that when nations come again to deal collectively, as they will be obliged to do, with this question of contraband, commercial interests, which are now receiving instruction in the laws of war at an expense not wholly attributable to the legal profession, should take their part in bringing about a just solution.

PLAN OF SOLUTION.

Such a solution must, in my opinion, be sought, if not in the abolition of the principle of contraband, at any rate in the adoption of a plan embracing (1) the abolition of "conditional contraband," and (2) a single list having been agreed upon, in the cooperation of neutrals and belligerents in the certification of the contents of cargoes, so that the risk of capture may be openly borne by those who may voluntarily assume it, and harrassing "searches" and detentions no more be heard of.

In addition to the woes arising from developments of the contraband question, neutral commerce has had to meet in recent years a new obstacle potentially more deadly than any ever previously devised. The discharge of projectiles and explosives from aircraft, which exposes men, women, and children, and the strong and the helpless alike, to indiscriminate peril of death and of mutilation, may be regarded as the counterpart on land of the use of floating mines at sea. Nearly or quite a year after the Russo-Japanese War a peaceful merchantman was blown up at sea by contact with a drifting mine.

The second Hague conference sought to restrict this evil by a "convention relative to the laying of automatic contact mines," by which it was forbidden (1) to lay such a mine unanchored, unless it was so constructed as to become harmless an hour at most after it ceased to be under control, (2) to lay it unanchored, unless it was to become harmless as soon as it broke loose from its moorings, or (3) to use torpedoes which did not become harmless when they had missed their mark. It was expressly forbidden "to lay automatic contact mines off the coasts and ports of the enemy with the sole object of intercepting commercial shipping." This convention was signed by 37 powers, 6 making reservations, and has been ratified by 21, 4 making reservations. The powers neither signing nor ratifying were China, Montenegro, Portugal, Roumania, Spain, and Sweden, and among the powers signing but not ratifying are Greece, Italy, Servia, and Turkey.

AGAINST INTERNATIONAL LAW.

The convention also contained a stipulation to the effect that its provisions should not apply "except between contracting parties, and then only if all the belligerents" were parties to it. This stipulation alone may deprive the convention of binding force in the present war in Europe; but we may safely affirm that the employment of contact mines in the open sea is forbidden by international law. The seas outside territorial waters are the common highway of nations, and none of them has the right to render the use of that highway insecure. Few days pass in which one does not read a report of the blowing up of a merchant or fishing vessel by contact with a mine. As a method of warfare this must be regarded not only as an atrocity which no nation is at liberty to perpetrate, but also as a direct violation of a clear international right which Governments are justified in asserting on all occasions. Wholly apart from the danger to life, it places the neutral merchant in a worse position than he ever occupied before. Heretofore, if his ship or his cargo was seized he knew to whom to look for redress. If vessel and cargo are sunk by a mine, proof of its identity being impossible, his case is hopeless unless he carries adequate insurance; and in this event the insurer is placed in a like situation of helplessness.

MARINE INSURANCE.

The mention of insurance brings us to the consideration of a subject of prime importance to the American mercantile community. As the result of the destruction of the American merchant marine during the Civil War in the United States many of the companies which had previously carried on the business of marine insurance were ruined, and with a few important exceptions, the business has since been largely controlled by foreign capital. The practical experience of the present war has shown the importance of expanding in the United States the business of marine insurance, so that the country may in case of wars in which it is neutral no longer be dependent upon the resources and aid of foreign companies. The insurance granted by the Government of the United States during the present war, although it has been of value, has been of very limited scope, because it has been confined to vessels under the American flag, and to cargoes on such vessels, and even in respect of such cargoes the restrictions have been such as to make it often unavailable; a fact merely illustrative of the embarrassments which attend the Government in attempting to deal on its own financial account with questions of neutrality in the transaction of business, a neutral government being always obliged to bear in mind that it is itself forbidden to perform any act that savors of unneutrality.

EQUALITY OF OPPORTUNITY.

In concluding this survey of commercial problems growing out of war I am led to comment upon a phrase often heard, to the effect that "commerce is war." This view is obviously one-sided. While commerce undoubtedly involves competition, it is in its essence an exchange of benefits. Conducted upon lines of monopoly as in the days of the old colonial system, commerce does indeed assume the aspect of warfare, but the experience of the world has shown that the old colonial system, instead of promoting trade, fettered it.

In the preamble of the preliminary peace between Great Britain and the United States of November 30, 1782, we find, from the pen of Franklin, these words:

"Whereas reciprocal advantages and mutual convenience are found by experience to form the only permanent foundation of peace and friendship between States, it is agreed to form the articles of the proposed treaty on such principles of liberality, equity, and reciprocity as that, partial advantages (those seeds of discord) being excluded, such a beneficial and satisfactory intercourse between the two countries may be established as to promise and secure to both perpetual peace and harmony."

A great Brazilian statesman, the late Baron Rio Branco, in defense of a boundary settlement under which a large sum of money was to be paid to a neighbor for the purpose of building a railway, declared that "arrangements in which neither of the interested parties loses, and, still more, those in which both gain, are always the best."

Speaking in a similar strain our own Webster once boasted that he was not among the number of those "who regarded whatsoever others had as so much withholden from themselves."

What Americans desire, and what they are entitled to, is opportunity—equality of opportunity. If they demand more than this, they ask for more than they need. Their commercial expansion, great as it has been, has but begun. The future is theirs.

Immigration.

EXTENSION OF REMARKS

OF

HON. HORATIO C. CLAYPOOL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. CLAYPOOL. Mr. Speaker, it is perhaps unnecessary for me to preface my remarks by stating my unlimited confidence in the honesty and patriotism of the President. That goes without saying, and we are equally certain the President asks no apologies from those who hold a different opinion from that which he expresses by his veto of the immigration bill. Our fathers, in their wisdom, separated with much exactness the executive and the legislative functions of our Government, so that each may assert itself in any given matter without showing the slightest disposition to infringe upon the rights of the other.

That the President should consider the experience of a party existing a hundred years ago and which then advocated restricting immigration as material evidence in the case under discussion is astonishing. The existing conditions are so different we fail to see the analogy. In the days of the Know Nothing Party, to which he evidently refers, we had but a few millions of people on the American Continent, practically one-tenth of our present population. Even the Middle West was almost an unbroken wilderness, while the broad prairies were totally un-

broken and uninhabited save by the red man and the buffalo. We were then sadly needing more of the vim and vigor of the Caucasian race. Then, and for many years following, good citizens from Germany and Ireland were seeking new homes on American soil. Their industry, exerted in cutting down the forests, farming the lands, building the canals and railroads, made them welcome visitors to our shores. But these people, so valuable to us then, have for many years ceased to hunt homes upon the farming lands of the New World, and in their stead countries of southern Europe and Asia are now sparing us nearly a million a year of those whom these Governments are pleased to see emigrate to a foreign land.

It is passing strange that the President makes no distinction in conditions now, when we have a population of a hundred millions, and a hundred years ago, when we had approximately 10,000,000, with a wilderness and unbroken and uninhabited plains before us. It is strange that he makes no distinction in the quality of the German and Irish immigrants of a half century ago and those now asking admittance.

The President says, in substance, at least, no political party has ever successfully maintained the principle of restricted immigration and that he does not believe the American people will indorse such legislation. Let me remind him that the Sixty-second Congress passed this bill with all the arbitrary tests herein contained; that the bill so passed by that Congress was vetoed by President Taft; that the Sixty-second Congress was Democratic and was succeeded by the Sixty-third Congress, still more Democratic; that so far as we are advised not a single Member of the Sixty-second Congress lost his seat by reason of having voted for the immigration bill, with all its arbitrary tests, while on the other hand President Taft was defeated. And, while we admit many causes combined added to his downfall, yet it might well be admitted on the other hand there is no evidence that the fact of President Taft's having vetoed the immigration bill came to his rescue in the slightest degree, but, in our opinion, it added to and made more certain his defeat. If this legislation, which stood out so prominently as a feature of the Sixty-second Congress, was so obnoxious to the American people; if, indeed, they are so charitable as to cry aloud, "This is the land of the free and the home of the blessed," the asylum of the poor and oppressed of all nations of the world, while millions from the Old World are threatening our very civilization, it is passing strange they did not raise the question on us who in the Sixty-second Congress insisted that we were first for Americans, and by the tests of the immigration bill we hoped to limit immigration to a negligible number and that of a better quality. To be perfectly frank, in this connection let me assure you the test can not be too severe to please me. Just think of it; the population of this country to-day is three times what it was 50 years ago. Even with this restriction, if we could obtain it, in 50 years, only a little more than a single lifetime, we may well expect the population to be double what it is to-day. Call it selfishness if you will, I still believe self-preservation is one of the fundamental laws of nature. Of the 100,000,000 now here, many are poor and needy. Of course that always was and always will be true. Sometimes it is the fault of the individual, sometimes due to unavoidable conditions. But whatever may be the cause, can we relieve it or even keep it reduced to its present status by adding yearly to our unfortunates a million of the unfortunates from the Old World? It is no answer to say our forefathers have been here but a few generations. The query is, Have we not come to a stopping place in this tide of immigration? I am of the opinion we have already delayed restriction too long. But be that as it may, we can not cure that evil by still longer delay and neglect.

The President's words, by the way, are always full of meaning, and these were not written as politics, but as sober history, when he said, referring to the flow of immigrants to this country from southern Europe—

and they came in numbers which increased from year to year as if the countries of the south of Europe were disburdening themselves of the more sordid and helpless elements of their population, the men whose standard of life and work was such as American workmen had not dreamed of before.

The President in his message assures us that these undesirable people will be excluded by this bill. The hardy German, Irish, and Scandinavian immigrants are not interfered with—we have no intention of interfering with the immigration of good people from these countries.

This is not a new question before the American people—it has been discussed in nearly every schoolhouse in this broad land of ours. There are few questions in which our people feel a greater interest or in which they hold a more decided opinion. Within a quarter of a century both of the great parties declared in favor of restricting the importation of pauper labor. In this statement I am not including the position of the Republican Party shouting from the housetops for protecting the American laborer, which clamor they only intend for deception, while they are busy importing pauper labor to take the place of the American workman in the shops and mines and on the railroads. On the contrary, I have in mind that broad, generous disposition on the part of fair-minded American people who favor the American laborers whether in the field, shop, or mine, and who believe with Goldsmith, "A bold peasantry, their country's pride, when once destroyed can never be supplied."

But it is urged with much assurance by those who oppose any restriction of immigration such as is proposed by this bill, and, in fact, if their words are not meaningless, want the ports left wide open so that America may be hailed as the "Land of the free and the home of the blessed," that the masses have never been consulted, and it is intimated that they are not now and have not been truly represented on this question in Congress. And yet, Mr. Speaker, there has been no time in the last four years in which almost two-thirds of the membership of this House, presumably coming direct from the people, could not be relied on to support this immigration bill with the literacy test.

Let us ask the American people to view this question from a truly American standpoint. We admit this country to be a splendid retreat for the unfortunates of the Old World, but is their coming good for our present civilization? But one answer comes from the true American citizen. The selfish individual who wants cheap labor says, let them come, we need them for servants. And yet these same individuals are the next moment heard crying for the protection of the poor American laborer. They can not be honest in both statements, for the two are inconsistent.

I can not conceive of any true opposition to this bill, except that coming from those who desire cheap labor in America, and the Shipping Trust, their allies, who amass wealth by bringing a million immigrants a year from the Old World to our more hospitable shores of these undesirable and uneducated foreigners who weaken our civilization by impoverishing our citizenship.

If we fail to pass this bill now, let us go on in the work well begun and still hope to win before it is too late.

Naval Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. FINLY H. GRAY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915,

On the bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. GRAY. Mr. Speaker, we have already learned many lessons from the war in Europe, and we will learn many more before the close of that great conflict. We have learned that large armies and navies are no insurance of peace, but serve to precipitate and bring on international conflicts. We have learned that great dreadnaughts and battle cruisers are no longer invincible in war, but have become helpless, floundering monsters in the sea, with their own weight and cumbersome armor, designed for their protection, a menace to their escape from mines and submarines assailing them from beneath the water and air craft from the sky. We have learned that during these first months of this, the greatest war of the world, between the greatest naval powers of the world, all attempts to bring dreadnaughts and armored warships into decisive action have not only failed, but these vessels have been compelled to withdraw to save themselves from annihilation from mines and submarines and kept interned and in hiding far from the scenes of action, fearing to enter hostile waters to engage the enemy's fleet or coast defenses, and their availability as a fighting force confined to action in midsea and a factor of offense only.

But the greatest lesson learned from experience in that great struggle is the advantage of mines and submarines over battleships in the protection of coasts and harbors and in maintaining adequate defense against attacks from sea.

The British Navy is admitted double the strength of the German Navy. Yet Germany has maintained full and complete protection of her seaboard in the Baltic and her coast in the North Sea in the very face of the shores of England and in

defiance of all the dreadnaughts of Great Britain. Germany with half the battleships not only holds the English back, but challenges and engages her superior force from her rendezvous of mines and submarines. While "Britannia rules the wave" Germany rules the ocean depths below and the skies above, and the terror of her mines and submarines and air craft not only avails her absolute protection against the British Navy, but is filling the English Channel with wrecks of the English fleet.

The German Navy in dreadnaughts and battleships equals in power more than three times that of the Russian Navy. Yet Russia holds Germany from the Bay of Finland and maintains as full, complete, and effectual protection of her seaboard cities as if her waters were guarded by all the navies of the world. Her mines and submarines avail her the same defense against the German Navy as the German mines and submarines avail against the British Navy.

The same full, complete, and adequate protection of our coasts and harbors afforded Germany against England and Russia against Germany is available for our own coasts and harbors, and make mines and submarines the most efficient, effective, and absolute means to be employed by a nation whose military policy is defense. I here quote from the hearings before the Naval Affairs Committee held during the present session of Congress questions submitted by myself to Admiral Fletcher, commander in chief of the Atlantic Fleet, together with his answers, which appear at page 518 of such hearings, showing the availability and effectiveness of mines and submarines in conjunction with seaboard fortifications for our harbors and coast defenses:

Mr. GRAY. Suppose that a harbor is protected by the ordinary land forts and also by a sufficient number of torpedoes, mines, and submarines, how large a hostile fleet would be required to enter that harbor if it was protected by those instruments?

Admiral FLETCHER. It would be a very difficult matter. They probably would not attempt to enter the harbor. As a matter of fact, under modern conditions of war it is doubtful if it ever becomes necessary for the fleet to enter a harbor.

Mr. GRAY. Suppose a hostile fleet desired to enter the harbor, and the harbor was protected with ordinary land forts and with a certain number of mines, torpedoes, and submarines, how large a hostile fleet would be required to enter that harbor under those conditions?

Admiral FLETCHER. Of course it depends on the size of the forts, the area, and so many conditions that it would be difficult to specify the exact size of the attacking force, but, as I say, in general they would not attempt to enter such a fortified harbor by means of a fleet alone; it would not pay.

Mr. GRAY. Then those instrumentalities would be sufficient to protect the harbor without any warship in the harbor, or would you require a warship in the harbor in order to cooperate with those instrumentalities?

Admiral FLETCHER. You would not require a warship in the harbor. The protection of the harbor itself should be sufficient by forts, mines, and submarines without the aid of the fleet.

As a further showing and illustration of the availability of mines and submarines in affording the most complete and absolute defense to be resorted to by a nation, I here quote from the hearings before the Naval Affairs Committee at the present session of Congress, giving questions propounded by myself to Admiral Fiske, a member of the General (Naval) Board, president of the War College, and aid for operations, and his responses, with reference to the protection of the Panama Canal, appearing at page 1053 of said hearings:

Mr. GRAY. The principal defense rests with the Army and not the Navy, would you say, Admiral?

Admiral FISKE. No, sir; the principal defense would rest with the Navy, because if our fleet commanded the sea an enemy could not get near the canal; only in the case of the defeat of our fleet could he land there.

Mr. GRAY. Is it not a fact that the approach to the Panama Canal is being fortified with very large guns that have a range longer than the range of the guns on the ships?

Admiral FISKE. I think they are practically the same.

Mr. GRAY. Practically the same?

Admiral FISKE. Maybe a little longer, but it is not always the range that counts; it is the distance at which you can hit.

Mr. GRAY. Would not a gun placed in a fort on land be able to strike with more accuracy than a gun on a rocking ship? Would it not be possible to strike a target more accurately from land than from a ship?

Admiral FISKE Oh, yes. The office of the guns on land is to keep the fleet away.

Mr. GRAY. And these guns, you say, have a range as long as the range of the guns on the ships?

Admiral FISKE. Possibly more.

Mr. GRAY. Is it not a fact, Admiral, that the guns being mounted now for these harbor defenses have a longer range than the guns on the ships?

Admiral FISKE. I do not know; I have never given the matter any particular study; it is just a question of looking up the tables and making comparisons.

Mr. GRAY. I believe Admiral Fletcher stated that, as I understood him. But in connection with these guns for harbor defense, would it not be possible to mine the waters there as well as at any other harbor?

Admiral FISKE. Oh, yes.

Mr. GRAY. Could you not also protect the mouth of the Panama Canal with a sufficient number of submarines?

Admiral FISKE. Yes, sir.

Mr. GRAY. What would you say, without having any Navy at all at the mouth of the Panama Canal, would it be possible with those guns mounted there with longer range than the guns on the ships, and with the mines and the submarines, to prevent a hostile fleet coming into the canal, without any ships of the Navy there to defend it?

The CHAIRMAN. They would not try that.

Admiral FISKE. No; they would go to some other place to land and make the attack.

Mr. GRAY. But would it be possible, with those defenses I have spoken of, for a hostile fleet to enter the canal?

Admiral FISKE. I think not.

Mr. GRAY. Then you say we could defend the canal without any part of our fleet at all, as against the approach of a hostile fleet? Would you say that?

Admiral FISKE. Yes, sir; I should say that.

Mr. GRAY. Now, if that is true, it would leave all our Navy free to engage the hostile fleet and prevent them from landing an armed force.

Admiral FISKE. If our fleet was strong enough to do it.

Mr. GRAY. If we had our fleet left free. If the fortifications and defenses of the Panama Canal were sufficient to prevent the entrance of a hostile fleet without any assistance of any part of our fleet, that would leave our fleet free for other purposes, would it not?

Admiral FISKE. Why, no; because the hostile fleet could go and land a force a few miles out of reach of those defenses.

Mr. GRAY. I don't believe you understand my question. I understood you to say that if the Panama Canal was defended with these guns in the forts and by the mines and by the submarines, if they could prevent a hostile fleet coming into the canal without the aid of the fleet, then that would leave the fleet free. Is that right?

Admiral FISKE. Yes, sir.

Mr. GRAY. And if that is true our fleet would be free to engage the enemy and prevent him from landing a hostile force a few miles away and marching to attack the Panama Canal?

Admiral FISKE. Yes, sir; provided our fleet were strong enough.

Mr. GRAY. Yes, sir. Then it is only a question of whether our fleet would be strong enough to prevent a hostile fleet from landing an army?

Admiral FISKE. That is right.

Mr. GRAY. And marching to attack the canal?

Admiral FISKE. That is right.

Mr. GRAY. Now, a hostile fleet would probably have to come from a distance. It is a fact, is it not, that none of the large naval powers of the world would want to take all her navy away from their coast and leave it unprotected, even in time of peace?

Admiral FISKE. Of course, at the present moment that is true.

Mr. GRAY. In time of peace would it be considered good policy for any of the naval powers of Europe in close proximity with each other, assuming conditions shall continue in Europe as they have been in the past, would it be probable that any one of the three great naval powers would withdraw all of her fleet from her own shores and bring it to the Gulf of Mexico to engage our fleet and attempt to land a force on Mexican soil? Would it be probable that they would do that?

Admiral FISKE. It might be probable, but not more than 50 per cent probable.

Mr. GRAY. Yes.

Admiral FISKE. I should say not more than 50 per cent. But I would like to add that with things as they have been in the past, with the antagonisms that have existed among those three nations, it would not be even 50 per cent probable. If some of these conditions and antagonisms are wiped out by the war and one side or the other triumphs, then the triumphant forces would be able to do just what you say.

Mr. GRAY. Have we any guide to go by but the past? Have we anything to show that conditions will not exist there as they have in the past? Is it not fair to assume that things will continue as they have been in the past?

Admiral FISKE. This war is going to change things in a way that no one can prophesy. Before this war took place there were some who imagined it was probable or possible that there was an agreement between two nations whereby one agreed to let the other alone provided it would do so-and-so.

Mr. GRAY. That is true; every man has his own assumptions as to what conditions will be after this war is over——

Admiral FISKE. But before the war began, I mean.

Mr. GRAY. But before the war you say they would bring over 50 per cent——

Admiral FISKE. No; I didn't say there was 50 per cent probability.

Mr. GRAY. I understood you to say it was more than 50 per cent.

Admiral FISKE. Probably not as much as 50 per cent.

Mr. GRAY. Now, for instance, we will take the strongest power we have, the strongest naval power in the world, and if they were to bring 50 per cent of their navy to the Gulf of Mexico with transports to land troops on Mexican soil to march to the canal, would they be able to successfully land those troops there as against all our fleet? I mean the strongest power.

Admiral FISKE. I think that is a fair question, sir. I should say it would be a good fight, but I don't know which one would win. You said 50 per cent coming over; now, if they should send 75 per cent——

Mr. GRAY. Well, take the next power. We will not say what the power is; but, whatever it be, if they should send 50 per cent——

Admiral FISKE. No; she would have to send a great deal more than 50 per cent, and she would have to have some sort of an agreement whereby they [other powers] would let her alone.

Mr. GRAY. But without any agreement there would not be very much trouble about it. It would be a close fight between the strongest power if they sent 50 per cent, but with the second power there would not be much trouble about it?

Admiral FISKE. We don't know what any given fleet would be able to do, for it begins to look as if one were more skillful than the other.

Mr. GRAY. I am not speaking of what nations, but of the second power. Do you say the second power might be stronger than the first? Do you say that might be possible, that the nation which we regard as the second power might be stronger than the first? Would you say that?

Admiral FISKE. I didn't quite——

Mr. GRAY. Would you say that you don't know what the skill of the second power is, and that by reason of their skill they might be superior to the first power?

Admiral FISKE. I think it is possible.

Mr. GRAY. It is possible, but is it probable?

Admiral FISKE. Well, whenever you hear that one power is twice as strong as the other you naturally say that the probability of success is on its side; that is, unless you have other data.

Mr. GRAY. But you say it would be an awful close fight, the nation that is now rated by all the naval experts of the world as the strongest nation, yon would say that the second nation would be more likely to come in and overcome us than the first?

Admiral FISKE. I should not say that.

Mr. GRAY. You would not say that?

Admiral FISKE. No.

Mr. GRAY. Then, with the naval power that we have to-day, and with the fortifications I speak of as defending the Panama Canal, you would not say that even the highest and strongest naval power could go in there and destroy the canal, either by attacking it directly or by landing an armed force to attack it?

Admiral FISKE. Not if they only sent 50 per cent of their forces.

Mr. GRAY. That is all.

This is a time for our Nation to maintain a status quo before the world. It is a time to preserve the even tenor of our ways and to pursue our usual course in the regular order of things. It is no time to manifest alarm or apprehension or allow the unfounded fears of a few to be reflected as the state of mind of the many and the great body of the people. This charge of military unpreparedness to-day comes in part from the timid, who magnify dangers from afar and take alarm like the guilty who flee when none pursueth; and in part from the crafty and designing, who seek to take advantage of the times to commit this Nation to a world-power military policy, and thereby establish a permanent trade and commerce in arms and munitions of war.

But both alarmists predicting inevitable clash with foreign nations and war-supply interests appealing for a world-power Army and Navy under the guise of preparing for national defense are alike without grounds or basis for support of their charges of unpreparedness. There is not only less cause existing for war to-day with any rival power than ever before, and such powers are not only in a position less able to make war against this Nation than ever before, but we are better prepared to meet and repel an attack from them than ever before, as shown by the statements of the Secretary of the Navy before the Naval Affairs Committee of the House of Representatives in response to questions relative to the state and preparedness of our Navy, as will appear at page 666 of the hearings before that committee at the present session, as follows:

Mr. GRAY. Mr. Secretary, calling your attention to the concerted newspaper charge being printed over the country, of the declining strength and adequacy and efficiency of our Navy, I want to ask if we have not to-day more warships than ever before?

Secretary DANIELS. Certainly. The present Congress has authorized three dreadnaughts—three times as many as were carried in the preceding appropriation bill—and I am asking it to order two more. If my recommendation is approved, this Congress will break the record and authorize the largest additions of battleship tonnage to the fighting strength that has been provided by any Congress in the history of the Republic. This addition and the several additions of the last four Congresses are as follows:

Congress.	Years.	Tons of battleships authorized.
Sixty-third	1913–1915	160,000
Sixty-second	1911–1913	62,800
Sixty-first	1909–1911	109,000
Sixtieth	1907–1909	95,650
Fifty-ninth	1905–1907	40,000

Mr. GRAY. Are not these warships larger than ever before?

Secretary DANIELS. Yes. The battleships we are building now are about three times as large as our earlier battleships such as the *Oregon* of 20 years ago, and twice as large as battleships of the *Connecticut* type that were our standard of perfection 10 years ago.

Mr. GRAY. Are they not of a type more improved than ever before?

Secretary DANIELS. Yes; there has been steady improvement in offensive and defensive power as well as in habitability, sea-keeping power, etc.

Mr. GRAY. Have we not a greater tonnage in battleships than ever before?

Secretary DANIELS. Yes. The total effective tonnage of our battleships built and building, as shown by official reports for various years, is as follows:

	Tons.
Nov. 1, 1904	317,529
Nov. 1, 1905	333,529
Nov. 1, 1906	366,146
Nov. 1, 1907	406,146
Nov. 1, 1908	406,146
Dec. 1, 1909	449,796
Dec. 1, 1910	501,796
Dec. 1, 1911	555,796
Dec. 1, 1912	610,796
Dec. 1, 1913	642,734
Dec., 1914	712,732

Mr. GRAY. Are not the ships of a type which have far greater speed than any previous ships in our Navy?

Secretary DANIELS. Yes. All our ships of the dreadnaught type have a speed of 21 knots or more. Earlier battleships had a speed not over 19 knots.

Mr. GRAY. Now, Mr. Secretary, calling your attention to another phase of this question, is it not a fact that we have more guns on the ships of the Navy than ever before?

Secretary DANIELS. We have. The total number of big guns on our effective battleships built and building was 68 in 1902, 100 in 1906, 180 in 1910, and 260 to-day.

Mr. GRAY. Are not these guns larger than ever before in all our history?

Secretary DANIELS. Larger and much better. The *New York* and *Texas*, commissioned during the past year, were the first vessels in the United States Navy to carry 14-inch guns. The most powerful gun of preceding vessels was the improved 12 inch. Our vessels now building all carry 14-inch guns, and the three battleships authorized at the last session of Congress carry an improved type of gun of this size.

Mr. GRAY. And have they not a greater range; do they not shoot farther than ever before?

Secretary DANIELS. Much farther.

Mr. GRAY. Have they not a greater destructive power than ever before in our history?

Secretary DANIELS. Far greater.

Mr. GRAY. Now, Mr. Secretary, calling your attention to the question of our auxiliary craft, I want to ask you is it not a fact that we have more auxiliary craft than ever before in all our history?

Secretary DANIELS. Undoubtedly. The tonnage built and building of our fuel ships, transports, supply ships, hospital ships, tenders, and repair ships amounted in 1904 to 141,561 tons. In 1914 it amounts to 401,068 tons.

Mr. GRAY. Is it not a fact that we have more submarines than ever before?

Secretary DANIELS. Yes. The number of vessels of this type is steadily increasing. Ten years ago we had 8 built and building. Now we have 50, and 8 or 9 more will be begun in the near future, while the vessels of this type which will undoubtedly be authorized before March 4 will be promptly begun.

Mr. GRAY. And we have more torpedo boats than ever before?

Secretary DANIELS. Yes. Our tonnage of torpedo craft built and building was 12,658 in 1904. This has been steadily increased since and we now have 57,012 tons.

Mr. GRAY. And we have more harbors that are completely mined than ever before?

Secretary DANIELS. Yes. You know the Army is charged with this important work.

Mr. GRAY. Is it not a fact that we have more complete defenses at these harbors than ever before?

Secretary DANIELS. Much better. That is a matter which the Army has under it control. Your statement is true, however.

Mr. GRAY. Is it not a fact that we have more men than ever before?

Secretary DANIELS. Yes. We have 4,600 more newly enlisted men, and 7,000 more are available than 15 months ago.

Mr. GRAY. Are these men not more efficient and better educated and trained than ever before?

Secretary DANIELS. Far more so.

Mr. GRAY. And is it not a fact that we are more completely equipped in every department, and more efficient than ever before in all the history of this country?

Secretary DANIELS. Undoubtedly.

Mr. GRAY. Then you do not think there is anything in this concerted newspaper charge that is going over the country of the declining strength and efficiency and adequacy of our Navy?

Secretary DANIELS. Nothing at all. It is not true in any particular. The truth is that in every respect the Navy has been greatly strengthened during the past two years.

The economies and the securing of real competition wherever possible has enabled the department to largely increase the sums available for fighting craft without large increase of the naval appropriation bill. The following statement shows how the building program has steadily increased:

Statement of the totals of the appropriations carried by the naval acts from 1900 to 1914, showing separately the amounts for "Increase of the Navy" and showing the number and types of vessels authorized by those acts.

Year.	Appropriation.	Amount for increase, Navy.	Building program.
1900	$65,140,916.67	$17,140,699.00	2 first-class battleships; 3 armored cruisers; 3 protected cruisers; 7 submarines
1901	78,101,791.00	25,400,000.00	No new construction.
1902	78,856,363.13	22,703,010.00	2 first-class battleships; 2 armored cruisers; 2 gunboats; 2 tugs.
1903	81,876,791.43	25,925,632.00	5 first-class battleships; 2 training ships.
1904	97,505,140.94	32,176,860.00	1 first-class battleship; 2 armored cruisers; 3 scout cruisers; 2 colliers; 2 tugs; 4 submarines.
1905	100,336,679.94	42,255,833.00	2 first-class battleships.
1906	102,091,670.27	33,475,829.00	1 first-class battleship; 3 torpedo-boat destroyers; 8 submarines.
1907	98,958,507.50	23,713,915.00	1 first-class battleship; 2 torpedo-boat destroyers.
1908	122,663,885.47	30,307,962.00	2 first-class battleships; 5 colliers; 10 torpedo-boat destroyers; 8 submarines.
1909	136,935,199.05	38,819,595.00	2 first-class battleships; 1 collier; 8 destroyers (3 subsurface); 4 submarines.
1910	131,350,854.38	33,770,346.00	2 first-class battleships; 2 colliers; 6 torpedo-boat destroyers; 4 submarines.
1911	126,478,338.24	26,005,547.67	2 first-class battleships; 2 colliers; 1 river gunboat; 1 gunboat; 2 tugs; 4 submarines; 1 submarine tender; 8 torpedo-boat destroyers.
1912	123,225,007.76	20,569,373.48	1 battleship, first line; 2 fuel ships; 6 destroyers; 1 destroyer tender; 8 submarines; 1 submarine tender.
1913	140,800,643.52	35,325,695.00	1 battleship; 1 transport; 1 supply ship; 6 destroyers; 4 submarines.
1914	144,868,716.61	41,091,734.00	3 battleships; 6 destroyers; 8 (or more) submarines.
1915	(1)	43,030,801.00	2 battleships; 6 destroyers; 8 submarines (or more); 1 gunboat; 1 oiler.

[1] Recommended by the Secretary of the Navy.

The building program for 1914, as authorized by this Congress, was $5,766,039 more than in 1913; that is, the naval construction authorized required nearly $6,000,000 more than in the last year of the preceding administration. If my recommendations are approved, the 1915 new building program will be $8,705,106 more than was authorized in the last year of my predecessor's term. If, added to that, this Congress shall authorize the use of the nearly $2,000,000 saved from appropriations made for work on shore, the new building authorized by this Congress will be $10,000,000 more than was authorized in 1913.

Mr. GRAY. That is all.

OUR RELATIVE STRENGTH STILL FURTHER INCREASED BY LOSSES OF OTHER NATIONS.

But not only is our Navy being maintained in strength and efficiency while the navies of rival nations against which we have been building are engaged in conflict among themselves, and by their position are precluded from making war upon us, but their fleets are being fast crippled, weakened, and depleted by the destruction which they are inflicting upon each other, as shown by the following losses sustained by England and Germany reported up to this time:

English.

Name of vessel.	Class.	Size in tons.
Aboukir	Armored cruiser	12,200
Hogue	do	12,200
Cressy	do	12,200
Warrior	do	13,700
Hermes	do	5,600
Monmouth	do	9,800
Good Hope	do	14,100
Arethusa	Protected cruiser	3,600
Hawke	do	7,800
Gloucester	do	4,900
Fearless	do	3,500
Pathfinder	do	3,000
Glasgow	do	4,800
Amphion	do	3,500
Druid	Torpedo-boat destroyer	770
Laertes	do	950
Phoenix	do	770
Speedy	do	800
Fishguard II	Schoolship	.....
Submarine D-5	Submarine	.....
Submarine E-3	do	.....
Pegasus	Light cruiser	2,135
Niger	Torpedo gunboat	810
Audacious	First-line battleship	24,000
Bulwark	Battleship	15,000
Formidable	do	15,000
A. E. 1	Submarine	725
Bullfinch	Destroyer	370

These losses already suffered by England include a total of more than 28 fighting ships and war craft, 172,000 tonnage, 372 guns from 13.5-inch to 3-inch, 45 machine guns, 53 steamers and sailing vessels, and over 5,000 seamen.

German.

Name of vessel.	Class.	Size in tons.
Yorck	Armored cruiser	9,350
Scharnhorst	do	11,500
Gneisnau	do	11,500
Ariadne	Protected cruiser	2,650
Koeln	do	4,350
Maniz	do	4,350
Hela	do	2,040
Koenigsberg	do	3,348
Emden	do	3,492
Leipzig	do	3,250
Nurnburg	do	3,450
Magdeburg	Cruiser	4,450
Kaiser Wilhelm II	Auxiliary cruiser	14,390
Cap Trafalgar	do	26,000
Comet	do	1,157
Itola	do	.....
Rhios	do	.....
Bethia	do	.....
Markonannia	do	.....
Spreewald	do	.....
Grecia	do	.....
Ophelia	do	.....
Soden	do	.....
Cornoran	Gunboat	1,600
Iltis	do	880
Jaguar	do	9,350
Tiger	do	880
Luchs	do	880
Mowe	do	650
Hedgwig	do	.....
Von Wiseman	do	.....
Planet	do	650
Bluecher	Armored cruiser	15,500
Konigen Luise	Mine layer	22,163
Kaiser Wilhelm der Grosse	Armored cruiser	13,952
V. 187	Destroyer	689
S. 115	do	413
S. 117	do	413
S. 118	do	413
S. 119	do	413
S. 116	Torpedo boat	477
U. 15	Submarine	450
S. 99	Destroyer	396
Taku	do	276
Rufin	Mine layer	.....
S. 124	Destroyer	463
U. 18	Submarine	450

A sum total of the German losses is found to include more than 46 warships and fighting vessels, 176,000 tonnage, 402 guns from 9.4-inch to 3-inch, 12 machine guns, scores of steamers and sailing vessels of different types, and thousands of seamen.

The losses already suffered have not only had the effect to stop the further increase of the navies of these nations but to actually reduce them. We are no longer compelled to increase our Navy if our policy is only to maintain our relative strength toward them. We can now stand still and gain more by their losses than we have in the past by our building programs. In other words, we have gained in relative strength more rapidly by their losses than ever before by our own increases. These lists of casualties not only show the terrible depletion already suffered, but foretell the further destruction which must inevitably come to the navies of these belligerent nations before this conflict is over.

There is no grounds for sudden alarm nor reasons why we should now further surrender the taxing power over to the war-supply interests nor pile higher the burdens of war debts upon the people nor make heavier the yoke of militarism in the time of peace.

The Jitney Bus.

EXTENSION OF REMARKS
OF
HON. A. W. LAFFERTY,
OF OREGON,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, February 10, 1915.

Mr. LAFFERTY. Mr. Speaker, recently a young man in Oakland, Cal., owning an old automobile and being without money or patronage, conceived the idea of competing with the electric street cars. This was a new idea to the young man and was born of his necessity, but it was not in fact new. For over 10 years more passengers have been carried through the streets of London by the motor than have been carried by the trolley lines. The service is just as regular and just as cheap.

And what happened in London when it was demonstrated that the motor bus was going to become more popular than the trolley car? The capitalists owning surface trolley lines promptly unloaded them on the city and got the city council to grant to them exclusive franchises to operate the motor-bus lines. The capitalists immediately became public-ownership men, so far as the surface street car lines were concerned, but they desired and secured exclusive rights to operate the motor-bus lines as a private corporation.

The same men who a few years ago owned the surface trolley lines in London now own the motor-bus lines there. They have unloaded the surface trolley lines on the city because they are no longer profitable. But the capitalists of London still retain their grip on the subway trolley lines, because they pay good dividends in spite of the motor bus. The London subway cars can compete with the motor-bus lines because they are faster, but as to surface transportation the motor bus is just as rapid as the trolley car and is much more pleasant. That is why the motor bus has largely taken the place of the surface trolley car in that great city.

It is amusing to watch the newspaper representatves of the capitalists in our western cities fight the "jitney bus." They say the electric car line "has helped to build up our beautiful city and is entitled to our patronage." One Portland paper even claims that the street car company was responsible for paving a street to a suburb.

Shortsighted indeed must be the individual who can not see that all improvements put in by any electric car company in Portland or any other city has been paid for by the people and not by the men who own the utility. Every street car company in the United States organized or reorganized in the past 20 years—and that takes in all of them—has issued its stock free. The money power which bought the bonds required this in order to make the purchase of the bonds "a good speculation." The money received from the sale of the bonds is all that has gone into the construction, while the stocks have been a bonus to the purchasers of the bonds and to the organizers or reorganizers of the company.

In Portland, Oreg., in the case of the Portland Railway, Light & Power Co., the stocks were issued 65 per cent paid, and only 5 cents on the dollar has ever been paid in cash; yet the stocks so issued, par value of which are $100 per share, are paying dividends of 4 per cent regularly, which means 80 per cent profit on the $5 per share actually invested. And this is in addition, of course, to the interest on the bonds.

When this deal was put through at Portland a few years ago sufficient stock was given to men interested in Portland's daily newspapers to keep them quiet, and those same men are to-day causing Portland's daily papers to protect the trolley lines against the "jitney bus."

Just at the present, when the "jitney bus" is owned by Tom, Dick, and Harry, it is a bad thing and ought to be frowned on, according to these newspapers. But you just wait till the "jitney bus" grows to formidable proportions and becomes a dangerous competitor of the trolley lines, and then you will see these same newspapers favoring "regulation" of the "jitney bus," and in order to regulate it to the satisfaction of the money power these newspapers will favor granting an exclusive franchise to one big corporation to handle all the motor-bus business of the city. They will say that we should have the latest and largest and most improved motor buses and that the interests of the service demand that the matter be placed in the hands of one company with "sufficient capital" to handle the situation.

When that time comes these same corporation-controlled newspapers will favor unloading the surface lines onto the city, and at such prices as to let the capitalists out at a big profit from a losing proposition.

What every city should do is to own its own transportation facilities. These facilities constitute a monopoly, and if the cities owned them they could make a splendid profit, employ men at fair wages, and furnish every part of each city with good service. The latest and best vehicles could be adopted as fast as their practicability were established.

Immigration Bill.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. BARTON. Mr. Speaker, the veto is a power that in my judgment should be rarely exercised, and then only after the President has brought to bear upon the subject matters that throw additional light. When one man places his opinion above the many without additional light on a subject, it appeals to me as a most arbitrary action.

The President says:

> Not only do I feel it to be a very serious matter to exercise the power of veto in any case, because it involves the opposing of single judgment of the President to the majority of both the Houses of Congress, a step which no man who realizes his own liability to error can take without great hesitation, but also because this particular bill is in so many respects admirable, well conceived, and desirable.
>
> Its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates.

I agree with that statement and would like the President to point out the potent power that has prevented this bill becoming a law since May 20, 1896.

It is fair to presume that the Members of Congress, coming from all sections of the country, are closer in touch with the rank and file of the people than even the President; and despite the fact that the President says that this is a new question, I would direct his attention to the fact that this and similar bills have been before the House and Senate and passed at eleven different periods of time. I will herewith insert the dates the bill was voted on and the results of the vote:

1896.

May 20, House, 195 to 26.
December 17, Senate, 52 to 10.

1897.

February 9, Senate, 34 to 31.
March 3, House, 193 to 37 (over President Cleveland's veto).

1898.

January 17, Senate, 45 to 28.

1902.

May 22, House, 86 to 7 (in committee).
May 27, House, no division.

1906.

May 23, Senate, test added by amendment.
June, Senate, no division.

1912.

April, Senate, test added by amendment, 57 to 8.
April 19, Senate, no division, but only 2 votes against.
December 18, House, 178 to 52.

1913.

January 17, House, 149 to 70.
January 25, House, 166 to 71.
January, House, no division.
January, Senate, no division.
February 18, Senate, 72 to 18 (over President Taft's veto).
February 19, House, 213 to 114 (on veto).

1914.

February 5, House, 252 to 126.
December 31, Senate, 12 to 47 (on motion to strike out test).

1915.

January 2, Senate, 50 to 7.
January 15, House, 227 to 96.
January 14, Senate, no division.

There have been nine record votes in the House, the average of the votes being 184 to 67, and seven record votes in the Senate, the average vote being 51 to 16.

The immigration problem is one of the greatest problems that confront our people to-day. No matter what part of the country you live in, look about you and you will see that our arable, fertile land is not only well occupied, but that the land, because of the demand for it, is well advanced in price, and if you live in the city you can easily find many Americans seeking employment; what then is our reason for throwing the gates wide open?

Not very far back in our history we had plenty of rich, cheap, and fertile land, and we needed immigrants. To-day we can afford to select.

The argument is advanced that if this law had been in effect when our fathers came to this country that it would have excluded many of our best and most worthy citizens. I admit the statement, and had I been a Member of Congress at that date would have voted against the bill, but we can say in the same breath and with equal exactness if our forefathers had attempted to telephone, telegraph, ride in steam cars or automobiles, or send a wireless message of their arrival to the ones they left behind that their efforts would have been futile.

The conditions of to-day are not what they were then; our country is annually expending millions of dollars for educational purposes to lift our people to a higher standard of literacy, and if education is not a test of citizenship why do we make these enormous expenditures?

Our educational system at the time our forefathers came to these shores was as little developed as the country, and this condition, as applied to the masses, was world-wide.

The immigration of to-day is not what it was then. Only since 1820 has a record been kept showing where the immigrants come from. Writers on this subject classify immigrants as old and new, the first class being those who came before 1883 and the second class those who have come since that date. About 90 per cent of the old class came from England, Scotland, Ireland, Wales, Belgium, France, Germany, Norway, Sweden, Denmark, Switzerland, and the Netherlands.

Among the new we find 90 per cent from Russia, Austria-Hungary, Greece, Italy, Bulgaria, Montenegro, Portugal, Poland, Spain, Syria, and Turkey.

The Commissioner General of Immigration compiled statistics which show the number and per cent of illiterates from 1899 to 1909, inclusive.

Race or people.	Number over 14 years old.	Per cent of illiterates.
English	302,657	1.1
Finnish	123,415	1.4
French	81,449	5.4
German	566,579	5.1
Irish	381,095	2.7
Bohemian and Moravian	18,404	1.7
Dutch and Flemish	58,525	4.7
Scandinavian	483,049	.4
Scotch	95,073	.7
Welsh	15,191	2.0
Armenian	18,404	24.1
Bulgaria, Servia, Montenegro	80,854	41.8
Croatian and Slovenian	283,270	36.4
Dalmatian, Bosnian, Herzegovinian	26,270	36.4
Greek	170,513	27.0
Hebrew	744,395	25.7
Italian, North	311,243	11.4
Italian, South	1,517,768	54.2
Lithuanian	140,540	48.8
Polish	742,753	35.4
Portuguese	49,799	68.2
Roumanian	67,029	34.7
Russian	61,287	38.5
Ruthenian	113,931	51.0
Spanish	41,000	14.6
Slovak	312,954	22.1
Syrian	42,463	54.1
Turkish	15,408	58.8

The report discloses the fact that during the period covered by the table less than 3 per cent of the old immigrants could neither read nor write, while illiterates among the new immigrants numbered about 36 per cent.

No one attempts to assert that all these people who could neither read nor write were undesirables; but we are constantly fixing standards of citizenship, and I feel quite sure that, had this law been in effect, many of those who came here to make this their home would have had interest enough to have attained the literacy standing required by this bill. And if they had done so, who will question the fact that their condition would have been improved as a prospective citizen of this country? If not, then our whole scheme of education is wrong.

It is begging the question to assert that the power to read and write makes the man. No one claims that it does; but if it is not a desirable quality, why do we expend vast amounts for education and almost deprive ourselves of the necessities of life to educate our children? Nor is this test the only test in the bill; it has many good features. A law should be read in its entirety, considering all its parts; and if an immigrant could comply with this law in its entirety he would make a good citizen and a man we could assimilate.

I think the time has come when we should be cautious in the introduction of our citizenship. I am for the real immigrant—the one who comes here to make it his home. But during the decade 1900 to 1910 the number of foreign-born males 21 years and over who had taken no steps toward naturalization increased from 900,000 to 2,260,000; and as a matter of fact a large number of the aliens now coming to this country are not immigrants, in the direct sense of the word, but sojourners taking advantage of the higher American wages and then returning to their country with their earnings, each one of them displacing an American citizen who lives and rears his family in America and defends the flag, if need be.

We do not want the living conditions of six and a half million wage earners normally employed in manufactures, a million in mines, a million and three-quarters on railroads, and so on, reduced to a lower level; neither do we want to see them change their method of living and take up their abode in freight cars, using the clay banks for ovens. Already in the mass the wage earners get less out of a country's prosperity than anybody else. And if it be treason to listen to the voice of the Farmers' Union, the Daughters of Liberty, the American Federation of Labor, the Central Federated Union, the International Association of Machinists, the Central Labor Union of Lincoln in the State which I in part represent, the railway employees, the International Seamen's Union, the retail clerks, the teamsters, and other labor organizations, then I am guilty, but my conscience is clear and my reasoning satisfied; besides I know that men who want to cheapen labor and cheapen the mode of living will have their side of the case presented.

I am for the bill, and shall cast my vote to pass it over the President's veto, for it is only asking the people who come to our shores to attain a standard that we by legislation are forcing our own people to accept.

North Pole Controversy.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. FIELDS,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 8, 1915.

Mr. FIELDS. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I desire to submit a few brief observations, together with a letter from Dr. Frederick A. Cook to the Congress of the United States and certain other data bearing upon the polar controversy between Dr. Cook and Civil Engineer Robert E. Peary, both of whom claim to have reached the North Pole, and I trust that same, especially the letter of Dr. Cook, may receive the careful attention of the membership of the House.

I desire to say first that I am not prompted by personal interest in Dr. Cook or by unkind feelings toward Mr. Peary to speak upon this subject. I have only the slightest acquaintance with the former and have never met the latter. I therefore disclaim any personal interest in the controversy or personal preference for either gentleman. I am, however, interested in seeing each of these gentlemen receive fair treatment and a square deal at the hands of the American Congress and the American people in this controversy, which is no more than each and every American is entitled to in any matter with which the Congress has to do or in which the people are interested. I assume that the Congress is interested in this matter for the reason that it did by act of Congress tender the thanks of Congress to Mr. Peary for reaching the North Pole, which will be found in Public, No. 487, S. 6104, which reads as follows:

[Public—No. 487.]

An act (S. 6104) providing for the promotion of Civil Engineer Robert E. Peary, United States Navy, and tendering to him the thanks of Congress.

Be it enacted, etc., That the President of the United States be, and he is hereby, authorized to place Civil Engineer Robert E. Peary, United States Navy, on the retired list of the Corps of Civil Engineers with the rank of rear admiral, to date from April 6, 1909, with the highest retired pay of that grade under existing law.

SEC. 2. That the thanks of Congress be, and the same are hereby, tendered to Robert E. Peary, United States Navy, for his Arctic explorations, resulting in reaching the North Pole.

Approved, March 4, 1911.

It will be noticed that the above resolution does not accredit Mr. Peary with having discovered the North Pole, but with having reached the North Pole. Therefore the resolution does not recognize Mr. Peary as the discoverer of the pole, nor does it preclude Dr. Cook's claim that he discovered the pole on April 21, 1908, which was more than 11 months before Mr. Peary reached the pole according to the date given by Peary himself, which was April 6, 1909.

I am informed that some gentlemen have said on the floor of this House that Congress is not concerned about this matter, and that it has no jurisdiction over same. In reply to this statement I desire to ask, If Congress is not concerned about this matter, why, then, did it tender its thanks to Mr. Peary for his polar attainment? Nor did it stop at a vote of thanks, but by the same resolution it granted him a pension at $6,000 per annum for the remainder of his life, and by other governmental action he has been paid many thousand dollars out of the Public Treasury during his various leaves of absence from the naval service, much of which time was spent in polar explorations. This enormous sum, the thanks of Congress for his polar attainment, and the pension granted him was an admission and an implied acknowledgment on the part of the Congress of its interest in, and jurisdiction over, the polar efforts and achievements or controversies of American citizens.

It can not be argued in either justice or sincerity that Mr. Peary should receive the special favors of Congress for his polar attainment because he happened to be fortunate enough to be in the United States Navy. First, no man would dare contend that a naval officer should be given special advantages over a private citizen in a civil pursuit which was not a part of his official duty, and, second, the recommendation of the Secretary of the Navy on the resolution which acknowledged Mr. Peary's claim for Arctic explorations recommends that he is not entitled to such recognition for naval services, but throws him solely upon his claim as a private citizen for Arctic explorations. I submit copy of the report of the Secretary of the Navy, just referred to, which reads as follows:

NAVY DEPARTMENT,
Washington, February 10, 1910.

To the CHAIRMAN COMMITTEE ON NAVAL AFFAIRS,
House of Representatives.

MY DEAR CONGRESSMAN: The receipt is acknowledged of your letter of the 8th instant, inclosing a bill (H. R. 19971) providing for the appointment of Commander Robert E. Peary a rear admiral in the Navy as an additional number in grade, and placing him upon the retired list, and requesting for the committee the views and recommendations of the department thereon.

In reply I have the honor to inform you that Robert Edwin Peary entered the naval service of the United States as a civil engineer on October 26, 1881, and has been an officer of the Navy continuously since that date, performing the duties required of a civil engineer under orders from the Navy Department, except when on leave.

During his service in the Navy Civil Engineer Peary has been granted leave of absence abroad as follows:

April 6, 1886, leave abroad, 8 months.
October 31, 1887, leave abroad, 12 months.
February 24, 1891, leave abroad, 18 months.
November 21, 1892, leave abroad, 3 years.
May 2, 1896, leave abroad, 6 months.
May 25, 1897, leave abroad, 5 months.
September 9, 1903, leave abroad, 3 years.
April 9, 1907, leave abroad, 3 years.

The unexpired portion of this last leave was revoked on July 2, 1908, and Civil Engineer Peary was ordered to report to the Coast and Geodetic Survey for duty in making tidal observations in Grant Land and Greenland.

It would appear that the bill in question is framed for the purpose of rewarding Civil Engineer Peary for having reached the North Pole; and while having successfully accomplished this self-imposed task is most commendable and reflects great credit not only upon him but also upon the entire Nation, his various exploring expeditions can not be regarded as having been conducted for a strictly military or naval purpose, and for this reason it seems inappropriate to confer upon him a title for which his previous education, training, and service have not fitted him.

It is therefore recommended that in the title of the bill and in the fourth line thereof the word "commander" be changed to "civil

engineer," the latter being Mr. Peary's correct official designation, and, further, that instead of appointing him a rear admiral and placing him upon the retired list as such, that he be retired as a civil engineer, with the rank of rear admiral, and with the highest retired pay of that grade under existing law.

Faithfully, yours, G. VON L. MEYER.

Then, if one American citizen should receive congressional recognition for Arctic achievements, why should not another American citizen receive the same recognition and the same thanks if he can establish to the satisfaction of Congress that he attained the same achievement, and attained it many months prior to the date that Mr. Peary claims to have done so. Dr. Cook announced to the world that he had reached the North Pole prior to the announcement of Mr. Peary that he had done so, and was the first citizen of his own or any other country to claim to have reached that long-sought goal. Dr. Cook says he will establish by expert testimony, if given an opportunity, his claim of priority in reaching the pole. He states that more than 60 Arctic explorers and scientific experts from different parts of the world have recognized him as the discoverer of the pole, and that not one Arctic explorer or scientific expert has disputed same on scientific grounds, and that he is in possession of documents proving this acknowledgment; and these documents were written after the publication of the polar records of both himself and Peary, and most of them were written during the year 1914, after a most careful study had been made of the reports of both himself and Peary. So, in view of the claim of Dr. Cook that each and all Arctic explorers who have spoken on the controversy recognize him as the discoverer of the pole, it is, in my opinion, incumbent upon Congress to accord to him the same treatment that it accorded to Mr. Peary. It should give him an opportunity to establish his claim of priority by giving him and his witnesses a hearing before a committee of Congress; and if after a thorough hearing that committee is convinced that Dr. Cook did reach the pole, he should then receive national recognition through the Congress of the United States, which would automatically establish his claim of priority, as there is no controversy between Cook and Peary as to the date that each claims to have reached the pole. He is an American citizen the same as Peary, and should receive equal treatment at the hands of the American Congress. Justice demands that he be granted a hearing by the same Congress that gave Peary recognition, and a just public sentiment will sooner or later force such a hearing; and it is my contention that it should not be delayed, but should be granted while the expert witnesses who are familiar with the data and the facts and who are capable of passing upon same and giving competent testimony are obtainable. And in this connection I make the contention that the weight of expert computations on the observations of both Cook and Peary is in favor of Cook. As a basis of Peary's claim in this regard I submit copy of a letter of Hon. O. H. Tittmann, Superintendent of the Coast and Geodetic Survey, which reads as follows:

DEPARTMENT OF COMMERCE,
UNITED STATES COAST AND GEODETIC SURVEY,
Washington, March 4, 1914.

Mr. E. N. NORTON,
6952 Harvard Avenue, Chicago, Ill.

SIR: In reply to your letter of February 28, 1914, I have to inform you that you can obtain information in regard to observations, etc., of Admiral Peary on his trip to the far north in his book called "Peary's North Pole."

You will find a statement of the testimony of Hugh C. Mitchell, one of the computers of the Coast and Geodetic Survey, who worked up Peary's observations, on pages 135–142 of the hearings before the Committee on Naval Affairs, subcommittee on private bills, dated March 4, 1910, a copy of which can probably be obtained by writing to the chairman of the Committee on Naval Affairs, House of Representatives, Washington, D. C.

The computations of Peary's work were made by Messrs. Hugh C. Mitchell and Charles R. Duvall, who were employed for the purpose by Mr. Peary. These computations were, therefore, not made officially by the Coast and Geodetic Survey, although this office has always vouched for the accuracy of the work done by these two men.

Respectfully,
O. H. TITTMANN, *Superintendent.*

It will be noted from the above letter that the observations of Mr. Peary were computed by only two gentlemen who were connected with the Coast and Geodetic Survey, but who were not acting officially in their computations of Peary's observations but were paid for same by Mr. Peary himself. I do not question the integrity of these gentlemen or the correctness of their computations of Peary's observations, but in connection with their report I wish to call attention to the fact that the observations of Dr. Cook were computed by Mr. Clark Brown, associate member of the American Society of Civil Engineers, and Mr. Brown's computations were approved by David R. Lee, civil engineer, B. S., Cornell University, 1889, also a member of the American Society of Civil Engineers; J. M. Taylor, M. E., Cornell University, 1888; E. G. Raynor, civil engineer, B. S., New York University, 1903; R. C. Holt, civil engineer; and J. C. Green, associate member American Society of Civil Engineers, Michigan Agricultural College, 1901. All five of these gentlemen are scientific experts from different parts of the country, and four of them were not then and are not now acquainted with Dr. Cook. Therefore if we accept the report of the two scientific experts who computed the observations of Mr. Peary, we should also accept the report of the five scientific experts who computed the observations of Dr. Cook, and who show by their computations that Cook reached the pole.

Not only do the principles of justice demand that Dr. Cook be given a hearing and that this controversy be settled for all time, but our educational interests demand its settlement. The students of history of the present and future are entitled to have the controversy settled while the claimants are both living and each able to defend his case, so that they may not be misled by history or left to guess at the facts.

Then there is another reason why an investigation of this matter should be made by Congress. Congress has officially acknowledged that Mr. Peary reached the pole. I am informed that it is now contended that he did not reach the pole, and that it can be established that he did not if opportunity is given. I do not attempt to vouch for the truthfulness of that statement or the soundness of the contention. But I do contend that Congress was not indulging in child's play or idle formalities in its official recognition of Mr. Peary's claim that he reached the pole. It was dealing with a question of both national and international interest and should be sure of the grounds upon which it based its action. I understand that it was stated by Miss Lilian E. Kiel, former stenographer for Hampton's Magazine, before the Committee on Education of this House a few days ago that the alleged Peary report of his trip to the pole was not a product of his own brain, but was a product of the editorial staff of Hampton's Magazine. If this be true, it is sufficient to raise the question of doubt as to whether the report was written on information and calculations received from Mr. Peary, or on information from some other source. It is therefore the duty of Congress to inquire into the authenticity of the report on which it gave Peary recognition. If the charges advanced by Miss Kiel are untrue, they are an injustice to Mr. Peary and the editorial staff and the magazine referred to, and their truthfulness should be immediately challenged and disproved by Mr. Peary and all other parties concerned. If they are true, Mr. Peary and his staff have done an injustice to both the Congress and the public by leaving this matter open to so much doubt. As a basis of my reference to the charges of Miss Kiel before the Committee on Education of the House of Representatives, I here submit copy of an affidavit by her containing practically the same charges above referred to, which reads as follows:

WASHINGTON, D. C., *July 1, 1914.*

To whom it may concern:

While employed as editorial stenographer by Hampton's Magazine it fell to my lot to take the story entitled "The discovery of the North Pole," which ran in Hampton's in 1910. This story was published over the name of Robert E. Peary, was dictated to me by a woman—Mrs. Elsa Barker—and of it Mr. Peary wrote not one word. I still hold in my possession my stenographer's notebooks containing my original shorthand notes of this story.

Later in the year a member of this same enterprising, unscrupulous editorial staff manufactured and dictated to me a faked "statement" for the press to which I was commanded to sign the name "Frederick A. Cook" by typewriter, but of which Dr. Cook had absolutely no knowledge until it appeared in the public press.

This faked "statement"—commonly called "the Cook confession"—appeared simultaneously with the issue of Hampton's Magazine for January, 1911, which contained the first instalment of what was known as "Dr. Cook's own story," in which, after Dr. Cook had O. K.'d the galley proofs, I helped to insert certain insanity and "confession" clauses.

The above is a voluntary statement made by me in the interests of justice without the knowledge of Dr. Frederick A. Cook.

LILIAN E. KIEL.

CITY OF WASHINGTON, *District of Columbia, ss:*

Subscribed and sworn to before me this 1st day of July, 1914.
[SEAL.] E. C. OWEN, *Notary Public.*

I maintain that if the charges made by Miss Kiel are untrue, Mr. Peary and those implicated with him by these charges can not afford to sit idly by and let them go unnoticed or unchallenged. And if the charges of Miss Kiel are not refuted or met by a satisfactory explanation, the Congress and the country must admit that a mistake was made by giving Mr. Peary congressional recognition for his polar achievements, the report in question being a part of the basis upon which they gave such recognition. And, further still, Dr. Cook is heralding charges against Mr. Peary from one end of the United States to the other, so grave in character that they are inflaming the public mind to such an extent that the public is contending that inasmuch as Congress has impliedly acknowledged its jurisdiction over this matter by its recognition of the Arctic achievements of Mr. Peary, it is now incumbent upon Congress to make a full

and thorough investigation of the claims of Dr. Cook and the charges by him against Mr. Peary, charging the latter with bribery, fraud, and falsehoods, to discredit and destroy him (Cook) and establish his (Peary's) polar claim, upon which claim he received congressional recognition.

The public is contending that the charges which Cook is making against Peary should be answered and refuted or acknowledged by Mr. Peary. I would not make any contention for the purpose of precipitating further controversy between the two gentlemen under discussion, but I do contend that Congress should take the matter in hand and should give a full and open hearing to both claimants and their witnesses. If the charges are untrue, the country should know it, and Cook's campaign against Peary should come to an end. If, on the other hand, they are true, the country, and especially the Congress, which gave official recognition to Mr. Peary, should know it. I maintain that neither Mr. Peary nor the Congress which has officially recognized him should be willing to permit the campaign of Dr. Cook to further proceed without notice. It is my opinion and my contention that the controversy should be settled and settled right. And in the hope that it may lead to that end I am introducing the following resolution:

Be it resolved, etc., That the thanks of Congress be, and the same are hereby, tendered to Dr. Frederick A. Cook for his Arctic explorations, resulting in his reaching the North Pole.

This resolution is practically identical with section 2 of the resolution extending the thanks of Congress to Mr. Peary, and if it should be passed by Congress it will automatically settle the question of priority of discovery in favor of Dr. Cook. I introduce this resolution in the hope that it may lead to a full hearing and proper and final settlement of the question in controversy. The controversy should be settled, to the end that if Cook's claim of discovery of the North Pole and his charges against Peary are untrue, the country should know it and his campaign of assault upon Peary should cease. On the other hand, if he can establish his claim that he reached the North Pole, as he says he can, and as the great number of Arctic explorers and scientists say he can, he should not only be recognized by the Congress and the country as the discoverer of the North Pole, but should be commended by the world for the brave, fearless, and untiring fight which he has waged for his rights.

I include in the data submitted herewith copy of the contract between Mr. Peary and the New York Times, which was printed in the Times on September 11, 1909. I also include copies of numerous letters from Arctic explorers and scientific experts to which I invite special attention; and I desire to say here that I have seen all the original letters from which these copies are made. I submit all this, together with Dr. Cook's letter to the Congress of the United States to which I have previously referred, for the information of the membership of the House. And I insist that in view of the preponderance of evidence in favor of the claim of priority at the North Pole by Dr. Cook, and his request for and persistent efforts to secure a hearing before Congress, the same body that heard Mr. Peary, a hearing should be granted to Cook.

The data above referred to are submitted in the following order:

TIMES CONTRACT WITH PEARY AS PUBLISHED IN NEW YORK TIMES SEPTEMBER 11, 1909.

NEW YORK TIMES,
New York City, July 6, 1908.

GENTLEMEN: I herewith acknowledge the receipt of the sum of $4,000 from the New York Times on behalf of itself and associates. It is understood that in making this advance the Times does not assume any responsibility for or any connection with the expedition on which I am about to embark, and which has for its purpose the finding of the North Pole. The money is advanced to me as a loan to be repaid to the New York Times and its associates out of the proceeds of the news and literary rights resulting from this expedition, it being understood that if for any reason the expedition is abandoned before the fall of 1908 the money is to be refunded to the Times. If the expedition is successful and the pole is discovered I promise to use every means in my power to reach civilization and wire to the Times the full story of the discovery over my own signature. The Times is to have the sole rights to the news of the discovery, and is to have the exclusive right of its publication in all parts of the world. My understanding is that the Times, on its part, agrees to syndicate the news both in Europe and America, and to give to me the entire amount it receives, after deducting costs of cables, tolls, etc. The Times and its associates will pay me what they consider a reasonable amount for the use of the material in their own publications. From the sum thus raised the $4,000 is to be repaid, and I am free to sell the magazine and book rights to my best advantage.

It is understood, however, that should the news reports by any possibilty not realize the sum of $4,000, any deficit will be reimbursed to the Times from the magazine and book rights.

Should the expedition not be successful in finding the pole, but should simply result in explorations in the Far North, the Times is to be repaid $4,000 out of the news, magazine, and book rights of the expedition, so far as they may go toward the liquidation of that claim.

Yours, very truly, R. E. PEARY.

[Editorial comment from the Evening Tribune, Des Moines, Iowa, June 23, 1914.]

Whatever else Dr. Cook may be right or wrong about, he is most certainly right about the efforts that are being made to suppress him and his contentions over the North Pole discovery.

The Evening Tribune is in receipt of a mass of printed matter about the doctor, sent from no acknowledged source, that in the preparation must represent weeks of labor and hundreds of dollars' expense.

The question that naturally suggests itself is why such an effort should now be considered necessary to discredit the doctor, and who is financially interested enough to go to the expense?

—

WASHINGTON, D. C., *January 7, 1911.*

To Dr. FREDERICK A. COOK,
New York City.

DEAR DR. COOK: I thank you very much for your kind letter, and I assure you that I have never varied in the belief that you and Civil Engineer Peary reached the pole. After reading the published accounts daily and critically of both claimants, I was forced to the conclusion from their striking similarity that each of you was the eye-witness of the other's success.

Without collusion it would have been impossible to have written accounts so similar, and yet in view of the ungracious controversy that has occurred since, that view (collusion) would be impossible to imagine.

While I have never believed that either of you got within a pin point of the pole, I have steadfastly held that both got as near the goal as was possible to ascertain, considering the imperfections of the instruments used and the personal errors of individuals under circumstances so adverse to absolute accuracy.

Again, I have been broad enough in my views to believe that there was room enough at the pole for two, and never narrow enough to believe that only one man got there.

I believe that both are entitled to the honor of the achievement.

Very truly, yours,

W. S. SCHLEY.

—

INDORSEMENTS OF LETTER BY ADMIRAL SCHLEY, JANUARY 7, 1911.

SAN JOSE, CAL., *April 22, 1914.*

I agree with Admiral Schley and have drawn my conclusions from like reasoning.

MAURICE CONNELL.

COPY OF INDORSEMENT ON SCHLEY LETTER.

APRIL 22, 1914.

MY DEAR DR. COOK: I indorsed these sentiments at the time they were first expressed, and have discovered no reasons in the intervening years to change my opinion.

Sincerely,

SAMUEL P. ORTH,
Professor of Political Economy, Cornell University, New York,
Member of the "Miranda" Arctic Expedition, 1894.

COPY OF INDORSEMENT ON SCHLEY LETTER.

NEW YORK CITY, *January 23, 1914.*

The opinion of Admiral Schley is my belief regarding the rival polar claims.

EDWIN S. BROOKE, Jr.,
Crocker Land Expedition, 1913.

To the Congress of the United States (presented through —— ——):

As an American citizen, I ask Congress to act upon the Poindexter joint resolution 144, which was introduced April 30, 1914, or any other that may have been introduced later, to the end that we Americans may have the right to say that an American was the first to reach the geographical spot known as the North Pole, for which statement at the present time no authority exists.

The question of who discovered the North Pole is in doubt in the minds of many people the world over. It is a question that should be settled and settled right; and it would seem that now is the fitting time to do it, while both claimants are alive, and evidence, such as there is, available.

Many people in Europe, and multitudes in the United States, are thoroughly convinced that Dr. Frederick A. Cook was the first man to reach 90° north latitude.

As time passes and citizens of this country read the story of the conquest of the pole as told by Dr. Cook in his book entitled, "My Attainment of the Pole," or listen to him personally as he tells his experiences from the lecture platform, it is borne in upon them that there has been a great injustice done, and that the popular belief that R. E. Peary is the discoverer of the North Pole is erroneous.

To my mind, the chief proof that an explorer can give of what he claims to have accomplished is to be found in his account or narrative. We like that to ring true and to tally with such facts as we know. Dr. Cook in his book, "My Attainment of the Pole," gives us a story that does ring true, and his claim that he was the first of all men to reach the North Pole is, I think, proven beyond question. The story of its conquest and of the wonderful journey over the ice floes with his two Eskimo companions is most convincing.

The record of observations by sextant for latitude made by Dr. Cook are as good, I believe, as possible to be taken under such adverse conditions as must prevail in the vicinity of the pole. The novel idea of proving his position by accurate and painstaking observations of shadows for a period of 24 hours while at the pole was a happy thought, and such results as he got would obtain nowhere else but at the North or South Poles.

Should further proof be needed, it is to be found in the reports given by R. E. Peary in his book, entitled the "North Pole," written some time after Dr. Cook's statements had been made public. In this book Mr. Peary, writing of his journey to the pole, describes in detail the same conditions of ice, water, and sky that Dr. Cook found the year before; also where Dr. Cook saw land to the west, first between the eighty-fourth and eighty-fifth parallels of north latitude, and later the submerged island between the eighty-seventh and eighty-eighth parallels, Peary, too far east to possibly see these lands, yet found the divisions in the floes caused by the obstruction of those lands to the easterly drift of the ice. He also, in one case at least, reported animal life, indicating that land could not be too far away.

There are probably but few people who doubt that R. E. Peary reached the pole in 1909; but if so, how are we to account for his description of that journey, tallying so completely with that previously given to the public by Dr. Cook, unless we admit that Dr. Cook must have made the same journey the year before, as he says he did?

To those of us who know Dr. Cook, his simple word is sufficient; to those who do not, his word should be as good as another's.

I believe that anyone who has had much experience in the Arctic regions and who is familiar with the narratives of both Dr. Cook and R. E. Peary, and who is honest and unprejudiced, must feel that the honor of discovering the North Pole belongs by right to Dr. Frederick A. Cook.

Unfortunately, it would seem that as a rule the press of this country love sensation better than truth, and have been most ready to print charges of fake and fraud as advanced by Peary and his followers, while their columns have been closed to Dr. Cook when he has wished to answer these charges and present his own claims.

The people of the United States, however, love truth and justice, and I think it would be peculiarly fitting for the Congress of the United States to investigate this matter impartially and settle for all time as to whom belongs the honor of discovering the North Pole. I ask that in the interest of national honor, justice, and geographical and historical knowledge.

Respectfully,

EDWARD A. HAVEN,
Master Mariner.

(Served as officer in navigating and handling ships in Arctic ice for 14 years; the last voyage as first officer with the Ziegler polar expedition of 1903–1905. Also three years' experience sledging and boat sailing on Alaskan rivers and coasts.)

OAKLAND, CAL., *December 28, 1914.*

UNITED STATES REVENUE-CUTTER SERVICE,
4154 Piedmont Avenue, Oakland, Cal.,
April 27, 1914.

Mr. E. C. ROST,
6952 Harvard Avenue, Chicago, Ill.

DEAR SIR: I wish to acknowledge receipt of your letter of the 15th instant in regard to the work of the Arctic explorers, Dr. Frederick A. Cook, of Brooklyn, N. Y., and Civil Engineer Robert E. Peary, United States Navy, retired, inclosing a copy of a letter to Dr. Cook from the late Admiral W. S. Schley, United States Navy, which I return you herewith.

You ask me for my opinion as to the merit of the claims for discovery of the geographical point, the North Pole, and in reply I wish to state that I have met both the persons referred to, have carefully studied their reports, and from the experience I have had during five cruises to the Arctic Ocean on the Pacific side in Government ships I fully indorse the view of the late Admiral Schley in his letter to Dr. Cook in every particular, and I regret very much that any public controversy ever took place betwen the two gentlemen after the hardship and suffering they so bravely had endured for the sake of national pride and science. The priority of discovery evidently belongs to Dr. Cook.

I am, sir, very truly, yours,

O. C. HAMLET,
Senior Captain U. S. Revenue-Cutter Service, retired.

STRANDBOULEVARD 114,
KOBENHAVN.

MY DEAR DR. COOK: It is very kind of you, indeed, to send me the photos of yourself and those from the voyage. I do appreciate them very much, and prize them highly amongst the other explorers. Once more, please accept my most sincere thinks.

May I congratulate you? I saw in the papers that the Congress was going to confer an honor on you. I need not tell you that I was very pleased.

I have from our mutual friend, Hamlet, received the congressional report on the Peary investigation, and was extremely interested. Good God! That committee of the National Geographic Society have certainly taken matters easy. It seems really incredible. If a similar report from the Congress have been sent out, I would be very pleased to receive it.

I am angry with Peary, as I have written and written again regarding some glacialogical work done on the ice cap on Greenland, but have never received an answer, and I presume that he does not like that I brought back the information that the Peary Channel did not exist. That's the only reason that I can find out.

Do tell me, are there in your "Through the First Antarctic Night" any glacialogical information, or have you written anything on this theme, for instance, from your Mount McKinley voyage? I am working hard with it, as I have to draw up my official report over the voyage across the northern Greenlandic ice cap. Did I ever send you my book? If not, let me know, and I will send it to you at once, and if you care for my photo I would be honored to send you one.

What definite information is there in Peary's book about his having reached the pole? Has he written anything?

With my kindest regards and thanks, I am,

Yours, faithfully,

EJNAR MIKKELSEN,
Leader Arctic Expedition to Bering Sea, Member Ziegler Arctic Expedition, Leader Ericksen Relief Expedition.

DURBAN, *April 24, 1914.*

Dr. F. A. COOK.

DEAR SIR: Most sincere thanks for your excellent book, My Attainment of the North Pole.

I've read it with the greatest interest, and I must congratulate you as the winner of the blue ribbon. By the way, permit me to tell you that I've always been one of your most ardent supporters, even in those days when the Peary gang had the run of the press and you were silent. Amongst those who have had a peep behind the curtains of Arctic exploration Peary's true character is only too well known to be commented upon and his doings are the least said infamous.

You have fought a noble fight with a true gentleman's weapon, which is more than what can be said about your antagonist, and I sincerely hope that the justice you are demanding shall not be long in forthcoming.

Hoping to have the pleasure of one day making your personal acquaintance, I beg to remain,

Sincerely, yours,

R. BERGENDAHL,
Of the Ziegler Expedition.

Address, Warberg, Sweden.

SCHOONER "CARRIE W. BABSON,"
709 Cleveland Street, Tampa, Fla., May 23, 1914.

Dr. F. A. COOK, *Chicago, Ill.*

DEAR DOCTOR: It was with much pleasure that I received your book, My Attainment of the Pole, on my arrival here from sea.

Please accept my sincere thanks for your kind remembrance, and rest assured I shall keep it as a token of the first discoverer of the North Pole.

I have sent a card in your behalf to our Congressman SPARKMAN.

Thanking you kindly once more, hoping this finds all well.

Yours, sincerely,

Capt. JOHN MARSHALL.

P. S.—You will remember the schooner *C. W. Babson*, of Gloucester, Mass. I have sailed her for the past eight years in the Central American trade.

M.

CHICAGO, ILL., *September 14, 1914.*

To whom it may concern:

During a luncheon at the New Washington Hotel, in Seattle, Wash., Wednesday, January 8, 1913, when Capt. Otto Sverdrup, his daughter, Dr. Frederick A. Cook, and myself were present, the captain said: "Dr. Cook, I have always taken a great deal of interest in your polar explorations on account of my own work in the Arctic. I have read your narrative carefully, and by the indisputable facts contained therein I am confident that you reached the North Pole."

G. W. BAKER.

Subscribed and sworn to before me this 15th day of September, 1914, Chicago, Ill.

[SEAL.]

CHAS. L. GROBECKER,
Notary Public.

UMATILLA, LAKE COUNTY, FLA., *January 25, 1911.*

Dr. FREDERICK A. COOK,
Waldorf-Astoria, New York.

MY DEAR DR. COOK: Your very kind letter of January 13, inclosing letter (copy) from Admiral Schley and yours (copy) to Hon. George Edmond Foss was forwarded me from Chattanooga to this place, where I am wintering.

I thank you for your kind expressions, and feel highly honored for your appreciation of my note.

I never had a doubt as to your success in discovering the pole, but you were from the first most unjustly and savagely treated and most so by one who should have backed you up or else be silent.

I agree with Admiral Schley that there is room enough at the pole for two, but even if Congress makes Commander Peary a rear admiral it will not convince me that he has discovered the pole. He may have done so, but his action toward you does not come up to my idea of a true sportsman.

My dear Doctor, you will not have to wait for your reward from our children's children. The American people are at times slow to see a

truth, but they generally strike it in time, and you must remember that your claim was subjected to a deluge of vituperation, and it takes time to remove this; and bear in mind—

"Truth crushed to earth will rise again."

I anticipate and heartily wish a thorough vindication of your claim. I am,

Very respectfully and sincerely,

P. J. A. CLEARY,
Brigadier General, United States Army, Retired.

—

COPY OF INDORSEMENTS ON SCHLEY LETTER.

419 WEST THIRTY-NINTH STREET,
New York City, April 25, 1914.

I believe in Dr. Cook having reached the North Pole, as I have been with him myself and as I helped him to prepare in the lonely winter months for his dash to the pole. I have always known him for a man of his word, and as for Civil Engineer Peary, I could point out more than once that he didn't keep his word; therefore I don't believe in any way in Civil Engineer Peary.

If I would not know some of the inside history and only read the published accounts of Dr. Cook and Civil Engineer Peary, I would be of the opinion that both reached the pole.

RUDOLPH FRANKE.

—

THE CREIGHTON UNIVERSITY OBSERVATORY,
TWENTY-FIFTH AND CALIFORNIA STREETS,
Omaha, Nebr., August 11, 1914.

Senator O'GORMAN, of New York:

HONORED SIR: Allow me to respectfully ask your honor to use your influence in having Congress investigate Dr. Cook's claims as to the discovery of the North Pole.

It is only fair that Congress should take up his case, as it did that of Admiral Peary, and that Dr. Cook himself should ask for such a hearing shows that he is not afraid of submitting his data to the Nation's scrutiny.

While I am personally convinced of the many advantages and even of the necessity of this investigation, my name does not in any way imply the official sanction of the Creighton University.

Respectfully, yours,

WILLIAM F. RIGGE.

—

ALBANY, *January 27, 1915.*

Dr. FREDERICK A. COOK,
Brooklyn, N. Y.

DEAR DOCTOR: I am very glad to learn that Congress is now investigating the subject of polar exploration, with special reference to the discovery of the North Pole. There has never been a doubt in my mind that your book, "My Attainment of the Pole," is a true account of results successfully and bravely accomplished by yourself, and I hope and believe that the proposed inquiry will establish your claim to priority in this great achievement. With kind regards and best wishes,

Very truly, yours,

TARLETON H. BEAN.

(Dr. Tarleton H. Bean, fish culturist, State of New York; member of the Arctic Club of America; member of Arctic expeditions to Alaska, 1880–1889.)

—

1007 CALIFORNIA-PACIFIC BUILDING,
San Francisco, June 12, 1914.

Mr. E. C. ROST.

DEAR SIR: Replying to your favor of April 15 asking for my opinion regarding the possible attainment of the pole by Dr. Frederick A. Cook, I can only suggest that opinions are usually valueless things unless based upon justifiable reasonings. I inclose herewith such reasonings regarding Dr. Cook's polar work as I have been able to arrive at, together with such matters as go to form the basis of these reasonings.

I can not believe that anyone familiar with Arctic work, or even sufficiently familiar with Arctic history to appreciate the worth of what they read, can read with an unprejudiced mind Dr. Frederick A. Cook's "My Attainment of the Pole" and not be impressed with the vivid and realistic character of the wonderful story or fail to be impressed with the intelligence, the fidelity, and the quiet, determined courage of its author. I do not believe any man sufficiently clever to construct this story as it is written without first having had the experience.

Sincerely,

ANDREW J. STONE.

(Andrew J. Stone, traveler and explorer; has traveled over almost all parts of Arctic and sub-Arctic America; also sledged the extreme Arctic coast throughout an entire winter.)

PRATT, KANS., *August 11, 1914.*

Mr. E. C. ROST,
The New Ebbitt, Washington, D. C.

DEAR SIR: I have always thought that both Dr. Cook and Peary reached the pole or got within reasonable distance of it, and I have never been able to understand why Cook has not been able to get a hearing before the proper committees and societies to pass upon his records. He is surely entitled to such a hearing.

Very truly, yours,

L. L. DYCHE.

(L. L. Dyche, member of various Peary and Cook Arctic expeditions; professor of zoology and curator of birds and mammals since 1900, University of Kansas; has made 23 scientific expeditions and hunted all over North America from Mexico to Alaska, including Greenland and the Arctic regions.)

—

OMAHA, NEBR., *January 4, 1915.*

Mr. ERNEST C. ROST,
Washington, D. C.

DEAR SIR: I have manuscript of many hundred pages for a book entitled "Has the North Pole Been Discovered?" It is ready for publication. If it is published, I shall be pleased to send you a copy. I prove beyond dispute that Peary never went to the pole and never intended to go there. I prove it by Peary himself. I show also that there is not a scrap of truthful evidence indicating that Cook did not go there. I review all that I know has been written, including the action of the National Geographic Society and the testimony at Washington in Peary's behalf.

Yours, very truly,

THOS. F. HALL.

(Thomas F. Hall, traveler, mariner, expert on comparative Arctic literature.)

—

ITHACA, N. Y., *April 21, 1914.*

Mr. E. C. ROST, *Chicago, Ill.*

MY DEAR SIR: Regarding my opinion about the discoverer of the North Pole, I have never changed my mind regarding this from the morning I received notice that Dr. Cook had reached this imaginary spot known as the North Pole, nor, a few days following, that Peary had also reached this spot. I sincerely believe both of these men have been there.

I have for a number of years been a close student of matters "Arctic," and I have had the pleasure of being in the field with both of these men. I have read every article that has come under my observation. I have talked with scientific men regarding the claims of each, from a scientific point of view, and the more I read and study on each side convinces me that both succeeded. I have also talked with Admiral Schley on this subject and can indorse his letter. I hope the controversy will come to an end. As Admiral Schley says, "there is honor enough for two."

Very truly, yours,

L. C. BEMENT.

—

ERIE, PA., *June 24, 1914.*

E. C. ROST, *the New Ebbitt, Washington, D. C.*

DEAR SIR: From my own personal knowledge of Dr. Cook I regard the doctor as an unusually competent leader, equal to the greatest emergency. He is the epitome of honor and sincerity.

Let the impartial limelight of a congressional investigation be turned onto the North Pole controversy.

The period of Arctic darkness is long and trying, but when the light appears it also is long and much more satisfying. Those who are trying to block this investigation know full well why they are more comfortable in the dark.

Sincerely, yours,

RALPH L. SHAINWALD, Jr.

(Ralph L. Shainwald, jr., explorer of Arctic Alaska.)

—

COLUMBUS, OHIO, *December 28, 1914.*

Mr. E. C. ROST, *Washington, D. C.*

DEAR SIR: In reply to your letter of the 25th instant, I would say that in the summer of 1894 I accompanied Dr. Frederick A. Cook to Greenland in the ill-fated *Miranda*, and had abundant occasion to observe his straightforward and honest character and his great resourcefulness in times of peril. When our ship was injured upon the rocks, the courage and skill which he showed in venturing 100 miles northward along the rugged coast of Greenland in a small boat to get relief prepared me for believing that he could accomplish any daring enterprise that was within reach of human effort. When, therefore, his report of reaching the pole came, my only doubt as to whether he had really reached the pole related to the difficulty of making accurate observations under the conditions in which he was placed. But when Peary's detailed report appeared it was evident that either both had been to the same place or that Peary had copied Cook's notes. In an interview which I had with Admiral Schley, a year or two before his death, he expressed to me his perfect confidence in Dr. Cook's honesty and ability to make observations, since he knew that Dr. Cook took great pains to perfect himself in handling instruments before his last Arctic tour.

Trusting that the truth in this whole matter may come out, I am,

Very truly, yours,

G. FREDERICK WRIGHT.

(Prof. G. Frederick Wright (author of "The Ice Age of America"), Arctic traveler; president of the Ohio State Archæological and Historical Society.)

—

To the Congress of the United States:

The discoveries en route to the North Pole will be an asset to future generations. By virtue of the pioneer efforts of American explorers we have a legitimate claim upon certain lands and resources of the far north. This claim will go by default until national recognition is given to the work of Arctic explorers. It would seem, therefore, to be a Federal duty to determine the validity of the work of polar explorers.

In the Hydrographic Office the money of the taxpayers is wasted by the publication of polar maps which record false data. The falsity of these maps is an insult to other nations, and a poison to the minds of future generations, for the school histories copy such false statements because they are sent out under the guaranty of the stamp of the United States Government. Is it not our duty to see that school children are taught verified geography, when the honor of the flag and the prestige of the Nation are at stake? The answer to this question compels a determination of the status of the discoveries en route to the pole.

Engineer Peary has been paid from the Navy nearly $100,000 for official services never rendered. He is now drawing a favor of $6,000 annually, not for any duty ever performed in the Navy, but by virtue of appreciation of his polar efforts. The bill gives Peary $6,000 yearly, but denies to him the credit of his claimed discovery of the pole. This denial for the credit of polar priority was forced in justice to my earlier polar attainment. There is, however, no congressional record to show that any examination has ever been made to determine the status of my demands for the claim of priority in reaching the North Pole. This Federal half action upon the work of Engineer Peary and absolute indifference to my work is an injustice to Peary; it is injustice to myself. It is an inexcusable sacrifice of national prestige. Either Peary is the discoverer of the North Pole and deserves full credit, or I am the discoverer of the pole and deserve national recognition—or the $100,000 paid to Peary should be returned to the National Treasury. For if my case is not a national issue, how is Peary's? For the Secretary of the Navy has admitted that Peary's financial advantage is not due to his services to the United States Navy.

The work of exploration and discovery has always been a legitimate field of conquest. More territory and more material resources have been placed under the flags of nations by explorers than by all the wars of all ages. The present war in Europe, like most wars

of the past, is due mostly to overreaching for spheres of influence. The nations now at war have placed millions of lives, billions of finances, on the altar of sacrifice, to win for their descendants precisely the prizes, peaceably, ethically, and honestly secured by explorers, at a very small cost. Nevertheless, the pathfinding pioneers have always been compelled to beg for mere subsistence for the battle drive into the unknown, and returning, stripped of everything but life, they have gone, usually, to their graves under a blanket of abuse. A general who has killed a thousand men is lauded to the zenith of glory during his lifetime, but he who discovers a new continent is appreciated only a hundred years after his soul wanders over the dead silence of the future.

No soldier goes to fight because he expects a reward; no explorer faces the death of tropical dangers nor the arctic tortures of famine and frost because he expects a reward. But when all is over, he does expect that a record of brotherly appreciation will be made. The polar quest, with its acquisition of territory and new resources, has been fought for 400 years and yet nearly every explorer has gone to eternity with the sting of injustice instead of the flower of timely understanding.

To obviate this during the lifetime of the men who claim to have reached the North Pole, my friends have insisted that there be a national determination of the status of the respective claims.

The discovery of the pole is not a personal matter. The flag that protects 100,000,000 people guarantees justice to the call of 100,000,000 voices for the truth of history that will be taught in the books of coming generations. In proof of this demand for Federal action my friends have offered as a documental demand petitions, letters, and official correspondence of nearly 100,000 Americans.

Contrary to a quite general impression, there never has been an official examination of the relative merits nor an investigation of the official status of the question of priority of the discovery of the North Pole. A commission appointed by the University of Copenhagen did make a preliminary examination of a part of my data, and in the case of Engineer Peary a commission appointed by the National Geographic Society did make a preliminary examination of a part of his data. But in both cases the investigation was by way of recalculation of the nautical observations. Such observations, when taken alone, do not offer adequate proof.

An explorer's record is his final official narrative. Therein he presents all the disconnected field notes and all his observations. Unlike explorers in more favored regions, the arctic traveler, with snow for a bed and ice for a pillow, with cold fingers, chattering teeth, and an ever-shivering skin, makes only brief notes. These notes only serve as reminders, a kind of shorthand tabulation of daily events. Such notations to others are not understandable, and yet in the end of 1909, when the hasty preliminary investigation was made, there was no other data accessible. The completed record was not ready until later. The first examination was therefore premature and incomplete. And furthermore, the expert opinion, the most important proof of this work, has only been expressed in the last few years.

Three bills are now pending in Congress, all aimed to adjust the claim for polar discovery and exploration.

The first (S. J. Res. 144) was introduced by Senator MILES POINDEXTER, of Washington.

The second by Representative CHARLES B. SMITH, of New York (H. J. Res. 282).

The third by Representative CHARLES B. SMITH, of New York (H. J. Res. 383).

Contrary to a quite general impression, there is no tribunal, no society or scientific bureau, that can act with authority upon the merits or validity of an explorer's reports, and therefore, in presenting the facts upon which the claims for polar discovery are based, we are confronted at once by the quest for the precedence of the rating of earlier explorers.

There have been severe and long-continued controversies following every important discovery, and since nearly all geographic societies are composed of laymen (not geographers), who pay a certain sum yearly for the privilege of membership, there is no recognized geographic society which can be regarded as a scientific body in the sense of a technical organization such as geologic and biologic societies.

By an almost universal rule the explorer's work has been protected by some form of recognition from the government whose flag was carried into the unknown. This was preceded and followed by the slow process of digestion and assimilation of the pioneer's scientific data, and, finally, all doubts were stilled by the verification of later travelers and the expert opinion of explorers and scientific experts who have made themselves specialists along similar lines of endeavor.

It is now nearly six years since the double announcement of the discovery of the North Pole. Both records have been under the microscopic eye of all the people of all the world. Time enough has elapsed to elicit the verdict of the composite intelligence of the competent judges of all nations, and, therefore, the time would seem to be opportune for a national determination of the rival polar claims.

To this end I will offer for the consideration of Congress and the special committees to which the respective bills have been sent the following abstract of the material results of my last Arctic expedition. Upon the facts herein contained, and upon the supplementary corroborative evidence and expert opinion herein presented, I base my claim for the credit of priority in reaching the North Pole. Part of this and much accessory data are included in "The Case of Dr. Cook," by Fred High, editor of the Platform, Steinway Hall, Chicago.

With the assistance of John R. Bradley, of New York, an expedition was equipped for exploring the Arctic wilds. On July 3, 1907, all arrangements were complete and we sailed in a specially equipped and rebuilt auxiliary schooner out of the harbor of Gloucester, Mass. In the end of August we arrived at Annoatok, North Greenland, at a point 700 miles from the North Pole. There, aided by John R. Bradley, I finally organized an expedition to reach by sledge the boreal center. Supplies were landed and a permanent camp was erected at Annoatok. Rudolph Franke remained as my sole civilized companion. During the long Arctic night that followed sledges were built, the equipment was perfected, Eskimos and dogs were trained for the later sledge journey over the Polar sea. Native men, women, and children extended willing hands to finally and thoroughly equip the polar sled train.

At sunrise of 1908 (Feb. 19) my expedition started for the pole, aiming to force a new route over and among the lands discovered by Capt. Otto Sverdrup.

On March 20 the last of the supporting parties returned. I had selected as my companions for the last dash two young Eskimos, Ah-we-lah and E-tuk-i-shook. We were then approximately 60 miles north of Cape Svartevoeg, in an air line 460 miles from the pole. To this point no one has ever denied my progress northward. The only point of my journey to the pole, therefore, which remains to be proven is the last 460 miles.

It is furthermore conceded by everybody that when we were later carried adrift westward on the return, that we traveled southward to Jones Sound and from there back to Annoatok and south to Upernavik. The total conceded distance, therefore, covered by my expedition, including the detours, was approximately 3,000 miles. Even if we exclude the 460 miles under dispute, my journey over the pack ice multiplies by three the longest journey over pack ice on record before or since. For the longest other journey claimed over the polar pack ice is that of Engineer Peary, and since he seems to have traveled practically in an air line from Cape Columbia to the pole, his greatest distance is 840 miles; therefore, if my detractors concede that I am able to cover more than three times the record distance on pack ice, then they also prove without further argument the efficiency of my expedition. All discussion, therefore, on the complex problem of food and equipment is met by this doubly verified journey of 3,000 miles.

Now, as to that last 460 miles, which Peary has chosen to challenge: At the very outset he keeps me in idleness on the lifeless waste of the polar ice for two months without explaining our movements. Less than a hundred miles to the south were game lands. To the north was the reachable glory of the polar attainment. It is known that we did not go south at this time. It is not reasonable to suppose that one would sit on the ice for two months to deceive himself and the world. The only rational conclusion is that we did go north, for to do so was to satisfy an ambition nursed for 20 years.

In going northward, as we reached the eighty-third parallel we crossed a great gap dividing the land-adhering pack from the more active circumpolar drift. As we neared the eighty-fifth parallel we discovered land westward. Between the eighty-seventh and eighty-eighth we crossed what seemed like ice-covered land. We reached the pole on April 21, 1908, and noted for the first time in history the physical conditions about the top of the globe. I have given along this line an abundance of scientific data by which subsequent explorers can affirm or deny my work.

On September 1, 1909, Inspector Daugaard-Jensen, the director of Danish North Greenland, wired his Government the first news:

"Dr. Cook reached the North Pole on April 21, 1908. * * * The Eskimos of Cape York confirm Dr. Cook's story of his journey."

The next message was sent to Mrs. Cook:

"Successful. Well."

In the third message I registered my claims with the International Bureau of Polar Research at Brussels. It was directed to the secretary, Prof. Georges Lecointe:

"I reached the North Pole on April 21, 1908. Discovered land far north."

En route from Greenland I had prepared a brief report of the main results of my journey to the pole. This was published in the New York Herald on September 2, 1909. Within a few days thereafter there was turned over to the New York Herald the complete original narrative as written while in the Arctic from the original observations before civilization was reached. This was published under the title, "The Conquest of the Pole," in instalments, from September 15 to October 7.

The brief and preliminary record of my polar expedition as first published in the New York Herald is a document of great importance. This is pointed out by Edwin Swift Balch in his historic analysis, "The North Pole and Bradley Land," page 42. In this first press narrative my claim, in specific detail, goes on record. Here for the first time you have the assembled data of the original field notes. At the time when this was offered for publication I had no way of knowing of Peary's later reported claims.

The final and complete record of all the important results of my expedition were assembled and published in book form under the title "My Attainment of the Pole" in 1911. (The Polar Publishing Co., Steinway Hall, Chicago.)

Through all ages explorers have been rated not by disconnected field notes, nor by a mathematical test of calculation for position, but by the careful reexamination of all the data as presented in the final publications. When to this is added the verifying and corroborative evidence of subsequent explorers, the pioneer's effort is substantiated for all time. In so far as I am able to judge the demands of an examining board, the records of the original data to support my claim as discoverer of the North Pole as above presented are complete.

We next have to deal with the corroborative evidence, the trend of expert opinion, and charges of insincerity. At the very outset of this line of examination I wish to record the broad statement that with but one exception no competent authority on Arctic exploration has ever denied my polar success after the publication of my printed narrative in book form. The one exception is the attitude of Engineer Robert E. Peary. This statement ought to receive careful investigation, for there is a widespread belief in the minds of laymen that scientific men have given an unfavorable verdict. Of course, in a controversy which has been discussed in every center of culture and in every abode of civilization where ink is put to paper it is possible to dig up arguments on every phase of the polar conquest, just as loosely gathered statistics and hasty newspaper comment can be assembled to prove or disprove the honesty of my public document. But I repeat that, to my knowledge, there does not exist an official document in any language which denies my attainment of the pole upon scientific grounds.

Whence, then, comes the widespread opinion of doubt? Some of this is due to the seeming impossibility of the task. Some disbelief followed the natural distortions, exaggerations, and misinterpretations which follow all news reports during times of eager press competition. But a little examination will show that four-fifths of the uncertainty in the public mind is due to a prearranged press campaign. I do not mean to infer that the press has been subsidized. It has been influenced, but not by $10,000 bills. Newspapers that can be bought are not worth buying; but every man in public life knows that it is possible for a half dozen men of large political and financial power to get together in Chicago or New York and start a storm which will lift or sink the public spirit of any man. This is particularly true in times of great news excitement, for at such times all newspapers of all the world are made the victims of the press bureaus of self-interest. The best proof of this is the bias of the present war news. Every statesman in Washington understands this kind of criminal injustice, and yet the malignant perpetrators of this crushing steam-roller movement keep out of jail by a show of keeping within the law.

Without malice, without attempting to ape the cheap tactics of recrimination, but simply in self-defense and in the interest of ethical justice in public life, I want to record here certain facts which upon examination will prove a press campaign which for contemptible indecency is not equaled even in the soul-blackening times of a presi-

dential campaign, for, as is well known, in this polar dispute the press of the entire world was sufficiently interested to copy the concocted stuff of the red-ink venders.

Within a few months after my expedition had departed for the Arctic, in 1907, there was a meeting of the Peary Arctic Club in New York. At this meeting there was a vigorous discussion of my action in seeking the pole. Previous to this all of my work of exploration was given dignified recognition by Mr. Peary and his cooperators. In proof of this case see the earlier Peary publications; also statements by Hon. FRANK T. O'HAIR, CONGRESSIONAL RECORD, January 22, 1915. But thereafter suspicion was thrown over all my work. Previously I had been a coworker; now I was a rival; and forthwith a press campaign was organized that would belittle my attempt to outdistance the chronic official seeker of the pole.

As an outcome of this meeting of the self-appointed Pole Ice Trust, pretending philanthropy, the first document on record is a letter sent to the International Bureau of Polar Research at Brussels, Belgium. It fell to my lot to see this letter and verify the signature of Robert E. Peary. I called for a copy, which was refused on the ground that copies of official correspondence could not be given.

At a meeting of the Royal Society of Belgium in November of 1912, which was called to discuss certain phases of the polar conquest, Prof. Georges Lecointe, the secretary of the International Bureau of Polar Research, produced this letter, and then said: "This letter is the key to the polar controversy. When you understand this you will see through the entire press campaign which followed." The American consul general was present and can verify the transactions at that meeting.

As nearly as I can remember, the letter officially charged that Dr. Cook was en route to the pole without having sought a license, without authority from any accredited organization. From which was inferred that I was an insurgent among explorers, piercing, without permission, certain reserved spheres of influence, and therefore my work was unethical, unscientific, and should not receive official recognition. Among other things in the same letter I was charged with taking Peary's supplies, using his people, following in his route. These charges, as is shown by later developments, were absolutely false. The letter ended by the following statement:

"If Dr. Cook returns and claims to have reached the pole, he should be compelled to prove it."

For two years during my absence and before any claim was made, there came to the editorial desks of a thousand papers at regular intervals press material in which my prospective efforts were belittled, while Peary's next move was to be the only official campaign for the pole, and most remarkable of all, this press material carried reports of Peary's actual work when no communication had been received from the polar regions. All of this and more is brought out in Chapter XXXIII of My Attainment of the Pole. It is furthermore verified by Robert J. Usher, quoted by Hon. LOUIS FITZHENRY in the CONGRESSIONAL RECORD December 23, 1914:

"Mr. Usher has also furnished the following letter:

"'NOVEMBER 23, 1914.

"'My own observations lead me to believe more and more firmly that any unfavorable statement against Dr. Cook from encyclopedias, magazines, or schoolbooks can be traced back to some slanderous and unverified newspaper story. All such statements would simmer down to a few, which could be labeled "Hampton's slanders," etc. Proof of the falsity of these various statements is found outside of Dr. Cook's own statements.'"

The Chicago Post in its issue of November 26, 1914, published the following letter from Mr. Usher:

To the Editor of the Post.

SIR: Why does your inspired headline writer refer to Dr. Frederick Cook as "Old Doc Cook"?

Dr. Cook was born in 1865. He is a bona fide M. D. and a member of the American Medical Association, as its latest directory attests.

If the term is used as derogatory, it is well to remember that no scientific body has ever disproved his claim of having reached the North Pole in 1908 and of having climbed to the top of Mount McKinley in 1906.

Statements discrediting Dr. Cook can always be traced to cumulated newspaper statements made without reference to facts and originally instigated, in most instances, by a press bureau whose sole purpose was to destroy Dr. Cook's good name.

ROBERT J. USHER,
Assistant Reference Librarian John Crerar Library.

This press propaganda will be referred to later. Here I wish to record that my report of the discovery of the physical condition about the pole in April, 1908, as published on September 2, 1909, in the New York Herald, is the first information we have of the boreal center.

Engineer Peary, with his widely heralded expedition, left the shores of the United States one year later. He therefore left civilization about three months after I had reached the pole. The question of priority is established by the fixed dates of departure. The question, therefore, now at issue is not one of dates, but did either polar claimant reach the pole?

In the bill which retired Peary on a pension of $6,000 per year Congress has conceded that Peary reached the pole on April 6, 1909, but his claim of being the only polar victor was denied by Congress in eliminating from the pension bill the words "discovery of the pole." It would seem in the light of this Federal record that Peary's claim for recognition is closed, but the question of credit for priority is open.

This phase of the polar conquest in the interest of national prestige and to give an official record for the benefit of our school children is thoroughly summed up by the Hon. LOUIS FITZHENRY. (See CONGRESSIONAL RECORD of Dec. 23, 1914.)

Engineer Peary's first report, wherein he gave his observations of the physical conditions about the pole, was issued about a week later than mine. In it he denied my success. If therefore he unconsciously and unwillingly proves the validity of my claim, he is a witness of double value.

An examination of Peary's various publications will prove conclusively that his report is a scientific parallel of mine. This was first noted by the late Rear Admiral W. S. Schley and later substantiated by the researches of practically all Arctic explorers.

This comparative study of the data by which Peary proves my position step by step is really remarkable, more especially when it is remembered that Peary is on record as saying that "Dr. Cook has handed the world a gold brick."

By a careful search through the published official records Mr. E. C. Rost has plotted this parallel scientific data. This is verified by S. J. Entrikin, Ralph J. Shainwald, Maurice Connell, L. C. Bement, Capt. Edward A. Haven, Dr. Middleton Smith, and other Arctic explorers. (Hon. FRANK T. O'HAIR, CONGRESSIONAL RECORD, p. 2311, January, 1915.)

A careful study of this relief chart (Fred High, The Case of Dr. Cook) of comparative polar data by Rost proves the statement of the late Rear Admiral Schley that "each is the eyewitness of the other's success," or that he who came second copied the first reports.

On this chart it will be noted that Peary's report confirmed mine in every important scientific detail. My account of the physical conditions about the pole did not fit any previous theory. Peary's report in substance was a parallel of mine. Peary denied my success and said that he was the only one who had reached the pole. If he therefore unconsciously proves my case, he is a witness of double value. The existence of the lands which I have reported are proven by Peary's description of land-divided ice farther east and by other similar parallel data, and thus my position is absolutely established to and beyond the eighty-eighth parallel, and Peary's position to within 100 miles of the pole is proven by a similar comparison.

This leaves only about 100 miles of the disputed 460 miles to verify. Over this last 100 miles and at the pole I have reported an absence of land and life; a sea of highly colored moving ice, composed of large, smooth ice fields. Here and elsewhere I have reported winds, thermometric records, tidal action on the pack, physical conditions of the sea ice. These and all the minutest detail down to the psychology of the men with me are confirmed by parallel statements by Peary in his official narrative.

Rear Admiral W. S. Schley was one of the first to note that Peary's report was in reality a scientific duplicate of mine, and that by his parallel material my position was verified and proven. In the end of 1909, at the time when it was popular to belittle and ridicule my work, Schley said his judgment was made upon his knowledge of Arctic conditions; that he had gone over both accounts carefully, and that it would take more than an academic lever to change his mind. Again, a year later, Admiral Schley placed himself on record by the following letter:

1826 I STREET,
Washington, D. C., January 7, 1911.

DEAR DR. COOK: I thank you very much for your kind letter, and I assure you that I have never varied in the belief that you and Civil Engineer Peary reached the pole. After reading the published accounts daily and critically of both claimants I was forced to the conclusion from their striking similarity that each of you was the eyewitness of the other's success.

Without collusion it would have been impossible to have written accounts so similar, and yet, in view of the ungracious controversy that has occurred since, that view (collusion) would be impossible to imagine.

While I have never believed that either of you got to within a pin point of the pole, I have steadfastly held that both got as near the goal as was possible to ascertain, considering the imperfections of the instruments used, and the personal errors of individuals under circumstances so adverse to absolute accuracy.

Again, I have been broad enough in my views to believe that there was room enough at the pole for two, and never narrow enough to believe that only one man got there.

I believe that both are entitled to the honor of achievement.

Yours, very truly,

W. S. SCHLEY.

This letter was sent out by the Associated Press on January 11, 1911. When Henry Gannett, one of Peary's experts, read this in the papers, he phoned Admiral Schley and asked if he had written it. Admiral Schley answered, "Yes; what is the matter with it? Isn't it a good letter?"

More than 50 other Arctic explorers and scientific experts have either in private letters or published statements expressed a similar opinion.

This, with the detailed records as published in my narrative from original documents and photographs, I offer as proof to substantiate my claim as being the first to reach the North Pole.

And, as further proof, let us note that my opponents do not argue on the merits of polar exploration, but by a series of side issues, such as the distorted news reports on the Mount McKinley ascent, the yellow journal "confessions," the false reports of the Danish verdict, and a dozen other press explosions. I am ready to go before a committee acting for the United States Government to present the other scientific results of my polar effort, and also to meet one and all of the insinuations aimed to undermine the sincerity of my work.

To be able to present an unbiased expert opinion of the observations to determine geographic location taken en route to the pole Mr. Clark Brown, of Albany, N. Y., has reported as follows:

RECALCULATIONS AND VERIFICATIONS OF NAUTICAL OBSERVATIONS.

[By Clark Brown, of Albany, N. Y.]

Though Dr. Cook has never claimed absolute accuracy for his observations, they are found to be at least as accurate and more complete than those of Mr. Peary. In fairness to Mr. Peary and those who have pronounced in his favor solely upon the nautical data, Dr. Cook has insisted that his observations be given the same test as was given to Peary's data by the congressional investigators.

After having seen and studied Dr. Cook's original field papers upon which his most important observations were calculated, and after having seen his day-by-day log book as written in duplicate while in the Arctic, I compared the original notes and data with the published statements, and I have reached the following conclusions from the quoted source:

The following extracts from Dr. Cook's book My Attainment of the Pole and the connecting explanatory notes supply the data for and are illustrated by the diagram. (Diagram of polar observations, by Clark Brown.)

"Our course when arriving at the pole," says Dr. Cook, on pages 288 and 289, "as near as it was possible to determine was on the ninety-seventh meridian. The day was April 21, 1908. It was local noon. The sun was 11° 55′ above the magnetic northern horizon. My shadow, a dark, purple-blue streak, with ill-defined edges, measured 26 feet in length. The tent pole, marked as a measuring stick, was pushed into the snow, leaving 6 feet above the surface. This gave a shadow 28 feet long.

"Several sextant observations gave a latitude a few seconds below 90°, which, because of unknown refraction and uncertain accuracy of time, was placed at 90°. Other observations on the next day gave similar results, although we shifted camp 4 miles toward the magnetic south."

On page 573 we find a transcript of his log book from which we see that on April 20 he set his course for the ninety-seventh meridian, and on April 21, 1908, he traveled from 1 a. m. to 9 a. m., covering 13½ miles. Having made camp, he slept in the tent a short time; and then, after the observations at noon, from which he figured his position as latitude 89° 59′ 45″, he advanced 14″ (shown in manuscript as —pd 14—), and pitched the tent, made a snow house, and prepared for two rounds of observations. During the time occupied in taking these observations he moved camp 4 miles magnetic south. This change of position is spoken of on pages 289, 296, 302, and 573. On page 296 he says:

"At 6 o'clock, or six hours after our arrival at local noon, I arose, went out of the igloo, and took a double set of observations. Returning, I did some figuring, laid down on my bag, and at 10 o'clock, or four hours later, leaving Ah-we-lah to guard the camp and dogs, E-tuk-i-shook joined me to make a tent camp about 4 miles to the magnetic south. My object was to have a slightly different position for subsequent observations.

"Placing our tent, bags, and camp equipment on a sled we pushed it over the ice field, crossed a narrow lead of sheeted young ice, and moved on to another field which seemed to have much greater dimensions. We erected the tent, not quite two hours later, in time for a midnight observation. These sextant readings of the sun's altitude were continued for the next 24 hours."

All the observations herein mentioned are found grouped on page 302, as follows:

The sun's true central altitude at the pole April 21 and 22, 1908:

Seven successive observations taken every six hours. Each observation is reduced for an instrumental error of —2′; for semidiameter and also for refractions and parallax, —9′. The seven reductions are calculated from sextant readings, generally of an upper and lower limb.

[Taken from Dr. Cook's field notes.]

[April 21, 1908.]

Ninety-seventh meridian local time, 12 o'clock (noon), 11° 54′ 40″.
Same camp, 6 p. m., 12° 00′ 10″.
Moved camp 4 miles magnetic.
South, 12 o'clock (midnight), 12° 3′ 50″.

[April 22, 1908.]

Six o'clock a. m., 12° 9′ 30″.
Twelve o'clock noon, 12° 14′ 20″.
Six o'clock p. m., 12° 18′ 40″.
Twelve o'clock midnight, 12° 25′ 10″.
Temperature, —41. Barometer, 30.05.
Shadow, 27½ feet (of 6-foot pole).

From these observations on page 302 I have computed the mean position of the pole. The data from the Nautical Almanac required in reducing the observations are the sun's declination and the hourly change at Greenwich apparent noon as follows:

1908	Declination.	Hourly change.
	° ′ ″	″
Apr. 21, noon	11 48 57.5	50.96
Apr. 22, noon	12 9 14.9	50.47
Apr. 23, noon	12 29 20.4	49.46

Having plotted the relative positions of the three camps in the immediate vicinity of the pole, I gave each a name. The first tent camp is called "Stop 1." The snow igloo is called "Camp Ah-we-lah's Farthest." The extreme tent is called "E-tuk-i-shook's Farthest."

After reducing each observation separately, I plot the approximate result of each observation in its relation to the sun and the observer's station. The notation Obs. 1, Q 1, and P 1 is used to show the positions of the observer and the sun at the time of the observation, and the position of the pole is indicated by the first observation. The same notation, numbered consecutively, is used for the subsequent observations.

The mean position of P 1, P 3, P 5, and P 7 gives the accepted position of the pole in one direction, while P 2, P 4, and P 6 locate it the other way. From this mean result the meridian and parallels are drawn. I have used the character "Q" to represent the sun and have taken a minute arc equal to a mile, to follow the practice of the United States Navy. The finished drawing and the table of computations have been verified by a number of experienced engineers, who have appended their signatures and have given their colleges and degrees.

While some allowances must be made for error by refraction and time, Dr. Cook's observations prove that in his march between camps on April 21, 1908, and again on April 23, he was within a fraction of a mile of the North Pole, and that at his last camp he was about a mile beyond the pole.

An additional proof of the reasonable correctness of Dr. Cook's observations is brought out in a study of the variation of the compass en route to the pole. (Map of Magnetic Variation in the North Polar Region. Compiled by Clark Brown, Albany, N. Y.)

CLARK BROWN, *Albany, N. Y.*

There has been much idle speculation in the press about "records and proofs" of an explorer's doings. The proof and record of a voyage of discovery are the assembled data of the official reports, which are usually published in book form. Upon the records there presented an explorer is judged by future generations.

Since the publication of my complete report in book form in 1911, there has not, to my knowledge, been published in English or any other language, as indicated before, a single authentic paper or document or book which denies my polar attainment on scientific grounds. On the other hand, from a historical standpoint the validity of my work is supported and the insinuations against it are invalidated by many publications. Foremost among these is the book from the pen of the geographic historian, Edwin Swift Balch, entitled "The North Pole and Bradley Land," Campion & Co., Philadelphia.

Mr. Fred High, in his "Case of Dr. Cook," summarizes the scientific deductions of Balch as follows:

"Before taking up Balch's unbiased analysis of the evidence of the North Pole discovery, it should be remembered that the work of Admiral Wilkes in the Antarctic came under the unfair criticism of rival interests, as did Dr. Cook's journey to the pole. For more than 50 years the name of Wilkes was taken from the map. Balch analyzed this injustice, fought the battle for Wilkes during 15 years against critics, including the Encyclopedia Britannica, and at last the Australian expedition rediscovered Wilkes Land, and thus Balch won against the onslaught of Sir Clements Markham and others.

"The study of the polar controversy by Balch was worked out in a similar way. It is difficult to give an abstract, but we can quote his conclusions:

"Balch strongly emphasizes the fact that Dr. Cook could not have had anything on which to base his description of physical conditions north of 83.20° north latitude; and as Dr. Cook's descriptions agree with those later given by Peary on a parallel route farther east, there could be no doubt that Dr. Cook's journey was made and that the line of his march across was first executed.

"The reason for this is that these statements can be based on nothing but Cook's own observations, for Cook started from Denmark, from south Greenland, before Peary started for Labrador from north Greenland, and therefore everything that Cook stated or wrote, published immediately after his arrival in Europe, must be based on what Cook observed or experienced himself.

"Cook's original narrative stands on its own merits; it is the first and most vital proof of Cook's veracity, and yet it has passed almost unnoticed.

"There are three points in particular which claim attention. The first is the account of the land sighted in 84.20° north to 85.11° north—Bradley Land. The second is the glacial land ice in 87.88° north. The third is the account of the discovery of the North Pole and the description of the ice at the North Pole.

"Cook's first great discovery, the writer holds, was Bradley Land, named after his friend and backer. The land, Cook declared, had a great crevasse in it, making it appear like two islands, the southerly one starting at 84.20° north. Peary made no mention of land north of 83.20° north. But he corroborated Cook about Bradley Land by sounding in 310 fathoms a little below 86° north. Bradley Land is placed on Peary's own map.

"'The second discovery of Cook's is the glacial land ice in 87° north to 87° north—88° north,' says the writer. 'A closely similar occurrence was observed by Peary on his 1906 trip in about 86° north 60° west.'

"But the most important particular in which the two men agreed, in the mind of Mr. Balch, is in their description of the ice at the pole. Cook reported that it was 'a smooth sheet of level ice.' The writer adds: 'If that description of the North Pole is accurate, the writing of it by Cook, first of all men, on the face of it is proof that Cook is the discoverer of the North Pole.'

"But not only was the ice at the North Pole smooth and level, but the snow there was 'purple' in the story of Cook, a detail in which he was again borne out by Peary.

"'Purple snow,' says the writer, 'is linguistic impressionism, an attempt to suggest with words what Frank Wilbert Stokes has done with paints in his superb pictures of the polar regions. Hence,' he says, 'the use of the word "purple" by Dr. Cook, who is not a trained artist, proves that he has the eye of the impressionist painter, and that he is an extremely accurate observer of his surroundings.'

"That Cook's description is accurate is, in the next place, certified to by Peary. Peary corroborates Cook absolutely about conditions at the North Pole; and Cook is corroborated by Peary not only by what Peary saw but by what he did. If there was anything in the western Arctic, between the North Pole and 87.47° north, but an 'endless field of purple snows,' smooth and slippery, Peary could not have covered the intervening 133 geographical miles in two days and a few hours. Peary therefore, from observation and from actual physical performance, proves that Cook's most important statement is true.

"The evidence is thus examined step by step. The statements of the two men are compared word by word, and this is the conclusion reached:

"In view of all these facts, it becomes certain that Cook must have written his description of the North Pole from his own observations, for until Cook actually traveled the western Arctic, between 88° north and the North Pole, and told the world the facts, no one could have said whether in that area there was land or sea, nor have stated anything of the condition of its ice, with its unusual, perhaps unique, flat surface.

"But Cook, in his first cable dispatch, stated definitely and positively and finally that at the North Pole there was no land, but sea frozen over into smooth ice, and Peary confirmed Cook's statements.

"Cook was accurate; and the only possible inference is that Cook was accurate because Cook knew, and the further inevitable conclusion is that since Cook knew, Cook had been at the North Pole.

"In Europe there has been a general reexamination of the rival polar claims, and since the publication of the work of Edwin Swift Balch the trend of opinion of historic geographers has gradually vindicated Dr. Cook. Prof. Otto Baschin, president of the Geographical Institute of the Berlin University, has published in the Berliner Tageblatt for July 27, 1913, also in Petermann's Mitteilunger, No. 59, a scientific analysis of the injustice of the polar controversy, in which he says that Dr. Cook has been unjustly suspicioned and wronged; that his proofs are sufficient.

"'Gradually,' says Baschin, 'voices from everywhere are heard to take up Dr. Cook's cause in his favor, and the truth of his reports of the attainment of the North Pole is now generally believed and accepted.'

"Among many other European authorities, Dr. Fritz Machatschek, of Austria, in the Deutsche Rundschau für Geographie, Vol. I, No. 36, 1913–14, makes out a clear case for Dr. Cook. After examining the evidence for and against the polar claims, he comes to the following conclusion:

"'If Cook had really wished to fool the world, if his wholly competent report (his book) which is before me, with the picturing of the most fearful overwintering of 1908 was only a chain of lies (as his detractors declare), and he in reality went only a few days' march to the north from Axel Helberg Land, then one must ask, Why did he not turn backward in the same year to the Eskimo settlements in the northern part of Greenland; why did he not want the world to believe that he could make the round trip to the pole in one summer, just as Peary did it? Why did he voluntarily winter far from all relief stations?

"'By unprejudiced judges Cook's attainment of the North Pole can not be denied, and the words of Balch will help to spread this verdict.'"

By a careful examination of the brief outline of the most important data resulting from my journey en route to the pole any group of men of average intelligence can come to a reasonable conclusion on the validity of my polar attainment. There remains but one phase: What is the verdict of expert opinion? I have given the opinion of the geographic historian, but what is the opinion of the polar explorer?

When Engineer Peary, reporting his work a year later than mine, wired that he had "nailed the Stars and Stripes to the pole" in a glad-handed spirit I wired Peary my congratulations and said there was room enough and honor enough at the pole for two. His reply to my friendly attitude was the famous "gold-brick" message: "Dr. Cook has handed the public a gold brick," and thereafter Peary made himself witness, judge, and jury in a case where Peary was to derive the benefit. All of this is now newspaper history, but a brief review of this phase of the polar controversy is likely to be placed under the eyes of men who aim to determine the justice of both polar claims.

Following the "gold-brick" message Peary chose to force a press campaign to deny my success and to proclaim himself as the sole polar victor. Peary aimed to be retired as a rear admiral on a pension of $6,000 per year. This ambition was granted, but Congress rejected his claim for priority by eliminating from the pension bill the words "discovery of the pole." This, of course, was done because of my prior work. The European geographical societies, forced under diplomatic pressure to honor Peary, have also refused him the title of "discoverer." By a final verdict of the American Government and of the highest European authorities Peary is therefore denied the assumption of being the "discoverer of the pole," though his claim as a rediscoverer is allowed. The evasive inscriptions on the Peary medals prove this statement, and the CONGRESSIONAL RECORD gives the final Federal verdict.

During the time of the intense newspaper controversy it seemed to be desirable to bring the question to a focus by submitting to some authoritative body for decision. Such an institution, however, does not exist. Previously explorers had been rated by the slow process of historic digestion and assimilation of the facts offered, but it was thought that an academic examination must meet the demands. Engineer Peary first submitted his case to a commission appointed by the National Geographic Society of Washington, D. C. This is a private, unofficial organization, in which anybody is admitted as a "national geographer" upon payment of $2 per year. It is, furthermore, well known that this society was financially interested in Peary to the extent of $25,000, and some of its favored members were the recipients of valuable furs and trophies. Common decency would demand that an organization with a monetary interest and whose members had received illegitimate favors would withdraw as a jury, but a little investigation will show that such ethical justice does not enter the realm of the National Geographic Society.

This society did fully and freely indorse Peary as the "discoverer of the North Pole," and its action was indorsed without independent examination by other American societies. However, a year later in Congress the same men who acted as a commission of experts for the above society unwillingly admitted that from a nautical standpoint there was in Peary's proofs no positive proof.

My data were sent to a commission appointed by the University of Copenhagen. The Danes reported that the material presented was incomplete. This statement, however, did not carry the interpretation that the pole had not been reached. The Danes have never said, as they have been quoted by the press, that I did not reach the pole; quite the contrary; the University of Copenhagen conferred the degree of doctor of philosophy and the Royal Danish Geographical Society gave a gold medal, both in recognition of the merits of the polar effort.

This early examination was based mostly upon the nautical calculations for position, and both verdicts when analyzed gave the version that in such observations there was no positive proof. The Washington jury ventured an opinion. The Danes refused to give an opinion, but showed their belief in my success by conferring honorary degrees.

It is the unfair interpretation of the respective verdicts by the newspapers following an admiral-making propaganda that precipitated the turbulent air of distrust which previously rested over the entire polar achievement. All this, however, has now been cleared by the final word of 50 of the foremost polar explorers and scientific experts.

In so far as they were able to judge from all the data presented in the final books of both claimants, the following experts have given it as their opinion that I reached the pole:

Rear Admiral W. S. Schley, United States Navy, commander of the Greely relief expedition.

Capt. Otto Sverdrup, discoverer of the land over which Dr. Cook's route was forced.

Capt. J. E. Bernier, commanding the Canadian Arctic expeditions.

Prof. G. Frederick Wright, author of The Ice Age of North America.

Brig. Gen. P. J. A. Cleary, retired.

Prof. W. H. Brewer, for 16 years president of the Arctic Club of America.

Prof. Julius Payer, of the Weyprecht-Payer expedition.

Prof. L. L. Dyche, member of various Peary and Cook expeditions.

Mr. Edwin S. Brooke, jr., of the Crocker Land expedition.

Mr. Maurice Connell, of the Greely expedition and the United States Weather Bureau.

Prof. Samuel P. Orth, Cornell University, *Miranda* expedition.

Mr. Samuel J. Entrikin, second in command, Peary expedition, 1894.

Dr. Middleton Smith, Point Barrow expedition.

Capt. O. C. Hamlet, United States Army, Arctic Revenue Service.

Capt. E. A. Haven, of the Ziegler expedition.

Prof. Otto Baschin, president of the Geographical Institute of the Berlin University.

Dr. A. Wedemeyer, of the German imperial marine department.

Mr. Andrew J. Stone, explorer of the north coast of America.

Dr. Dillon Wallace, Labrador explorer.

Mr. Edwin Swift Balch, author of The North Pole and Bradley Land.

Capt. Ejnar Mikkelsen, leader of expeditions to Bering Sea and east Greenland.

Capt. R. Bergendahl, Fiala-Ziegler expedition.

Commodore John Byers Wirt, commanding naval veterans, United States Navy.

F. Hopkinson Smith, author, artist, traveler.

Capts. Johan Menander, B. S. Osbon, and Thomas F. Hall.

Messrs. Henry Biederbeck, Frederick B. Wright, F. F. Taylor, Ralph H. Cairns, Theodore Lerner, M. Van Rysselberghe, J. Knowles Hare, Charles E. Rilliet, Homer Rogers, R. C. Bates, E. C. Rost, L. C. Bement, Clarence Wychoff, Alfred Church, Archibald Dickinson, George B. Butland, Ralph Shainwald, Henry Johnson, Clark Brown, W. F. Armbruster, John R. Bradley, Harry Whitney, and Rudolph Franke.

Drs. T. F. Dedrick, H. J. Egbert, W. H. Axtell, A. H. Cordier, and Henry Schwartz.

Father William F. Rigge, astronomer, Creighton University.

Judge Jules Leclercq and Prof. Georges Lecointe, secretary of the International Bureau of Polar Research; and others.

Thus indorsed by practically all polar explorers, my attainment of the pole and my earlier work of discovery and exploration is further established by the following honorary pledges of recognition (these are now in my possession, the press reports to the contrary being untrue):

By the King of Belgium, decorated as knight of the Order of Leopold.

By the University of Copenhagen, in conferring the degree of Ph. D.

By the Royal Danish Geographical Society, presentation of a gold medal.

By the Arctic Club of America, presentation of a gold medal.

By the municipality of the city of Brussels, presentation of a gold medal.

By the Royal Geographical Society of Belgium, presentation of a gold medal.

By the municipality of the city of New York, with the ceremony of presenting the keys and offering the freedom of the city.

By the physicians of Benton Harbor, Mich., presentation of a gold medal.

Without denying Engineer Peary's success, I note that his case rests upon the opinion of three of his official associates in Washington. Three men acting for a society financially interested—three men who have never seen a piece of polar ice—have given it as their opinion that on April 6, 1909 (about a year after my journey), Mr. Peary reached the pole. By many this was accepted as a final verdict of experts for Peary; but are such men dependable experts? Furthermore, the mere fact that Peary was under a pension of $6,000 per year during the agitation of the rival polar claims has forced the final public opinion that Peary is officially accepted as the discoverer of the pole. No such injustice was intended by Congress, and this misinterpretation surely forces the action to make my prior claims as discoverer of the North Pole a Federal issue. In the interest of fair play, we, in a democratic form of government, will not concede that a pension and a uniform decides a question of national honor.

In the above outline of my claim for recognition as discoverer of the North Pole I have tried to indicate five independent methods of examination and verification:

First. An examination of the important data embodied in my various reports which have been issued as public documents. These are the official records of the expedition. This I am ready to supplement by the accessible field notes and photographs.

Second. The comparative method of verification which was indorsed by Rear Admiral Schley, which has been plotted by Mr. E. C. Rost and also verified by a number of Arctic explorers.

Third. An examination and recalculation of the nautical observations for position as outlined by Clark Brown and verified by competent experts.

Fourth. The acute historic analysis and certification of certain facts and stages of progress as outlined by Edwin Swift Balch in his book, "The North Pole and Bradley Land."

Fifth. The expert opinion of the Arctic explorers of all nations. This ought to be supplemented by calling upon expert witnesses of living explorers and scientific men who specialize in this line of research.

If there is any other method of examination that it is thought important to pursue, I am ready to offer all the assistance I can. All that I have ever asked for is a fair hearing and a fair understanding, and my main object in getting the data of my voyage of polar discovery and exploration before Congress is to have a Federal record for future generations, which record will fortify our claims to new lands and valuable resources of the north.

In reply to the many insinuations against the sincerity of my polar efforts I ask the privilege to record that every vehicle of doubt was rolled out of the Peary admiral-making camp. However, fate has been unkind to Peary, for to-day every side attack that he has forced on me can be used with double force against Peary. It would seem that in a sportsmanlike claim for national honor the scientific merits of the work in question would be the sole test. I have answered all in the last pages of the book, "My Attainment of the Pole." Peary chose to paint his anger and animosity in the flaring red ink of a press campaign. In his book, "The North Pole," Peary ignores his previous desperate attempt to disprove my prior claim by the mere assertion that he is the "discoverer," and that no one else could reach the pole without adopting the "Peary system."

However, it is worthy of note that no one since has adopted the "Peary system," neither Amundsen, Scott, or McMillan, and that the best record of this "system" is less than one-third of the conceded distance covered by my system. Peary has spent about a million dollars to build his system; mine has cost less than $10,000. An investigation of the comparative scientific results of the two systems will bring out some important lessons for future explorers.

I do not ask that the floor of Congress be used to air a personal dispute. Indeed, I have always taken the ground that the cheap tactics of trying to bury the main issues by side attacks should not be dragged into a contest for national honor. If, however, this simple problem of proving my claim for the credit of priority in reaching the North Pole is to be rated by side issues, then I do ask for the common justice of a court of law wherein the credibility and self-interest of the venders of distrust be first examined, and, above all, I want the opportunity of facing my accusers.

Since the introduction in Congress of the various bills bearing upon the polar problem every Senator and Representatives has been sent certain abusive letters and publicity material. On the desk, therefore, of every Congressman there is proof that this battle is to be fought, not upon the merits of the work, but upon the striking force of insinuations upon personal veracity. If this is to be the method of examination, I am ready to open the back pages of my past life and will insist upon going into the minutest detail; but in such an event both polar claimants should be judged by the same standard, and, furthermore, the men responsible for the campaign of doubt should first be put under a similar test.

As a prelude to this kind of examination I wish to record an outline of the admiral-making campaign, from which, I am ready to prove, emanated every charge against my sincerity. This, it will be remembered, was begun two years before my return from the north.

In the end of September, 1909, when the public wearied of Peary's unsportsmanlike attitude, mostly because of his "gold-brick" messages, Peary wired Gen. Thomas Hubbard to meet him to direct a campaign against Dr. Cook. The editor of the New York Times was also summoned. This part of the deal is a matter of public record in the press of the day, but the doings behind closed doors that followed have never been made public. Thereafter, however, with but one exception (record of Peary's injustice about Benton Harbor, Mich.; documents published of Benton Harbor November 18 to 24, 1913), Peary became a mental prisoner of Hubbard. The New York Times and its affiliated papers became the mouthpiece of a new campaign, best designated as the admiral-making propaganda. Herbert L. Bridgman, the self-confessed

mental valet of Hubbard, had previously wired Peary over the New York Herald wires to put a soft pedal on future "gold-brick" messages. Thereafter Gen. Hubbard became Peary's press agent and Bridgman the dispenser of pro-Peary press fabrications.

It is known that Gen. Hubbard was the president and his underling, Bridgman, was secretary of the Pole Ice Trust, otherwise known as the Peary Arctic Club. The Pole Trust was changed to a Peary press bureau, and to prove the power of this press bureau Bridgman told Clark Brown, of Albany, N. Y., that $350,000 had been subscribed "to see Peary through." The millionaire press agent, Gen. Hubbard, told Belmore Browne, of Tacoma, that he would spend his last dollar to beat Dr. Cook, and forthwith money began to pour into the melting pot of polar defamation. Another tin soldier, the would-be United States Senator known in Tacoma as "Slippery Jim Ashton," was engaged for a mysterious mission. Ashton had learned something in his campaign for the Senate, and he added his slippery political methods to the slime-dispensing Hubbard's methods. On the day before New York officially received me as the discoverer of the North Pole by offering the honor of the freedom of the city there appeared a press broadside of false statements, like that which is concocted against a candidate for office on the day before election. Gen. Ashton was the self-confessed vender of this. Gen. Hubbard was the instigator, and Peary was the profit sharer. In this full page of press material, by which 1,000 papers were made a party to the conspiracy, it was attempted to show that Mount McKinley had not been climbed by me as I had previously described. Gen. Hubbard next paid some $8,000 to Belmore Browne and others to gather anti-Cook reports bearing upon the ascent of Mount McKinley. These reports were recently sent to various Congressmen with letters from Gen. Hubbard. If the examining board aims to go further into this problem, I am ready to present other documents.

For the present I propose to support my first ascent of Mount McKinley by the following documents:

1. The official record of the expedition, "To the Top of the Continent"; Doubleday, Page & Co., New York.
2. Chapter 34 of "My Attainment of the Pole," third edition; Polar Publishing Co., Steinway Hall, Chicago.
3. "Mount McKinley: Its Bearing on the Polar Controversy," by E. C. Rost.
4. "Mount McKinley and Mountain Climbers' Proofs," by Edwin Swift Balch.
5. Hon. Frank T. O'Hair, Congressional Record, January 22, 1915.

In further proof of this vile press campaign, I offer an article by Elbert Hubbard, The Philistine, "Article on Arctic explorers," page 161.

Since Elbert Hubbard says that he was on the editorial list of a publicity bureau, and since it is known that this bureau reaches 6,000,000 people daily, the article in question, though not intended as scientific data, would seem to be material proof of a very far-reaching press propaganda, and again I repeat it is, furthermore, this same press propaganda which is responsible for most of the polar distrust.

Following the black-hand efforts of the Mount McKinley attack, Gen. Hubbard and his hirelings moved camp to the Hubbard Memorial Hall at Washington, D. C. Here Gen. Hubbard and his agent, Gilbert Grosvenor, are engaged in a get-rich-quick scheme which they call the National Geographic Society. In return for the easy cash of $2 per year, Grosvenor makes a national geographer with equal facility of a street sweeper or a diplomat; all who will pay the $2 get by post a highly colored certificate of membership. This certificate, for bald-faced dishonesty and deception, would put federally suppressed mining stocks to shame. Three hundred thousand people are thus deceived to become members of this organization, which, with inconceivable vanity, calls itself the National Geographic Society, referred to in the following resolution:

In the House of Representatives,
January 21, 1915.

Mr. Smith of Maryland submitted the following resolution, which was referred to the Committee on the Post Office and Post Roads and ordered to be printed:

House resolution 709.

Whereas the National Geographic Society of Washington, D. C., a private enterprise, enjoys privileges granted by the Post Office Department which are not granted to other magazines, but which the Third Assistant Postmaster General, in a letter dated January 26, 1914, says he has and is conceding to the National Geographic Society; and

Whereas this discrimination by the Post Office Department in favor of the National Geographic Society means a loss of over $300,000 annually to the Post Office Department; and

Whereas since the National Geographic Society is not national (in the sense that it is not a bureau of nor connected with the National Government in any capacity whatsoever), is not geographic, is not scientific, and is not a society, but is simply and solely a private publishing house, no special privileges should be granted to it: Therefore be it

Resolved, That the Postmaster General explain to Congress why privileges amounting to discrimination are granted to the private enterprise known as the National Geographic Society.

Gen. Hubbard easily annexed this society to the North Pole Trust. Its treasury was separated from $25,000 to get in on the ground floor with Peary. This $25,000, by the way, was the price paid for the privilege of acting as a jury for Peary and Hubbard. The same Gen. Hubbard, as admitted by ex-President Taft, requested the President to see Peary through on the admiral-making trail. All of this is recorded in the Congressional Record and elsewhere, if the examining board chooses to investigate the injustice of this kind of double-dealing.

The part of this same campaign which is material just now is recorded in the various efforts by which Gen. Hubbard has tried to prevent a bearing on the bills now before Congress. First, Grosvenor made his rounds among the Congressmen lobbying for Peary and serving out Gen. Hubbard's insinuations about the ascent of Mount McKinley.

This was followed by personal letters with books to Congressmen, always about Mount McKinley.

A little later a Philadelphia lawyer, by the name of Alexander, took up the Hubbard burden by sending letters to Congressmen, accompanied by a nameless and dateless press sheet. This press sheet is the duplicate of an anonymous letter signed "Veritas," which previously was sent all over the country by some one. Again in this the Hubbard McKinley fabricated charges were sent out. The spineless Alexander soon wearied of his task, and that congressional laundry now used by those who have dirty national linen to wash—the Congressional Information Bureau—was pressed into service. As is well known, since lobbying has become unhealthy, this bureau is substituted for the former Capitol gum shoers, and mail carriers are made to do the work for which former lobbyists were sent to jail. Again, by this method Gen. Hubbard's false statements about Mount McKinley were sent out.

Mount McKinley has no connection with the conquest of the pole; but since it is the illegitimate creation of the Hubbard-Peary family; since it is the white hope of the North Pole Trust and its subsidiary, the National Geographic Society; since Gen. Hubbard has wagered his millions in raising this white hope, by all means from this angle it is a material subject for investigation.

It will be remembered when I returned and reported an average speed of 15 miles per day, Gen. Hubbard and company charged me with the crime of exceeding the polar speed limits. When Peary returned, reporting a speed that doubled mine, there was a dead silence in the Pole Trust.

About two months ago Donald B. McMillan reported the disappearance of Peary's "Crocker Land." Again there is dead silence in the Hubbard-Peary camp. Why?

Again I insist, if the claims for polar honors are to be judged by past records, ethics, and morals, I accept the challenge, but I want to face my accusers.

As one of the interested parties of an unjustified and unwarranted controversy I am bound to give vent to the pain of the whip of injustice which has been snapped at me, but all I ask for is a verdict on the merits of my polar efforts. I bear no malice to anyone. I do not claim to have placed my hat on the North Pole; I do not claim to have placed my feet on the pin point of the earth's axis. I certainly did not nail a piece of bunting to a pole of frozen air, but I do claim to have lifted the Stars and Stripes first of all men at the boreal center. I do claim that the American eagle has spread its wings of glory over the world's top. I do not deny that there is room enough and honor enough under those wings for others.

My appeal to Congress and to my fellow countrymen is not entirely personal. The polar regions have certain valuable resources which will be an important asset to future generations. It is true the North Pole is in the center of a deep sea. It has no value, either scientific or commercial, and no explorer ever supposed it would have. The poles of the earth could be better and more accurately located from Washington than in the regions of the poles. To touch the pin point of the pole, therefore, is not the object of polar exploration.

Our main object is to pierce the unknown and replace the blank spots upon our charts by the topographic outline of lands, the delineation of seas, and above all to bring back a knowledge of the physical condition about the top of the globe. Such knowledge is very important to the people of all sections of the earth. For example, our weather conditions are not entirely understandable until we know the weather of Canada. In Canada weather is a mystery until the storm-delivering centers about the pole are studied. The same is true of geology, of biology, of anthropology, and of every branch of national science.

There is an interlinking of all the terrestrial conditions, and, therefore, to know the globe as a whole there must not be large blank spots on our maps. To meet this demand is the object of all exploration. This has been met by the recorded results of my attainment of the pole. It is certified by the expert opinion of my own peers—the Arctic explorers of all the world.

The polar regions will at some time in the near future become valuable, and, therefore, it would seem to be the duty of those who guard the destiny of the State to take some steps to protect the interests of American explorers, for in so doing our claim upon the future resources will be protected. My appeal, therefore, is not one of selfish gain, but in the national interest of the work of all American explorers.

The time will come when human life will extend to within 500 miles of the pole. To that point there is an abundance of animal and plant life. The Arctic is not, as is generally supposed, always blanketed with ice and snow. The long summer sun gives a double daily growth to plant life. The best proof of the wealth of the North is the existence of a permanent land fauna, for animals do not eat rocks and snowballs. They must have food. They do have food; and they adapt themselves to the frigid environment. In Prince Edward Island some $16,000,000 have been made during the past four years breeding foxes. The same can be done with all the fur-bearing animals. The farther north we go the cheaper the food, the better the fur. In furthering the interest of this animal industry we will establish fur farming, which will give wealth and comfort to millions in the near future.

The Arctic Sea has in it more usable life than the Gulf of Mexico, and there, by an international agreement, seal farming can be established.

There are many minerals in the far north, and mining difficulties are not greater than in Alaska, while transportation is easier and cheaper.

Now, what has been done to secure these resources for future Americans? Canada has quietly spent more than a million dollars to file claims on everything reachable, because her statesmen have realized that all lands sooner or later become valuable.

The claim by right of discovery gives a nation the first call upon new lands, but that claims goes by default unless supplementary steps are taken.

Why, may I ask, have we closed our eyes as a Nation to the discoveries of the American explorers?

American fishermen have used Hudson Bay for 100 years. This bay is the most wonderful inland sea of the world. Its marine life will feed millions during ages to follow. Canada has closed the door of Hudson Straits to our seamen. Here is a problem for immediate adjustment. These pioneer fishermen were explorers; their rights cry for protection.

American sailors explored the uttermost reaches of the Antarctic before other nations woke up to the possibilities of the far south. A proper protection of their claims would have given us hundreds of islands and a valuable coast line with harbors and mines and undreamed-of industries. These islands will at some time become the best fur farms of the entire world, but not a voice has been raised by our statesmen to protect the discoveries of these brave explorers.

Our forefathers, with a worthy pride, recorded the splendid pioneer efforts of Admiral Wilkes in the frozen south. He discovered a new continent and explored islands and seas about the South Pole. Fifty years later by one stroke of the pen a certain British armchair geographer, in the Encyclopædia Britannica and on the maps of the world, took American honors and American claims from the Antarctic Continent. This was officially done by the map makers of Europe. To this sacrifice of American prestige, to this insult upon the flag, there has been silence in Washington. Why?

The geographic historian, Edwin Swift Balch, called a halt upon this kind of national insult (Antarctica, by Edwin Swift Balch), but to the present, although the discoveries of Wilkes have been verified by the Australian expedition, no official action has been taken to guard the honor of Antarctic pioneers.

In the Arctic there is a long list of worthy achievement, which, with inconceivable indifference, has been given official absent treatment.

American fishermen have always been pioneers in the north; they needed harbors and boating and land facilities. They require some assistance to determine the position and extent of submarine banks, and they require some enlightenment on the food and propagation of submarine life. Other nations here gave much assistance to their marine explorers, but what have we done?

The discoveries of Drs. Schwatka, Kane, Hays, and Bessell are lost among old books under dusty shelves. The work of Wellman, Baldwin, and Fiala is lost in the ungracious controversy of rival newspaper publicity.

The splendid pioneer's work of discovery by Lieut. de Long, of Capt. Hall, of Gen. Greely, and Engineer Peary, by which the United States could add hundreds of miles of seacost and thousands of square miles of terrestrial wealth, is locked up in forgotten archives.

The conquest of the North Pole is, therefore, only a part of a long list of American achievements which should be given official recognition and protection by those who guard our national honor and the future destiny of our heritage to the resources of the world. If in future years a controversy arose about the validity of the source of these discoveries, it would be difficult to prove up our claims, except by the bleached bones and fox-emptied graves of those whose lives were sacrificed in the war with the ice world.

In the Arctic there are at least 5,000,000 square miles of territory not now in use, upon which animal farming, mining, and other industries can and will thrive in the years to come. There the high cost of meat, the high cost of living can be reduced. In that great, lone land there is elbow room for the millions now at war, wherein the only real result is to fertilize with human remains the soil that must support future generations.

The lot of an Arctic explorer is not an easy one. If he succeeds he is disputed. If he fails he is called a weakling. In either case he goes to oblivion under the snow of a cold and unappreciative world.

In the better perspective of later generations communities engage in the battle of body snatching to place his remains under domes that represent millions of dollars, to flatter the vanity of the community boosters. These same pioneers, during the lifetime of their declining years, have been usually denied butter for their bread and honor for their children.

How much nobler would the world be if these same men had been given the glad hand of brotherly appreciation in some tangible, unforgetable way by the nations which profited by their conquests. I appeal not for myself, but for the whole family of pathfinders, past, present, and future, for the determination of the validity of the polar claims is but a part of our duty to future posterity.

FREDERICK A. COOK,
Ebbitt House, Washington, D. C.

FEBRUARY 9, 1915.

The Land Question Underlying Immigration.

EXTENSION OF REMARKS
OF
HON. HENRY GEORGE, JR.,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, February 4, 1915.

Mr. GEORGE. Mr. Speaker, in explanation of my vote against House bill No. 6060 when it was offered for passage in the House over the President's veto, I desire to present in the RECORD chapter 11 of my father's work entitled "Social Problems," as follows:

CHAPTER XI.

THE LAND QUESTION BEHIND IMMIGRATION.

This gulf stream of humanity that is setting on our shores with increasing volume is in all respects worthy of more attention than we give it. In many ways one of the most important phenomena of our time, it is one which forcibly brings to the mind the fact that we are living under conditions which must soon begin to rapidly change. But there is one part of the immigration coming to us this year which is specially suggestive. A number of large steamers of the trans-Atlantic lines are calling, under contract with the British Government, at small ports on the west coast of Ireland, filling up with men, women, and children, whose passages are paid by their Government, and then, ferrying them across the ocean, are dumping them on the wharves of New York and Boston with a few dollars apiece in their pockets to begin life in the New World.

The strength of a nation is in its men. It is its people that make a country great and strong, produce its wealth, and give it rank among other countries. Yet here is a civilized and Christian Government, or one that passes for such, shipping off its people, to be dumped upon another continent as garbage is shipped off from New York to be dumped into the Atlantic Ocean. Nor are these people undesirable material for the making of a nation. Whatever they may sometimes become here, when cooped up in tenement houses and exposed to the corruption of our politics and to the temptation of a life greatly differing from that to which they have been accustomed, they are in their own country, as anyone who has been among them there can testify, a peaceable, industrious, and, in some important respects, a peculiarly moral people, who lack intellectual and political education, and the robust virtues that personal independence alone can give, simply because of the poverty to which they are condemned. Mr. Trevelyan, the chief secretary for Ireland, has declared in the House of Commons that they are physically and morally healthy, well capable of making a living, and yet the Government of which he is a member is shipping them away at public expense as New York ships its garbage.

These people are well capable of making a living, Mr. Trevelyan says, yet if they remain at home they will only be able to make the poorest of poor livings in the best of times, and when seasons are not of the best, taxes must be raised and alms begged to keep them alive; and so as the cheapest way of getting rid of them they are shipped away at public expense.

What is the reason of this? Why is it that people in themselves well capable of making a living can not make a living for themselves in their own country? Simply that the natural, equal, and inalienable rights of man, with which, as asserted by our Declaration of Independence, these human being have been endowed by their Creator, are denied them. The famine, the pauperism, the misgovernment and turbulence of Ireland, the bitter wrongs which keep aglow the fire of Irish "sedition," and the difficulties with regard to Ireland which perplex English statesmen, all spring from what the National Assembly of France, in 1789, declared to be the cause of all public misfortunes and corruptions of government—the contempt of human rights. The Irish peasant is forced to starve, to beg, or to emigrate; he becomes, in the eyes of those who rule him, mere human garbage, to be shipped off and dumped anywhere, because, like the English peasant, who, after a slave's life, dies a pauper's death, his natural rights in his native soil are denied him; because his inalienable right to procure wealth by his own exertions and to retain it for his own uses is refused him.

The country from which these people are shipped—and the Government-aided emigration is as nothing compared to the voluntary emigration—is abundantly capable of maintaining in comfort a very much larger population than it has ever had. There is no natural reason why in it people themselves capable of making a living should suffer want and starvation. The reason that they do is simply that they are denied natural opportunities for the employment of their labor and that the laws permit others to extort from them the proceeds of such labor as they are permitted to do. Of these people who are now being sent across the Atlantic by the English Government and dumped on our wharves with a few dollars in their pockets, there are probably none of mature years who have not by their labor produced wealth enough not only to have supported them hitherto in a much higher degree of comfort than that in which they have lived, but to have enabled them to pay their own passage across the Atlantic, if they wanted to come, and to have given them on landing here a capital sufficient for a comfortable start. They are penniless only because they have been systematically robbed from the day of their birth to the day they left their native shores.

A year ago I traveled through that part of Ireland from which these Government-aided emigrants come. What surprises an American at first, even in Connaught, is the apparent sparseness of population, and he wonders if this can indeed be that overpopulated Ireland of which he has heard so much. There is plenty of good land, but on it are only fat beasts, and sheep so clean and white that you at first think that they must be washed and combed every morning. Once this soil was tilled and was populous, but now you will find only traces of ruined hamlets, and here and there the miserable hut of a herd, who lives in a way no Terra del Fuegan could envy. For the "owners" of this land, who live in London and Paris, many of them never having seen their estates, find cattle more profitable than men, and so the men have been driven off. It is only when you reach the bog and the rocks, in the mountains and by the seashore, that you find a dense population. Here they are crowded together on land on which nature never intended men to live. It is too poor for grazing, so the people who have been driven from the better land are allowed to live upon it—as long as they pay their rent. If it were not too pathetic, the patches they call fields would make you laugh. Originally the surface of the ground must have been about as susceptible of cultivation as the surface of Broadway. But at the cost of enormous labor the small stones have been picked off and piled up, though the great bowlders remain, so that it is impossible to use a plow; and the surface of the bog has been cut away and manured by seaweed, brought from the shore on the backs of men and women, till it can be made to grow something.

For such patches of rock and bog—soil it could not be called, save by courtesy—which has been made to produce anything only by their unremitting toil—these people are compelled to pay their absentee landlords rents varying from a pound to four pounds per acre, and then they must pay another rent for the seaweed which the surf of the wild Atlantic throws upon the shore before they are permitted to take it for manure, and another rent still for the bog from which they cut their turf. As a matter of fact, these people have to pay more for the land than they can get out of the land. They are really forced to pay not merely for the use of the land and the use of the ocean but for the use of the air. Their rents are made up, and they manage to live in good times, by the few shillings earned by the women, who knit socks as they carry their creels to and from the market or seashore; by the earnings of the men, who go over to England every year to work as harvesters; or by remittances sent home by husbands or children who have managed to get to America. In spite of their painful industry the poverty of these people is appalling. In good times they just manage to keep above the starvation line. In bad times, when a blight strikes their potatoes, they must eat seaweed or beg relief from the poor rates or from the charitable contributions of the world. When so rich as to have a few chickens or a pig, they no more think of eating them than Vanderbilt thinks of eating his $50,000 trotters. They are sold to help pay the rent. In the loughs you may see fat salmon swimming in from the sea, but if every one of them were marked by nature with the inscription, "Lord So-and-So, London, with the compliments of God Almighty," they could not be more out of the reach of these people. The best shops to be found in the villages will have for stock a few pounds of sugar and tea weighed out into ounce and half-ounce papers, a little flour, two or three red petticoats, a little coarse cloth, a few yards of flannel and a few of cotton, some buttons and thread, a little pig-tail tobacco, and perhaps a bottle or two of "the native" hid away in the ground some distance from the cabin, so that if the police do capture it the shopkeeper can not be put in jail. For the Queen must live and the army must be supported, and the great distillers of Dublin and Belfast and Cork, who find such a comfortable monopoly in the excise, have churches to build and cathedrals to renovate. So poor are these people, so little is there in their miserable cabins, that a subsheriff who last year superintended the eviction of near 100 families in one place declared that the effects of the whole lot were not worth £3.

But the landlords—ah, the landlords!—they live differently. Every now and again in traveling through this country you come across some landlord's palatial home mansion, its magnificent grounds inclosed with high walls. Pass inside these walls and it is almost like entering another world—wide stretches of rich velvety lawn, beds of bright flowers, noble avenues of arching trees, and a spacious mansion rich with every appointment of luxury, with its great stables, kennels, and appurtenances of every kind. But though they may have these luxurious

home places, the large landlords, with few exceptions, live in London or Paris, or pass part of the year in the great cities and the rest in Switzerland or Italy or along the shores of the Mediterranean; and occasionally one of them takes a trip over here to see our new country, with its magnificent opportunities for investing in wild lands which will soon be as valuable as English or Irish estates. They do not have to work; their incomes come without work on their part—all they have to do is to spend. Some collect galleries of the most valuable paintings, some are fanciers of old books and give fabulous prices for rare editions. Some of them gamble, some keep studs of racers and costly yachts, and some get rid of their money in ways worse than these. Even their agents, whose business it is to extort the rent from the Irishmen who do work, live luxuriously. But it all comes out of the earnings of just such people as are now being dumped on our wharves—out of their earnings, or out of what is sent them by relatives in America, or by charitable contributions.

It is to maintain such a system of robbery as this that Ireland is filled with policemen and troops and spies and informers, and a people who might be an integral part of the British nation are made to that nation a difficulty, a weakness, and a danger. Economically, the Irish landlords are of no more use than so many great, ravenous, destructive beasts—packs of wolves, herds of wild elephants, or such dragons as St. George is reported to have killed. They produce nothing; they only consume and destroy. And what they destroy is more even than what they consume. For not merely is Ireland turned into a camp of military police and red-coated soldiery to hold down the people while they are robbed, but the wealth producers, stripped of capital by this robbery of their earnings, and condemned by it to poverty and ignorance, are unable to produce the wealth which they could and would produce did labor get its full earnings and were wealth left to those who make it. Surely true statesmanship would suggest that if anyone is to be shoveled out of a country, it should be those who merely consume and destroy, not those who produce wealth.

But English statesmen think otherwise, and these surplus Irish men and women; these garbage Irish men and women and little children—surplus and garbage because the landlords of Ireland have no use for them—are shoveled out of their own country and dumped on our wharves. They have reached "the land of the free and the home of the brave" just in time for the Fourth of July, when they may hear the Declaration of Independence, with its ringing assertion of inalienable rights, read again in our annual national celebration.

Have they, then, escaped from the system which in their own country made them serfs and human garbage? Not at all. They have not even escaped the power of their old landlords to take from them the proceeds of their toil.

For we are not merely getting these surplus tenants of English, Scotch, and Irish landlords, we are getting the landlords, too. Simultaneously with this emigration is going on a movement which is making the landlords and capitalists of Great Britain owners of vast tracts of American soil. There is even now scarcely a large landowing family in Great Britain that does not own even larger American estates, and American land is becoming with them a more and more favorite investment. These American estate of "their graces" and "my lords" are not as yet as valuable as their home estates, but the natural increase in our population, augmented by emigration, will soon make them so.

Every "surplus" Irishman, Englishman, or Scotchman sent over here assists directly in sending up the value of land and the rent of land. The stimulation of emigration from the old country to this is a bright idea on the part of these landlords of two continents. They get rid of people who, at home, in hard times, they might have to support in some sort of fashion, and lessen, as they think, the forces of disaffection, while at the same time they augment the value of their American estates.

It is not improbable that some of these evicted tenants may find themselves over here paying rent to the very same landlords to swell whose incomes they have so long toiled in their old country; but whether this be so or not, their mere coming here, by its effect in increasing the demand for land, helps to enable those landlords to compel some others of the people of the United States to give up to them a portion of their earnings in return for the privilege of living upon American soil. It is merely with this view, and for this purpose, that the landlords of the Old World are buying so much land in the New. They do not want it to live upon; they prefer to live in London or Paris, as many of the privileged classes of America are now learning to prefer to live. They do not want to work it; they do not propose to work it at all. All they want with it is the power which, as soon as our population increases a little, its ownership will give of demanding the earnings of other people. And under present conditions it is a matter not of a generation or two, but only of a few years, before they will be able to draw from their American estates sums even greater than from their Irish estates. That is to say, they will virtually own more Americans than they now own Irishmen.

So far from these Irish immigrants having escaped from the system that has impoverished and pauperized the masses of the Irish people for the benefit of a few of their number, that system has really more unrestricted sway here than in Ireland. In spite of the fact that we read the Declaration of Independence every Fourth of July, make a great noise and have a great jubilation, that first of the inalienable rights with which every man is endowed by his Creator—the equal right to the use of the natural elements without which wealth can not be produced, nor even life maintained—is no better acknowledged with us than it is in Ireland.

There is much said of "Irish landlordism," as though it were a peculiar kind of landlordism, or a peculiarly bad kind of landlordism. This is not so. Irish landlordism is nothing worse than English landlordism, or Scotch landlordism, or American landlordism, nor are the Irish landlords harder than any similar class. Being generally men of education and culture, accustomed to an easy life, they are, as a whole, less grasping toward their tenants than the farmers who rent of them are to the laborers to whom they sublet. They regard the land as their own, that is all, and expect to get an income from it; and the agent who sends them the best income they naturally regard as the best agent.

Such popular Irish leaders as Mr. Parnell and Mr. Sullivan, when they come over here and make speeches, have a good deal to say about the "feudal landlordism" of Ireland. This is all humbug—an attempt to convey the impression that Irish landlordism is something different from American landlordism, so that American landowners will not take offense, while Irish landowners are denounced. There is in Ireland nothing that can be called feudal landlordism. All the power which the Irish landlord has, all the tyranny which he exercises, springs from his ownership of the soil, from the legal recognition that it is his property. If landlordism in Ireland seems more hateful than in England, it is only because the industrial organization is more primitive, and there are fewer intermediaries between the man who is robbed and the man who gets the plunder. And if either Irish or English landlordism seems more hateful than the same system in America, it is only because this is a new country, not yet quite fenced in. But, as a matter of law, these "my lords" and "your graces," who are now getting themselves far greater estates in the United States than they have in their own country, have more power as landlords here than there.

In Ireland especially the tendency of legislation for a series of years has been to restrain the power of the landlord in dealing with the tenant. In the United States he has in all its fullness the unrestricted power of doing as he pleases with his own. Rack-renting is with us the common, almost the exclusive, form of renting. There is no long process to be gone through with to secure an eviction, no serving notice upon the relieving officer of the district. The tenant whom the landlord wants to get rid of can be evicted with the minimum of cost and expense.

Says the Tribune's "Broadway Lounger" incidentally in his chatter: "Judge Gedney tells me that on the 1st of this month he signed no less than 250 warrants of dispossession against poor tenants. His district includes many blocks of the most squalid variety of tenement houses, and he has fully as much unpleasant work of this kind as any of his judicial brethren. The 1st of May is, of course, the heaviest field day of the year for such business, but there are generally at the beginning of every month at least 100 warrants granted. And to those who fret about the minor miseries of life no more wholesome cure could be administered than an enforced attendance in a district court on such occasions. The lowest depths of misery are sounded. Judge Gedney says, too, that in the worst cases the suffering is more generally caused by misfortune than by idleness or dissipation. A man gets a felon on his hand, which keeps him at home until his savings are gone and all his effects are in the pawnshop, and then his children fall sick or his wife dies, and the agent of the house, under instructions from the owner, who is perhaps in Europe enjoying himself, won't wait for the rent, and serves him with a summons."

A while ago, when it was bitter cold, I read in the papers an item telling how, in the city of Wilkes-Barre, Pa., a woman and her three children were found one night huddled in a hogshead on a vacant lot, famished and almost frozen. The story was a simple one. The man, out of work, had tried to steal and been sent to prison. Their rent unpaid, their landlord had evicted them, and as the only shelter they knew of they had gone to the hogshead. In Ireland, bad as it is, the relieving officer would have had to be by to have offered them at least the shelter of the almshouse.

These Irish men and women who are being dumped on our wharves with two or three dollars in their pockets, do they find access to nature any freer here than there? Far out in the West, if they know where to go, and can get there, they may, for a little while yet; but though they may see even around New York plenty of unused land, they will find that it all belongs to somebody. Let them go to work at what they will, they must, here as there, give up some of their earnings for the privilege of working, and pay some other human creature for the privilege of living. On the whole their chances will be better here than there, for this is yet a new country, and a century ago our settlements only fringed the eastern seaboard of a vast continent. But from the Atlantic to the Pacific we already have our human garbage, the volume of which some of this Irish human garbage will certainly go to swell. Wherever you go throughout the country the "tramp" is known; and in this metropolitan city there are already, it is stated by the Charity Organization Society, a quarter of a million people who live on alms. What, in a few years more, are we to do for a dumping ground? Will it make our difficulty the less that our human garbage can vote?

Immigration.

EXTENSION OF REMARKS

OF

HON. LATHROP BROWN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regu- the immigration of aliens to and the residence of aliens in the United States.

Mr. BROWN of New York. Mr. Speaker, in his message accompanying his veto of the immigration bill now before the House, President Wilson spoke of the complete change of policy with regard to immigration therein instituted. He stated that this country's ancient ideal of constitutional free institutions to which those of all nations who yearned for self-government and the opportunities for education could come was now being overthrown, and a purely restrictive literacy test was substituted.

This bill contains many selective restrictions which appear in the bill for the first time. They are far more important than the public realizes. They will go a long way toward preventing the greater part of the various alien social evils under the burdens of which we labor. But in themselves they can not compensate for our refusal to extend to others the same incalculable benefits by reason of which we are all here to-day.

Frankly speaking, the sociological aspects of this bill appeal to me more strongly than any others. Just a year ago, on January 30, 1914, I had the privilege briefly to address this House and to suggest that since in some years more immigrants come to this country than babies are born in it, a very grave respon-

sibility rested upon the Members in selecting the forebears of our future generations. As we legislate in this bill, so are future generations of Americans conceived. We mold the race. Truly our opportunity is more glorious than that of any conqueror, because instead of destroying and subduing, we create and construct.

So if through this literacy clause we had not deliberately closed the door of the only place in God's world in which a man may live according to his highest ideals without fear, I should care nothing for it one way or the other. The numerical numbers kept out by this literacy-test provision will be immaterial in any event, but the ancient principle will be lost for all time.

The great Republican manufacturer wants no restriction so that his labor market may be continually cheapened by fresh importations; the labor-union man, recently arrived himself, wants the United States for his very own. Both are wrong. Yet both are forced to admit that they would make as a prerequisite for any immigration a sound body and a sound mind. The sound body we can discover by using for that purpose a small fraction of the million dollars surplus per annum which we receive from the immigrants themselves for a head tax, but to the mind little attention is paid.

Now, by the mind I do not mean merely that portion of the body known as the brain. I mean that subtle mechanism which, barring accident and modified by environment, will develop certain characteristics of resistance to evil and a proper adjustment to the conditions of living. An average man is almost always gauged at his true worth by the people of his community. So we must look for industry, frugality, sobriety, and chastity in the forefathers of the race that we shall build to-day.

It is a common saying that a man "comes of good stock." We know his people before him, and we assume that he will inherit the characteristics of his forbears. Is it too much to ask that we select the forefathers of succeeding generations of citizens with some care?

In my previous speech on this subject I showed how the descendants of two persons in five generations showed an economic loss to their community of $1,308,000; another pair in seven generations $1,411,676, and so on. We know our jails are crowded, our asylums overflowing, our almshouses occupied, our reformatories full. Why are their inmates there, a drain on the Nation, instead of being busy, happy, productive units in a busy world? If we knew why they were there, would not this knowledge help us to keep from our shores those who will go there and whose children for generations will go there?

Do we know? Are we on the threshold of rediscovering an ancient law of biology in its application to that mental defect which leads to all evil?

In 1912 Dr. Goddard summarized some data of the hereditary qualities of one family and scouted the Mendelian law. In 1914 he published a summary of field investigations and tables covering 590 pages, and is forced to the conclusion that the traits resulting in our social evils are largely mental, and that the inheritance of these defects follows exactly the lines of that infallible old law of biology—Mendel's law.

I state his conclusions based on his own data or that furnished to him. I do not argue for or against. I only hope that he shall be found in later years to be pointing the way toward the admission to our shores of only those whose characteristics are "dominant" and not "recessive."

He defines a mental defective as—

> One who is capable of earning his living under favorable circumstances, but is incapable from mental defect existing from birth or from an early age (a) of competing on equal terms with his normal fellows or (b) of managing himself and his affairs with ordinary prudence.

He emphasizes the inability and the incapacity, not the unwillingness or the laziness, of feeble-minded persons to make proper adjustments to their environment. He thinks that about 2 per cent of our school population is feeble-minded; about 25 per cent to 50 per cent of our jail criminals are feeble-minded.

He gives the following list of reformatories and institutions for delinquents, with the estimated number of defectives, as showing a fair idea of the amount of feeble-mindedness. He says that differences in the percentages are probably due more to the standards used in estimating the defectives than to actual differences in numbers. It is most discouraging to discover that the more expert is the examiner of these groups the higher is the percentage of feeble-minded found. For example, Dr. Olga Bridgman, who has made one of the most careful studies on record, finds that 89 per cent of the girls at Geneva, Ill., are defective.

	Per cent.
St. Cloud (Minn.) Reformatory	54
Rahway Reformatory, New Jersey (Binet)	46
Bedford Reformatory, New York (under 11 years)	80
Lancaster, Mass.:	
Girls' Reformatory	60
50 paroled girls	82
Lyman School for Boys, Westboro, Mass	28
Pentonville, Ill., juveniles	40
Massachusetts Reformatory, Concord	52
Newark, N. J., juvenile court	66
Elmira Reformatory	70
Geneva, Ill. (Binet)	89
Ohio Boys' School (Binet)	70
Ohio Girls' School (Binet)	70
Virginia, three reformatories (Binet)	79
New Jersey State Home for Girls	75
Glen Mills schools, Pennsylvania, girl's department, about	72

On page 29 of the Report of the Massachusetts White Slave Commission we read:

> Of 300 prostitutes, 154, or 51 per cent, were feeble-minded. All doubtful cases were recorded as normal. The mental defect of these 154 women was so pronounced and evident as to warrant the legal commitment of each one as a feeble-minded person or as a defective delinquent.
>
> At the Massachusetts School for the Feeble-Minded there are an equal number of women and girl inmates, medically and legally certified as feeble-minded, who are of equal or superior mental capacity.

In our judgment the commission have been ultraconservative, says Dr. Goddard; no doubt wisely so for their purposes. But we read further (p. 30):

> The 135 women designated as normal as a class were of distinctly inferior intelligence. More time for study of these women, more complete histories of their life in the community, and opportunity for more elaborate psychological tests might verify the belief of the examiners that many of them also were feeble-minded or insane.
>
> The mental age of the 135 women rated as normal, as measured by the Binet scale, was as follows: Seventeen had the mentality of a 12-year-old child; 71 had the mentality of an 11-year-old child; 32 had the mentality of a 10-year-old child; 4 had the mentality of a 9-year-old child; 11 were not tested.

Probably at least 50 per cent of our almshouse inmates are defective.

Dr. Goddard's Table I shows 13,711 individuals, comprising 327 families, who have been studied for feeble-mindedness and grouped as follows:

Groups.	Families (charts).	Total individuals on charts.	Average number of persons per chart.
Hereditary	164	7,937	48.4
Probably hereditary	34	1,252	36.8
Neuropathic	37	1,348	36.4
Accident	57	2,086	36.6
No cause	8	299	37.3
Unclassified	27	789	29.2
Total	327	13,711	41.9

I now insert a table which shows the results of certain types of matings. I do not see how it is possible to get away from the conclusion that feeble-mindedness is transmitted in accordance with Mendel's law:

Type of mating.	Number of matings.	Total offspring.	Deformed infants and miscellaneous.	Undetermined mentality.	Feeble-minded offspring.		Normal offspring.	
					Actual findings.	Theoretical expectation.	Actual findings.	Theoretical expectation.
FF-FF	144	749	149	118	476	482	6	0
FF-NF	122	698	161	166	193	185½	178	185½
FF-NN	18	66	13	19	0	0	34	34
NF-NF	33	212	39	27	39	36½	107	109½
NF-NN	7	27	2	2	0	0	23	23
Total	324	1,752	364	332	708	704	348	352

A brief description of Mendel's law may not be out of place at this time.

Gregor Mendel was an Austrian monk, who for eight years prior to 1866 made some experiments in growing peas in the monastery garden. In 1866 he published an account of his results, which was lost until rediscovered in 1900.

Mendel planted tall and dwarf peas, cross-fertilized them, and then planted the resulting seed. When the plants matured in the first generation they were all tall. These plants he allowed to fertilize themselves, and in the second generation discovered that one plant out of four was a dwarf pea. The ratio was three tall peas to one dwarf. So he named the character which

the tall peas had "dominant," and the character of lack of tallness, which the dwarf peas had, "recessive." He proceeded to experiment further and to establish the formulæ known as Mendel's law.

Here let me digress long enough to say that since Mendel's time biologists have discovered that traits are transmitted among people in the following way, but always in the ratio of Mendel's law: When the male plasm fertilizes the female it brings with it, contained within the chromosomes, certain determiners. Suppose these determiners are those which result in brown eyes in the infant to be. If the father received his brown eyes from both his parents and the mother brown from both of hers, then the child would certainly have brown eyes, because pigmentosis is a "dominant" character and both parents were "duplex dominant." But in order to understand the following formula, which is Mendel's law, a certain additional knowledge of heredity is necessary. Here are six different kinds of matings, with their corresponding theoretical expectations, in which D stands for the dominant characteristic, R stands for the recessive characteristic, duplex for inheritance from both sides, and simplex from one side only. Thus—

DD crossed with DD results in DD children.

DD crossed with DR results in ½ DD + ½ DR children.

DR crossed with DR results in 1 DD +2 DR + 1 RR children (3 to 1).

DD crossed with RR results in DR children.

DR crossed with RR results in ½ DR + ½ RR children.

RR crossed with RR results in RR children.

The development of a child starts with the union of two small portions of the germ plasm, that from the father with that of the mother. The fertilized ova does not contain the organs of the adult, but it does contain the determiners which will mold the organs into maturity. Now, if an embryo infant has received the determiner for brown eyes from the mother only, when it matures one half of its own germ cells will carry the determiner and the other half will not. It will be brown-eyed but simplex. Suppose this simplex brown-eyed male mates with a similar simplex female. Half the germ cells of each carry the determiner and half do not. What will be the results of this union? Take two pennies. Let the heads represent the determiners or dominant characteristics. Let the tails represent the lack of determiners or recessive characteristic. Now match these pennies one hundred times, and you will find two heads—duplex dominant—come up twenty-five times, two tails—duplex recessive—come up twenty-five times, and one head and one tail—simplex dominant—come up fifty times, on the average. Here again is Mendel's law: Three brown eyes to one blue; three tall peas to one dwarf.

Mr. Speaker, early in my term in Congress I went to the chairman of the House Committee on Immigration and asked him to accept certain amendments to the proposed bill, which was presented to the House as H. R. 6060, which would provide for some adequate mental examination of aliens in order to protect the American race. The House committee refused to incorporate these amendments in the House bill. I printed them and informed each Member of the House that I expected to offer them on the floor; I did offer them, and the House, under the leadership of the chairman of the committee, voted them down.

I then had the pleasure of introducing to the Senate Committee on Immigration Dr. Spencer L. Dawes, special commissioner of the State of New York on the alien insane; Dr. L. Vernon Briggs, representing the Massachusetts State Board of Insanity; Dr. Frank Woodbury, representing the committee on lunacy of the Pennsylvania State Board of Charities; and Dr. Hugh Young, representing the Maryland State Lunacy Commission—the chairman of the State hospital commissions of the States of Rhode Island, Connecticut, and New Jersey being prevented from attendance by reason of a blizzard which was raging at the time—who advocated the adoption of these amendments. The Senate committee incorporated them in the Senate bill which passed the Senate, and the House concurred in all the Senate amendments except one.

This amendment inverted the burden of proof which is required to be established before an alien can be deported within the three years now required by law. Under the present law it is necessary for the Government to show that the causes for an alien becoming a public charge within the three-year period during which he is subject to deportation existed prior to his landing. The amendment which the House rejected required that if an alien became a public charge within the five-year period provided in the bill under discussion, the alien must show that the causes which resulted in his becoming a public charge arose subsequent to the landing. The enactment into law of this amendment would save the State of New York, and other Eastern States in proportion, a great many hundreds of thousands of dollars every year. Therefore the responsibility for the burden placed upon the taxpayers of New York, and other Eastern States in proportion, rests squarely upon the House conferees who cared only for the adoption of the literacy clause.

It was generally known that the President of the United States would veto the bill if the literacy clause was left in it. The House conferees, with the exception of one, apparently cared nothing for sensible restriction by selective methods, but only for the arbitrary restriction contained in the literacy clause which meant the defeat of the entire bill.

In the last sundry civil bill the House made a more liberal appropriation for medical officers who were to examine aliens arriving in this country, chiefly at the port of New York. During the fiscal year 1914 Congress authorized the employment of 19 extra physicians, of whom 6 were psychiatrists, stationed at Ellis Island. The Public Health Service was able to certify for deportation for mental diseases 1,360 aliens in 1914 as against 883 aliens in the fiscal year 1913. I am unofficially informed that since immigration became less on account of the European war and it has been possible to give each immigrant an individual examination there has been an increase of over 100 per cent in the proportion of aliens certified for deportation for mental deviation. Where any two of such aliens are liable to start a family, such as those to which I have referred in my remarks, it would seem to me that these matters should receive adequate consideration from Congress.

Therefore, as I said in my speech a year ago, if we are to secure legislation which will admit to this country reasonable numbers of the best strains of European blood to mix with our present population and build up a race worthy of our best traditions, the labor people ought to abandon their attempts to pass the literacy test to the exclusion of other sensible tests, and the Congress of the United States should agree on an immigration bill which will permit this country to remain what it now is—the only place on God's earth to which those oppressed politically and for religious motives may come for an asylum, yet at the same time safeguarding the race from the impure taints which under the present law continue, and which in spite of any literacy test would continue, to infest our shores.

The Immigration Bill.

EXTENSION OF REMARKS

OF

HON. JOHN R. FARR,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915.

Mr. FARR. Mr. Speaker, under leave to extend remarks for five legislative days granted on last Thursday I am submitting for printing in the CONGRESSIONAL RECORD the able statement made at the White House on January 22, 1915, by Dr. Stewart Patton on behalf of a delegation representing State boards of insanity and national and local organizations interested in certain amendments in the immigration bill—H. R. 6060—which relate to exclusion and deportation of insane and mentally defective immigrants. The names of the members of the delegation are appended to the statement. I am also submitting a newspaper article containing an interview with the present Secretary of Labor, in whose department is the Bureau of Immigration.

The statement is as follows:

Mr. President, the gentlemen for whom I have the honor to be the spokesman desire to bring to your attention certain provisions in the immigration bill which relate to insane or mentally defective aliens, and to state very briefly the reasons for these amendments to the present immigration law. There are no other provisions in this bill which, in our opinion, are of greater importance than these or likely to prove more beneficial to the people of this country if enacted into law.

Those whose views I wish to present are the chief executive officers of boards which have to do with the care of the insane and the mentally defective in the following States: Massachusetts, Rhode Island, New York, New Jersey, Pennsylvania, and Maryland. In the public institutions of these six States are to be found nearly three-fourths of all the insane or mentally defective immigrants who are receiving public care in this country. In addition I desire to speak for the following National or State societies devoted to the study of insanity and mental deficiency, the promotion of the care of those suffering from these conditions, or the prevention of mental diseases—the National

Committee for Mental Hygiene, the American Medico-Psychological Association, the American Genetic Association, the Committee of One Hundred on Public Health, the New York Psychiatrical Society, the Mental Hygiene Committee of the New York State Charities Aid Association, and the Eugenics Record Office. Properly accredited representatives of each of these State boards and of each of these societies are in this room. Although what I have to say has the unqualified indorsement of all these gentlemen, each is ready to speak for his own State or for his own organization and to give any specific information which you may desire.

The States whose representatives are here to-day are literally staggering under the burden of caring for their insane. There are in all public institutions approximately 200,000 insane persons—a number exceeding the number of students enrolled in all the colleges and universities in this country. If all the States had provisions comparable to those existing in the most advanced ones, there would be more than 300,000 insane patients in the hospitals to-day. If there were added those in whom serious mental disease exists but is unrecognized, the number under treatment would reach half a million.

To this great number 60,000 new patients—an army nearly as large as our Regular Army—are added every year.

The cost of conducting the institutions in which this vast number of persons is cared for is so great that in several States it is exceeded only by the amount expended for education. In New York the expenditures for the insane are one-fourth of the total annual appropriations of the State.

Even with these great sums devoted to the care of the insane of the United States, much remains to be done. In many States large numbers of these sick persons are not yet delivered from the misery and degradation of jails and almshouses, and in very few States is our duty to the most unfortunate of the communities' wards fully discharged.

In the case of the mentally defective, existing provisions are still more inadequate. It has been estimated by careful students of the subject that only 10 per cent of all the feeble-minded are in suitable institutions. The others are unjustly confined in prisons and reformatories, inadequately cared for in almshouses or at large in the community, often a menace to the morals and to the safety of others, and more often themselves the victims of greed or lust. Enlightened States are keenly aware of the importance of solving the great problem of providing for the mentally defective, but the magnitude of the task is such that our legislatures are reluctant to undertake it.

What can be said, sir, of the intelligence of a country which, just awakening to this vast problem and just stirring itself to deal with it, fails to take every necessary precaution to prevent the task being rendered still more difficult by a large and steady influx of the insane and the mentally defective of other lands? In requesting that Congress provide us with an immigration law under which the insane and the mentally defective can be excluded, we can not be accused of inhumanity. The gentlemen whom I represent are devoting their lives to the welfare of these persons. They are engaged constantly in the endeavor to render relief to those suffering from mental diseases more effective and more humane than it is at present; but when they see their institutions so overcrowded that patients have to sleep on the floors of wards and corridors, when year after year they see their charges suffer through the reluctance of legislatures to grant the great appropriations needed for proper care and treatment, and when they realize that the beds occupied by aliens could be filled at once by citizens waiting for treatment, can they be blamed for asking for better provisions in the immigration law? Aliens and citizens share alike in this great humanitarian work, but need this half loaf be divided?

The States which I have named receive their population chiefly through immigration. The number of immigrants who come to New York State to settle permanently every year is greater than the number of babies born. The application through eugenics of the facts learned by the scientific study of human heredity will doubtless make it possible in years to come to cut off defective strains, so that fewer babies who have inherited the mental defect of their parents will be born, but how weak are efforts in this direction compared with the enormous need. It is in the elimination of the insane and the mentally defective from the great tide which flows through Ellis Island that the most practical and humane field for the control of insanity and feeble-mindedness in this country is to be found.

It may be said that the present immigration law excludes the insane and the mentally defective. In reply I have to say that, under the present immigration law, our public institutions have filled with the alien insane. There are serious defects in the immigration law, and these defects have long been recognized, not only by those who care for the alien insane and mentally defective in the public institutions of this country, but by the medical authorities actually engaged in the examination of immigrants at our ports of entry. The amendments which I will read are indorsed not only by the State boards and medical organizations which are represented here to-day, but by every national medical organization which is interested in psychiatry and by more than 20 State and local medical organizations.

They were framed with the constant guidance of experienced medical officers of the Government service who had discovered the inadequacies of the present immigration law in their daily work at Ellis Island. Together we have urged them upon the attention of Congress, and the only opposition which they have received from any source has been from those steamship companies which are willing to bring to this country any unfortunate immigrant who can be persuaded to come and who can get through one of the convenient loopholes in the present law.

Listed in the order of their importance, these are the amendments which we desire to advocate:

1. Providing that medical officers of the United States Public Health Service who have had special training in the diagnosis of insanity and mental deficiency shall be detailed for duty at ports of entry designated by the Secretary of Labor, and that the services of interpreters and suitable facilities for making mental examinations and observing cases shall be provided for these medical officers.

2. Providing that the surgeon of each vessel shall make a mental examination of each immigrant before accepting him for passage. (A physical examination only is required at present.)

3. Providing a fine of $200 for bringing to this country any insane or mentally defective person whose condition could have been detected by a competent medical examination at the time of embarkation.

4. Adding constitutional psychopathic inferiority and chronic alcoholism to the excludable causes.

5. Making it mandatory for the Secretary of Labor to provide suitable attendants for immigrants being deported, when they require personal care on account of mental or physical disability.

6. Increasing from three to five years the period in which deportation of aliens, who have become a public charge in this country, can be effected—unless it can be affirmatively shown that their dependence is due to causes arising subsequent to landing.

7. Providing that deportation can be effected subsequently if proceedings are instituted within five years.

We advocate these amendments as medical men trained in the department of medicine which has to do with mental diseases. In our opinion, these provisions in the bill before you overshadow all others in importance, and we especially desire to state that we are here solely for the purpose of presenting the reasons for their inclusion in the immigration law. Although other provisions in the law may be desirable, and some may be inadvisable, we wish to confine ourselves strictly to those matters regarding which we have special knowledge.

The amendments which we advocate deal with complex problems in a highly specialized branch of science, and we have felt that the views of men who are devoting themselves to this work might be of value to you in forming an opinion as to the need of the amendments which I have read and as to the results likely to be gained by their adoption.

LIST OF REPRESENTATIVES OF STATE BOARDS AND SCIENTIFIC AND CHARITABLE ORGANIZATIONS PRESENT AT THE HEARING GRANTED BY THE PRESIDENT JANUARY 22, 1915.

STATE BOARDS OF INSANITY AND STATE BOARDS OF CHARITIES.

Dr. Spencer L. Dawes, New York Commission on Federal Legislation for the Alien Insane.

Hon. Joseph P. Byers, New Jersey commissioner of charities and correction.

Dr. John Nevin, New Jersey Commission on the Care of Mental Defectives.

Dr. L. Vernon Briggs, Massachusetts Commission on the Alien Insane.

Dr. Frank Woodbury, committee on lunacy of the Pennsylvania State Board of Charities.

Dr. Hugh H. Young, Maryland Lunacy Commission.

Mr. Walter R. Wrightman, Rhode Island State Board of Chairities and Correction.

ORGANIZATIONS.

Dr. Thomas W. Salmon, National Committee for Mental Hygiene, Boston Society of Psychiatry and Neurology.

Dr. Edward N. Brush, American Medico-Psychological Association.

Mr. Paul Popenoe, American Genetic Association.

Dr. Hugh H. Young, Committee of One Hundred on Public Health.

Dr. Stewart Paton, New York Psychiatrical Society.

Mr. George A. Hastings, Mental Hygiene Committee of the New York State Charities' Aid Association.

Mr. H. H. Laughlin, eugenics record office.

[From the Enquirer, Cincinnati, Sunday, Nov. 1, 1914.]

WILL THE UNITED STATES BE OVERRUN BY MILLIONS OF RUINED AND UNHAPPY MEN AND WOMEN AFTER THE WAR?

(By James B. Morrow.)

WASHINGTON, *October 31.*

Human siftings, men who can not fight or work, are piling up like culm heaps in the cities and large villages of Europe. Even healthy boys of 15 are being driven to the battle field. Defectives, mental and physical, are left behind with the women and small children. They, too, must be fed and clothed.

Thousands of them will come or be sent to the United States. Their relatives and neighbors will pass the burden of their support across the Atlantic, saying to themselves in defense that there is more to eat in America than at home. Steamship companies, hard pressed by the war, will take a chance with freight, just as they have done in the past, if the charges are paid in advance.

As a business proposition it is cheaper to spend $20 in a lump on a parasite than to spend three times that amount per year, though the money is paid a franc here and a mark there. Whole regiments of undesirable men came to the gates of the United States when Europe was prosperous and at peace. Thousands were shipped back across the ocean, but it is reasonably certain that hundreds passed the inspectors and are now living in this country as criminals, beggars, or paupers.

Conditions were normal in Europe for the year ended June 30, 1914, yet 6,537 aliens, who were mentally or physically defective, attempted to enter the United States. Also there came 15,705 who were likely to become a public charge; 3,254 who were suffering from loathsome or dangerous contagious diseases; 1,077 who were idiots, imbeciles or feeble minded; 775 who were criminals; 634 who were habitually immoral, and 232 who were insane or epileptics.

UNDESIRABLES DO GET IN.

All of these immigrants were stopped. But at least 4,610 aliens whom the laws excluded got through, and, getting through, were afterward taken into custody and returned to Europe. Eight hundred of them were found to be insane; 1,356 were of the kind likely to become public charges; and 700, men and women, belonged to the class that operates in the red light districts of large cities. Undoubtedly, hundreds of immigrants barred by the laws of this country, as was said before, passed inspection and are now living by hook or crook in one place and another.

It may be of interest to note that of the aliens debarred 5,964 were southern Italians, 2,491 were Hebrews, 2,184 were Greeks, 1,896 were Poles, 1,808 were English, 1,596 were Russians, and 1,375 were Germans. Three hundred and thirty had been "assisted"—that is, their passage had been paid by others. Most of them were incapables whom their relatives or villages wanted to be rid of.

Such, then, are some of the immigration figures for a year that was not unusual in any respect. Officers of the Government in Washington believe that the European war will immensely increase the number of undesirable immigrants reaching the Atlantic ports of Boston, New York, Philadelphia, Baltimore, and New Orleans. The lines therefore have been tightened at all those cities, and instructions, at the suggestion of William B. Wilson, Secretary of Labor, to take special pains in the matter of immigration, have been sent by the Secretary of State to each American diplomatic and consular officer in Europe.

The direct loss to the United States by the war in Europe will, of course, be tremendous. Efforts consequently are being made by the National Government to reduce the indirect loss at every point that is possible. There are, and will be, many such losses. Communities in this country, for example, are involuntarily helping to maintain soldiers in the foreign armies.

AND AMERICA PAYS THE BILL.

A man from Pittsburgh tells of an Austrian who responded to the call of his Emperor, leaving his wife and five small children behind, with only $11 for their support until his return. Pittsburgh is caring for that family and scores of other families similarly situated. Cities everywhere are having such burdens. The Austrian may die on the field of battle or he may come back minus a leg or arm. No matter what happens, his wife and children, and perhaps himself, will live by charity—they for some time and he for all time, probably.

Before the great nations of Europe began butchering their strong, young, and productive citizenry an American expert investigator began looking into immigrant conditions in Germany, Russia, Austria-Hungary, Greece, Italy, and the Balkan Peninsula. W. W. Husband, the investigator, completed his labors a short time before Austria took up arms against Servia. His report has not been made public so far. When it is printed it will cause a great deal of discussion in the United States. Among other things, it will show how immigration to this country is promoted by persons regularly engaged in the business, principally by scattered local subagents of steamship corporations.

The competition between ocean transportation lines for steerage passengers to America has been very sharp for years. Russian immigrants, because of the better terms offered to them, formerly sailed from Hamburg and Bremen in German ships. They poured across the frontier in such large numbers, however, that the German Government, as a sanitary measure, established stations and ordered that Russians traveling overland to ports on the North Sea be inspected by physicians and compelled to take a bath.

The German ships continued to enjoy a practical monopoly of the steerage traffic to the United States until the managers of the Russian lines advertised far and wide that passengers on the way to America and intending to embark in their ships were neither inspected nor required to take a bath. At once the swarm across the German boundary dwindled and Russian vessels leaving ports on the Black and Baltic Seas took away from the Germans a good share of the American-bound passenger traffic. There has been strenuous competition both to get traffic and to create it—to transport steerage passengers and to induce them to emigrate.

WHAT THE EXPERT LEARNED.

Secretary Wilson had one main object in view when he sent Mr. Husband abroad. The figures in his office showed that thousands of poor foreigners were annually coming to this country, only to be denied admittance when they arrived. Moreover, Secretary Wilson thinks that further restrictions should be placed on immigration. On being asked what his expert had learned during the investigation he made, Secretary Wilson said:

"He found that a very large number of aliens are indirectly induced to emigrate to the United States. European countries have laws regulating the emigration of their inhabitants, and take upon themselves a measure of supervision over their water transportation lines. No country wants its people to violate the laws of this country. While open efforts to promote immigration are prohibited, thousands of aliens at village markets and fairs are secretly advised to come to America by steamship agents, who get commissions on the tickets they sell.

"Thus persons who will be turned back at our ports on their arrival here purchase tickets under solicitation, not knowing either the law or the facts bearing on the situation. They are poor, often miserably so, but by selling their few personal belongings they get sufficient money with which to pay their ocean passage. When they leave their old homes they have nothing but the clothing they wear and the little bundles they carry in their hands. But they are filled with hope, and feel that their luck will turn once they are in the United States.

"Penniless, they arrive in New York, only to find that they must return to the village they left. Their homes have been broken up. Their property, turned into money and spent, is gone. It is true the steamships which brought them over are required to take them back free of charge, but they are ruined, none the less.

"It seemed to me, as I became familiar with the immigrant problem, that something should be done to stop the coming of those aliens who, for one reason or another in our laws, are prevented from entering the country. So I asked Mr. Husband to visit Europe, talk with public officials, with steamship managers, and with priests, rabbis, and ministers. Our purpose was to show just what classes of aliens are prohibited from coming into the United States, and to spread the information in small villages and rural districts and into the people's homes.

"Wherever Mr. Husband went he was well received. Public officers, transportation companies, and churches sympathized with what we are trying to accomplish, and promised their cooperation. They saw that a cripple or a beggar or a diseased person should remain in the village where he belongs, and that if he were shipped to America he would surely find the way back to his own home in the course of time. But before Mr. Husband's report could be put into type Europe went to war. International relations are in so delicate a balance now that we have decided to hold the report back for the present.

"A plain statement of the immigration laws of the United States has been sent, however, to all of our diplomatic and consular officers in Europe. Full descriptions are given in the statement of those persons who are debarred by cause from coming into the United States.

"While the war continues many weaklings, derelicts, and criminals, it is natural to suppose, will attempt to get into this country. And after the war is over great numbers of broken men and women will want to forget their sorrows and try to rebuild themselves in free America.

"During the past 11 years nearly 11,000,000 immigrants have passed through our ports—1,218,480 came in the fiscal year ending June 30, 1914, and it may be illuminating to know that 21,600 were southern Italians, 138,000 were Hebrews, 122,700 were Poles, 79,900 were Germans, 51,800 were English, 45,000 were Russians, 44,540 were Magyars, 44,800 were northern Italians, 33,900 were Irish, 19,000 were Scotch, and 18,170 were French.

WILL WAR INCREASE IMMIGRATION?

"Of course, immigration fell off at once at the outbreak of the European war. From August 1 to October 7, 1913, immigrants to the number of 310,452 entered the United States. During the same period this year the number was only 89,789. What effect the war will have on immigration in the long run is conjectural. There are two theories. It is argued that the men and women of Europe, worn out, stricken with poverty, burdened with sorrows, fearful of other wars, will come in immense numbers to the United States. On the other hand, it is maintained that ruined Europe will have to be rebuilt and that work at good wages will be abundant for all able-bodied men."

"Do you think immigration should be further checked in some way?" Secretary Wilson was asked.

"Yes; but I will not talk about that matter at the present time," he replied. "I will say, however, that no more aliens should come into the country during a given year than can be properly assimilated—that is, absorbed so completely as not to affect our institutions injuriously. In almost every case the alien landing at one of our ports is poor. It is necessary that he should have work at once.

"There are no more free Government lands on which he may settle. If he wants land, he must buy it. He has no money, however, with which to obtain land, no money for tools and live stock, and no money on which to live until he can grow a crop. So he remains where he is or goes to a near-by mining or manufacturing district, and, perhaps, adds another unit to the oversupply in that labor market.

THREE WAYS TO SLOW DOWN.

"Now, an excess of labor means, of course, that under the pressure of competition wages fall or that the days of work are reduced, and, logically, that the standard of living is lowered. When such things happen a community is not in a sound economic condition. A million aliens a year are not too many, possibly, for a country so large and generally so prosperous as is the United States, provided, however, that the million is properly distributed. That is all I care to say," Secretary Wilson observed, "concerning the phase of the immigration question touched upon by your inquiry."

There are three ways under discussion by which the stream of immigration can be cut down. An educational test is urged by many public men. Aliens, these men argue, should be able to read and write their own language. The reply is made in opposition to this suggestion that the literacy test would exclude many young and healthy aliens and admit agitators and persons living principally by their ingenuity.

The proposal of Senator DILLINGHAM, of Vermont, to base all future immigration on the number of aliens now in the United States from each country is also supported by conspicuous Members of Congress. If the Dillingham idea became a law, there would be a large decrease in the immigrants admitted from Greece, Italy, and Austria-Hungary, but there would be no appreciable effect on immigration from Russia and no effect whatever on immigration from Great Britain, Germany, France, or the countries of northern Europe.

The third plan for reducing the number of aliens reaching the eastern ports of the country is to admit immigrants in proportion to the population of the countries whence they come, taking into account at the same time the condition of business in the United States. Russia under this scheme would fare best, and Germany, Austria-Hungary, France, Italy, and England would follow in the order here put down.

THOSE WHO OPPOSE RESTRICTION.

Political economists who maintain that men should move without hindrance wheresoever they chose and certain large corporations which view with composure an oversupplied labor market are antagonistic to all attempts further to limit the human tide that is sweeping in upon the shores of the United States.

Organized labor, on the other hand, patriotic societies, and some organizations of farmers are urging additional restrictive legislation. The literacy test is approved by organized labor and the patriotic associations. * * *

"Thousands of men working in this country," I said to Secretary Wilson, "returned to Europe at the call of their Kings and Emperors and are now engaged in war. Should aliens who come here to find work be required to take out papers of naturalization?"

"I do not think so," Secretary Wilson answered. "The alien who becomes a citizen or takes steps to become a citizen should do so freely and not under any sort of compulsion. He should want to be an American, should believe in our institutions, and love liberty. Such a man will make a good citizen and his children will be patriotic Americans. It would be no gain to the country were he forced to accept citizenship; on the contrary, it would be a hurt.

"Furthermore, if entrance to the United States were conditional on citizenship, nothing could prevent an alien from applying for his first papers, thus signifying his intention, and then refusing later to complete the required process. Fraud would be encouraged and we should be making a mockery, as I see it, of a sacred privilege."

Mining Experiment and Mine Safety Stations.

EXTENSION OF REMARKS

OF

HON. H. H. SELDOMRIDGE,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 1, 1915.

Mr. SELDOMRIDGE. Mr. Speaker, in the few minutes allotted to me it will be impossible to present in detail the many reasons that urge me to support the pending measure. It is one of greatest importance and affects vitally not only the development and enlargement of our mineral producing area, but also the safety and well-being of men who follow the dangerous occupation of mining.

The great war which threatens the devastation of a large part of continental Europe will undoubtedly cause a serious drain to be made upon the gold supply of the world. It is most fortunate for our country that a wise and intelligent oversight of our national finances and an earnest spirit of cooperation on the part of our financial interests has retained for us the greater part of our gold supply and prevented an inroad upon it by foreign nations. The basic money of the civilized world to-day is gold. It fixes the volume and supply of all forms of currency, and it is of the utmost importance that its production should not be curtailed.

I represent in part one of the greatest mineral-producing States of the Union. Our people are interested in all forms of mining enterprise and heartily favor any legislation that will contribute to supporting and assisting mineral development. This bill provides that the Secretary of the Interior is authorized to establish and maintain 10 mining experiment stations and 15 mine safety stations in the mining regions of the United States and the Territory of Alaska. These stations are to be under the control of the Bureau of Mines. Not only will these stations be able to make investigations that will safeguard the lives and health of miners, but they will also make investigations concerning the most improved and satisfactory conditions of mining and relate them to the problems that are more or less local to every mineral-producing area. Although great advance has been made in all lines of ore treatment, there is still much to be done in this direction. There are vast bodies of refractory ores for which the most economical treatment process has not yet been found. These stations, located directly within the mining territory, will be able to deal with a problem of this character at first hand, and they will also have the benefit of the practical experience of men who have devoted their lives to the mining industry.

While we are placing great emphasis in these days upon the work of the agricultural bureaus, we should not forget the valuable service which is being performed by the Bureau of Mines. If we can increase our mineral production and thereby furnish a still greater supply of the world's precious metal, and also the cheaper metals which are so necessary in all lines of manufacture, we will do much to contribute to the wealth and prosperity of the country and will furnish to our farmers and producers an ever widening market. Congress should be most liberal in its appropriations for the support of the Mining Bureau and should consider sympathetically legislation that is designed to enlarge its activities.

Facts Which the Newspapers Have Held Back from the Public.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. LAFFERTY. Mr. Speaker, the articles herewith inserted in the RECORD will be printed in pamphlet form at my expense and sent out to my constituents. In no other way can I get the information therein contained before the people. The newspapers refused to print, even as paid advertisements, the more important facts herein set out.

And let me repeat what I have said many times before, the Government does not print, at public expense, any extracts from the CONGRESSIONAL RECORD. The cost of printing all such extracts must be paid for by the Member ordering the same.

All of the articles here reproduced were written by myself and they were printed by me shortly after the election in a sort of handbill, which, for the lack of a better name, I called the "Saturday American." I think anyone who will do me the justice to read these articles will better understand the fight I have had to make the past four years.

In all future campaigns I shall, as a matter of course, have the opposition of Portland's daily newspapers. Any voter who will read this pamphlet will understand why. It would be as reasonable to expect a camel to go through the eye of a needle as to contemplate for a moment that any daily newspaper owned by the money power will give favorable comment to the candidacy of a man who is loyal to the public welfare.

Such papers will favor a new and untried man, even though he may profess conscientiously to be a friend of the common people, especially if by supporting such untried man one who is tried, true, and efficient may be defeated. They realize that by the time the new man develops into an effective instrument in the hands of the public, if by that time he has not been made to see the "light," he can also be defeated on some pretext or other and another new man put in his place. By that process the money power has for generations been making a plaything of Congress and of the American electorate.

It has actually come to be a habit with voters to regard as out of the running or "unavailable" any man who has no newspaper support. The truth is that the man without newspaper support is the only one who can at this day even be expected to be true to the public welfare. The newspapers are purchasable, and they have been purchased by the money power. They were valuable to the money power only because of their ability to betray the voters and to crucify honest public servants.

I realize that as the result of a century-old national habit we like to see the names of our public officials favorably mentioned in "the press." But that is the one thing that we have got to forego for the present and for some years to come. It is simply out of the question. The public interests and the interests of the money power which is robbing the public are in sharp and direct conflict. Therefore, it is impossible for us to have a public official who is fighting faithfully and effectively for the general public welfare, and who at the same time is giving such satisfaction to the special-privileged corporations as to justify them in having their newspapers give him favorable comment, or support him for continuance in office. It would be just as reasonable to expect water to run uphill, or to look for the sun to rise in the west and set in the east. Yet, many of us are willing to sacrifice our public men when they lose "newspaper support." How sensible we are! Is it not time for us to use the thinking powers that God has given us, and to quit depending absolutely upon the advice of millionaire-owned newspapers for our political action?

Of course, the newspaper fight on an ordinary public official who proves to be faithful to the people need not become personal or bitter. The newspapers find it quite easy to kill off such officials by quietly ignoring them or gently shifting "sentiment" to some other man, and thereby getting rid of the official who is failing to line up properly with the interests. But in my case, I am going to try to prove to you that they did not find any ordinary official. When they attempted to ruin me I fought, and I fought like a tiger. I am still fighting, and I am going to fight so long as I have a drop of blood left. I denounced the sneaking curs who were running the Portland newspapers, and I denounced them personally. I denounce them now. They are dirty liars and dirty cowards, and they will not dare come out into the open and let the people of Portland see them face to face with me or with any of the other square public men whom they have attacked. They know that their hang-dog countenances would betray them once they came out of their backroom retreats. They are hirelings of the money power, and no man will sell himself for any purpose unless he is inherently a crook, a sneak, and a coward.

I am a Republican. I have never at any time registered anywhere as anything else. In 1912 the Portland papers habitually referred to me as the "Bull Moose" candidate for Congress. I was the regular Republican candidate, having received the nomination over one of the ablest men in Oregon, Judge Gantenbein, and had merely been given a later "indorsement" by a handful of Progressives, and without any intimation to me that they were going to do so. But the Oregonian and Journal, with intention to deceive, thereafter persistently referred to me as the "Bull Moose" candidate, and credited Thomas McCusker, independent, with being the regular Republican candidate. The Oregonian, C. N. McArthur, C. B. Moores, and the entire gang of old machine politicians supported McCusker against me in 1912.

It is true that in 1912 I scratched the Republican ticket to the extent of voting for Roosevelt and Johnson for President and Vice President, but I did so because I regarded the Chicago convention as a gross fraud on the Republican electorate, and in so voting I acted in harmony with a great majority of the Republican Party throughout the Union. In 1914 I ran as an independent candidate for Congress, after having been defeated by C. N. McArthur in the primaries, because I had a perfect right under the law to so run, and for the further reason that I believed then, as I believe now, that I was defeated in the primaries by the infamous lies of the newspapers and by their absolute refusal to tell the voters the truth about anything I was doing in their behalf. Moreover, as stated, the Oregonian, McArthur, Moores, and the entire old machine gang refused to support me in 1912, when I had the regular Republican nomination, but supported Thomas McCusker, independent; so they certainly were in no position to complain as to my course in 1914.

As stated, I am a Republican and have always been. My father and three of his brothers fought in the Union Army during the war. I believe in the Republican Party of Lincoln. But I am an American citizen first, and if at any time it appears to me that any other party offers a better opportunity to procure for the American public the justice to which it is entitled I shall not hesitate to aid that party in bringing about that result, even to the extent of joining its ranks if necessary.

Above everything else, I desire to warn the voters against the cupidity of the newspapers in all future campaigns in which I shall participate. The papers will tell all manner of lies. They

will put out all manner of false rumors calculated to disorganize opposition to their machine program and their machine candidates. They will say, "LAFFERTY is uncertain whether he will run," "LAFFERTY may withdraw," "LAFFERTY this" and "LAFFERTY that." They will say, "Poll shows Mr. Blank (machine candidate), 100; LAFFERTY, 3." The papers are absolutely unscrupulous, and have no more compunctions in telling you lies to disorganize your efforts than their editors have in eating a meal's victuals. It is a second nature to them. They figure that they can reach you every day, and that long after any opportunity for the candidate to reach you has passed—that is to say, the few weeks preceding the election—they can pour the lies into you and so mold your sentiment as to defeat your efforts altogether. That has been done time and time again. During that period they will misrepresent what the candidate is saying at his meetings, putting in his mouth the very opposite of what he said; and they will completely misrepresent the character of any public meeting held. The candidate, at best, can only meet face to face 2,000 or 3,000 people during this period, while the newspapers reach the entire population of a district each day, which, in the case of Multnomah County, means close to 300,000 people. Therefore, you will see the absolute necessity of disregarding altogether the newspaper lies and of urging your friends and neighbors to do the same.

And do not forget that all four of the Portland newspapers are owned by millionaires. Mr. Pittock, owner of the Oregonian, born in England, is worth at least $2,000,000; C. S. Jackson, owner of the Journal, born in Virginia, is worth close to $1,000,000; Wheeler Bros., owners of the Evening Telegram, wealthy timbermen, lately from Pennsylvania, are in the millionaire class; Mr. Scripps, owner of the Portland News, is worth several millions. Scripps does not even live in Oregon. He owns some 67 other papers in addition to the Portland News.

Besides these millions which I shall have to fight, and without $50 in my pocket at that, I shall have the united opposition of the Portland Railway, Light & Power Co., the Portland Gas & Coke Co., the Pacific Power & Light Co., the Pacific States Telephone Co., the Southern Pacific Railroad Co., and every other railroad company entering Portland, and every bank in Portland.

While I had a little money and a little property when I was elected to Congress, I have neither now and am in debt, and this notwithstanding the fact that I have been economical. My money has gone for Government printing, for paid advertisements in the Portland newspapers and for office rent and clerical help.

I mention these facts to show each voter that whatever help I may have in the coming campaigns will be that of volunteer workers. I expect several in each precinct to so volunteer to work in my behalf. And this must be done, if at all, without any further request on my part than this statement.

It will be worth millions in the aggregate to the street car company, the Southern Pacific Co., and the other interests named by me to retain control of the Government, locally and nationally. They know that if the public once gets control laws will be passed and enforced that will boil out special privilege and give the average citizen a chance. The fight, as I say, means millions to them. They will fight. It means a couple of hundred dollars a year at least to each family to have common honesty in public affairs. Will you fight? That is the question. I believe you will.

"EDGAR BUNCOMBE" PIPER AND "CONFIDENCE SLIPPERY" JACKSON—TWIN NEWSPAPER BOSSES NOW ON THE JOB—"PORTLAND NUISANCE" BUT TAIL TO OREGONIAN KITE, WHILE EVENING TELEGRAM REMAINS PASSIVE.

[By A. W. LAFFERTY, in the Saturday American, Nov. 21, 1914.]

Never in the days of the "convention boss" was the State of Oregon more completely under "boss rule" than it is right now.

The power to name candidates has merely been transferred from the anteroom of the old conventions to the editorial rooms of the corporation-owned newspapers.

The power to name candidates means the power to make and administer the laws, for the candidates so named do make and administer the laws.

"Corporation ridden" is the only phrase that will describe the plight of the people of Oregon, and the corporation owned and controlled newspapers are responsible for it.

For hire, direct or indirect, these newspapers have kept the people of Oregon in ignorance of what was going on, while plunderers have stolen our lands, obtained franchises grossly unfair to the public, and saddled upon those who toil the burden of paying interest and dividends indefinitely upon millions of dollars of watered public-utility bonds and stocks.

Not only did these newspapers knowingly permit the plunderers to rob this generation, but they permitted them to rob this generation's children of a large portion of that which should be the sacred heritage of every innocent babe which shall first see the light of day in this great State.

C. S. Jackson, whose initials stand for what his name ought to be—"Confidence Slippery"—came to Portland from Pendleton over a decade ago, and he is said to have amassed a fortune of a million dollars.

POOR MEN STARTED JACKSON.

"Confidence Slippery" Jackson has posed as a friend of the "poor man." Many poor men, still struggling for bread and butter, remember well the days they donated to soliciting subscribers for Jackson's paper, in order to give it a foothold in Portland a little over 10 years ago.

Jackson has not earned his million. He has not done an honest day's work since he has been here. He is a big, crooked-nosed bluffer, and the pure air and sagebrush plains of eastern Oregon were immensely benefited by his migration to Portland. But God help Portland. The sooner Portland gets rid of "Confidence Slippery" Jackson and all of his kind the sooner the city will come into its own. Jackson and his narrow, mentally constipated, hidebound, stand-pat, managing editor—George Trowbridge—are now engaged in running "prosperity" cartoons. But the only prosperity visible in the vicinity of the Journal office is that which is streaming into Jackson's cash till. Let every man who loves his city, his State, and his Nation see to it that not another penny of his money goes into that till.

The people of Portland are compelled to donate to Jackson $60,491.69 a year as a mail subsidy, a donation which we make when we buy 2-cent stamps. But there is no earthly excuse why we should voluntarily donate anything else to him. We are compelled by existing law to make Jackson a present of the $60,491.69 a year, but there would be no excuse if we should increase the donation by patronizing his paper. And this same "Confidence Slippery" Jackson, the friend of the "poor man," the one who recently said with pious impudence that he gives a "fair hearing to all," actually refused to print as a paid advertisement the article reproduced herewith, showing how he receives $60,491.69 a year from the pockets of the people of Portland without giving anything whatever in return therefor.

"Edgar Buncombe" Piper, of the Oregonian, refused to print, as a paid advertisement, the same article. Read it and see if there is anything in it that would have justified any honest man running an honest newspaper in refusing to accept it as a paid advertisement. If your answer be in the negative, then you must conclude that both papers are essentially dishonest and unworthy of another penny of your support. Would you be worthy to call yourself a man if you continued to give your money to one whom you knew to have deliberately defrauded you by suppressing facts material for the voters to know?

OTHER ADVERTISEMENTS REFUSED.

"Edgar Buncombe" Piper refused many other advertisements during the last campaign.

The most important of these was an article offered to the Oregonian with the cash as a paid advertisement on August 16, 1914, and which after being set up in type was refused at the dictation of Piper. That article showed up the public record of C. N. McArthur, whom the Oregonian was supporting for Congress. It showed that when McArthur was in the State legislature in 1909 he openly advocated on the floor the passage of the Brooke-Bean bill, which, if it had passed, would have made it a criminal offense for any candidate for the legislature to sign statement No. 1. The object of the bill was to prevent direct election of United States Senators under the Oregon plan, but to remit their election to the money power through a corrupted legislature, as was done throughout the Union prior to the invention of statement No. 1 in Oregon, and the subsequent constitutional amendment making direct election of Senators Nation-wide. The article refused by the Oregonian as a paid advertisement on August 16, 1914, further showed that McArthur, in 1910, was one of the prime movers in the holding of the notorious "assembly" in Portland, whereby it was sought to nullify the direct primary indirectly, and set a precedent for the naming of all candidates for office by the old party machine in advance of the primary and in spite of the direct primary law. McArthur was the nominee of that "assembly" for State senator, but was defeated at the lawful primary by George W. Joseph.

These certainly were legitimate facts for the voters to know, and for Mr. McArthur, as a candidate for the important office of Representative in Congress, to answer or explain to the

electorate. But he was not called upon to answer because of the power of the Oregonian.

The article refused by the Oregonian as a paid advertisement on August 16, 1914, further showed by reference to the official corporation records at Salem that Mr. McArthur in 1912 actually acted as president of a dummy corporation known as the Hood River Gas & Electric Co., organized by the Pacific Power & Light Co., of Portland, for the purpose of freezing out an independent competing company at Hood River. That part of the article refused by the Oregonian, which shows Mr. McArthur's connection with the Hood River Gas & Electric Co., is as follows:

Between the years 1910 and 1912 Mr. McArthur was out of office, and whom did he serve in private life? He served as president of the Hood River Gas & Electric Co., organized by the Pacific Power & Light Co., of Portland, for the purpose of freezing out an independent at Hood River.

The Pacific Power & Light Co., of Portland, is a large holding corporation. Guy W. Talbot is its president and Lewis A. McArthur, brother of C. N. McArthur, is its assistant general manager. The Pacific Power & Light Co. is a $16,000,000 corporation, organized under the laws of the State of Maine. It, in turn, is owned by the American Power & Light Co., also organized under the laws of the State of Maine.

Although only a subsidiary of the American Power & Light Co., the Pacific Power & Light Co. owns the electric light companies at The Dalles, Pendleton, Dayton, Wash., Pasco, and Vancouver, and it is rapidly acquiring other holdings. It also owns water works and gas plants in Oregon, Washington, and Idaho. It owns the street railway at Walla Walla, and the interurban line from that place to Freewater, Oreg.

MANY FRANCHISES GRABBED.

This corporation has acquired franchises at Richland, Toppenish, Waitsburg, Lewiston, Touchet, Prosser, Underwood, Dufur, Attalia, Benton City, Clarkson, Grandview, Lowden, Moxee City, Outlook, Parker, Prescott, Wallula Junction, and numerous other towns and cities in Oregon, Washington, and Idaho. The New York advertisements of the Pacific Power & Light Co. boastingly assert that all of its franchises are "free from objectionable restrictions" and that some of them extend as far into the future as 1981. How encouraging to the public! The gross earnings of this company for 1913 were $1,288,059. Its expenses and taxes were only $663,674, leaving its net earnings $624,385. In other words, nearly 50 per cent of its income was clear profit, to be distributed as "interest and dividends" among its bondholders and shareholders. This company was organized January 10, 1910, and has since been very active in acquiring its holdings. The American Power & Light Co., which owns the Pacific Power & Light Co., also owns the Portland Gas & Coke Co.

M'ARTHUR AT HOOD RIVER.

In 1911 the Pacific Power & Light Co. bought the electric light company at Hood River. A citizen up there—Neil C. Evans, now residing at 315 East Thirtieth Street, Portland—organized an independent company and began cutting rates. The original company did not wish to bring its rates down, because in order to make things look right it would have to do the same in other towns in Oregon where it did not have competition.

But the Pacific Power & Light Co. hit upon the scheme of organizing the "Hood River Gas & Electric Co." as a dummy with which to fight the independent, and it put in C. N. McArthur as president of this dummy company. That McArthur served as its president as late as 1912 is proved by the annual report of the corporation on file at Salem. The independent company made terms with the subsidiary company and the Pacific Power & Light Co. now controls the situation at Hood River.

The Oregonian refused to let you know the facts just quoted during the last campaign. They are now set out here. These facts are either true or untrue. If untrue, let Mr. McArthur show that I have misrepresented him and I will leave the State of Oregon, never to return. He will have every opportunity to do so after March 4. If he fails, but confesses these charges by his silence, then I ask the electorate of the third Oregon congressional district to rebuke the oppression by which I was prevented from presenting the case of the public against greedy special privilege in the last campaign.

Any man wishing to run for constable, or for any other office, must now first go to one of the newspaper political bosses and "arrange for publicity" during the campaign. In that way these new bosses control elections. And the money power controls the newspapers by giving them graft in the form of mail subsidies. It also gives them graft in the form of news monopolies. It affords them other means of acquiring a million in 10 years without doing one honest day's work to earn it.

These same newspaper political bosses lied to the people and said that I had not "attended to my duties."

The Oregonian printed the first editorial along that line August 22 last, and that editorial was written by William D. Fenton, attorney for the Southern Pacific Railroad Co. Yet, the editorial was printed as an ordinary Oregonian editorial. That was a great fraud on the readers of the Oregonian and the electorate of Oregon. The idea of a newspaper permitting a railroad attorney to write its editorials, attacking a candidate for reelection to Congress, when that Congressman was fighting tooth and nail to make that very railroad company live up to the law. Yet, that is exactly the fraud that was perpetrated on the people of this district by "Edgar Buncombe" Piper in the campaign just closed.

Mr. Piper refused the following day, August 23, to print as a paid advertisement my answer to the editorial, in which I charged that it was written by Fenton, and challenged Fenton to deny it. Later I printed in the CONGRESSIONAL RECORD the article which the Oregonian refused, charging that the editorial was written by Fenton, and neither Fenton nor the Oregonian has denied the charge to this date.

(3.)

DID YOU SEE THIS BEFORE THE ELECTION?—IF YOU HAD SEEN IT, WOULD NOT YOUR VOTE HAVE BEEN A REBUKE TO BRUTAL AND COWARDLY OPPRESSION?

[By A. W. LAFFERTY, in the Saturday American, Nov. 14, 1914.]

Below is reproduced, word for word, an advertisement headed "C. S. Jackson's froth," which I succeeded in getting printed Monday before the election in the Evening Telegram, but which both the Journal and the Oregonian refused to print as a paid advertisement. The article merely recites figures, which, if untrue, the Journal and the Oregonian could have exposed. They had all the balance of their papers as free space in which to do it. They were devoting columns to lying about me and belittling me.

The only possible excuse these bulldozing newspapers could have had for arbitrarily refusing to print this advertisement was that they did not want you to know the facts here set out. If you had known that in time, would you have supported them by voting for their candidates for Congress, McArthur and Flegel? Moreover, the Oregonian refused to print many other advertisements of even more importance to the public offered by me with the cash during the campaign. Read carefully the following. It will be worth your time:

C. S. JACKSON'S FROTH.

C. S. Jackson, the man who has been made a millionaire by the poor people of Portland, refused last Thursday [Oct. 29, 1914] to print as a paid advertisement the following facts from the Postmaster General. And because the Evening Telegram accepted the advertisement on Friday, with a statement that the Journal had refused to print it, Jackson was made insanely angry, and yesterday, in a signed two-column editorial in the Journal he ranted and he frothed, he puffed and he blowed, and he said "LAFFERTY is a liar," but he did not answer or refute a single fact charged in the following article. I invite intelligent people to read it and to decide for themselves who is the liar, C. S. Jackson or myself. After you have read it you will not have to ask, "Where did you get it, Mr. Jackson?" You will know where he got his million. You will know that you and the other citizens of Oregon have largely donated it to him as a mail subsidy, at the rate of $60,000 a year, and that he was so anxious to keep you in ignorance of the facts that he refused to give you this information even as a paid advertisement. Is either C. S. Jackson or the Oregonian a safe guide to direct honest public opinion? When their pocketbooks are touched, when their own system of milking the public is about to be exposed, they show the cloven hoof.—A. W. LAFFERTY.

SERVES NOTICE ON EMPLOYEES.

Since the foregoing was put in type I have learned that Jackson in his desperation has had his two-column editorial of yesterday printed in leaflet form and handed a copy to each Journal employee, and has added thereto a statement which in effect orders all his employees to vote and work against me or quit their jobs. Jackson's statement to his employees follows:

"The above article speaks for itself, tells its own story. The Journal has been defamed and falsely accused by LAFFERTY. I wish you to read at your leisure the facts in the matter, so far as LAFFERTY'S mistakes and misrepresentations are at variance with the truth, and at the ballot box Tuesday register your verdict for or against the Journal, as your conscience and loyalty toward this paper may dictate. You are in a position to know whether or not what I say regarding this matter is true. If you are not fully posted and still feel uncertain, you can easily acquire the facts. In any event if the Journal can not have your support in this connection and the support of those you can influence, then your contempt for the Journal is enough to justify your indignation, for no honest man should labor in an environment contrary to his principles and destructive of his rights.

"Sincerely, C. S. JACKSON."

The foregoing is simply a poorly glossed-over order to all Journal employees to vote against me, and have their wives and dependents do so, or lose their jobs. Yet Jackson poses as a great foe to the "political boss" and preaches the doctrine that each voter is "an independent sovereign," having the right to vote without dictation, undue influence, or coercion. That is true except when Jackson's pocketbook is touched. Then old-fashioned boss politics are justifiable.

A. W. LAFFERTY.

The Oregonian refused to print this article as a paid advertisement in to-day's issue (Nov. 2, 1914, the day before election), although the cash was tendered in advance. The Oregonian is fighting as frantically as is the Journal to keep me from getting these facts to the public. After election I shall have this article printed in the CONGRESSIONAL RECORD and send it to each voter in this district, whether I am defeated or elected; but I believe I am going to be elected.

A. W. LAFFERTY.

ARTICLE WHICH BOTH THE JOURNAL AND THE OREGONIAN REFUSED TO PRINT AS A PAID ADVERTISEMENT.

Every time you buy a 2-cent stamp you give 1 cent to the Journal, the Oregonian, the Saturday Evening Post, and their allied papers.

Yet the Journal complains bitterly because I have used your frank, not mine, to notify you of these facts. The congressional frank belongs to the people of the district and is intended to be used for their enlightenment as to what is going on.

THE OFFICIAL RECORDS.

Here is the proof that every time you purchase a 2-cent stamp you donate 1 cent to the newspapers and magazines.

In a letter to me dated September 24, 1914, the Postmaster General says:

"I invite your attention to the inclosed copy of a report of the Commission on Second Class Mail Matter, submitted February 2, 1912, from pages 130 to 138 of which it will be seen that this commission found the cost of handling, transporting, and delivering second-class matter to be approximately 6 cents a pound, exclusive of certain unapportioned expenditures. These unassignable expenditures amounted to approximately 2 cents a pound."

Therefore, according to the Postal Department the total cost of transporting and handling newspapers and magazines is 8 cents a pound.

In a further letter to me, dated September 29, 1914, the Postmaster General says:

"I have to invite your attention to the following table, showing, with respect to the publication mentioned by you, the weight of the mailings at the 1-cent-a-pound rate of postage during the fiscal year ended June 30, 1914:

"Morning Oregonian, Portland, Oreg., 956,433 pounds.
"Oregon Journal, Portland, Oreg., 864,167 pounds.
"Evening Telegram, Portland, Oreg., 759,099 pounds.
"Saturday Evening Post, 37,013,634 pounds."

JOURNAL SUBSIDY OVER $60,000 PER YEAR.

Inasmuch as the Journal sends 864,167 pounds yearly through the mails at 1 cent a pound—which is almost as good as a frank—and as it costs us 8 cents a pound to handle, transport, and deliver those papers, it will be seen that the net donation which we make to the Journal yearly is $60,491.69, or a large fortune for any ordinary family. The amount we donate to the Journal each year, as proved by the Postmaster General's letters here quoted, is nearly twice as much as we pay in salaries yearly to both of our United States Senators and all three of our Congressmen from Oregon. The subsidy of the Saturday Evening Post yearly is greater than the annual appropriation made by Congress for river and harbor improvements in the whole State of Oregon.

FAKE "EXPRESS" COMPANY ARGUMENT.

These newspapers, pensioners on the backs of the people, brazenly and falsely assert that the express companies carry their papers just as cheap, and they would have us believe they are really favoring the Post Office Department by giving a part of their business to Uncle Sam. What they say is not so, and they know it is not so. Imagine an express company carrying 12 newspapers to 12 different post offices for 1 cent! But that is exactly what the Government will do and does do if the 12 papers should weigh in the aggregate only 1 pound. But suppose the papers were heavy and ran 4 to the pound. Imagine an express company hauling 4 quarter-pound packages to 4 addresses for 1 cent! The big newspapers patronize the express companies only when they have large bales of papers going to a single agent in a near-by town and thereby cheat the Government out of the only business they have upon which the Government could make a profit.

SPEECHES SENT INEXPENSIVE TO GOVERNMENT.

All the speeches I have sent out would not weigh over 6 tons, and the postage thereon, if paid at $20 per ton, the rate charged the Journal and the Oregonian, would only have amounted to $120 for my four years in Congress. I would rather have paid that amount and had my speeches go by fast mail, which is the service given the Oregonian and the Journal. Congressional speeches are handled as deadhead matter, and everything else has the right of way.

I favor making second-class mail matter pay actual cost. Nothing short of that is common honesty. Why should one man be taxed to enrich the pockets of another man? Yet half our letter postage to-day is a Government tax on us to put money into the pockets of the rich newspaper owners. I am against graft and greed in every form.

A. W. LAFFERTY,
733–736 Pittock Block.

GOVERNMENT AND MUNICIPAL OWNERSHIP OF NATURAL MONOPOLIES INEVITABLE—CLEVELAND'S 2½-CENT STREET CAR FARES—MAYOR ROLPH SENDS GOOD WISHES, AND REPORTS TREMENDOUS SUCCESS OF MUNICIPALLY OWNED AND OPERATED GEARY STREET LINE IN SAN FRANCISCO.

[By A. W. LAFFERTY, in the Saturday American, Nov. 14, 1914.]

Outrages always precede great reforms. The American people are honest and moderate. They believe in their institutions and in the existing order of things. It requires a great deal to stir them up. But when once aroused, they do not stop till they get justice.

Intrenched special privilege is determined not to meet the public halfway. It is committed irrevocably to a course which means that it will fight to the last ditch the passage of any laws for the public welfare, and that when any laws of a halfway character once are put on the statute books, they will wear them out in the courts and evade them in every possible manner.

When first elected to Congress, four years ago, the writer of this article knew that things were not exactly right in this country, but he had no idea that they are as bad as they are.

The solemn and momentous truth is that a group of 200,000 men own 70 per cent of the wealth of the United States, leaving but 30 per cent for the remaining 99,800,000 people. The group owning nearly all the wealth is headed by the Rothschilds, the Rockefellers, and the Morgans, and constitute what is known as the "money power." They own all public utilities. They own all street railways. They own all steam railroads. They own the telephones, the telegraphs, and the express companies. They own the big banks of Wall Street, of London, and of Paris. Through exorbitant public-utility profits and real estate interest, the money power is now collecting practically all our earnings, and the result is that the American people are working for their board and clothes. It makes no difference whether you be a doctor, a lawyer, a dentist, skilled tradesman, a clerk, or a day laborer, all you are getting under present conditions is a bare living.

The remedy is not confiscation. Oh, no. That is only what the high-brow servants of the money power in derision claim all honest legislators favor. But the remedy is for the Government and the municipalities to buy from the money power all public utilities at their actual present value, and then the tremendous wealth to be produced hereafter will go to the public instead of going to the money power. Under the Constitution the public has the right to make this purchase. The public is given the right at any time to take private property for a public use "upon making due compensation," which means to pay what the property is worth as property, and not what it is worth as a speculation. Public ownership would not take from the money power the millions it has already made through charging the public exorbitant profits, but it would stop the flow of wealth to the money power hereafter and turn it toward the general public welfare. It would reduce the cost of living, and leave in the hands of the people a large portion of their earnings which are now going in unearned profits to the money power. An additional remedy would be to pass a genuine rural-credit law providing for direct loans of gold Treasury notes to the farmers on first mortgage, which would reduce the price of bread and meat and save to the public hundreds of millions now going to the money power as unearned agricultural interest for the loan of "credit" to the farmers.

Here are a few illustrations of how the public is being robbed by exorbitant public-utility profits:

The Portland Railway, Light & Power Co. is a fair example. Its gross earnings for 1913 were $6,723,742, its total operating expenses and taxes were $3,298,310, and its net earnings, all of which were sent East, amounted to $3,425,432. These figures are taken from Moody's Manual, 1914 edition, the official guide of Wall Street. Yet the Portland Railway, Light & Power Co., through the newspapers, would have the people of Portland believe that the company is barely making a living. Its net earnings for the past seven years have steadily increased each year, while Portland residents have grown poorer each year. Its own figures, set out in Moody's Manual, show its net income for the past seven years as follows: 1907, $1,632,375; 1908, $2,059,017; 1909, $2,399,112; 1910, $2,914,518; 1911, $3,266,806; 1912, $3,313,397; and 1913, $3,425,432. This company is capitalized for over $200,000 a mile, and is paying interest and dividends on that capitalization, while its actual physical valuation is not more than half that amount, as the proof here given will show.

The citizens of Cleveland, Ohio, now have 2½-cent street car fares, and that is proof No. 1. A fight was made there by Tom Johnson for public ownership. The company offered to compromise by submitting its physical valuation to arbitration before Federal Judge Taylor and permitting the city to fix the fares thereafter at such an amount as would pay 6 per cent profit to the company on its actual physical valuation. The result was that the fares were immediately reduced to 3 cents, and the company is now required to sell two tickets for 5 cents. The Cleveland Railway Co. was no different from the local company, and is owned by the same money power.

San Francisco furnishes proof No. 2. Two years ago, under the leadership of Mayor James Rolph, jr., our sister city on the south built the great Geary Street line. It is the finest street railroad and the best equipped of any on the Pacific coast, and it cost to build and equip it just over $100,000 a mile, while, as stated, the local company in Portland, which is not so well built or equipped, is capitalized for over $200,000 a mile. The Geary Street line is owned and operated in every detail by the city of San Francisco. During the past year the gross income of the Geary Street line exceed its operating expenses over 50 per cent. Its tremendous success has caused the United Railways of San Francisco to make overtures to sell out its entire system to the city.

Recently I wrote to Mayor Rolph and inquired as to the success of the Geary Street line. His reply, prepared by Mr. Edward Rainey, secretary to the mayor, at the mayor's direction, in part follows:

"The mayor has asked me to reply to your letter of September 16, which he was very glad to get. He asked me to extend to you his best wishes and to say that this office will be glad to furnish any further information you may desire from time to time relative to street railway ownership in San Francisco. * * *

"Before the present administration, Mayor James Rolph, jr., took office in January, 1912, some feeble attempts had been made toward a street railway in Geary Street. The mayor at once took up this matter energetically, and the Geary Street road was opened throughout a part of its length at the end of 1912. The construction was of the finest; the cost of construction, including cars, car barns, necessary real estate, tracks, etc., was just over $100,000 a mile, while the local privately owned company operating most of the street car lines was capitalized for something over $300,000 a mile.

"The success of the Geary Street road was immediate. * * *

"Let me add that all of the employees, with the exception of superintendent, assistant superintendent, and claim agents, are under civil-service rules and are selected after rigid examination and not subject to control for any political purpose."

More than $200 in unearned profits are now collected from each American family per year by the money power through street railways, steam railroads, unearned interest on duplicated deposits, etc. The average income of the American family, according to census reports, is only $625, so that the payment to the money power of unearned profits of $200 out of that meager income each year represents the difference between prosperity and hard times. It represents the difference between making a competence in the 30 years of one's active life and being a slave. It represents the difference between living with independent dignity, educating your children, and dying in peace, and the present struggle for existence under crushing conditions of poverty.

I wonder if my fellow citizens will believe me or will they still be deceived. I wonder if the people will not wake up to a realization of the fact that in a country like this, with bountiful crops and as much property present as ever, hard times are unnatural, and due only to the fact that all our earnings are going into the hands of a few. My heart was never stronger than to-day, and I have absolute confidence that I shall win in the end.

POSTAL SAVINGS BANK FAKE—LAW WAS FRAMED TO HELP BANKERS AND DOES NOT REDUCE COST OF LIVING.

[By A. W. LAFFERTY, in the Saturday American, Nov. 21, 1914.]

The establishment of the postal savings bank was opposed by the money power, just as that power opposes every step toward the exercise of the functions of this Government for the benefit of the people who constitute the Government. The proposal to establish a postal savings bank was called "paternalistic." It was denounced as socialistic and as being a step which trenched upon the sacred right of the banks to collect all banking profits from those who toil.

But finally a happy compromise was agreed upon which suited the money power to a dot. It was figured out that the public would be satisfied with the empty name, "postal savings bank," and that such restrictions should be thrown around its operation that, instead of being in any sense a competitor with private banks, it would really be a new source of augmenting their deposits.

It was urged by the servants of the money power that the postal savings banks should be limited to deposits of $500 from any one person and that not more than $100 should be deposited in any one month, and it was written that way. The money power also said that the depositors in the postal savings bank should only be paid 2 per cent interest, to be forfeited if the money was not left a full year, and it was so written. The money power said the Government should then redeposit the money in the private banks for 2½ per cent interest and permit the private banks to loan the same money out at 8 or 10 per cent, and it was so provided in the statute.

Then the money power said: "We are better off than before, for we will now get all the money that a certain class, who distrust the banks, have heretofore buried in tin cans and otherwise secreted about their premises." The money power predicted right, for millions came out of hiding and was deposited in the postal savings banks, because the people were willing to trust the Government, and this money was then redeposited immediately in the private banks by Uncle Sam.

Why does not Congress enlarge the powers of the postal savings banks, permit them to accept all the money the people desire to deposit in them, pay 3 per cent therefor, and then loan this money out on farm lands and other good security at 4 per cent, thereby reducing the cost of living to the people?

The answer is that the money power controls elections. Such a law will be passed whenever the people secure a majority in the Senate and House of Representatives who are honest and who are unafraid. We must have 218 Members of the House, as the total membership is 435, and we must have 49 Senators, as the total membership of that body is now 96. That happy day will come in 1916, or in 1918 at the latest, in the optimistic opinion of the writer of this article.

SUPREME COURT GETS LAND-GRANT CASE—SOUTHERN PACIFIC AT LAST BEFORE FINAL COURT—DECISION TO FOLLOW SOON.

[By A. W. LAFFERTY, in the Saturday American, Nov. 28, 1914.]

The most important case to the State of Oregon now pending in any of the courts is that of John L. Snyder et al. against Oregon & California Railroad Co. et. al., which is pending, at last, in the Supreme Court of the United States and which will be argued and finally decided soon.

This litigation was started on the second floor of the Portland post office, in Judge Wolverton's court, when John L. Snyder, an actual settler on a quarter section of the land in Columbia County, instituted suit, on September 16, 1907, to compel the company to give him a deed. The writer was and is his attorney. The following six months I filed suit for 64 other actual settlers. One year later, September 4, 1908, the United States Government intervened and filed a complaint asking that all of the lands involved in the whole grant, which had not been sold, be forfeited to the Government, on the ground that the company had violated the terms of the grant in refusing to sell to settlers, and in selling to others than settlers, and in selling in quantities larger than 160 acres and for prices exceeding $2.50 per acre.

On July 1, 1913, Judge Wolverton sustained every point claimed by the Government and entered a decree forfeiting 2,300,000 acres to the United States. Judge Wolverton denied the claims of Snyder and the 64 other actual settlers and forfeited their claims also to the Government. From Judge Wolverton's decision Snyder and the other settlers appealed and the railroad company appealed, of course, as it always does. June 1, 1914, the circuit court of appeals at San Francisco ordered the case certified to the Supreme Court of the United States, without itself rendering a decision, thereby saving several years' time.

The case has now reached the highest court in the land and has been docketed. It will be argued by all sides in the very near future, and a final decree entered soon thereafter.

The Supreme Court may render any one of three decisions, namely:

First. The court may affirm Judge Wolverton's decision declaring a forfeiture, and in that case the lands will simply become the property of the United States, and will not be subject to any form of settlement or claim unless Congress shall see fit to pass a law so providing. Congress ought to pass such a law in case of forfeiture to the United States, and the lands should be sold to settlers under a drawing system, and in tracts of 40 acres. In lots of that size the 2,300,000 acres would make 60,000 homes. In lots of 160 acres the lands involved would make 15,000 homes.

Second. The court may decide in favor of the railroad and let the company keep the land. I do not look for such a decision, however, as the law is too plain.

Third. The court may hold that the United States is not entitled to an outright forfeiture, and that neither is the railroad

entitled to hold the land, but that the original law making the grant must be enforced to the letter. This is the decision that I am fighting for. It is the decision that would result in benefit to Oregon. In case the Supreme Court reaches this conclusion it will doubtless direct the lower court to appoint receivers to take charge of the land and sell it out to actual settlers according to the law making the grant. This law simply provides that "the lands hereby granted shall be sold by said railroad company to actual settlers only, in quantities not exceeding 160 acres to any one settler, and for prices not greater than $2.50 per acre." That is all the law there is on the subject, and a plainer law was never written.

STATE OWNED AND OPERATED FORESTS—CONVEYANCE IN TRUST FOR FORESTRY PURPOSES WOULD SAVE OREGON $12,000,000 A YEAR.

[By A. W. LAFFERTY, in the Saturday American, Nov. 14, 1914.]

A letter just received from the Oregon State Tax Commission says our total taxes in Oregon last year amounted to $18,000,000 and that this year they will amount to $23,100,000.

As Oregon has but 800,000 population, it will be seen that our taxes have reached the enormous total of practically $30 per head of our population, or $150 per family.

You may not pay the $150 in taxes when you go to the courthouse to get your tax receipt, but such firms as Meier & Frank, Olds, Wortman & King, Lipman, Wolfe & Co., and the other merchants with stocks of merchandise mounting into the millions, pay your taxes for you, and you pay them when you buy the merchandise. At the end of the year each citizen has paid his pro rata share of the taxes of the State, either directly or indirectly.

No wonder the people of Oregon are hard up. If they were not energetic, and made of the very best quality, they would be complaining more than they are. No higher spirited men and women are to be found anywhere than in Oregon.

The principal remedy for the high taxes in Oregon would be to secure the passage of a law by Congress providing for the conveyance of the forest reserves in trust to the States wherein located.

Half the taxable wealth of Oregon is in her 16,000,000 acres of forest reserves, and in consequence held off the tax rolls.

These 16,000,000 acres constitute one-fourth of the State's area. The valuation is estimated by the Oregon Conservation Commission to be $400,000,000. If these lands were conveyed to the State in trust for forestry purposes, they would yield a profit to the State of at least 3 per cent net each year, which would turn into the State treasury $12,000,000 and cut our taxes down one-half.

The proposal to convey the forest reserves in trust to the States originated with the writer hereof, and a bill has been introduced in each of the last two Congresses for that purpose. The Bureau of Forestry at Washington, of course, is bitterly opposed to the proposal, and have reported to the Committee on the Public Lands against the bill. The National Bureau of Forestry does not wish to relinquish its jurisdiction over Oregon's forests because they furnish the subject matter for many fat jobs for eastern college-bred "foresters," who travel back and forth across the continent at Government expense to look after Oregon's resources.

That such a bill as has been proposed by me will ultimately become the law, I have not the slightest doubt. It ought to be the law now. It safeguards every right of the National Government, in that it provides that the lands shall be held in public ownership forever by the States, and that only the ripe trees shall be cut and marketed each year, allowing the younger timber to grow up. The bill provides that all the cutting shall be under the general supervision of the Federal Bureau of Forestry, and that Congress shall revoke the grant in trust to any State at any time if the State shall fail to take proper care of the forests within its borders.

This bill gives to the East all it is demanding, to wit, a guaranty that the forest lands of the West shall be held permanently for forestry purposes, thereby preventing an ultimate timber famine; and at the same time gives to the West what it is rightfully demanding, to wit, home rule and the profits from its own natural resources. The bill provides that the State shall organize a board of forestry capable of taking proper care of the lands. The measure would give employment to Oregon people, and would put all the profits from her reserves into Oregon's treasury. No Oregon daily newspaper has favored the bill, because they were afraid they would thereby help the fortunes of the man who proposed it.

IS THIS COMPANY LOSING MONEY?

Income account of the Portland Railway, Light & Power Co., 1907 to 1913, inclusive.

[By A. W. LAFFERTY, in the Saturday American, Dec. 5, 1914.]

	Gross earnings.	Operating expenses and taxes.	Net earnings.
1907	$3,982,657	$2,350,282	$1,632,375
1908	4,351,676	2,292,659	2,059,017
1909	4,818,622	2,418,910	2,399,112
1910	5,638,896	2,724,378	2,914,518
1911	6,336,703	3,069,897	3,266,806
1912	6,642,308	3,328,911	3,313,397
1913	6,723,742	3,299,310	3,425,432
1914 (ending Nov. 30)	6,366,154	3,284,272	3,081,882

DANA SLEETH IS KICKED OUT—BRILLIANT EDITOR, WHO ONCE MADE FAKE LABOR PAPER POPULAR, HAS BEEN SUCCEEDED BY ANOTHER SLAVE.

[By A. W. LAFFERTY, in the Saturday American, Nov. 21, 1914.]

It is not generally known to the people of Portland that Dana Sleeth, the cleverest editorial writer of recent times in Portland, has been let out of his job as editor of the Portland "Nuisance" by the Scripps management, and that he has been succeeded by one Moriarty. But such is the case.

The exact reason for this change is not known, but it is believed that it is merely in accordance with the usual cold, mercenary policy of Mr. Scripps to fire any man who fails to extract the coin from the "Mutts." The "Nuisance" has been on the toboggan right for these last several moons, and appears to be in a very low state of vitality. Of course its millionaire owner could dig up the necessary mazuma to tide it over till the "Mutts" forget its recent sins, but Mr. Scripps, like most millionaires, does not believe in digging up.

So another slave has been put in charge. He will try in a little different way to work off on the "Mutts" the same old boiler-plate Scripps chestnuts, which are sent out to all the "57 varieties" of Scripps papers at the same time, and which appear on the same day in all Scripps papers all over the United States.

Why does not Multimillionaire Scripps carry at the head of the editorial column of the News the name of his "current editor," so we might at least know the name of the individual who is sent here to tell us how to vote?

—

(10)

BANKING GRAFT IS GREATEST YET.

[By A. W. LAFFERTY, in the Saturday American, Dec. 5, 1914.]

The banking graft everywhere is the nicest, easiest, cleanest graft there is. Nowhere is the picking better, proportioned to the population, than in Portland.

In England those who are given the privilege of conducting the banking graft have to pay for the privilege. They have to contribute liberally of their profits each year to maintain broken-down royalty and relatives of royalty. For such favors as these, and for liberal loans and donations from time to time to the ruling families, the banking graft is farmed out all over Europe.

But in the good old U. S. A. we give our codfish aristocrats the privilege of collecting millions annually from our poor shopkeepers, small-business men, and householders through the banking graft, and we get nothing whatever in return for so farming out that privilege. We are easy.

Take Ladd & Tilton, for example. That bank has deposits of $15,000,000. It has loans and discounts of $15,000,000. In other words, one crowd has $15,000,000 deposited with Ladd & Tilton and another crowd has the same $15,000,000 borrowed. Ladd & Tilton pay interest to their depositors, say, of 4 per cent and charge the borrowers 8. Thus, for acting as "bankers"—keeping the books—Ladd & Tilton collect 4 per cent a year on $15,000,000, which is $600,000. The First National Bank, recently consolidated with the Security, has deposits of $14,000,000 and it has loans and discounts of $14,000,000. Its process is the same as that of Ladd & Tilton, and its profits of 4 per cent annually on loans of $14,000,000 amount to $560,000. So these two banks alone, to say nothing of the many others in Portland, collect yearly over $1,000,000 from the people of Portland and of Oregon "for keeping the books." This $1,000,000 going to these two banks alone amounts to $4 for every man, woman, and child in Portland, or $20 for each family of five. The banking toll being collected by all the banks in Portland per year will amount to at least $6 per head, or $30 per family. That is a tax you are paying now to the banks.

Nearly all of this banking graft could be saved to you if your Congress would pass a law enlarging the powers of your bank—the postal savings bank. Your bank might just as well receive the deposits, keep the books, loan the credit, and cut down the cost of living in Portland nearly $30 per year per family.

Suppose Congress would do this for your bank. Then you would be a stockholder in one bank in Portland, a large white marble structure, of which you would be proud. It would be your institution. It would serve you. Its dividends would be reflected in the reduction of your yearly cost of living. Merchants could get cheaper credit. The community would be relieved of the heavy banking toll of which it is being now drained annually, and which is a heavy burden upon those who toil.

The banks never have on hand anything like the amount of money they owe to their depositors. The law only requires a reserve equal to 25 per cent of the bank's deposits, and even a part of this reserve may be kept on deposit in a central reserve bank. Therefore if all the depositors in any bank should call for their money on the same day or the same month they could not get it. But as the borrowers owe the bank, and the bank owes the depositors, it is figured that the bank is "solvent." But the truth is that the same dollar is loaned many times by the bank, without the cash being actually withdrawn from the bank once. A will deposit $1,000 to-day, for example. B will borrow that $1,000 to-morrow. But instead of taking the cash he will take a certificate of deposit. The next day C will borrow the same $1,000, and he, too, will take a certificate of deposit.

There are only $3,500,000,000 in the United States to-day, or $35 per capita. Yet the people have borrowed ten times that amount and are paying interest on it to the banks and trust companies.

The graft of the Portland bankers is only a drop in the bucket as compared with that of the Rothschilds, the Morgans, and the Rockefellers. But the Portland bankers stand in with that Wall Street crowd and do their bidding when it comes to defeating honest public officers in Oregon.

—

(11)

ONE-CENT LETTER POSTAGE.

[By A. W. LAFFERTY, in the Saturday American, Dec. 5, 1914.]

The Post Office Department has reported that it costs the Government less than 1 cent to carry an average 2-cent letter. Then why should you pay more than 1 cent postage?

The answer is that the Government is losing $75,000,000 a year on daily newspapers and magazines, which it is carrying for 1 cent a pound, when it costs 8 cents a pound, and therefore you are taxed 1 cent every time you buy a 2-cent stamp to help make up that deficit.

Is there not another and fairer way to make up that deficit? Yes. The fair way would be for Congress to pass a law requiring all newspapers and magazines to pay actual cost of transporting, handling, and delivering their products, and to then reduce letter postage to 1 cent.

Congress does not do this because Congressmen are afraid of the big newspapers at election time.

But the newspapers have been exposed in their graft. The facts have gone into the CONGRESSIONAL RECORD. And this knowledge will gradually reach the people in one way or another. Then they will demand their rights.

Of course, this particular saving will only be about $1 per year to the average citizen, but common honesty should be observed in small things as well as in large things. There is no reason why the poor widow who writes a half dozen letters a year should be taxed 6 cents to go into the pockets of arrogant bluffers, bulldozers, and thugs who happen to own daily newspapers.

I favor allowing country weeklies to go free in county of publication as at present. That part of the deficit caused by the country weeklies is so small as to be negligable.

—

(12)

RAILROADS' FAT INCOMES; FAKE POVERTY HOWL—EVERY OREGON LINE SHOWS INCREASE OF NET INCOME FOR 1913 OVER 1912, YET ASK FOR RAISE IN RATES.

[By A. W. LAFFERTY, in the Saturday American, Nov. 28, 1914.]

Although the official figures here quoted show that every railroad system operating in Oregon increased its net income in 1913 over 1912, these roads, through the controlled press, would have you believe that they are poverty-stricken and barely able to exist. These figures are taken from Moody's Manual, 1914 edition, the official guide on Wall Street.

Did you know that these railroads maintain publicity departments, composed of trained newspaper men, who write articles and send them out to the country papers to be printed as "editorials," showing how the railroads are "pouring money into loosing propositions" because they "have faith in this country's future"? The past week such articles have appeared in Oregon country weeklies. The readers supposed these articles were written by the country editor, whereas they were written in Portland in the railroad offices. They bribe the country editors to publish this rot by giving them cash for "advertisting," but in sums out of all proportion to the value of the advertising. It is outright bribery.

Here are the facts:

GREAT NORTHERN.

1912.

Gross operating revenue	$66,197,819
Operating expenses	37,662,548
Net operating revenue	28,535,271

1913.

Gross operating revenue	78,692,767
Operating expenses	45,859,254
Net operating revenue	32,833,513

NORTHERN PACIFIC.

1912.

Gross operating revenue	63,423,947
Operating expenses	38,158,518
Net operating revenue	25,265,429

1913.

Gross operating revenue	72,676,139
Operating expenses	44,673,298
Net operating revenue	28,002,841

SOUTHERN PACIFIC.

1912.

Gross receipts and income	140,377,690
Net income	48,265,408

1913

Gross receipts and income	154,516,877
Net income	55,950,181

SPOKANE, PORTLAND & SEATTLE.

1912.

Gross earnings	4,837,141
Operating expenses and taxes	3,003,663
Net earnings	1,833,478

1913.

Gross earnings	5,341,466
Operating expenses and taxes	3,337,345
Net earnings	2,004,120

UNION PACIFIC SYSTEM.

(Including Oregon-Washington Railroad & Navigation Co.)

1912.

Gross operating income	85,977,609
Operating expenses	50,389,407
Net operating income	35,588,202

1913.

Gross operating income	93,638,459
Operating expenses	54,030,216
Net operating income	39,608,424

The foregoing undisputed figures show that during the so-called "hard times" of 1912 and 1913 every railroad entering Portland, Oreg., increased its gross income and its net income; in other words, increased its profits. The same was true of the great Pennsylvania Railroad system and all other systems east of the Mississippi River. Yet these roads did not have the nerve in 1912, even under Mr. Taft's administration, to ask to have their rates raised. They knew it would be futile to make such a request. But in 1914, when their profits were greater than in 1912, these railroads took advantage of the fact that we had a President friendly to the railroads, and they asked and received at the hands of the Interstate Commerce Commission an order raising the rates of eastern roads, and the prospects are that the western roads may also succeed in getting their rates raised. In order to get this raise of rates the roads carried on through the newspapers of the country a propaganda of threatened receiverships of the railroads, which no doubt has had much to do with our present hard times in most every business except that of the very public utilities responsible for the cry of "hard times."

In proposing Government-owned ships President Wilson has grappled with the money power for the first time. Let us hope the President will not falter. Every American citizen should support the President in this fight.

We now see in the daily papers numerous inspired items intended to make us believe that the railroads are going to restore good times for us by making liberal purchases of cars and materials. Shortsighted, indeed, is the man who can not see that every purchase by a railroad is a purchase by the public.

It is a purchase of something which is paid for by the public. One item this morning was headed "Railroads liberal buyers." Suppose the public owned the railroads. The item would then read "The public is a liberal buyer." The same meaning ought to be attached now, for it is the public which pays the bills for all railroad improvements or betterments.

Strange, indeed, is the doctrine now being preached by all bankers, railroad men, newspapers, and others under the control and influence of the money power that we can only have good times by raising railroad rates. To say that the public can make permanent prosperity for itself by increasing the price it has to pay for transportation and other necessities reminds me of the man who tried to raise himself over the fence by his boot straps.

But to the money power this strange doctrine of making good times by compelling ourselves to pay more for everything we buy is logical enough. The money power now owns 70 per cent of all the wealth of the United States. Two hundred thousand men own this 70 per cent of our wealth, leaving only 30 per cent for the remaining 99,800,000 people. They say to us: "Let us charge you such rates for public-utility service and for commodities put out by monopolies which we now control as to give us the remaining 30 per cent of the wealth and we will give you a full dinner pail in the meantime; we will employ labor." To me that is not an encouraging promise. I should prefer to call a halt now. I should prefer to so administer what we have left in the hands of the public as to turn the tide of wealth back toward ourselves and our children. I am not willing to sell our birthright for a mess of pottage which when gone will leave us and our children slaves to the money kings for all the long future. I do not want cocaine; I do not want fictitious relief which will turn to ashes upon the lips; I want a permanent cure; I want a permanent prosperity which will extend into every home. Any system which postpones a realization of this much to every man who gives honest and sober toil to society is robbery and a disgrace to the intelligence and independence of the American people.

Increasing Prices and Costs.

EXTENSION OF REMARKS

OF

HON. JOHN I. NOLAN,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 10, 1915.

Mr. J. I. NOLAN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I wish to insert a statement of the Hon. CHARLES A. LINDBERGH before the Commission on Industrial Relations in the city of New York February 5, 1915, on the subject of increasing prices and costs, and suggesting a remedy.

The statement is as follows:

Hon. CHARLES A. LINDBERGH, called as a witness, testified as follows:
Chairman WALSH. Kindly be seated.
Mr. LINDBERGH. Mr. Chairman, in order to have this as brief as possible, I have written the matter as briefly as I could to present it.
Chairman WALSH. That was very thoughtful. What is your name, please?
Mr. LINDBERGH. CHARLES A. LINDBERGH.
Chairman WALSH. And your residence?
Mr. LINDBERGH. My residence is Little Falls, Minn.
Chairman WALSH. And your business or profession?
Mr. LINDBERGH. I have practiced law in the past and farmed.
Chairman WALSH. What official position do you hold in the Government of the United States?
Mr. LINDBERGH. I am a Member of Congress from the sixth district of my State.
Chairman WALSH. That is, of Minnesota—the sixth district of Minnesota?
Mr. LINDBERGH. Yes.
Chairman WALSH. We have been informed that you have given a great deal of study to the question of cost and prices?
Mr. LINDBERGH. I have.
Chairman WALSH. With reference to industrial conditions?
Mr. LINDBERGH. I have so.
Chairman WALSH. Have you been kind enough to prepare that in concise form that you might read?
Mr. LINDBERGH. I have.
Chairman WALSH. I wish you would kindly do so. We must have perfect order, ladies and gentlemen.
Mr. LINDBERGH. I realize that any report made by your commission will have the respectful consideration of the country, and therefore ask your review of certain facts which I wish to present briefly.

INCREASING COSTS AND SUGGESTIONS FOR A REMEDY.

Legislatures and courts, as well as Congress, have an established rule that so-called "vested property," when employed, is entitled to a so-called "fair return." The enforced rule bears no relation to what men and women receive or should receive for their work in creating and conserving vested property, but corresponds somewhat with the results secured by speculators who make great profits from their respective schemes for scalping from the products of labor. The farmer, as well as the wageworker—whether mental or manual—strives year in and year out to secure success, each working his life out, but no rule was ever fixed by any legislature, Congress, or the courts that would enforce in favor of these toilers a fair return for creating the very property to which the vested-rights privilege attaches. On the contrary, the rule of reasonable return, established in favor of vested property when employed, absolutely precludes and makes impossible a fair return to farmers, wage and salary workers. If any controversy arises as to what the farmer or wageworker should receive, the price is fixed at what others in his class receive for the same thing, which price has originally been made by the privileged class; that is, by the capitalists, and it bears no relation either to the cost of living, the cost of production, nor to its true relative service to mankind.

No permanent reduction in the cost of living in favor of the masses can be secured as long as there is no relative rule for fixing a reasonable return for farm or other products and for labor, as compared with the so-called "reasonable return" to capital. The rule of "reasonable return," as applied—that is, the net profit required to satisfy capital—does not change materially. It is the same now as it was for the years past, and as it is intended by the capitalists it shall continue on into the future. When the wageworker gets increased wages the employer adds the increase to the sale price of the goods the employee produces or the services he renders. If the employer did not, it would interfere with his so-called "reasonable return," which it seems is a privilege regarded by legislatures and courts, as well as by Congress, as more "sacred" than human life. So, too, if the farmer gets more for his farm product than usual, those who buy, just so far as they can, and if it is a "special interest" it can, add the additional cost and make the final consumer pay it. As a result this added cost is charged back to the farmers and wageworkers in the price they pay for the goods and the services that they must buy. Now let us consider how the prices are continually marked up.

VESTED PROPERTY WITH SPECIAL PRIVILEGE.

With each additional year there is a greater amount of centralized accumulated property, carrying to its possessors the "special privilege" of collecting "reasonable profits" for its use. Right there is the "kernel in the nut"—that is, it is the underlying reason, the fundamental cause of the increasing prices and prevents a proper reduction of the hours of labor for the toilers.

The interest, dividends, and profits that have been accumulated from past speculation are enormous, and they are multiplying annually. To comprehend this we must deal in concrete facts. There is over $100,000,000,000, including all kinds of property and debts owed by corporations and others, upon which the public is forced to pay interest, dividends, and profits, or what may be termed "income property," and to support and pay that, and also its further accumulation, the helpless masses of humanity are struggling, yes, to meet the payment of the "reasonable profit" upon this huge and constantly increasing sum.

Including all ways in vogue to fleece the toilers, it is understating rather than overstating to say that the profit averages not less than 7 per cent above expenses, and 3 per cent more may safely be added without overestimating it, as the cost and expenses, including upkeep, making a total of not less than 10 per cent. That is, there is an annual charge of more than $10,000,000,000 exacted from the toilers.

I do not claim that these figures are absolutely accurate, for the exact amount can not be secured, but I do claim, and every careful student of the subject knows, that they are not exaggerated, and in fact are below the actual amount. They do, however, fairly demonstrate the principle I wish to make clear, which is, that the cost to the people of supporting the so-called rule of "reasonable return" for the use of capital, as it is applied in business and supported by law and practice, means that the toilers upon farms, in shops, and elsewhere, mental and manual, are forced to pay in a single year over $10,000,000,000 with the certainty that it will increase annually as long as the present rule and practice prevails. It is an actual tax upon the toilers to support and accumulate capital for the capitalists. It averages more than $100 for every man, woman, and child and is increasing yearly in proportion to the increase of "vested property" employed in business.

THE ENORMITY OF THE THING.

This $100,000,000,000 upon which more than $10,000,000,000 is collected yearly, is owned by a comparatively few persons, and the courts decree and "society" accepts, that when it is employed, as all this is supposed to be, it is entitled to a "reasonable return" above the cost of upkeep. There certainly are not over 30,000,000 people who do any useful work, and upon them the entire burden rests. That makes an equivalent of $333 per worker. Thus a man who is paid $600 annually for his labor or farm product, and his wife who works at home, have their wages or the income for the farm products reduced, and the price of what they must buy increased, in order to contribute $666 as a "reasonable" return for the use of capital.

I deny that the charge called a "reasonable return" now made by the capitalists and supported by the courts as such is, in fact, reasonable, but I admit that under the present system a charge for the use of capital is necessary in order to secure its employment. The Government charge is from 2 to 3 per cent, and for good measure we will calculate on a basis of 4 per cent, which a few banks pay to a few depositors. On that basis the husband and wife depending upon a present income of $600 would, if only 4 per cent were charged for the maintenance of a "reasonable income" to capital, have their income increased by additional wages and by a saving upon purchases making for the two an aggregate of six-tenths or $400. But even 4 per cent is unreasonable, for we must not forget that the $100,000,000,000 upon which the "reasonable profit" is being collected is in part sweat money; that is, the accumulated, so-called "reasonable profit" taken from the toilers of the past.

Take as an example the case of a skilled workman employed in a plow factory capitalized at $500,000, upon which the stockholders get 7 per cent dividend, while owing a bonded debt of $200,000, with an annual interest charge of 6 per cent. To meet the dividend and interest would require $47,000 above the expenses of upkeep. That $47,000 would come from the profits on the sale of plows. In order to meet this payment the profits must be made as large as possible, not only to meet the dividends, interest, and expenses, but to accumulate a surplus as well, as a provision against future emergencies, which is the common practice. This is exactly the situation which creates the trouble in all cases. It causes the low wage to the employees in the

factory and elsewhere and the high prices the purchasers pay for the goods, and as a result increases the profits, with which to pay for the use of capital. It is not all deducted from the wageworker's pay. He is already chafing under the injustice of his meager pay, but under the rule the profit must be made up. Therefore it is accomplished in part by keeping the workman's wages below the actual value of his service and by tacking the rest onto the consumer's cost; and, since the toilers themselves are also consumers, they get the worst of it "both going and coming."

Your honorable commission will quickly see the problem presented. With the enormous accumulations of property now in the possession of the few, resulting as it does in a continually increasing capital upon which to compute the so-called "reasonable return," it is certain that we are facing the impossible; that the masses are doomed to be more and more completely crushed and weighted to exhaustion; and that it can not be avoided except by resort to socialism or by the adoption of a new rule by which the reasonable requirements of humanity will also be measured in connection with the so-called "reasonable return," for the benefit of "vested property"; that is, that "vested property" shall not carry to its owners the privilege of shackling the toiling millions with the burden of paying the tribute of what now is and has been enforced as the so-called "reasonable return." The plain producer, the toilers everywhere, must have a truly reasonable return for their service, which is, after all, the principal part of the world's requirements. The pay return of farmers, employees, and capitalists should be relative to their importance. The pay of the toilers should not be encumbered with a charge such as that which I have described in favor of capital.

Already the capital holdings upon which the toilers are forced to pay annual interest, dividends, and profits average more than $1,000 per capita. That is equal to more than $5,000 for each average family of five persons in the United States.

Permit me to say that when the heads of the family once comprehend the fact that for each member of the family as well as for himself, he owes a debt he did not contract, but which nevertheless is annually increasing by force of this rule which I have described, and is forced to pay interest, dividends, and profits for each member of the family, be it large or small, and of the fact that upon their children and their children's children the debt will double and treble, as it must if the rule prevails in the future as it has in the past, I repeat, they will rise, and justly so, in rebellion against the system, and a new form of government will be established. If this is to be avoided a reform system will have to be installed to do justice to those who toil in all the useful industries that supply the needs of mankind. The rule of reasonable return can not be exclusively applied for the benefit of capital.

The other causes for the high cost of living are incidental to the one which I have presented. I shall not encumber you with a discussion of them. I wish, however, to make a few general observations before suggesting a remedy.

THE RESULT OF THE SO-CALLED "REASONABLE PROFIT."

The rule as practiced has enabled greed unobstructed to appropriate the transportation systems, the most rapid systems of communication—telegraph and telephone—the forests, the valuable minerals, the water powers, the valuable patents, and the other most valuable agencies to mankind. The rule itself, as practiced, is sure to give capital the advantage which I have shown, but to facilitate its execution with the least delay and bring it to its most effective energy in behalf of capitalists the banking and currency system has been made the agency of its hugest and most rapid accomplishment.

THE MONOPOLY OF MONEY AND CREDIT.

The people have now on deposit in the banks $19,100,000,000, on about half of which they receive no interest and on the other half from 2 to 4 per cent, or approximately $285,000,000. But the banks have loaned more than 90 per cent of the $19,100,000,000 at from 6 to 10 per cent; frequently more. In 1915 they will collect directly from the borrowers about $1,000,000,000 more than they pay for the deposits. In other words, the people take to the banks the $19,100,000,000 and get $285,000,000 from the banks for its use. But the banks collect from borrowers $1,285,000,000, which will be added to the price of the goods and services that the people must buy. In addition to these there is also the accumulated billions that the banks have collected in previous years for their stockholders, which is their "vested property," and upon which those who save it collect the so-called "reasonable return."

The banks control the use of the $19,100,000,000 that belongs to the depositors and can loan it or withhold it as they please and loan to whom they please. It does not belong to them, but they use it as they please. Because of that fact it is loaned in such manner and to such parties that the largest borrowers, who usually control the banks, get a decided advantage over all others and make several times greater profit out of the schemes into which they enter than the amount of the dividends that the banks pay to the stockholders. In other words, the bankers have a monopoly of the money and credit, which, as I stated, is the instrument for speeding up the absolute control of all property for the benefit of the capitalists.

THE REMEDY LIKELY TO BE FIRST APPLIED.

As I have already stated, there are two remedies that can be applied. One is pure socialism, which people generally have refused to accept. The other is the one which I am explaining. It is to take from the banks the exclusive privilege of controlling the money and credit which they have by Government authority. The interest to borrowers must be reduced to at least as low a rate as that now paid by the banks to the Government.

An attempt will be made to fool the people by reducing the rate of interest in some cases. That will in a measure help the individual borrower, whose interest is reduced, but the reduction will be accomplished by expanding credits, so that while the banks will collect less interest on a dollar, they will collect interest on more dollars, thus preventing a reduction in the aggregate amount of interest paid. The public will find that it costs as much to pay interest, dividends, profits, and upkeep on $200,000,000,000 at 6 per cent as to pay 10 per cent on $120,000,000,000. Under our present system one or the other of those positions will develop very soon. I am referring to the process rather than the exact figures. The owners of the great banks, through their banks, having received from the Government the exclusive privilege to monopolize money and credit, will not care which way they do it so long as they can force the public to pay as much as or more than it has been paying. If the Government instead of private individuals got the interest and paid it out for annual expenses, we would not have the present accumulation of "vested" property in favor of a few who are permitted thereby to levy tribute to secure what they term a "reasonable" return.

The Government itself, so far as practical, should collect the interest in lieu of taxes. There must be organization of all the useful industries for that purpose. This can be accomplished in practically the same way that the organization of the banks was. The farmers, the transportation companies, the home builders, the manufacturers, and the municipalities all should organize. To them all the Government must extend privileges such as are now given exclusively to the banks. To facilitate this great work and aid in securing the means the postal savings banks must be opened to all depositors for the acceptance of checks, money, and evidences of credit to aid in financing, not exclusively the banks, but all useful enterprises which under the present system are burdened with the shackles of usury.

Many are turning to the Socialist Party for a remedy, but the Socialists, I believe, do not claim that their proposed system could be put into full operation for a long time. If the Government will extend to all legitimate enterprise the use of public credit, such as that which it has given exclusively to the banks, I am certain that more than half of our present troubles about the high cost of living would be cured. Please understand me—I do not suggest taking from the banks all privileges of doing business, but I do maintain that the banks should have no exclusive privileges. The banks should be our servants instead of our masters, and should be paid as servants for the value of their services only. This can be accomplished most quickly in a nonpartisan way. The remedy can be applied without hindering the enthusiastic office seeker's proceedings as before in the name of the several political parties, in an alleged attempt to bring about the millennium.

As long as the progressive Republicans, the progressive Democrats, the progressive Progressives, and the progressive Socialists and others are divided into groups hostile to each other, the cause of humanity will progress slowly, for the reactionaries in all the parties are consistent and upon all problems vital to them, which require their cooperation, they stand together and act as a unit. It may be jealousy among the officeholders and those seeking offices that keeps the progressives in all parties from acting together. But it does seem that jealousy should not exist among the voters, because their individual material interests are identical. It is the identity of material interest that ties the "special interests" together for united action to maintain control, but the material interest of the plain people to cooperate to prevent the "special interests" from having control and taking all in sight does not seem to work by the same rule. The plain voters hurrah for the party and let the "interests" run away with the goods.

Your honorable commission understands full well the significance of the main problem I have presented. If you broadcast its substance to the people, which the means placed by Congress in your charge enables you to successfully do, the people of this country will soon control legislation and Congress, and a remedy will be forthcoming which will stop the increasing prices and give to the toilers less hours of toil and more of the substance that will supply them with the conveniences and demands of an honest and intelligent citizenship. It is merely a question of getting the right understanding home to the toilers on the farm, in the shop, stores, offices, on the railways, and elsewhere. Let them understand, and the manhood and womanhood of the citizenship of this naturally great country of ours will respond to its grandest opportunities. This is the people's country, and the men and women of this country should run it for themselves and their posterity instead of as now ignominiously submitting to a policy, enforced in practice, which makes of them the slaves of usury.

Now, having closed my written statement, I wish to add verbally that what I have stated is the main proposition I have desired to call your attention to. And, Mr. Chairman and gentlemen, I want to call your attention also to a report of the Secretary of the Treasury. This report is dated February 2. You will find on that date the Government of the United States had deposited with the banks something over $71,000,000. It has been for most of the time in the last six months about $80,000,000, but suppose we call it $70,000,000. Upon that sum the banks are paying to the Government 2 per cent. As a matter of fact, the banks are collecting directly for their own benefit 6 per cent approximately upon this $70,000,000, which you will see is 4 per cent in addition to what they are paying the Government; and therefore there is an indirect tax for the benefit of the banks which is added to the commodities and the prices which we are paying for our common necessities of this difference between 2 per cent and 6 per cent. But that is not all.

You know, as a matter of fact, that the total amount of actual money in the banks is about $1,700,000,000, and that by the process of banking it has been expanded so that the banks now have on deposit and are owing to depositors $19,100,000,000. The $1,700,000,000 has been expanded more than 10 times in the form of credit. Now, this $70,000,000 which the Government has on deposit in the banks, that is taken from the Government Treasury, is also expanded by a like process. Therefore instead of the bankers collecting interest upon this $70,000,000 alone, they are collecting interest also upon a large amount of credit that is established by virtue of this $70,000,000.

That, I say, in regard to the general bank deposits, was multiplied more than 10 times. We will not assume that they have been able to multiply more than 10 times in the case of the Government deposits, because the Government may draw upon the banks at any time for this sum. But they have increased and expanded the credits they are given by virtue of that $70,000,000 to a very large extent, and on that account the banks are collecting many millions of dollars in the way of interest and profit above that which is directly collected by them upon the $70,000,000. This is, too, in effect, a tax upon the people generally.

Now, the proposition I am making to you is this: That there has got to be some measure of a reasonable return, which is comparative, reasonably favoring property in the one case, but not losing sight in the other case of the toilers of this country, whether on the farm or elsewhere. You have got to consider the two together; and instead of the courts going on in the future and legislatures, as well as Congress itself doing likewise, and measuring a reasonable return to capital upon the basis of what it can earn in speculation, it must be done with regard to what the toilers themselves are getting. So that both the toilers and the capitalists, as long as this system is followed out, will receive proportionately a fair return for the services that are rendered in the one case by the employment of capital and in the other case by the labor.

Now, that is the particular problem that I have wished to call your attention to, and I do not think I need to take any more of your time. Of course I am glad to submit to any questions you may wish to ask.

Chairman WALSH. I think, as far as I am concerned, that states it very concisely and well, and we will be glad to make that a part of our record, and if we issue a bulletin, to put it in the record. Mr. Lennon says he was convinced of that a long time ago.

Mr. LINDBERGH. I thank you gentlemen very much.
Chairman WALSH. We thank you very much, Mr. LINDBERGH, and we are sorry, in behalf of the commission, that we could not have given you a better place in the program, but we are limited in time.
Mr. LINDBERGH. That is perfectly satisfactory to me. I wished simply to get the facts before the commission, so that you may have them in your proceedings.
Chairman WALSH. Very well.
At this point the commission will stand adjourned until to-morrow morning at 10 o'clock.
Adjournment taken until Saturday, February 6, 1915.

Mining Experiment and Mine Safety Stations.

EXTENSION OF REMARKS
OF
HON. CALEB POWERS,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, February 13, 1915.

Mr. POWERS. Mr. Speaker, the bill under consideration reads as follows:

Be it enacted, etc., That the Secretary of the Interior is hereby authorized and directed to establish and maintain in the several important mining regions of the United States and the Territory of Alaska, as Congress may appropriate for the necessary employees and other expenses, under the Bureau of Mines and in accordance with the provisions of the act establishing said bureau, 10 mining experiment stations and 15 mine safety stations, movable or stationary, including those already established, the province and duty of which shall be to make investigations and disseminate information with a view to improving conditions in the mining, quarrying, metallurgical, and other mineral industries, safeguarding life among employees, preventing unnecessary waste of resources, and otherwise contributing to the advancement of these industries: *Provided*, That not more than three mining experiment stations and mine safety stations hereinabove authorized shall be established in any one fiscal year under the appropriations made therefor.

SEC. 2. That the Secretary of the Interior is hereby authorized to accept lands, buildings, or other contributions from the several States offering to cooperate in carrying out the purposes of this act.

I shall give this measure my hearty support. There are now about 2,000,000 men employed in the occupation covered by this bill. The Government is expending annually but $200,000 for their protection and welfare. The table which I here insert shows:

Production, number of men employed, and number of men killed in and about the coal mines in the United States in the calendar years 1902 to 1913, inclusive.

Year.	Production (short tons).	Number employed.	Number killed.		
			Total.	Per 1,000 employed.	Per 1,000,000 short tons mined.
1902	296,687,066	510,437	1,895	3.71	6.39
1903	345,200,166	547,431	1,752	3.20	5.08
1904	339,164,812	573,373	2,004	3.50	5.91
1905	386,379,243	615,628	2,232	3.63	5.78
1906	407,835,003	631,086	2,116	3.35	5.19
1907	461,406,023	655,418	3,197	4.88	6.93
1908	404,932,764	672,794	2,449	3.64	6.05
1909	460,761,427	666,523	2,668	4.00	5.79
1910	501,596,378	725,030	2,840	3.92	5.66
1911	496,221,168	728,348	2,719	3.73	5.48
1912	534,466,580	722,662	2,360	3.27	4.41
1913	570,000,000	728,355	2,785	3.82	4.88

This makes plain the importance of this great industry and the fatalities connected with it. The mining and mineral industries of this country add to the Nation's wealth each year about $4,600,000,000. As a matter of fact, the agricultural and mining and mineral industries of the Nation are its two great basic sources of wealth and commercial greatness. I submit here a table showing their relative importance:

	Agriculture, including forestry.	Mining and mineral industries.
Number of employees	13,000,000	2,300,000
Yearly value of products	$10,500,000,000	$4,600,000,000
What each worker in these industries contributes to the national wealth, yearly	$800	$2,000
What each industry contributes to the freight tonnage of the country, yearly.....per cent..	22	60

It will be noted that while one farmer, on an average, contributes each year $800 to the Nation's wealth, one miner contributes $2,000; and since mining and agriculture are the two great and most important industries of our country, it will not be amiss to know just what the National Government has been doing for each.

What the National Government is doing for each of these industries.

Yearly appropriations.	Agriculture.	Mining.
For education:		
From direct appropriation	$2,500,000	Nothing.
From land grants	1,030,000	.....
From Smith-Lever Act for demonstration educational work	480,000	.....
For 52 experiment stations, one in each State and Territory	1,550,000	Nothing.
For general researches and other work to aid agriculture and mining	22,410,000	$1,967,000
Total	27,970,000	1,967,000
Per capita contribution from the people of the United States for the advancement of these industries	0.28	0.02
Of this contribution the per capita expenditure for safeguarding the lives of 2,300,000 employees in the mining industry is about one-half of 1 cent per annum	.....	.005

I do not want to be understood as objecting to what the Federal Government is doing for the farmers of our country. I rejoice along with them that the National Government is spending so liberally of its means to further their interests and advance the great cause of agriculture in the United States. My father was a farmer. I was reared on a farm and I have never outgrown, and I hope I never will outgrow, my love for the country and the farm. We used to mine some on my father's farm when I was a boy, but only for domestic purposes; but since my father's death the old farm has passed into other hands and has been converted into a veritable mining camp. There are two mining plants established on or close to the old homestead. They are two busy hives of industry going on—or would go on but for Democratic hard times—in the valleys and on the hillsides where I used to roam and play. The neighbor boys have all grown up and many of them have turned to digging coal and mining as a means for a living. The creek on which I was reared in Knox County, Ky., has on it now 20 or more mining operations, and part of them big ones. In fact, Knox County produces now about 1,000,000 short tons of coal a year. The neighboring counties of Laurel, Pulaski, McCreary, and Whitley are big coal producers, while the counties of Harlan and Bell—all in the district I have the honor to represent—are not only exceedingly rich in mineral resources, but active and progressive in their development. Bell County last year produced 2,500,000 short tons of coal, standing second, I believe, among the counties of the State in coal production. We have in southeastern Kentucky some 10,000 square miles of bituminous-coal territory. The entire State of Pennsylvania has only about 4,000 more square miles of bituminous-coal territory than we have in southeastern Kentucky.

Kentucky now stands fourth among the coal-producing States of the Union. She stood sixth or seventh a few years ago. She has recently forged ahead of both Ohio and Indiana. We produced in Kentucky in 1914, 20,000,000 short tons of coal. The coal field in eastern Kentucky now excels in both production and quality the coal fields of western Kentucky.

My district is in the heart of the present coal production in southeastern Kentucky. We have no mining headquarters or mine rescue stations located there. I hope that this bill will become a law and that the eleventh district may be able to get one of the 15 safety stations provided for in this bill.

Immigration.

EXTENSION OF REMARKS
OF
HON. S. KIRKPATRICK,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, February 4, 1915.

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. KIRKPATRICK. Mr. Speaker, for the first time in the deliberations of the Sixty-third Congress I am brought face to face with the expressed views of the Chief Executive of our Nation relative to the literacy test in its application to immigrants landing on our shores.

My objections to the President's veto is not based alone on objection to the introduction of foreign immigrants because of their inability to tell who they are, where they came from, or

whither they are going; still I believe all these are essential and necessary elements that enter into the composites constituting good citizenship. I feel perfectly safe in saying that all laws are more or less used, and likewise abused, but, Mr. Speaker, we can not live on tradition or that which prompted or controlled our forefathers more than a century ago. At that time 96 per cent of our broad acres were unoccupied. Then we were turning the virgin soil with a wooden mold-board plow, and "single taxers" had not been born.

The good Lord quit making land a long time ago, and no one knows when he will resume this difficult and arduous task. One hundred years ago the demand for labor was the rule, now it is the exception. Then we were reaping down our fields with a hand scythe, now the genii of the age are offering to cut, bind, thresh, and grind all for a nominal sum, and before proceeding further along these lines permit me to say that I am unalterably opposed to the use and exercise of the veto power.

I am old enough to recall some vivid impressions growing out of the frequent use of this privilege of veto by the predecessor of Zachary Taylor, and in 1848 this became an issue of the slogan type. Mr. Taylor was appealed to as to his position on this grave question and said, "Gentlemen, your will, not mine."

No man has a more exalted opinion of President Wilson than I have. In a legal sense it is in a great measure artificial for lawyers to differ, and it is akin and natural for all of us to do likewise. I frankly said to the President this morning that I intended to vote against his veto. He said in part that inasmuch as I had been faithful in all other matters affecting the welfare of our people "I grant that you are as honest in your convictions as I am in mine."

I placed Mr. Wilson in nomination for the Presidency in the nineteenth century, and I am the first and only original Wilson man in the United States, or, as I jocularly remarked to Mr. Wilson on one occasion, save one, and that was himself. To this he dissented, adding that at that time he had not been born into the kingdom of the "emergency," "dark horse," or "receptive" caste.

"The law of the Lord is perfect, converting the soul," but I am aware of the fact that there are some Members who are strangers in the commonwealth of Israel. I have contended for 40 years that the best and safest protection for American wage earners is to place some restrictions on competitive labor, for as sure as two and two make four, if there are two men for a job the price for performing such labor will be materially reduced if not cut in two.

I desire to say that Members who continue to vote for high tariff and free labor, and do so from sense of habit, custom, or environment, are like the new convert who said, "The moon shines brighter, but the road's a damn sight rougher."

If inconsistencies could be converted and made to appear as jewels, then some of you fellows would be decked beyond recognition. This is not a new issue, nor is it dead or dying. It was thrashed out under the Cleveland and Taft administrations. Three millions of organized workers of America demand it. The conversion of Saint Paul was almost instantaneous, but not along these lines. Some have said there are 30,000,000 workingmen not yet heard from. I invite all such into the arena of public expression.

The restrictions objected to are not onerous, complicated, or difficult to overcome. To learn to read 30 or 40 words of our own or their own language should be readily done, and the man or woman will be better qualified for better and higher ideals. Thus having said what I have said, I shall vote to place this bill upon our statutes.

Immigration.

EXTENSION OF REMARKS
OF
HON. PERCY E. QUIN,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. QUIN. Mr. Speaker, under general leave to extend remarks for five legislative days in connection with the splendid 58-page Burnett immigration bill, H. R. 6060, I insert in the CONGRESSIONAL RECORD this 10th day of February certain articles and editorials contained in this week's—February 8 to 14, 1915—issue of the American Federation of Labor Weekly News Letter, the federation's official weekly paper:

PRESIDENT'S VETO OF IMMIGRATION RESTRICTION BILL IS SUSTAINED—136 REPRESENTATIVES SUPPORT CHEAP LABOR PLEA OF STEAMSHIP, MINING, AND STEEL CORPORATIONS AND REFUSE TO PROTECT AMERICAN WORKERS FROM FLOOD TIDE OF ILLITERATE IMMIGRANTS—261 REPRESENTATIVES VOTE AGAINST EXPLOITING HUMANITY AND STIMULATED IMMIGRATION.

By a vote of 261 to 136 the House of Representatives Thursday, February 4, refused to pass the Burnett immigration bill over the President's veto.

A two-thirds vote was necessary to pass the bill.

If any four of the 136 that voted against labor had voted for labor, the bill would have passed.

For over five hours the House discussed the question. The friends of immigration restriction put forth their most eloquent pleaders for the maintenance of American ideals and insisted that the literacy test was in accord with the demands for compulsory education that has now become a part of the life of this country. Attention was also called to the unanimous demand of the American Federation of Labor, the railroad brotherhoods, and the farmers' organizations for a restrictive immigration policy that American standards may be continued.

The evidence made public by the American Federation of Labor showing that the National Liberal Immigration League has been financed by the Shipping, Coal, Steel, and other trusts is now in the public records. Representative BATHRICK, of Ohio, included this evidence in his speech supporting the bill.

Representative BURNETT, chairman of the House Committee on Immigration, closed the debate with a strong speech urging that the President's veto be not sustained.

An analysis of the vote shows that the campaign steadily maintained by those who oppose illiteracy of immigrants is proving effective. Friends of restriction polled 48 more votes to pass the bill over President Wilson's veto than they polled when President Taft's veto was sustained. The negative vote was only increased by 22.

Representative BURNETT announced after the vote was taken that he would introduce another immigration restriction bill immediately after the next Congress convenes.

Unionists and other friends of immigration restriction may secure a record of all the debates on this question by writing to their Representatives for a copy of the CONGRESSIONAL RECORD, issue of Thursday, February 4.

WHY ORGANIZED LABOR FAVORS THE LITERACY TEST.

One of the fundamental principles that have controlled public policies in the United States is belief in education. The primary medium for acquiring an education is ability to read. Reading is the key to an intellectual world which leads to truths, understanding people, things and their relations, the ability to recognize a tendency and its value.

Education drives out ignorance, which is the great enemy of the welfare and progress of the people. Ignorance renders people easy of exploitation, makes them more readily victims of political misrule, and limits the basis of their moral conceptions. The individual's moral and ethical standards can not be greater than his understanding of the consequences of his acts. The more one knows of the human mind and body the more able he is to distinguish between harmful and beneficial lines of action.

It is idle to point to some great characters who were illiterate or to some rogues and criminals who were educated. There are always exceptions to every general statement, but the data from which a general law is deducted must not be drawn from exceptional cases.

We believe that proper education develops and stimulates the natural faculties and makes the individual a resourceful master of his powers.

True it is that an education is not always a test of character, but as between an illiterate and an educated person the supposition is always in favor of the educated. Education is something more than purely intellectual development, for it is impossible to separate the concepts of the mind from feeling and emotion and resulting convictions of moral obligations. Mental habits constitute character.

Ignorance among citizens is the greatest enemy of popular government; it affords an opportunity for boss rule and for the special privileges exercised by predatory, exploiting interests. The uneducated do not know their own rights or understand what promotes their own welfare; they are the victims and the tools of political and industrial malefactors.

Convinced that their faith in education was well grounded, the States of our Union have never wavered in their established policy of free public schools, and compulsory education laws were necessary to the maintenance of our republican form of government. Millions are yearly appropriated for public schools, normal schools, technical schools, colleges, and universities. Most of the States fix the school years during which children must attend school or the minimum educational requirements which each must acquire. There has been a consistent effort to raise the age limit under which school attendance is compulsory. There has been unfailing desire to make education more practical and more vital and to extend educational opportunity wherever there is desire for it, regardless of age. As Americans we take pride in raising the standards of intelligence and lowering the percentage of illiteracy.

Education is the requirement made of every American who seeks a position of responsibility. We would not think of abolishing a literacy test for the Members of Congress as a means to securing men of high character. A literacy test of requirements varying with the nature of the work to be done is imposed for all official positions, for the civil service, police duty, and for other work. It is recognized as the most practical, effective test that has been evolved.

Illiteracy is a hindrance in all work, even the so-called unskilled labor. It is an obstacle to securing better conditions of work and a menace to the safety and health of these workers. The Federal Immigration Commission in its detailed study of working conditions in such industries as the steel, iron, and coal industries found that illiteracy and inability to speak our language on the part of the workers increased the number of mine explosions, industrial accidents, and insanitation.

Illiteracy is what shuts the individual off from opportunity; education opens up the way to opportunity.

Some degree of education is required of all Americans. The literacy test of the Burnett immigration bill provides for a test of a similar nature for immigrants who wish to come to America.

There is no reason why the standards for foreigners should differ from those prescribed for citizens. Nor can special privileges for foreign illiterates be justified on the ground that their inability to read represents only lack of opportunity. The requirements are so low that no forceful, ambitious persons will be debarred. Ability to read 40

words in his own language is an undertaking that would discourage no person who has qualities and character that would make him a desirable citizen.

The poor educational facilities of a country often reflect the failure or inability of the people to assert their rights, together with their low standards of life. Where there is effective demand it must be considered by the Government, however despotic, unless rebellion is invited.

The adoption of a literacy test for immigrants to the United States would result in increased provision for education in all countries which are now sending their surplus population here. A statement made by Prof. Fairchild in the hearing before President Wilson is most significant:

"When the literacy test was previously under consideration and its adoption seemed assured the Government of Italy began to make provision for more schoolhouses, but these provisions were stopped with the defeat of the bill."

It is not heartless to set standards; they are the necessary conditions for progress and betterment. The literacy test for immigrants into the United States will result in forcing the countries of southern Europe to assume their natural and rightful obligations to make provisions for the social, industrial, and political welfare of their own people and will enable the United States to become a land of real opportunity not only for such as may meet the necessary standards but also for those who are already within our gates.

—

FARMERS FAVOR RESTRICTION—THE GRANGE, THE FARMERS' NATIONAL CONGRESS, AND THE NATIONAL FARMERS' UNION DEMAND IT.

At the White House hearing on the immigration bill Mr. J. H. Patten, assistant secretary of the Farmers' National Congress, for four years general counsel of the Farmers' Union, and in close touch with the Grange, was selected by those present to present the attitude of the farmers. Among other things, he said:

"The Grange, the Farmers' National Congress, and the National Farmers' Union are the only organizations of farmers qualified to speak for the farmers of the country, organized or unorganized. They are a unit for this bill."

Mr. Patten called attention to the repeated arguments of the legislative committees of the farmers before Congress, asserted that their many resolutions and convention actions and immense membership quite entitled them to voice the sentiments of the farmers of the country, and warned against the paid attorneys and agents of the big trusts and Wall Street interests who posed as the spokesmen of the farmers and advanced so-called sentimental and humanitarian arguments in the name of the farmers and others. In illustration he said:

"A word with reference to the South. There are certain persons, who have no authority to speak for the farmer or for the South, that say the South wants and needs the present influx. Mr. President, the bees go to the honey pots. The immigrants go where it is most profitable and agreeable for them to go, and they do not go to the South or the rural districts. The South is afflicted with one unfortunate illiterate immigration which drove the average white man, who did not have the money to buy a large tract of fertile land and a large number of slaves, into the hills and mountains, where he became the so-called "white trash," and now he is beginning to come back down to work in the mines, in the factories, and on the farms. Without any foreign immigration the South during the last 30 years has increased faster in railroad mileage, in bank deposits, in number of cotton-mill spindles, in mineral output, and in every other field, including population, or labor supply out of its own loins, than has the Northeast, with all its tremendous immigration. And for reasons which impel the working classes of New England to ask for additional restrictive legislation to curb the efforts of the protected trusts to bring in cheap labor for beating down wages and the standards of living and American life, the farmers urge this proposed legislation.

"There seems little doubt about the European war fulfilling Mrs. French-Selden's and President Gompers's prophecy of an increased influx of undesirables and an increase in quantity as well as a decrease in quality. The farmers of New York and adjacent States object to the $3,000,000 paid annually in taxes for the care and keep of alien insane, which this bill would in great part lift from their shoulders. They believe in elementary education and favor requiring as much of newcomers as we compel of our own native born, on the theory that such better fits for earning a living, protecting ourselves and themselves, and makes for a more intelligent participation in public affairs. They see in the importation of too much cheap labor a tendency to increase the size of farms, the bringing about of the capitalistic system of production, and the destruction of the ideal small farm home owner, who is the mainstay of the Nation. The farmers of the country not only ask this legislation, but they ask for genuine rural-credits legislation, Federal aid to roads, and for efficient, practical marketing work."

—

ROLL-CALL VOTE OF HOUSE ON BURNETT IMMIGRATION BILL—THOSE VOTING "NAY" VOTED IN FAVOR OF HAVING TWO MEN FOR EVERY JOB—THE VOTE EXPLAINED.

The 261 Representatives voting "aye" voted to protect American workers; voted for American standards of life; and voted for industrial, political, and social welfare.

The 136 Representatives voting "nay" voted to insure the steel and coal barons an unlimited supply of cheap labor; voted to increase illiteracy; and voted to retard industrial, social, and political betterment.

A two-thirds vote was necessary to pass the immigration bill over the President's veto.

If any 4 of the 136 voting against labor had voted for labor, the bill would have passed.

ALABAMA.

Aye: Abercrombie, Blackmon, Burnett, Dent, Harris, Heflin, Hobson, and Underwood.
Nay: Mulkey and Taylor.

ARIZONA.

Aye: Hayden.

ARKANSAS.

Aye: Caraway, Floyd, Goodwin, Jacoway, Oldfield, Taylor, and Wingo.

CALIFORNIA.

Aye: Bell, Church, Curry, Hayes, Kettner, Kent, Knowland, Nolan, Raker, and Stephens.
Kahn answered "present." He was paired against the bill with Roberts of Nevada, who was paired for the bill.

COLORADO.

Aye: Seldomridge and Taylor.
Nay: Keating and Kindel.

CONNECTICUT.

Nay: Donovan, Kennedy, Lonergan, Mahan, and Reilly.

DELAWARE.

Aye: Brockson.

FLORIDA.

Aye: Clark and Sparkman.
Not voting: L'Engle and Wilson.
L'Engle and Wilson were paired for the bill, with Vare, of Pennsylvania, against.

GEORGIA.

Aye: Adamson, Bell, Crisp, Edwards, Howard, Hughes, Lee, Tribble, Vinson, and Walker.
Nay: Bartlett and Park.

IDAHO.

Aye: French and Smith.

ILLINOIS.

Aye: Baltz, Buchanan, Borchers, FitzHenry, Foster, Fowler, Hill, Hinebaugh, McKenzie, O'Hair, Rainey, Tavenner, and Thomson.
Nay: Britten, Copely, Gorman, Gallagher, Graham, Madden, Mann, McAndrews, Sabath, Stone, Stringer, and Williams.
Not voting: Hoxworth.

INDIANA.

Aye: Adair, Cox, Cullop, Dixon, Gray, Morrison, Moss, and Rauch.
Nay: Barnhart, Korbly, Lieb, and Peterson.
Not voting: Cline.

IOWA.

Aye: Good, Green, Haugen, Kennedy, Kirkpatrick, and Scott.
Nay: Connolly, Towner, Vollmer, and Woods.
Not voting: Prouty.

KANSAS.

Aye: Anthony, Campbell, Connelly, Doolittle, Helvering, Murdock, and Neeley.
Nay: Taggart.

KENTUCKY.

Aye: Barkley, Cantrill, Fields, Helm, Johnson, Langley, Powers, Rouse, Stanley, and Thomas.
Nay: Sherley.

LOUISIANA.

Aye: Aswell and Watkins.
Nay: Broussard, Dupré, Estopinal, and Lazaro.
Not voting: Elder and Morgan.
Elder was paired for the bill with Metz, of New York, against.

MAINE.

Aye: Guernsey, Hinds, and Peters.
Nay: McGillicuddy.

MARYLAND.

Aye: Lewis, Linthicum, Price, and Talbott.
Nay: Coady and Smith.

MASSACHUSETTS.

Aye: Gardner and Gillett.
Nay: Deitrick, Gallivan, Gilmore, Greene, Mitchell, Paige, Phelan, Roberts, Rogers, Thacher, Treadway, and Winslow.

MICHIGAN.

Aye: Hamilton, Kelley, McLaughlin, MacDonald, Mapes, J. M. C. Smith, Samuel W. Smith, and Woodruff.
Nay: Beakes, Cramton, Doremus, and Fordney.
Not voting: Lindquist.
Lindquist was paired for the bill with Graham, of Pennsylvania, against.

MINNESOTA.

Aye: Anderson, Davis, Lindbergh, and Volstead.
Nay: Manahan, Miller, and Stevens.
Not voting: Smith.
Steenerson answered "Present." He was paired against the bill with Faison, of North Carolina, for the bill.
Smith wished to vote "No," or against the bill, but not being in the Hall when his name was called was not permitted by the Speaker to vote.

MISSISSIPPI.

Aye: Candler, Collier, Harrison, Humphreys, Quin, Sisson, Stephens, and Witherspoon.

MISSOURI.

Aye: Alexander, Decker, Dickinson, Hamlin, Hensley, Lloyd, Rubey, Rucker, Russell, and Shackleford.
Nay: Bartholdt, Booher, Borland, Gill, and Igoe.

MONTANA.

Aye: Evans and Stout.

NEBRASKA.

Aye: Barton, Kinkaid, and Stephens.
Nay: Lobeck, Maguire, and Sloan.

NEVADA.

Not voting: Roberts.
Roberts was paired for the bill with Kahn, of California, against.

NEW HAMPSHIRE.

Nay: Reed and Stevens.

NEW JERSEY.

Aye: Baker, Browning, Drukker, Hart, and Parker.
Nay: Eagan, Hamill, Scully, Townsend, Tuttle, and Walsh.

NEW MEXICO.

Nay: Fergusson.

NEW YORK.

Aye: Danforth, Hamilton, Mott, Parker, Platt, and Underhill.
Nay: Brown, Bruckner, Calder, Cantor, Carew, Chandler, Clancy, Conry, Dale, Dooling, Driscoll, Fairchild, Fitzgerald, George, Gittins, Goldfogle, Goulden, Griffin, Levy, Loft, Maher, O'Brien, Patten, Riordan, Smith, Talcott, Taylor, Ten Eyck, and Wallin.
Not voting: Dunn, McClellan, Metz, Oglesby, and Wilson.
Dunn was paired for the bill with Metz, of New York, against.

NORTH CAROLINA.

Aye: Doughton, Godwin, Gudger, Kitchin, Page, Pou, Small, Stedman, and Webb.
Not voting: Faison.
Faison was paired for the bill with Steenerson, of Minnesota, against.

NORTH DAKOTA.

Aye: Helgesen and Young.
Nay: Norton.

OHIO.

Aye: Allen, Ashbrook, Bathrick, Bowdle, Claypool, Fess, Francis, Gard, Key, Post, Switzer, and White.
Nay: Brumbaugh, Bulkley, Crosser, Goeke, Gordon, and Sherwood.
Not voting: Whitacre.

OKLAHOMA.

Aye: Carter, Davenport, Ferris, McGuire, Morgan, Murray, Thompson, and Weaver.

OREGON.

Aye: Hawley, Lafferty, and Sinnott.

PENNSYLVANIA.

Aye: Ainey, Brodbeck, Butler, Carr, Dershem, Difenderfer, Farr, Griest, Hulings, Keister, Kiess, Kelly, Kreider, Lesher, Lewis, Palmer, Patton, Porter, Rothermel, Rupley, Temple, and Walters.
Nay: Bailey, Barchfeld, Burke, Casey, Donohoe, Edmonds, Lee, Logue, Moore, Morin, and Shreve.
Not voting: Graham, Langham, and Vare.
Langham was paired for the bill with Graham, of Pennsylvania, against.
Vare was paired against the bill with Wilson, of Florida, for the bill.

RHODE ISLAND.

Nay: Gerry.
Not voting: Kennedy and O'Shaunessy.

SOUTH CAROLINA.

Aye: Aiken, Byrnes, Finley, Johnson, Lever, and Ragsdale.
Nay: Whaley.

SOUTH DAKOTA.

Aye: Burke, Dillon, and Martin.

TENNESSEE.

Aye: Austin, Byrns, Garrett, Houston, Hull, McKellar, Moon, Padgett, Sells, and Sims.

TEXAS.

Aye: Beall, Callaway, Dies, Eagle, Garrett, Gregg, Henry, Rayburn, Slayden, Smith, Stephens, Sumners, Vaughan, and Young.
Nay: Buchanan, Burgess, Garner, and Hardy.

UTAH.

Aye: Johnson.
Nay: Howell.

VERMONT.

Aye: Greene and Plumley.

VIRGINIA.

Aye: Carlin, Flood, Glass, Hay, Holland, Jones, Montague, Saunders, Slemp, and Watson.

WASHINGTON.

Aye: Bryan, Falconer, Humphrey, Johnson, and La Follette.

WEST VIRGINIA.

Aye: Avis, Brown, Hughes, Moss, Neely, and Sutherland.

WISCONSIN.

Aye: Cooper, Frear, and Lenroot.
Nay: Browne, Burke, Esch, Konop, Reilly, and Stafford.
Not voting: Cary and Nelson.
Nelson was paired for the bill with Kahn, of California, against.

WYOMING.

Aye: Mondell.

WHAT OPPONENTS OF IMMIGRATION RESTRICTION SAID.

The cause of cheap labor for steamship, mining, and steel corporations was presented in a most effective manner in Congress by several Representatives, who urged that the President's veto of the Burnett immigration bill be sustained.

The pleas of the workers now here that the flow of illiterate immigrants should be checked was overlooked in a clever manner by the cheap-labor advocates, who soared into oratorical ecstasies over a nation that they insisted flung open its doors to all.

Against these word pictures the friends of immigration restriction marshaled every cold fact in the sum total of actual conditions. They presented the reports of impartial Government investigators; the unbiased conclusions that American workers can not compete with illiterates, who lower living standards; the efforts of steamship and allied corporations to defeat the bill; the unanimous stand for restriction by unionists and farmers; the repeated votes in favor of restriction by both Houses of Congress; the fact that education is now a part of our national life; and the necessity of paying more attention to workers in this country and less to those in foreign lands.

Representative MANAHAN, of Minnesota, answered the pleas of organized workers in his State by charging that the petitions signed by these toilers meant nothing "so far as the sentiment of the rank and file of labor is concerned."

Mr. MANAHAN evidently believes men are hungry through a failure of our country to produce enough for all. He said:

"More men means more wealth produced; more toilers mean more necessities of life brought into existence to feed hungry men, to clothe shivering men."

To show that he was strictly neutral and should not be classed as a friend of the Steamship, Steel, and Coal Trusts, and other cheap-labor advocates, the speaker accused "selfish greedy men" of controlling the wealth of the Nation. Mr. MANAHAN was most emphatic in this matter and censured these corporations very severely.

Representative KINDEL, of Colorado, made a speech on equalizing transportation rates. He expressed the belief, "without egotism," that he had done more for the general mass of people to reduce the cost of living "than any other man on the floor of the House." The speaker quoted statistics to prove his assertion that transportation charges were responsible for all our ills. A colleague was interested in knowing Mr. KINDEL'S position on the matter before the House, and the Colorado gentleman took time to say "he was most emphatically opposed to the literacy test."

Representative LEVY, of New York, opposed the bill on the ground that "it is very unfair to captains, masters, agents, and consignees of vessels, as it lays down intricate rules and regulations." This, the speaker declared, would interfere "with the efficiency of our commerce and merchant service marine."

Representative CALDER, of New York, indicated that illiterate immigrants are fortunately situated in New York. He said:

"It is true that at present over 400,000 men and women in our city are out of employment, but in this vast number few are among the illiterate. These people take care of their savings until business revives."

Representative WALSH, of New Jersey, read his speech. Like a knight of old the eastern lawmaker rushed to the defense of President Wilson and loudly lamented the decadence of respect for authority. Said Mr. WALSH:

"Who of us to-day would dare to stand on this floor and insinuate that President Wilson was a sneak? Who would dare speak of Jackson as a coward? None, of course, because we know that to do so would be to sound the death knell of one's political career. Yet these accusations have been hurled at the head of our distinguished President."

As Mr. WALSH'S speech was prepared with the thought that the President would be attacked because of his veto, the speech sounded ridiculous, because nothing of the kind occurred. In fact, the contrary was true, as opponents of the Chief Executive were most courteous in stating their views, much to the chagrin of Representative WALSH, who also announced that he "would leave Washington on March 4 next."

Besides his vote, Representative DONOVAN'S opposition to the bill was recorded in a clipping he had read to the House, which declared that "we shall never learn to respect our real calling and destiny unless we have taught ourselves to consider everything as moonshine compared with the education of the heart."

Representative SABATH, of Illinois, referred to the National Liberal Immigration League and its method of raising money to combat restriction. Mr. SABATH could not see where the league was guilty "in asking aid from all to aid the cause which they advocated." The speaker excepted the steamship companies and other corporations, although he said these contributions were small and the league is now in debt. He could see no difference between the activities of the league and activities of the organizations that favored restriction because they wanted the standards of American life maintained.

Mr. SABATH prefaced these statements with this reference to the National Liberal Immigration League: "I did not agree with their activities." This placed him on both sides of the question, while leaving his auditors in the dark as to other practices the league may have been indulging in. The Illinois gentleman failed to take advantage of this opportunity and make public the particular "activities" he "did not agree with."

Representative BURKE of Pennsylvania gave this consolation to the man out of a job or who is trying to compete with lower living standards:

"There are millions of acres yet to be cultivated in this country, railroads to be built, tunnels to pierce the mountains, and new industries to be established in every section."

Representative MOORE, of Pennsylvania, was another gentleman who believed immigration raised wages and shortened hours. The labor unions formed no part of this theory. The speaker also referred to the National Liberal Immigration League and its methods of raising funds. He assured his colleagues he knew little of the league, but he could see no difference between its methods of raising funds and those of the American Federation of Labor and other bodies favoring restriction. Mr. MOORE failed to distinguish between an effort to maintain American living standards and an effort to reduce these standards.

The speaker rejected the theory that a shorter workday means greater production. He said an eight-hour day "means contraction of labor."

Mr. MOORE expressed alarm at the thought of having no one to do menial service. This, he feared, threatened our institutions. Said he:

"But who is to do the drudgery? If we are educated to despise the lowly, who will do the man's work on the road or the woman's work in the kitchen? Take away the untaught foreigner, who has done much to develop and construct our institutions, and rely too much upon that excess education and pride of scholarship which abhors the basic labor, you will halt our national progress."

Representative GALLIVAN, of Massachusetts, spoke in glowing terms of the "wholesome discontent" behind foreign immigration. He made no mention of the methods of steamship companies to stimulate immigration or the conditions forced upon illiterate immigrants by monopolists controlling the basic industries of this country. A report by the Federal Immigration Commission shows that many of these aliens, instead of being impelled by a "wholesome discontent," come here, the commission says, "merely to save enough, by the adoption, if necessary, of low standards of living, to return permanently to their home country."

These facts were overlooked by opponents of the bill, who pleaded with their colleagues to continue the policy "laid down by the fathers of our country." Mr. GALLIVAN'S speech was filled with these sentiments.

Establishment of Food-Supply Depots.

EXTENSION OF REMARKS

OF

HON. WILLIAM KENT,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 17, 1915.

Mr. KENT. Mr. Speaker, I have received and have been requested to file petitions signed by more than 100,000 persons the caption of which petitions reads as follows:

FOOD-SUPPLY DEPOTS.

To President Woodrow Wilson and to the Congress of the United States:

Whereas the speculators are arbitrarily and unnecessarily raising the price of the necessities of life; and

Whereas the United States Government should conserve and protect the interests of the producers and consumers as against these speculators who are robbing the people, multitudes of whom are already in dire need: Therefore

We hereby petition the President and Congress of the United States to establish in the strategic industrial and agricultural centers of the

Nation food-supply depots and such other facilities as are necessary to maintain a just market for the producers and for the purchase of food products and for the sale of these necessities of life direct to the people.

Accompanying these petitions I submit the following letter:

SOCIALIST PARTY, NATIONAL OFFICE,
803 West Madison Street, Chicago, Ill., February 15, 1915.

Hon. WILLIAM KENT,
House of Representatives, Washington, D. C.

DEAR SIR: I am sending you herewith a blank sample of a petition that was ordered circularized by the national executive committee of the Socialist Party. Something over 100,000 names were secured, and the package containing the petitions is being sent you by express.

I know we are imposing upon you somewhat by asking you to take care of this matter, but we know of no one in the Congress who is fairer to the Socialist Party than yourself, and I feel confident that you will be willing to do this for this organization.

With kindest regards, I beg to remain,

Very sincerely, yours,

WALTER LANFERSIEK,
Executive Secretary.

It would be superfluous and of undue cost to the Government to ask that this vast array of names should be printed, but full publicity should be given to the well-founded complaint of these thoughtful people. We all know that the abuse exists, and that profits derived from speculation and all costs incident to speculation represent parasitism and not production. It is no new thing for municipalities to establish markets where producer and consumer meet.

The contention of these many petitioners that the Federal Government should aid in eliminating the profits of speculation from being a charge on the people, thus earnestly urged, certainly deserves the consideration of our Government.

I ask the reference of the petition to the Committee on Interstate and Foreign Commerce.

Immigration.

EXTENSION OF REMARKS
OF
HON. OSCAR CALLAWAY,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915.

The House had under consideration the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. CALLAWAY. Mr. Speaker, under general leave to extend remarks on H. R. 6060, I append hereto the arguments of the proponents of the bill at the public hearing at the White House January 22, 1915. As the arguments of the opponents of the bill at that time and place were printed in the CONGRESSIONAL RECORD by the gentleman from Massachusetts, it seems to me that the public is entitled to both sides of the debate.

HEARING BEFORE THE PRESIDENT OF THE UNITED STATES ON THE IMMIGRATION BILL (H. R. 6060).

The hearing on the above matter was held in the East Room of the White House at 10 o'clock a. m.

A list of the participants, together with the organizations represented by them, follows:

J. H. Patton, representing farmers' organizations.
Dr. Stewart Patton, representing alienists and State boards on insanity.
W. M. Clark, representing Brotherhoods of Engineers, Firemen, Conductors, and Trainmen.
Prof. H. P. Fairchild, of Yale University.
Prof. E. A. Ross, of Wisconsin University.
Fergus A. Dennis, representing 245,000 members of patriotic societies in Philadelphia and New Jersey.
Congressman J. HAMPTON MOORE, of Philadelphia.
Prof. Learned, of the University of Pennsylvania.
David A. Lourie, representing the Twentieth Century Club of Boston and the New Century Club.
Michael Leveen, grand master of the Independent Order of King Solomon, of Newark, N. J., gave way to Saul Cohn, as spokesman.
Capt. Samuel H. Borofsky, representing the largest Jewish congregation in Boston.
Congressman JAMES A. GALLIVAN, of Boston.
Oswald Villard, of the New York Evening Post.
Former Lieut. Gov. Robert F. Wagner, representing patriotic societies, as chairman of a subcommittee appointed by the executive committee of Tammany Hall Organization of the County of New York, presented a resolution expressing opposition to the measure. (Resolution not read.)
Louis Marshall, president of American Jewish Committee.
Alexander I. O'Rourke, of New York.
Former Judge Leon Sanders, of New York City, president of Hebrew Sheltering Immigrant Aid Society, also representing the Independent Order of Abraham, an organization of 200,000 paying members.
Congressman GEORGE W. LOFT, of New York City.
Marcus Braun, of New York, submitted a written statement, without speaking.
J. A. Shiplikoff, of New York.
Congressman HENRY M. GOLDFOGLE, of New York.
Miss Grace Abbott.
Rev. John Sobieszczy, of St. Stanislaus College, representing Polish-American Catholic Union.
Adam S. Gregorowicz, representing the Polish National Alliance of America.
Miss A. Emily Napieralski, general secretary, Polish Women's Alliance of America.
Congressman A. J. SABATH, of Illinois.
Hon. W. Bourke Cochran, of New York.
Edward T. Cahill presented a lengthy document, explaining its contents.
Frank Morrison, secretary of American Federation of Labor.
Charles Edward Russell stated that he represented 1,000,000 Socialist voters.

The PRESIDENT. Ladies and gentlemen, we are going to devote two hours and a half to this discussion, and in order that it may be conducted in as satisfactory a manner as possible we have arranged to divide the time equally between the two sides, those for the signing of the bill and those against it. It has been arranged that the time of those in favor of the bill should be allotted under the supervision of Mr. Frank Morrison, secretary of the American Federation of Labor, an hour being devoted to that side. The next hour and 15 minutes will be devoted to those who wish the bill vetoed, this time to be arranged by Representatives GALLIVAN, SABATH, and GOLDFOGLE; and then, at the conclusion of the 2 hours and 15 minutes which would be thus used up, the closing 15 minutes will be given to those who favor the bill, this time to be allotted as the other.

I am not informed as to who is to speak first in favor of the bill.

[Revised, owing to stenographic inaccuracies and omissions.]

Mr. MORRISON. Mr. President, I am going to request Mr. J. H. Patten, assistant secretary of the Farmers' National Congress, and for four years general counsel of the Farmers' Union, to speak in favor of the immigration bill.

Mr. PATTEN. Mr. President, Mr. J. H. Kimble, the national legislative agent of the Farmers' National Congress, is here, and there are representatives of other farmers' organizations present, but owing to the limited time alloted they have asked me to explain the attitude of the farmers. The Grange, the Farmers' National Congress, and the Farmers' Union are the only three farmers' organizations or agencies that are qualified to speak for the farmers of this country—organized or unorganized. They are a unit for this bill.

I have received recently a number of telegrams and letters similar to the following, which came yesterday:

CHARLESTON, W. VA., *January 20, 1915.*

J. H. PATTEN,
Congress Hall, Washington, D. C.

At 4 p. m. to-day the West Virginia State Grange, assembled in this city, unanimously passed a resolution reaffirming the action of the National Grange favoring the educational test in the immigration bill recently passed by Congress, and respectfully request you to present action to the President at the hearing next Friday.

(Signed) M. V. BROWN, *State Secretary.*

The action of the State Grange of West Virginia referred to in this night-letter telegram is typical of action taken year after year by the farmers' organizations of the country—the Grange—covering 32 States, in each one of which they have State organizations, and claiming a dues-paying membership of over 1,000,000 tillers of the soil; the Farmers' Union, which claims to have initiated over 3,000,000 farmers of the South, West, Middle West, and Northwest, covering 21 States with State organizations, and having locals in practically every State west of Pennsylvania and south of the Mason and Dixon line; and the Farmers' National Congress, which corresponds to the Landwirthschaftrat of Germany, except it is not created by the Government, and which is composed of delegates appointed by the governors and various agricultural organizations and bodies of the various States and Territories. It held its thirty-eighth annual session last October, and is regarded as a real farmers' congress, the name congress being characteristic. The National Grange, which met at Wilmington, Del., last November, again devoted considerable time to the discussion of immigration and reiterated its previous demand for the particular proposition now on your desk. I have here the National Grange, for last November—the official organ of the Grange, published at Westfield, Mass.—which contains the last resolution of the National Grange on immigration.

The resolution is part of one of four columns of matter on page 24 of this publication and occupies the second place under the heading, "Grange declares itself on four great public questions," and the article read in part as follows:

"RESTRICT IMMIGRATION—GRANGE INSISTS THAT RIGID TESTS BE APPLIED.

"The National Grange declared itself strongly upon the question of immigration and its announced policy attracted much interest outside the convention, as well as in, the papers of Wilmington and Philadelphia giving extensive space to its declaration on the matter.

"In concise form the Grange position on immigration was thus expressed, and is hereafter to be understood by all patrons as the position taken by their national organization, at a time when the question of immigration is taking on decidedly new significance, owing to the stirring happenings across the Atlantic. This was the National Grange declaration on immigration:

"'Among the thinking people of America there is an unusually strong feeling that the time has come when our immigration laws should be so amended as to prevent those ignorant, dishonest, vicious, and physically defective from entering our country.

"'While recognizing that ignorance is not a badge of dishonesty and crime, we are satisfied that the higher the average of education of our people, the better it is for our happiness, prosperity, and stability.

"'When the war now raging in the East is over and peace restored, Europe will unquestionably dump untold numbers of undesirables upon our shores. The better element from those countries will not be permitted to leave, if such a thing can be prevented. Right now is our accepted time for action. Therefore be it

"'*Resolved by the National Grange in forty-eighth session assembled*, That we demand the passage by Congress of such immigration laws, at the next session of that body, as will adequately protect our present citizenship from those of other countries, whose mode of living, ideals, and beliefs are inimical to those which have made us great.'"

It appears from this resolution, which was introduced by State Master H. Harland, of Idaho, and unanimously approved by the committee on foreign relations, of which State Master H. M. Culberson, of Wisconsin, was chairman, and which was unanimously adopted by the National Grange after several hours' discussion, and from the previous action of the grange in national meeting, that its over 1,000,000 mem-

bers ask for your approval of H. R. 6060. For instance, the National Grange two years ago adopted the following memorial to Congress:

"Whereas the Senate has passed an excellent bill, S. 3175, containing the legislation recently recommended by a congressional investigating commission as necessary to exclude undesirable immigration, and the House leaders have announced that the measure will be considered 'the first thing in December'; and

"Whereas we have recommended that the head tax be increased, the illiteracy test be enacted, the foreign steamships be fined for bringing undesirables, and that other judicious measures be adopted by the Congress of the United States: Therefore be it

"*Resolved by the National Grange in forty-sixth annual session*, That we urge this needed legislation."

On the second page of this official publication of the grange is a list of the 32 States in which the local pomonas or lodges are organized into State bodies and the names of the officials of these State organizations.

From this list of 32 State granges and their State officials you will see that Mr. M. V. Brown, who signed the night-letter telegram which I just read, is the State secretary of the West Virginia State Grange. On page 4 is matter taken from the official proceedings, showing that the National Grange has a surplus of $99,000, which makes a very respectable showing for a farmers' organization, and indicates a strength of membership and a business capacity that entitled the organization's resolutions and legislative wishes to consideration at your hands.

I have here various resolutions and convention actions of the State and National Farmers' Union. They extend consecutively over a period of eight years, and ask for the precise legislation contained in the 58-page bill that Congress has sent to you for approval or disapproval. At the last meeting of the National Farmers' Union at Fort Worth last September the following action was taken, according to page 53 of the minutes of that meeting:

"The committee on immigration presented the following report, which was, upon motion, adopted:

"Your committee on immigration beg leave to make the following report:

"An immigration bill, known as bill No. 3175, was introduced in the Senate in August, 1911, after being amended in the House, passed Congress, and sent to President Taft February 3, 1913, and vetoed by him. This bill has been reintroduced into the Senate, and your committee understands has not yet been made a law under this Democratic administration; and your committee feels that it can only reiterate and incorporate in its report the resolution of the immigration committee at the last convention, and which was unanimously adopted, which reads:

"'*Resolved by the Farmers' Educational and Cooperative Union of America in national annual convention assembled at Salina, Kans., this 4th day of September, 1913, representing over 3,000,000 members throughout 33 States*, That we reiterate our earnest demand for the needed legislation and urge upon the President and Members of the Senate and House that this bill, which is S. 2453 and H. R. 6060, be put upon the Federal statute books at the earliest possible opportunity; and be it further

"'*Resolved*, That the national secretary send this resolution to President Woodrow Wilson, Secretary W. B. Wilson, and Members of the Senate and House.'"

"Respectfully submitted.

"J. B. MITCHELL, *Kentucky.*
"R. L. LITTLE, *Nebraska.*
"L. C. CROW, *Washington.*"

The report and resolution adopted at Salina and referred to in this resolution as indorsed and reiterated were as follows:

Your committee on immigration beg to respectfully submit the following report:

"One year ago it was reported to the national convention that the congressional Immigration Commission, composed of three Senators, three Congressmen, Government officials, and others, after a four-year investigation at home and abroad, costing over a million dollars, had presented to Congress a 42-volume report of 500 pages per volume, recommending the very legislation which the Farmers' Union had been urging for years, and that it was pointed out the chairman of the commission, Senator DILLINGHAM, had introduced in the Senate on August 7, 1911, a 58-page bill—Senate bill No. 3175—containing the legislation that we had been urging and that had been recommended by the commission. The bill was reported to the Senate by the Senate Immigration Committee on January 17, 1912, and after three months' consideration and many days' debate passed the Senate on April 19, 1912, with only nine votes in opposition.

"It will be recalled that the commission found that 'many undeniably undesirable persons are admitted to this country every year' as a result of our weak laws and the shift in the source of our immigration by the profit-making steamship companies to southern Europe and western Asia, that 'there is a dangerous and apparently growing criminal element in the country, due to immigration,' and that the nine distinguished members of the commission unanimously concluded that 'substantial restriction is demanded by economic, moral, and social considerations,' recommending legislation that would give this country some such laws as other new countries have and as would tend to force the steamship companies to shift the source partially back to north European countries.

"The voluminous report of the commission completely vindicated our previous demands for this legislation, for it showed that this country has the feeblest immigration laws of any new country, and that our feeble laws accounted for our getting such an enormous number of undesirables, in spite of the efforts of our immigration inspectors. In this connection your committee feels that it ought to call your attention to the fact that last year 1,427,237 aliens entered this country, practically 90 per cent of whom came from southern Europe and western Asia, and most of whom were adult males coming merely to sojourn only temporarily, and only 15,000 of whom were 'farmers,' while the steamships report carrying back 611,924 aliens.

"Senate bill No. 3175 aimed at sifting out from this enormous stream the undesirable and at improving a little the quality of this enormous annual alien influx of nearly a million and a half. Having passed the Senate on April 19, 1912, and being reported to the House by the House Committee on Immigration June 7, the bill came up in the House for consideration under a special rule on December 14, 1912, shortly after our resolution of one year ago indorsing it was communicated to Members of the House by our faithful national secretary, and after continuous consideration for several days the bill was passed with an amendment on December 18 by a vote of 201 to 64.

"The Senate bill having been amended by the House necessitated a conference between the two Houses for adjusting their differences. After many conferences the bill was finally agreed upon and was passed again by the House and Senate, and was sent, on February 3, 1913, to the White House for President Taft's signature and approval. On February 6, in fulfillment of his preelection promise to certain persons and without precedent, the President held a public hearing in the east room of the White House, at which attorneys for the foreign steamships, certain employers and importers of cheap labor, and other large interests appeared in opposition to the bill, and your national legislative committee, together with the representatives of the American Federation of Labor and others, appeared in favor of the approval of the bill.

"To the surprise of everyone, President Taft on February 14, 1913, the last day and at the very last hour, returned to the Senate the 58-page bill with a 12-line message, saying that he did so 'with great reluctance,' but that he could not 'make up' his 'mind to sign it.'

"Four days later the Senate, after two days' debate, passed the bill over the veto by a vote of 72 to 18. The bill came up in the House the next day, February 19, 1913, but failed to receive the necessary two-thirds required by the Constitution, the vote being 214 for the bill to 113 against it, showing that a change of only 4 votes would have put the bill on the statute books.

"The same identical bill has been introduced recently in the Senate by the chairman of the Senate Committee on Immigration and in the House by the chairman of the House Committee on Immigration, both of whom have been in conference with the President and the Secretary of Labor, and who say that the bill will pass Congress the first thing next session and will certainly be signed by President Wilson.

"Therefore your committee respectfully recommends that the following resolution be adopted:

"Whereas the Immigration Commission, after years of investigation and a 42-volume report, recommended certain legislation contained in a 58-page bill that passed the Senate and House during the last Congress, only to fail by a few votes to receive the necessary two-thirds in the House needed to make it a law over a 12-line veto, after it had passed the Senate by the decisive vote of 72 to 18; and

"Whereas the same bill has been introduced recently in the Senate by the chairman of the Senate Committee on Immigration and in the House by the chairman of the House Committee on Immigration: Therefore be it

"*Resolved by the Farmers' Educational and Cooperative Union of America in national annual convention assembled at Salina, Kans., this 4th day of September, 1913, representing over 3,000,000 members throughout 33 States*, That we reiterate our earnest demand for this needed legislation and urge upon the President and Members of the Senate and House that this bill, which is Senate bill No. 2453 and H. R. 6060, be put upon the Federal statute books at the earliest possible opportunity; and be it

"*Resolved further*, That the national secretary send this resolution to President Woodrow Wilson, Secretary W. B. Wilson, and Members of the Senate and House.

"Respectfully submitted.

"R. F. DUCKWORTH, *Georgia, Chairman.*
"A. J. MARTIN, *North Carolina.*
"H. F. MCNAUGHT, *California.*"

These resolutions demand additional restrictive legislation before any attempt is made to divert and distribute immigration. The farmers of the country are a unit in the contention, as expressed in resolution by their organizations, that to divert and distribute immigrants before restrictive legislation is enacted excluding defectives, dependents, delinquents, and other undesirables, which, according to the congressional commission and to the official reports of State boards and officials, are entering this country in large numbers in spite of our apparently strong laws, would result in distributing and diverting over the agricultural sections these immigration evils from which the Northeast and its State legislatures are complaining, and that any attempt to find jobs and opportunities for aliens would act as a vacuum to pull in more immigrants and would be used as such by enterprising steamship agents abroad to drum up more traffic.

For instance, I have here a resolution adopted by the Farmers' Union six years ago that declares, among other things:

"Whereas foreign immigration is being advocated for the southern and western farming communities * * * and a Federal bureau is being established for the purpose of distributing and diverting foreigners; and

"Whereas the present flagrant lax enforcement of existing immigration laws and the urgent need of additional restrictive legislation will soon result in the agricultural sections of the South and West being made a dumping ground for undesirable southeast European and Asiatic population: Therefore be it

"*Resolved*," etc.

A somewhat similar resolution was adopted by the Farmers' National Congress as long ago as September 14, 1905, and which reads:

"Whereas much of the greatness of the United States is due to the energetic, industrious, and patriotic immigration which came to this country during the past century; and

"Whereas a strict execution of the present laws makes it possible to keep out the worst of the pauper and diseased elements of our present European and Asiatic immigration, but these laws admit large numbers of immigrants who are generally undesirable because unintelligent, of low vitality, of poor physique, able to perform only the cheapest kind of manual labor, tending to become a burden upon our large cities, and not available for supplying the need for agricultural laborers; and

"Whereas the coming of these undesirable aliens tends not only to lower the standards of American citizenship but also to prevent the coming of immigrants who would be valuable workers in the country districts and who would readily assimilate with our population: Therefore be it

"*Resolved*, That the Farmers' National Congress urges upon the Senators and Representatives of the United States the importance of further judicious regulations of immigration, and in particular demands the enactment of a law raising the present head tax upon immigrants to at least $10, and excluding absolutely immigrants of poor physique and those who are unable to read in some language."

Resolutions of this description have been reiterated year after year by each of the three national farmers' organizations and by many of their subsidiary State organizations. The resolutions represent the ever-increasing and growing sentiment that additional restrictive legislation should be enacted and that the restrictive policy commenced years ago should progress. The sentiment has crystalized into congressional action, and in 1907, as a part of an immigration law, a congressional commission was created to investigate the whole subject matter, at home and abroad, and especially the feasibility of the illiteracy or so-called educational test. The commission consisted of three Members of the House, three Members of the Senate, the United States Commissioner of Labor, C. P. Neill; the Assistant Secretary of Commerce and Labor Mr. Wheeler; and Prof. Jenks, a writer and scholar of international reputation.

I have here the first or partial report of that commission, which employed trained experts and investigators, expended something like a million dollars, and made a 41-volume report to Congress, recom-

mending practically every one of the one hundred and more changes in existing law that the bill now before you contains.

This is House Document No. 1489, of the Sixtieth Congress, second session. I understand that it was edited by then Congressman W. S. Bennet, now vice president of the National Liberal Immigration League, and the CONGRESSIONAL RECORD for February 27, 1909, shows that he presented the report to the House and asked to have it printed. On page 29 is a paragraph devoted to "The immigration law and its administration," which reads, in part, as follows:

"It is generally admitted by those acquainted with the subject that notwithstanding the fact that the present law proposes to provide for the exclusion of every undesirable immigrant, many undeniably undesirable persons are admitted every year. The commission's inquiries concerning defective and delinquent classes show this fact very clearly, and in a way which, it is believed, will be thoroughly understood and appreciated. In theory the law debars criminals, but in fact many enter; the law debars persons likely to become public charges, but data secured by the commission show that too many immigrants become such within a short time after landing. The same is true of other classes, nominally, at least, debarred by the law. In short, the law, in theory so far as its exclusion provisions are concerned, is exceptionally strong, but in effect it is, in some respects, weak and ineffectual. The commission has discovered several sources of this weakness; it is its purpose to find the others and to recommend some effective remedies."

As I said, I understand that this was edited by ex-Congressman Bennet, now vice president of the National Liberal Immigration League. Mr. Bennet was the only one of the nine members of the commission not to concur in the commission's recommendation that the illiteracy test is the "most feasible single method for excluding undesirable immigration," although he joined the other eight in recommending "substantial restriction." At the time the commissioners went over the volumes of data and drew up their conclusions and recommendations he was absent from Washington, and returned later to file a short dissenting report.

I know that this voluminous report is being made light of by some learned attorneys in New York City that have among their clients the foreign steamship companies, large importers, and others who fear that their profits may be cut into as a result of reducing the steerage profits and the consequent putting up of freight rates, and who are interested in cheap-labor exploitation schemes. And, Mr. President, if we can judge by past experience, and if you will examine the protests against this bill that are coming to you through the mails and over the wires, I am absolutely sure that you will find that they come from the people who want to Russianize the working people now here.

The PRESIDENT. Mr. Patten, let me suggest here that suggestions of motive had better be avoided. I think we had better stick to the merits of the question.

Mr. PATTEN. I beg your pardon.

Much is said by the opponents of this bill about this country being a haven and place of refuge, as though the over 1,000,000 annually coming came to escape hard conditions abroad, and once here never returned to their native lands. Immigration statistics do not bear out their plea. The last annual report of the Commissioner General of Immigration shows that 1,405,081 aliens came here last year, and that 633,805 aliens left this haven of the oppressed, this asylum for the downtrodden. In a splendid speech by Senator OVERMAN, delivered in the Senate April 19, 1912, the Senator called attention to some very interesting facts. I have here a very interesting table:

Table showing immigration, emigration, etc., for the last 11 years.

Year ending June 30—	Total alien arrivals.[1]	Total alien departures.[2]	Immigrant alien arrivals in Note 1.	Per cent of immigrant aliens who have been in the United States before.	Nonimmigrant alien arrivals.
1901	562,868	209,318	487,918	11.9	74,950
1902	730,798	220,103	648,743	9.5	82,055
1903	921,315	247,559	857,046	8.9	64,269
1904	840,714	332,019	812,870	12.8	27,844
1905	1,059,755	385,111	1,026,499	12.1	33,256
1906	1,166,353	356,257	1,100,733	12.1	65,618
1907	1,438,469	431,306	1,285,349	6.8	153,120
1908	924,695	714,828	782,870	8.1	141,825
1909	944,235	400,392	751,786	[3]	192,449
1910	1,198,037	380,418	1,041,570	[3]	156,467
1911	1,030,300	518,215	878,567	[3]	151,733
Total since 1900, or for last 11 years..	10,817,539	4,195,524	9,673,953	.....	1,143,583

[1] Official Government statistics. (Annual report of Commissioner General of Immigration.)

[2] Statistics furnished to the Government by steamship companies. (Required by act of Feb. 20, 1907.)

[3] Not given after 1909.

NOTE 1.—The distinction "immigrant alien" and "nonimmigrant alien" is fanciful, the only difference being as to whether the alien comes for the first time or comes intending to remain. A "nonimmigrant alien" is so classified if the alien says he expects to return to the native land.

NOTE 2.—Although 9,787,239 aliens entered this country during the last census decade (1900 to 1910) the Census Bureau reports that our foreign-born population increased only 3,129,766, which tends to show that the number of alien departures reported by the steamship companies falls short of the number that actually leave the country. The Immigration Commission reports that "at least 40 per cent of those coming return," taking a minimum of $250,000,000 annually out of the country.

This table of statistics shows that during the last census decade almost 10,000,000 aliens entered the country. According to the census of 1910, our foreign-born population increased only 3,000,000 during those 10 years. What became of the other 7,000,000? The foreign steamship companies admit carrying back 4,000,000. It appears they took back about 7,000,000. At any rate, the bulk of the 10,000,000 did not show up in this country in the census returns, and more than likely were either ground to powder by the exploiters of cheap labor or went back. The big trusts prefer ignorant, servile, illiterate labor, unable to speak our language. It is not true that the hundreds of thousands that return each year to their native lands come back here again, for the table shows that only a small part of those coming any year have ever been here before. But let us see what the commission in its official report says about the condition of the returning hundreds of thousands—the six or eight hundred thousand, at least, that return each year from this "haven," this land of "refuge and asylum" for the worthy and industrious and honest. The commission, at page 24 of volume 1, under the caption, "Conclusions and recommendations," finds that—

"The old immigration movement was essentially one of permanent settlers. The new immigration (since 1882) is very largely one of individuals, a considerable proportion of whom apparently have no intention of permanently changing their residence, their only purpose in coming to America being to temporarily take advantage of the greater wages paid for industrial labor in this country. * * * Thousands of those returning have, under unusual conditions of climate, work, and food, contracted tuberculosis and other diseases; others are injured in our industries; still others are the widows and children of aliens dying here. These, with the aged and temperamentally unfit, make up a large part of the aliens who return to their former homes to remain."

Much is also said about farmers and the need of them. But they are not coming. Of the 1,405,061 aliens that entered last year, 19,120 were farmers, were officially classified as farmers; 314,000 out of that million and a half said they had worked on a farm, or were farm laborers, doubtless living in congested centers and going back and forth each fall. Less than 2 per cent, according to the statement of the Immigration Bureau, of the annual million and nearly a half really go to the rural districts.

A word with reference to the South. There are certain persons, who have no authority to speak for the farmer or for the South, who say the South wants and needs the present influx. Mr. President, the bees go to the honey pot. The immigrants go where it is most profitable and agreeable to go, and they do not go to the South. The South is afflicted with one unfortunate illiterate immigration which drove the average white man, who did not have the money to buy a large tract of fertile land and a large number of slaves, up into the hills and the mountains, where he became the "poor white trash," and he is beginning to come back down to work in the mines, in the factories, and on the farm. Without foreign immigration the South during the last 50 years has increased at a greater rate in railroad mileage, in bank deposits, in number of cotton-mill spindles, in mineral output, and every other field, including population or labor supply, out of its own loins, than has the Northeast, with all its tremendous immigration. And for reasons which impel the working classes of New England to ask for additional restrictive legislation to curb the efforts of the protected trusts to bring in cheap labor for the purpose of beating down the standards of American life and American living.

Just a word with reference to what we may expect. Mrs. M. French Selden, who is a welfare worker of international perspective and reputation, and among other things a fellow of the Royal Geographic Society, returned to this country recently and gave a long interview, according to the New York Times of January 16, 1915, in which she declared that additional restrictive legislation was absolutely necessary.

Among other things she says:

"This country is going to be flooded with a class of undesirables unless you put up the bars. * * * The Belgians who wish to come here are renegades, or else they are the aged, the imbecile, or the poor women and children. They will bring nothing with them. They will add nothing to the country. Would it not be better for those who are willing to spend money to colonize them here to help repatriate them?"

Much the same sentiment seems to be entertained by Lucius L. Solomon, of San Francisco, who, as a delegate to the National Conference of Jewish Charities last May at Memphis, Tenn., called attention to the estimate of the California commission on immigration, and asserted: "That the completion of the Panama Canal merely renders California more accessible by tidewater," and would bring many immigrants to the western slope. "It may be boldly asserted that immigration is the underlying cause of all of the social problems of American Jewry," he said. "That it will continue to be so when the new tide sets in upon our west coast following the completion of the canal is evidenced by many unmistakable signs," and he urged "the literacy test, an annual limitation upon the number entitled to admission, the exclusion of unskilled labor," and the like.

There seems little doubt about the European war fulfilling Mrs. French-Selden's and President Gompers's prophecy about an increased influx of undesirables and an increase in quantity as well as a deterioration in quality. The farmers of New York State object to the $3,000,000 annually paid in taxes for the care and keep of alien insane which this bill would in great part lift from their shoulders. They believe in elementary education and favor requiring as much of newcomers as we compel of our own native born. The farmers of the country ask for this legislation, for genuine rural-credits legislation, for Federal aid to good roads, and efficient, practical marketing work. I thank you, Mr. President.

Mr. MORRISON. Mr. President, I will now call on Dr. Stewart Patton, representing the delegation of alienists and State boards of insanity, for 10 minutes.

Dr. PATTON. Mr. President, the gentlemen for whom I have the honor to be the spokesman desire to bring to your attention certain provisions of the immigration law which relate to insane or mentally defective aliens, and to state very briefly the reasons for these amendments to the present immigration law.

There are no other provisions in this bill which, in our opinion, are of greater importance than these, or likely to prove more beneficial to the people of this country if enacted into law.

Those whose views I wish to present are the chief executive officers of boards which have to do with the care of the insane and the mentally defective in the following States: Massachusetts, Rhode Island, New York, New Jersey, Pennsylvania, and Maryland. In the public institutions of these six States are to be found nearly three-fourths of all the insane or mentally defective immigrants who are receiving public care in this country. In addition, I desire to speak for the following National or State societies devoted to the study of insanity and mental deficiency, the promotion of the care of those suffering from these conditions, or the prevention of mental diseases: The National Committee for Mental Hygiene, the American Medico-Psychological Association, the American Genetic Association, the Committee of One Hundred on Public Health, the New York Psychiatrical Society, the Mental Hygiene Committee of the New York State Charities Aid Association, and the

Eugenics record office. Properly accredited representatives of each of these State boards and of each of these societies are in this room. Although what I have to say has the unqualified indorsement of all these gentlemen, each is ready to speak for his own State or for his own organization and to give any specific information which you may desire.

The States whose representatives are here to-day are literally staggering under the burden of caring for the insane.

Mr. President, I take the liberty of reminding you, sir, that there are more insane in institutions in this country than there are students in colleges and universities. There are more insane in this country than there are enlisted men of the Army, Navy, and Marine Corps; and in addition to these, Mr. President, each year there is being added to this great army an army practically equal to the Army of the United States, approximately 60,000 new cases every year. The cost of conducting these institutions in which this vast number of persons is cared for is so great that in several States it is exceeded only by the amount expended for education. In New York the expenditures for the insane are one-fourth of the total appropriation of the State. And, Mr. President, if proper provision were made in this country for the care of the insane, the amount expended in the care of the insane would exceed that expended for education.

So I think that we are justified in saying, sir, that in dealing with this problem that we are dealing with one of the great biological problems which fundamentally affect not only the future of this country but the future of our race; and certainly the permanency of democratic institutions must depend upon the intelligent interest that we take in the conservation of the brain power of this Nation.

Even with these great sums devoted to the care of the insane much remains to be done. In many States large numbers of these sick persons are not yet delivered from the misery and degradation of jails and almshouses, and in very few States is our duty to these most unfortunate of the communities' wards fully discharged.

In the case of the mentally defective existing provisions are still more inadequate. It has been estimated by careful students of the subject that only 10 per cent of all the feeble-minded are in suitable institutions; the others are unjustly confined in prisons and reformatories, inadequately cared for in almshouses, or at large in the community, often a menace to the morals and to the safety of others and more often themselves the victims of greed or lust. Enlightened States are keenly aware of the importance of solving the great problem of providing for the mentally defective, but the magnitude of the task is such that our legislatures are reluctant to undertake it.

What can be said, sir, of the intelligence of a country which, just awakening to this vast problem, and just stirring itself to deal with it, fails to take every necessary precaution to prevent the task being rendered still more difficult by a large and steady influx of the insane and the mentally defective of other lands? In requesting that Congress provide us with an immigration law under which the insane and the mentally defective can be excluded we can not be accused of inhumanity. The gentlemen whom I represent are devoting their lives to the welfare of these persons, and I may say, Mr. President, that we are actuated by only one motive in coming here—the tremendous problem which confronts us as a Nation and the tremendous necessity of doing something to conserve the brain power of this Nation.

The States which I have named receive their population chiefly through immigration. In New York State the number of immigrants who come to settle permanently there every year is greater than the number of babies born. The application, through eugenics, of the facts learned by the scientific study of heredity will doubtless make it possible in years to come to cut off defective strains, so that fewer babies who have inherited the mental defect of their parents will be born. But how weak our efforts in this direction compared with the enormous need! It is in eliminating the insane and mentally defective from the great tide which flows through Ellis Island that the most practical and humane field for the control of insanity and feeble-mindedness in this country is to be found.

It may be said that the present immigration law excludes the insane and the mentally defective. In reply I have to say that under the present immigration law our public institutions are filled with the alien insane. There are serious defects in the immigration law, and these defects have long been recognized, not only by those who care for the alien insane and mentally defective in the public institutions of this country, but by the medical authorities actually engaged in the examination of immigrants at our ports of entry.

The amendments which I will read are indorsed not only by the State boards and medical organizations which are represented here to-day, but by every national medical organization which is interested in psychiatry—that is, the study of mental disease—and by more than 20 State and local medical organizations.

I shall now take the liberty of reading these amendments.

Listed in the order of their importance, these are the amendments which I desire to advocate:

First. Providing that medical officers of the United States Public Health Service who have had special training in the diagnosis of insanity and mental deficiency shall be detailed for duty at all ports of entry designated by the Secretary of Labor, and that the services of interpreters and suitable facilities for making mental examinations and observing cases shall be provided for these medical officers.

Second. Providing that the surgeon of each vessel shall make a mental examination of each immigrant before accepting him for passage. (A physical examination only is required at present.)

Third. Providing a fine of $200 for bringing to this country any insane or mentally defective person whose condition could have been detected by a competent medical examination at the port of embarkation.

Fourth. Making it mandatory for the Secretary of Labor to provide suitable attendants for immigrants being deported when they require personal care on account of mental or physical disability.

Fifth. Increasing from three to five years the period in which deportation of aliens who have become public charges in this country can be effected, unless it can be affirmatively shown that their dependence is due to causes arising subsequent to landing.

Sixth. Providing that deportation may be effected subsequently if proceedings are instituted within five years.

I may say, sir, in conclusion, that should you desire further information upon this subject any of the gentlemen here would welcome the opportunity to present our case more in detail.

Mr. MORRISON. Mr. President, I will now call on Mr. William M. Clark, representing the Brotherhoods of Engineers, Firemen, Conductors, and Trainmen.

Mr. CLARK. Mr. President, I have the pleasure of speaking for the railway employees engaged in train service in this country. The Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railroad Conductors, and the Brotherhood of Railroad Trainmen favor this bill with the literacy test. These organizations comprise a membership of practically 350,000 citizens of this country. They are banded together as laboring men for self-protection and mutual benefit, and as one means of protection they have urged legislation restricting immigration.

Year after year they have expressed their insistent desire for this legislation. By resolutions passed at their supreme conventions, in meetings of local lodges and divisions, and by individual letters and telegrams they have voiced their approval of the principle of the present bill. They are affected. They are interested. This is no new subject to them. The membership have been advised of the progress of this bill. They watched to see it come from the committee more than 17 months ago. They knew when it was before the House of Representatives and followed its course in that body. They were equally interested in the struggle to secure action by the Senate, and they knew when the bill went to conference. At every stage they have been ready to urge their Representatives in Congress to support this bill. They are looking forward to its approval at this session.

Mr. President, these 350,000 railroad boys are a unit in asking you to sign this bill and let it become a law. I am directed to make this appeal on behalf of Mr. H. E. Wills, the assistant grand chief of the Brotherhood of Locomotive Engineers; Mr. P. J. McNamara, vice president of the Brotherhood of Locomotive Firemen and Enginemen; and Mr. Val Fitzpatrick, vice president of the Brotherhood of Railroad Trainmen. We are associated together here in Washington as the national legislative representatives of these four organizations, and, in order that you may have further knowledge as to the attitude of these organizations, I would like your permission to place a copy of the hearings before the Committee on Immigration and Naturalization, as of December 11 and December 12, before you. [Handing copy to the President.]

I thank you for your courtesy.

Mr. MORRISON. Mr. President, I will now ask Prof. H. P. Fairchild, of Yale University, to address you on this bill.

Prof. FAIRCHILD. Mr. President, I wish to touch very briefly simply on three points with reference to the literacy test, which seem to me to be of importance: First. Is it illiberal? Second. Is it un-American? Third. Is it a good selective test?

It is common in our every day talk to refer to the restrictionist as a narrow and illiberal man; while to say that a man has liberal views upon restriction is tantamount to saying that he is opposed to restriction. The assumption which lies back of this habit is the assumption that the restrictionist is concerned with his own personal interests, or with the interests of his own class, or of his own nation rather than with the interests of wider humanity. This may be true of some restrictionists; it is not true of all. There are restrictionists who are such because they believe that restriction has to do with the interests not of themselves or their own class or nation, not of any individuals of any class or nation, but with the interests of all humanity; and not only with the interests of the humanity of this generation, but of the humanity of generations to come.

To say that the United States is the final stronghold of democracy is merely to state a truism; yet it is also to enunciate a truth which should not be forgotten. Here, in this country, because of the conjuncture of natural resources and advantages, because of the make-up of the original population, because of all that has gone into our national history, the field is arranged for the most favorable struggle of the common people up to their great destiny that can be found anywhere among the nations of the earth. Our great function as a nation is to show what can be done under the most favorable circumstances to help the great mass of the common people to achieve the greatest that is possible for them; and we can not tolerate anything which threatens to check or retard the progress of the common people on to this great goal.

Now, there are grave reasons for feeling that two large elements of diverse peoples, with different languages, different manners, different ideals in the body politic of the United States constitute this sort of a menace that threatens to check, retard, perhaps permanently to stop the progress, toward this great goal. This is not the time nor the place, Mr. President, to enter into a detailed discussion of the arguments which lead to this view. They are long and complicated, and some of them technical. Suffice it to say that these arguments are sufficiently weighty to have convinced a large number—I think I may safely and fairly say a large majority—of the careful students of immigration problems to the side of restriction.

The whole thing is a matter of conservation. Every conservation program is accomplished by restriction, and involves the sacrifice of the interests of individuals. Yet we do not call the conservationist narrow. Every program of social reform is accomplished by restriction, and involves the sacrifice of the interests of individuals; yet we do not call the social reformer illiberal. If in seeking to work out this high destiny of the United States we must sacrifice the interests of some individuals, it is merely a law of nature. It is something which we can not avoid. The restrictionist, who holds the view that he does for reasons of this sort, does not recognize nor grant any superior claim to consideration on the part of the American individual as against the individual of any other group or nation. He does recognize and assert the claim of humanity as against the claims of all individuals, of whatever name or clime, of this generation.

In the light of these facts, I submit to you, Mr. President, that the policy of restriction, even by the literacy test, need not necessarily be either narrow or illiberal.

My second point is, Is the literacy test un-American?

It is not un-American to insist upon education. We do it in the case of our own children. We spend untold millions of dollars to establish, equip, and maintain a public-school system, and then by our compulsory education laws we say to our own children, "You must take advantage of these schools; we do not consider you fitted for adult participation in the life of this country unless you have the rudiments at least of an education." Is it logical to say to the foreigner who comes without any knowledge of American life or ways, "It makes no difference to you whether you are educated or not; you will get along all right; our own children must be educated, but it is a matter of indifference to you." Or put it in this way: Suppose a pair of immigrant parents came to this country bringing a child of 3 and set up their home here. That child would be compelled to go through the public schools of this country, and then we would say he was fitted to enter into the active life of the Nation. If that same child remained in Europe and came to this country at the age of 20, shall we say to him, "Education is a matter of indifference." Under which conditions would he need the education the most, if he had been brought up and trained in this country or if he had grown up in foreign countries?

Now, I know that the claim is made that this test of literacy is a test of opportunity and not of character, and that it is illiberal and un-American to test people on the basis of opportunity; that we should judge them on the basis of character. Here, again, I think we find an

error. It is not un-American to test people on the basis of opportunity if by "up-American" we mean that it is not in harmony with the established usages and legislation of this country. Even in our immigration statutes we can find countless examples of tests—I say "countless," but that is too large a word—many examples of tests which are really tests of opportunity. Take our pauperism test. Many a pauper immigrant is debarred because of meager opportunities in his youth, not because of any flaws in character. Take our disease test, particularly for trachoma. It is a test which operates against certain peoples as compared with other peoples. It is a test of opportunity, applying primarily to people who have grown up in certain lands.

Take even the polygamy test. That is really a test of opportunity. [Laughter.] The Hindu grows up in a polygamous society, and adopts that form of life just as naturally as one who grows up in a northern European country adopts the monogamous form of life. And in neither case is it a test of character. It is a test of the institutions in which one has grown up.

So that it is not un-American to test people on the basis of opportunity; and if we once start to try to sift out the characteristics of ourselves or of anyone else, which are due to opportunity, and separate them from those which are due to character or heredity, we find ourselves in a hopeless muddle, because, after all, opportunity and environment, being one and the same, are closely bound up with heredity and character The only thing to do is to determine what is necessary for the welfare of this Nation, and to act on the facts as they exist.

My third point is: Is the literacy test a good selective test? Here again I think the issue is merely confused by treating it on an individualistic basis. If you pick up half a dozen men at random on the street, you may find that the two who are illiterate are just as valuable citizens as the four who are literate. The advocates of the literacy test do not claim that it is a sole and sufficient test. It is just one other thing which seemed to be needed. Neither do they claim that it will keep out everyone who would make an unfortunate citizen of this country and would admit all who would be valuable citizens. We can understand this point clearly by considering the literacy test as a group test, and the argument is simply this: Those groups which are most difficult to assimilate in this country, and therefore constitute the greatest menace, are those who are least trained in the ways and habits and ideals of democracy. Now, the democratic nations of the world have long ago established public-school systems, through which their citizens go, and consequently they manifest a low percentage of illiteracy. The nondemocratic nations have a high percentage of illiteracy. So that illiteracy appears not so much as an evil in itself as an indication of a difference between the conditions in which the illiterates have grown up and the conditions which we count upon as necessary in this country. So the illiterate groups tend to be those which are most difficult to assimilate, most difficult to harmonize into the life of this country, because they have not been trained in democracy; consequently they are the groups which should be reduced in numbers as we admit them to our shores.

And in all this we make no distinction as regards the innate character of individuals or groups. It is merely a question of how well one group will fit into the life of this Nation.

Finally, I would say that this test is a good test, because it is not merely a sieve, but it is a tonic. The mere threat of a literacy test, we are told on the best of authority, two years ago started schools upon the hillsides all over southern and central Italy where there had been none before; and when the bill failed the schools were closed down. What greater service can we render than to establish a standard which will stimulate and further the progress of popular education in the foreign lands? Our duty, Mr. President, as a nation is to set standards. We can not hope to render our greatest service to humanity by helping individuals. What we must do to conserve our own proper destiny, to render our own function to mankind, is to safeguard every element which goes to make the United States what it is and to further the progress of this country toward the highest goal of democracy.

I thank you.

Mr. MORRISON. Mr. President, I will now call on Prof. E. A. Ross, of Wisconsin University.

Prof. ROSS. Mr. President, I represent no organized body. I am an absolutely disinterested student of society. I think I can say that, so far as I know, all those who profess the subject of sociology in this country are in favor of this bill. I stand for the literacy test. Once I was attracted by the idea of introducing a more searching and all-round test. I think many here have been attracted by the idea, for example, of the great eugenist, Prof. Davenport, of making sure of the personal record on the other side and of the family history of the would-be immigrant. But I presently came to appreciate that the European Governments will not tolerate a lot of United States agents examining with a microscope their police-station blotters and their court archives, the records of their prisons and jails and almshouses and foundling houses and insane hospitals. And yet that is the only way in which you can get light upon the personal record and family history of the applicant.

So that is a delusive proposition. Then there is the idea of a very searching, all-round individual examination of the applicant. It would have to be on this side. We can not imagine Italy tolerating an elaborate United States immigration service, with seventy-five or a hundred employees, at the Bay of Naples. They would not tolerate that. It has to be in this country. Now, Mr. President, I would oppose that because of its cruelty of operation. We can not have a test that can not clearly be foreknown by the man in Roumania or Syria or Russia in its application to himself. Exclusion can not be at Ellis Island; exclusion must be in the mind of the would-be immigrant. Now, the literacy test has the advantage of foreknowableness, and if there is one man in a hundred who could not know or could not tell whether he read well enough, the steamship agencies, in order to avoid being obliged to carry him back if rejected, would see to it that this simple test was applied to him before they sold him a ticket.

Now, suppose we had an elaborate all-round physical and mental examination at Ellis Island. Suppose even 1 out of 10 were rejected. Consider the situation of sixty or seventy thousand rejects a year—men who had sold their cow and their furniture, and given up their holding, and spent their all, nearly, in getting their families 5,000 miles to the shores of this country, and then were turned back. Such a test is absolutely impracticable, because the heart of humanity will not stand it. And so, on the basis of its foreknowableness, the literacy test is absolutely the only test of any selective consequence that can be considered. To oppose that, then, is to stand for unrestricted immigration.

Now, my other point, Mr. President, is this: That it takes some imagination to keep in view the parties to this case. It is not an issue between illiterate immigrants who wish to come in and us who are already here. It is a case between the visible, concrete, would-be immigrant, with a local habitation and a name, and with a personal fate which hinges upon his admission or nonadmission, and posterity, that has not been vestured with individuality, that is not concrete, opaque men and women. And yet posterity is certainly as real as the illiterate people now in Syria or Roumania. There will be a hundred and fifty millions of people in this country 60 years from now, and nearly all of them are not yet born; but they will certainly be here, and they will curse us if we do not have in mind their welfare in this matter. We have now more than three and a half millions of foreign-born illiterates in this country, coming at the rate of a hundred and fifty or two hundred thousand a year. The effect of that inevitably is to diminish our rightmindedness, which is the basis of easy, concerted civic action. It delays the ascent of man; it reenforces the saloon; it shatters our precious phantom of political attention in thrashing over old straw, questions that we supposed had been settled years ago instead of reserving our attention for the disposal of the real questions that confront the American people and will advance their progress.

Mr. MORRISON. Mr. President, there are a great number of societies, patriotic and other, that desire to be represented. I understand they had a meeting and it was agreed to give them as much time as we could. They have selected Mr. Fergus A. Dennis to represent them, and under the agreement of an hour they have, by my time, nine minutes.

Mr. DENNIS. Mr. President, I am very glad to speak to you as an old Princeton classmate and ex-member of Princeton University on this great question, and representing, as I do, 245,000 members of patriotic and religious societies in the city of Philadelphia and in the State of New Jersey—165,000 members in the State of New Jersey alone—ask you to approve this bill as it has come to you. As I understand, there is no serious objection on the part of any considerable number of persons to anything but the reading test, and consequently, in the very limited time allotted I want to say a word about our attitude toward this particular provision.

The patriotic societies and the American public believe in every individual having an elementary education, on the theory that reading, writing, and arithmetic better fit him for earning a living and intelligently participating in all our public affairs. The patriotic orders, with their life devoted to the public-school system, and the religious societies to our blessed Lord's work, all lay the foundation for the betterment of American manhood and prevent whatever may interfere with its growth and its progress.

We believe in compulsory school-attendance laws, and naturally think this country ought to require as much of foreign-born adults coming here as we require of our own native born, for their own good as well as the country's good. This has been so well said by a previous speaker. Why should we ask of our own what he who comes to become a part of this great body politic should not possess? Why should we force the education of our children to a standard that makes them fit for the intelligent use of all the rights of American citizenship, and say to the youth from abroad, to the man from the other side, "You do not need to be able to intelligibly read and write to understand these things"? We believe in compulsory school attendance, and we naturally think, I repeat, that this country ought to require as much of foreign-born adults coming here as we require of our own native born. The Commissioner of Education has reported that there are nearly 6,000,000 illiterate adults, and that the illiteracy of these 6,000,000 costs the country about $500,000,000 annually. We believe that the best is worth paying and working for. We believe that any worthy, industrious, energetic person desirous of coming here who could not pass the mild test in this bill, or who does not come under some of its humane exceptions, would soon learn to read if he is made of the kind of stuff we want to find in American citizens. We do not believe it is any more of a hardship to impose on our own who are here than upon those coming here, and we expect it before the alien here can be naturalized. Why should we not require it for admission? In many States aliens can vote immediately, almost, after declaring their intention to become citizens. We claim they should know enough when they come here to make them intelligent citizens.

I thank you.

Mr. MORRISON. We might as well reserve our three minutes, I think.

The PRESIDENT. Very well.

[Opponents of bill spoke.]

Mr. MORRISON. Mr. President, I am heartily in sympathy with the statement made by Mr. O'Rourke, of New York, in regard to the inalienable rights to life, liberty, and happiness. I would be more so if I did not know that those rights—life, liberty, and happiness—are being alienated every day in this country, notwithstanding that declaration was made by our forefathers. [Applause.]

Lest misunderstanding may exist, I might point Mr. Cockran's attention to the constitutions of many of our States which call for the citizens to be able to read to entitle them to vote. If the citizen does not vote, he certainly is of no assistance in the government of this country.

Mr. President, the proposition to prohibit immigration to the United States of able-bodied men and women because they can not read has a sympathetic viewpoint where individuals are considered; but, notwithstanding such a viewpoint, the American Federation of Labor, which represents the organized workers of the country and which is the only method or organization or agency which can with any justification or reason represent the unorganized workers, has repeatedly declared by resolutions in conventions that "the literacy test is the most practical means of restricting the present immigration of cheap labor, whose competition is so ruinous to the workers already here, whether native or foreign."

A great deal has been said and published in an endeavor to create the impression that it is necessary to induce immigration to come to this country for the purpose of securing agricultural workers. There is no question in my mind but that such agitation has for its purpose the enticing of emigrants to our country to supply the United States Steel Co., the great manufacturing concerns, coal companies, packing houses, and railroads with men willing to work at a cheaper wage than those who are born here. [Applause.]

That there may be no misunderstanding in regard to what the farmers think about using immigrants for farm hands, their representative, in his statement to you to-day, has clearly placed the farmers' organizations on record as opposed to the proposition of bringing immigrants into this country to do agricultural work.

The opponents of this test make the argument that common laborers would belong to the class that could not pass the literacy test, and that this country is very much in need of that particular kind of labor. The great industrial companies of this country have more men to-day than they can employ, but they want the present conditions of unemployment to obtain. [Applause.] They want two men for every job. [Applause.] They know that unemployed men must work to live, and their necessities will force them to accept any wage set by the compa-

nies. Hence the workers' wages are literally held below a living wage by the hunger, the misery, and the distress of the unemployed.

The organized wageworkers have declared in favor of restriction of immigration to maintain unlowered the American standard of life. [Applause.] Those who oppose restriction are representatives of companies and associations composed of employers of labor, whose dominant interest is the dollar, and of associations that depend for their existence upon contributions from the employing class. They feel that a reduction of immigration will result in a higher wage for their workers, which will disturb the profits and dividends from products manufactured by them, or perhaps they have been informed that if the steamship companies do not receive $60,000,000 a year for transporting aliens they will raise their freight rates. This reason will account in a great measure for the opposition of societies of various nationalities composed wholly or partly of business men and the attorneys of business men. [Applause.] Restriction may interfere with their profits. With them it is always the dollar, with never a thought for the success or comfort of our millions of wageworkers or the hundreds of thousands who are continuously without sustaining employment. The steamship companies' interest in immigration is the $60,000,000 or more a year collected by them for carrying aliens to and from our shores. These companies have no interest in the welfare of our people. Their interest is in the dollars they collect.

We oppose any attempt to lower the standards of American life. We want to raise them, and we are opposed to the exploitation of millions of aliens, with its attending evils, to swell the profits of the steamship companies, even if it adds to the revenues of those companies $60,000,000 a year, even if it enables the United States Steel Trust to pay dividends and interest on $400,000,000 of stocks and bonds which never cost that company a cent. [Applause.]

I wish to call your attention to the fact that industry is protected by a tariff, but labor is not; that the products of labor are protected, but we have a free flow of labor coming to our shores all the time; that the manufacturers have protection against products manufactured by cheap labor in foreign countries, but labor has no protection against the importation of cheap labor.

The opponents of this measure say that if the products of labor are protected, then labor itself must be benefited, because the manufacturer can sell the products at a much higher price than can be obtained in other countries and will be in a position to pay higher wages to his employees. The protected manufacturer does receive a higher price than the products can be sold for in other countries, and the second contention—that they are thus made able to pay higher wages to their employees—is also true. But the fact is they do not pay higher wages. They pay lower wages. We find that the most highly protected industries, particularly the industries that are now controlled by trusts, such as the Steel Trust, Rubber Trust, Sugar Trust, packing houses, and textile industry, pay to their employees the lowest wage in the country, and some of them less than a living wage for a family. A high tariff has nothing to do with the wages paid in these industries. [Applause.]

We hold that the limitation of immigration to our country will compel social and industrial reform in the countries from which the immigrants flow. The fact that these countries have an outlet for a great number of their people means that there is an outlet from the oppressive conditions in those countries. For that reason those countries delay social and industrial reforms. As a consequence, industrial and social misery is perpetuated in those countries, because their citizens are induced to come to this country.

Those who have made a careful study of the question and have watched the census have been forced to the conclusion that it has become a habit of mind of the people of this country to have small families. The foreigners that come here have large families, but after having been here some time they seem to get into the habit of mind which prevails among those born here; that is, the ever-decreasing number in a family. Those who have given this particular subject much thought and observation have come to the conclusion that this habit of mind is one of the direct results of the tremendous influx of foreign immigration into this country, which causes competition, increases the difficulties in the way of obtaining a living wage, and forces the workers to the conclusion that it is their one recourse to enable them to sustain American standards of life and to survive the competition of the million or more aliens that have been coming here each year.

The fact is that immigrants have been exploited to such an extent that workers possessing American ideals can not compete with them.

On February 2, 1914, Representative AUSTIN read the following letter:

"Edward Horvath Labor Agency. M. Engel, manager. Licensed and bonded. 124 East Third Street, New York City, October 4, 1913"—

This letter was read into the CONGRESSIONAL RECORD—

"S. E. & H. L. Shepherd Co., Rockport, Me. Gentlemen: Foreign laborers are now available in this city for less wages than you can secure men for in your State. Are you in need of any? If so, we can offer for immediate shipment any number of them of any desired nationality.

"Trusting to hear from you, we are, very truly yours, M. Engel, manager."

The following advertisement appeared in a Pittsburgh paper:

"Men wanted: Tinners, catchers, and helpers, to work in open shops; Syrians, Poles, and Roumanians preferred. Steady employment and good wages to men willing to work. Fare paid and no fees charged."

The wage earners believe in effective regulation of immigration, because they desire to retain the American standard of living. The standard of wages for both skilled and unskilled labor in this country is the result of many years of effort by organized labor. When an immigrant accepts work at less than the standard wage he not only takes the place of a man working at a higher rate but he assists in forcing downward the prevailing rate of wages in that industry, which result carries with it a corresponding reduction in the physical, moral, and intellectual standards of American life.

It is now an undisputed fact that in many industries the immigrants who come here are working for wages so low that the American worker insisting on American standards can not compete with them; in fact, they can not support a family on the wages paid them.

In support of my statement that the American worker can not compete with this induced immigration and support a family on the wages paid I refer you, Mr. President, to the investigation of the Bethlehem Steel Works made by a committee of the Federal Council of the Churches of Christ, representing over 16,000,000 people, and the investigation made by Commissioner Neill, of the Department of Labor, as to wages and conditions in the steel industry. The committee of the Federal Council of the Churches of Christ, commenting on the wage scale at Bethlehem, said:

"This is a wage scale that leaves no option to the common laborers but the boarding-house method of living, with many men to the room. When a man has a family with him they take in lodgers, or often the woman goes to work. It is reported that immigrant parents send their children back to the old country to be reared, while the mother goes to work. On such a wage basis American standards are impossible."

Again the committee says:

"None of these common laborers in any of these steel mills are paid a living wage for the average-size family."

The literacy test is an expedient which should be adopted now, and time and experience will demonstrate what further legislation will be necessary in the interest and for the safety of the American people and for the improvement of American citizenship and homes and for the perpetuation of the American Republic.

The American Federation of Labor, representing over 2,000,000 men, at its convention held in November, in Philadelphia, unanimously adopted a report urging the speedy enactment into law of the immigration bill. I will read so much of the report as refers to the literacy test:

"It may be well understood that the Governments of Europe will exert themselves to the utmost, to the end that those who are fit and who survive the destruction of the present conflict will not be permitted to leave their native countries, but will be seduced by whatever promises are necessary to remain and aid in the restoration of those countries to their lost position in commerce and industry, at the same time offering whatever inducements or assistance they may to the migration of the unfit to the United States, Canada, or any other country that may receive them. * * * For this, if for no other reason, the organized labor movement of the North American Continent should devote without cessation its most earnest endeavor to secure the speedy passage of the Burnett bill, containing the provision for the literacy test."

Mr. President, no other single proposed addition to our immigration laws has received the indorsement accorded to the literacy test. Seven times since 1894 bills to regulate immigration have passed one or the other House of Congress. In each case they have been passed by large votes. The Immigration Commission, which studied the question for nearly four years, said in the statement of its conclusions:

"The commission as a whole recommends restriction as demanded by economic, moral, and social considerations."

A majority of the commission favor the reading and writing test as the most favorable single method of restricting undesirable immigration. The majority in this case consisted of eight out of nine members of the commission.

The men who are chiefly interested in importing cheap labor into this country are the great tariff barons, the great mine barons, who want cheap labor. They know that they can not get cheap labor unless they get ignorant labor; because ignorant labor is the only labor that does not organize, that does not combine, and does not defend itself.

Mr. President, when you bar men because of illiteracy, you do not bar them because of themselves. You bar ignorance. You bar ignorance because ignorance is dangerous to free institutions in a self-governing country. [Applause.]

Speech of Hon. James E. Watson.

EXTENSION OF REMARKS

OF

HON. SAMUEL W. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 17, 1915.

Mr. SAMUEL W. SMITH. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the speech of Hon. James E. Watson, delivered at the Columbia Club, Indianapolis, January 15, 1915.

The speech is as follows:

SPEECH OF HON. JAMES E. WATSON, DELIVERED AT THE COLUMBIA CLUB, INDIANAPOLIS, JANUARY 15, 1915, IN ANSWER TO PRESIDENT WOODROW WILSON'S SPEECH DELIVERED AT TOMLINSON HALL, INDIANAPOLIS, JANUARY 8, 1915.

Woodrow Wilson, President of the United States, honored this city with his presence one week ago to-day. But he did not come among us as President of the United States. He came as a leader of a party. He came as a partisan Democrat. He did not appear in this city to espouse some great cause for which his administration stands, but to make a Democratic stump speech, to insist on party coherence and party loyalty. His speech was to Democrats and for the benefit of the Democratic Party, and it had no other object whatever.

It was the first time in the history of this country that a President has felt it necessary to leave the White House in order to make a partisan stump speech in an off year, when no campaign was being waged. Many Presidents have made tours of the country hitherto, but their addresses never contained any references to partisan politics. Some Presidents have felt impressed with the necessity of giving out interviews, or of writing letters, or of making speeches in campaign time in order to call the public's attention to some cherished policy of the administration; but this was the first time in the history of the Nation that a President of the United States deemed it advisable to abandon his official duties long enough to deliver a partisan speech generally defending the history and the record of his party and forcefully, and even bitterly, assailing the opposition party in the land.

WHY HE SPOKE.

He was probably impelled to adopt this course by three reasons: First, he wanted to "put out a feeler" for the nomination in 1916; second, realizing the opposition throughout the country to many of his policies, and sensing in advance the slump from the Democratic Party at the next election, he thought it wise to woo and, if possible, to win all former Progressives, in order to repair the loss in his own ranks; and third, he wanted to salve the wounds of the battered and bruised Democracy of Indiana.

He stated several times in the course of his speech that the independent voter is the salvation of the country and the hope of our institutions, and yet he frankly admitted that he came here to induce all of them to become partisan Democrats. These two statements are so glaringly inconsistent that a mere repetition is sufficient to show the weakness of the position he assumed.

As loyal Americans, we all have due reverence for the Presidency of the United States, and this usually leads us, in the beginning of the administration, at least, to most highly regard the occupant of that position, whoever he may be. When Woodrow Wilson took charge of affairs at Washington, he was no exception to this wholesome rule. The Republican Party had been rent in twain by opposing factions, and it seemed at that time as if the opposition to him never could be either united or aggressive. The press, without exception, was exceedingly friendly to him, and the attitude of the whole country toward him was one of generous sympathy.

But the people have had opportunity to more accurately take his measure in the well-nigh two years of his administration, and, while they are still unstinted in their praise of his scholastic ability and his literary attainments, yet I think that it is perfectly fair to say that the majority of the voters of the country are to-day exceedingly hostile to his policies and are totally at variance with the methods of his official conduct.

We rarely have a right to judge any man by any one public utterance, and yet, when made under all the circumstances that surrounded his Tomlinson Hall speech last Friday, after all the preparation and all the advertising and all the public expectation it aroused, and all the opportunities presented for a lofty statement of national questions and world-wide policies, I feel that we are fully justified in saying that he failed utterly to measure up to the requirements of the occasion, that he completely disappointed the expectation of his friends, and that we are warranted in the conclusion that his two years of service in the White House has weakened and not strengthened, narrowed and not broadened him.

Either that, or else the present condition of the country is so unenviable and the record of the Democratic Party is so reprehensible that even one of the brilliant attainments of the President could make no stronger defense than the weak one he put up.

A CONTRAST.

And this leads me to note a few points of difference both in President Wilson and the country since he made his first speech in Indianapolis, three years ago, when he was seeking the nomination. At a meeting presided over by Gov. Marshall, the then Gov. Wilson spoke with unusual vigor and with compelling force on three propositions.

First, he insisted that all legislation should be conducted under the public eye; that committees should transact all their business with wide-open doors; that the public should be freely admitted at all times to hear and see whatever might transpire in the course of legislation. And yet our history furnishes no parallel to the secrecy that shrouded the consideration of the Underwood tariff law, upon which no hearings were permitted, which was formulated altogether behind closed doors and completed in a series of secret caucuses, the public being almost wholly in the dark as to its main provisions—and all this without one note of protest ever issuing from the White House.

Secondly, he inveighed most vigorously against the party caucus in this same speech and took the position that all the representatives of the people, in both House and Senate, should have the full privilege of debate and amendment and that the individual conscience should never be bound by caucus domination.

And yet the solemn truth is that not one single law of any importance has been passed by the Senate since he became President, for all of them have been shaped and molded by caucus action, every provision determined, and every proposed amendment accepted or rejected, without the minority having been given the slightest consideration whatever. And so odious did the continuous methods of this caucus become—dominated, as it was, by southern Senators—that Senator HITCHCOCK, a Democrat, from Nebraska, denounced it in unmeasured terms and said of it that, "like all other party caucuses, it has degenerated into a political machine so low that nothing but the grace of God can lift it to the dead level of total depravity"—all this without a note of warning from the White House.

His third preelection statement was that each of the three coordinate branches of government should be absolutely independent of the other two; that the Executive should never encroach upon or invade the sphere of the others; and that neither should ever tolerate any interference whatever by either of the other two.

And yet the truth is that no one of his predecessors, not even Jackson, whom he said the other day he was following, or Roosevelt, at whom he said three years ago he was striking, ever more powerfully or more directly interfered to formulate legislation and to force its passage than has he in both the tariff law and the Federal reserve act, for it is known of all men that, while he brooks no attempts to interfere with his authority, he will yet tolerate nothing but the most submissive obedience to his dictates; that he has never scrupled to use the schoolmaster's tactics with Congress; that he has expressly commanded Senators and Representatives what to do and how to do it; and that he has always exacted the most scrupulous obedience to his commands under the pains and penalties of the loss of patronage upon failure to comply, and since his advent into the White House Executive aggression has gone to greater lengths than at any other time in our history.

A MIGHTY CONTRAST.

When he was here three years ago this Nation was at the flood tide of prosperity. All of capital was profitably invested; all of labor was remuneratively employed; every willing hand found labor at good wages; the pay envelope and the dinner pail were both full; the railroads were operating to the limit of their capacity; money was abundant and readily obtainable at low rates; the farmer found an eager market for the products of the soil; the manufacturer had months of profitable orders ahead; and we were in the main a prosperous, a happy, and a contented people.

Behold the mighty contrast: Now capital is in hiding; now 3,000,000 laborers are idle; now the railroads are in desperate condition for lack of business and because of oppressive and adverse legislation, for 225,000 cars are idle and are earning nothing for their owners. Now old industries are languishing and no new ones are in contemplation. Since the passage of the Underwood law the balance of trade in our favor gradually declined until it was seriously against us before the outbreak of the European war. One hundred and fifty millions of gold has been exported. Imports have largely increased and exports largely decreased. The only prosperity we now have grows out of the European war, but it is uncertain and confined to a few industries. Nobody will largely invest now, because the future is not sure. And if capital does not invest, labor is not employed; and if labor is not employed, the purchasing power of the laborer is curtailed, and this forces thousands of them to live from hand to mouth and other thousands into the line of mendicants that are fed at the soup houses throughout the land. A manufacturer will not continue to make his wares to place in the warehouse to sell on the market in six months from now when at the end of that time those wares may come into contact in our own market with similar wares made in Europe at one-half the wages he pays, and so under present conditions he curtails purchases and closes down a part of his machinery and dismisses a portion of his forces, and that instance multiplied an indefinite number of times brings industrial stagnation and commercial despair.

What has wrought this mighty change in the brief period between his two visits? At both times we have had the same farms and the same farmers, the same factories and the same laboring men, the same capital and the same wealth; we have had the same natural resources, the same inventive genius, and the same indomitable spirit of American enterprise, and yet at the one time we stood upon the shining summit of success with nothing to regret and naught to dread, while we are now plunged into the bogs of disaster and the quagmires of despair, with much to bemoan and even worse to fear. What was changed between these two periods? Nothing but the tariff. That was all. And yet, as in 1892, that one change has wrought a greater havoc in the loss of wages, in the shrinkage of values, in the decline of prices, and in the wasting of property than the entire Civil War in America with all its burden of cost.

And Woodrow Wilson is at the head of the organization whose policies have thus ruthlessly destroyed our prosperity, closed our factories, turned our laborers adrift, fettered our commerce, dissipated our revenues, put our capital on crutches, driven our railroads to the brink of bankruptcy, and filled the whole land with mutterings of discontent.

THE EUROPEAN WAR.

"But," says the President, "the European war and not the Underwood tariff is the cause of this destruction and is the fruitful mother of all our industrial woes."

What is the all-sufficient answer to this unfounded contention? Simply the balance of trade. Listen to its recital and it will convince the most obdurate free trader of the fallacy of this argument.

In November, 1912, the total trade balance in our favor was $162,000,000. In that month Gov. Wilson was elected President on a revenue tariff platform, and the very threat of tariff revision and the consequent unsettling of values cast its baleful shadow over every institution in the land and resulted in a widespread slackening in commerce and industry. This continued for a year, and to such an extent that in November, 1913, that trade balance had declined to $97,357,000, or a loss of $64,000,000 as compared with the month of his election, a year before. In October of that year his tariff bill was passed and from that time until the outbreak of the European war imports increased, exports decreased. We bought more abroad, because it was cheaper; we sold less abroad, because foreign imports closed our factories and diminished our output, and we therefore had less to sell and necessarily less to export.

In November, 1913, a portion of the Underwood bill became effective and the remainder in January, 1914. And the decline was correspondingly steady. In January it ran down to $49,224,000 in our favor; in February to $25,876,000—going down; in March to $4,944,000 in our favor—still going down; in April the bottom dropped out and the whole thing went completely Democratic, for in that month the balance against us was $11.210,000—not for us, but in favor of our commercial competitors in the world.

In June the balance was $457,000 against us and in July $5,539,000 in favor of our industrial rivals, and up to that hour nobody had dreamed of a European war.

What was the cause of the tremendous slump in our trade from $162,000,000 for us to $11,200,000 against us? The war? No; there was no war and all nations were at peace. What was it? The tariff bill of the Democratic Party. Free trade has wrought this destruction every time it has been attempted in the history of our land, and no rhetorical sophistry, no metaphysical disquisition on the psychology of "a mental status" can overcome the irresistible logic of events. The President says that this condition is wholly a state of mind. Rather, so far as the Nation is concerned, it is a "state of the Treasury"; for our manufacturers it is a "state of the purse"; and for our unemployed it is a "state of the stomach."

THE TRADE BALANCE.

What further facts does a detailed examination disclose?

From November 1, 1913, to November 1, 1914, as compared with the preceding year ending November 1, 1913, our exports fell off $392,423,000, while our imports increased $113,167,000, or a total change of $505,590,000.

Now, the balance of trade in our favor from November 1, 1912, to November 1, 1913, amounted to $766,318,000; from November 1, 1913, to November 1, 1914, $206,728,000, or a loss of $505,590,000 in a single year, nine months of which passed before the war began.

But let us take peace periods only for comparison. From November 1, 1913, to July 31, 1914, as compared with the period from November 1, 1912, to July 31, 1913, our exports decreased $176,116,000 while our imports increased $147,784,000, or a total change of $323,900,000, which must be attributed to the tariff, for nothing else in this country was changed in the meantime and there was no war abroad.

From November 1, 1912, to July 31, 1913, the balance of trade in our favor was $529,994,000; from November 1, 1913, to July 31, 1914, all before the war in Europe, it was $206,094,000, or a loss of $323,900,000, or an average loss per month of $35,989,000, and all this enormous decrease before anybody had ever thought of actual hostilities in Europe.

In the light of these facts how adroit was the message read by President Wilson to Congress in September of last year, in which he insisted that, because there had been a loss in our balance of trade for August—mentioning no other month—a war tax must be levied to meet the urgent demands of the Treasury. But why did not he say anything about the appalling loss from November, 1912, when he was elected, up to August, 1914? Why did not he cite the balance against us in the other months of 1914? Why? Simply because the European war began in August and he could lay the whole blame at the door of that contest, and therefore he based his entire appeal for a war tax on the condition in August. The simple truth is that had it not been for the war, as these figures conclusively prove, a bond issue or some other extraordinary measure for raising revenue would have been an inescapable necessity; and the further fact is that, from a purely partisan standpoint, the war in Europe was a godsend to that demoralized organization.

FURTHER PROOF OF DEMOCRATIC INCOMPETENCY.

But what other proof is there of this fact, if, indeed, further proof of so patent a truth be needed?

Simply this, that since the passage of the Underwood bill our imports have largely increased from all those nations not involved in this or any other war, demonstrating beyond all cavil that it is the tariff that is devastating industry in our land.

In the 11 months immediately preceding the war, as compared with the like period of the year before, we sold to Canada $41,000,000 less and bought of her $70,000,000 more, or a total loss to us of $111,000,000.

From Argentina our imports increased for October, 1914, as compared with October, 1913, $4,500,000; from Australia, $700,000; from Japan, $1,000,000; from Cuba, $2,800,000; from China, $50,000; from Italy, $1,300,000; from Mexico, war torn as she was, $600,000.

In October a year ago our trade with Argentina gave a balance of $4,000,000 in our favor. This year the figures were almost exactly reversed, with a balance of about $4,000,000 in favor of Argentina.

With Australia in October, 1913, we made a balance in our favor of more than $4,000,000; in 1914, $3,300,000.

In 1913 we lost to Brazil $5,700,000; in 1914, $7,500,000.

In 1913 we gained from Canada $18,000,000; in 1914, only $8,000,000.

In 1913 we lost to China $900,000; in 1914, $2,000,000.

In 1913 we gained from Cuba nearly $2,000,000; in 1914 we lost to Cuba nearly $1,000,000.

In 1913 we lost to Japan $800,000; in 1914, $5,000,000.

In 1913 we lost to Mexico $2,600,000; in 1914, nearly $4,000,000.

In 1913 we gained from the Netherlands $5,200,000; in 1914, $1,000,000.

In 1913 our October commerce with the United Kingdom gave us a trade balance of $50,750,000; in 1914, despite all the purchases by England of our war supplies from us, $47,400,000. And thus it is clearly demonstrable that the tariff and not the war is the cause of our industrial woes and the source of our commercial distress. And if the balance of trade with all the nations not engaged in war is so largely against us now, and has been since the present tariff law was passed, is it not a mathematical certainty that the same state of affairs will result with the nations now at war after that struggle shall have been concluded? So manifest is this to every business man that he declines to be affected by all the artificial stimulants they are seeking to administer to the general public in the form of trumped-up newspaper interviews, padded statements in the columns of the public press as to the extent of our present prosperity, the melodious whistling-in-the-graveyard tunes we hear wherever we go, or the pleasing and seductive imaginings of Democratic stumpers, for the man with money to invest knows that the business we now have is largely the result of the great demand created by the war, and that when that war is over and the Democratic tariff has a full swing and sweep at the industries of the country we shall inevitably be brought face to face with the most appalling industrial conditions we have ever witnessed in our land.

IDEAS OLD AND NEW.

The President's main contention, as outlined in this speech, leads us to the conclusion that if we would keep pace with advancing civilization, if we would meet the exigencies of the occasion as they arise, we must have a party of changing ideas and shifting theories of government. He thus expresses it:

> The trouble with the Republican Party is that it has not had a new idea for 30 years. I am not speaking as a politician. I am speaking as a historian. I have looked for new ideas in the record, and I have not found any proceeding from the Republican ranks. They have had leaders from time to time who suggested new ideas, but they never did anything to carry them out; and I suppose there was no harm in their talking provided they could not do anything.

And then he adds, and I am bound to believe him sincere in the statement, though, in the light of history, it seems as if the remark can not be otherwise than facetious:

> And therefore when it was necessary to say that we had talked about things long enough which it was necessary to do, and the time had come to do them, it was indispensable that a Democrat should be elected President.

I do not know just what he means by an "idea." If he mean by the term a real, fundamental principle, I agree with him, for in that sense the Republican Party has not had a new idea in 30 years. But if he mean the adaptation of certain fixed principles to the changing needs of a people, then I disagree with him utterly, for history clearly shows that no political party in the life of any country ever more fully applied its

theories of government to meet new conditions as they arose, or ever more completely adapted its principles to meet the changing demands of the hour, than the Republican Party in the United States.

The Christian Church has not had a new idea since the death of Christ, for He finally and authoritatively announced all its fundamental principles, and yet no one seriously questions its usefulness or its necessity because of the fact. True, there have been an almost limitless number of interpretations of those underlying ideas in centuries past in the efforts of its leaders and teachers to adapt its principles to the infinitely varied needs of humanity, but nevertheless its basic concepts have never changed through all the mutations of time.

The Ten Commandments have never been altered or modified since Moses wrote them. Would the President repudiate them because of that fact? True, there have been an endless variety of interpretations of these fundamental rules of human conduct since they were penned, but the fact nevertheless remains that they still constitute the groundwork of most of the systems of jurisprudence in the world to-day.

The Republican Party has really never had but five fundamental ideas of government since its birth—one moral, three commercial or industrial, and all of them based upon the fifth, which was the perpetuation of the Union—and it still clings to them as all that are essential for the proper solution of every problem that to-day confronts and perplexes us as a people.

IDEAS AS OLD AS THE NATION.

These ideas were announced by Washington, and, as far as possible, executed by Hamilton, and were defended by Webster and were repromulgated by Lincoln, and together have constituted the enduring highway upon which we have marched for 50 of the grandest years in all the history of men.

And it is an undisputed fact of history that the Democratic Party has opposed every one of these principles, most of the time bitterly, and has never failed to obstruct in every possible way the administration of these policies in the affairs of our Government.

What, then, are these ideas the gradual unfolding of which has marked our marvelous progress as a people and brought us to unchallenged leadership among the nations of the earth to-day? These policies were outlined by Abraham Lincoln 70 years ago, when he was first a candidate for Congress. "I believe," he said, "in a national bank. I believe in an internal improvement system and a high protective tariff." That statement was then prophecy; under his guidance it became fulfillment, and if we but look around us we can see on every hand the fruitful results of such fulfillment through the agency of the Republican Party.

Until recently the Democracy always opposed a national bank, because, as they protested, it was no function of government to issue money, and, further, because it was an invasion of the rights of the States. But Lincoln believed that our currency should be as national as our flag, and, when given power, with one sweep of his arm he drove forever into hiding all the wildcat and irredeemable money that flooded the land, the issue of irresponsible men, firms, and banks, and in its place substituted a currency that from then to now has been unquestioned in any quarter of the globe.

REPUBLICAN RECORD ON THE MONEY QUESTION.

Gentlemen, has the Republican Party ever swerved in its fealty to the cause of sound currency, to the idea of honest money, to the doctrine of the faithful discharge of national obligations? No; we have rather lifted higher the standard that his successors grasped when Lincoln fell. It was this thought that inspired Grant to exclaim, "Let it be understood that no repudiator of one farthing of our Republic's debt shall be trusted in any public place"; that strangled repudiation when loudly advocated by the Democratic Party; that quieted the fears alike of creditor and investor; and that has made the bonds of our Government the best security known to the money markets of the world.

It was this thought that inspired this party of ours to champion the cause of resumption, to place beneath the dollar of paper a dollar of gold on which it should be based and in which it should be redeemed. For Abraham Lincoln had promised that it should be done; promised at a time when it seemed as though the country were slowly bleeding to death in the midst of awful war; and this party of ours remembered that sacred promise and redeemed it; and from then to now ever dollar of our money has been worth a hundred cents in all the busy marts of the earth.

It was this thought that inspired William McKinley, at a time that tested the coherent power of our party, the integrity of the Nation, and the moral fiber of its citizenship, to champion the cause of the standard gold and through it the maintenance of the honor of the land. The peddlers of populistic wares descended upon the Nation in swarms with their patent remedies and their quack reforms; the country was deluged with epithet and slander; the passions, the prejudices, and the cupidity of the people were aroused as never before; and yet in the midst of a perfect saturnalia of denunciation and misinformation, McKinley, backed by the Republican Party, stood fixed and firm. He remembered Abraham Lincoln and his tenets, and thus inspired he stood unmoved amidst the turmoil and turbulence of his day, preserved the money of the Nation free from taint and flaw, kept Lincoln's plighted word to the people, and vindicated the moral fiber of the Anglo-Saxon race.

And thus on banking and currency and finance the Republican Party has ever been true to the teaching of its greatest leader and its greatest champion. And that party stands ready to-day, as it has ever stood ready in the past, to apply Lincoln's financial policy to our affairs whenever the occasion shall arise, whenever our financial honor is assailed or our commercial integrity is attacked, for we know that a sound currency is one of the indispensable prerequisites to prosperity and to progress among any people and in any land.

FEDERAL RESERVE ACT.

The President in his recent speech boasted that his party had used sound financial wisdom in the passage of the Federal reserve act, and I think they are entitled to credit for having made an honest effort to improve the currency system of the country.

For a party that opposed the issue of bonds during the Civil War and in 1868 insisted on their repudiation; for a party that fought the issue of greenbacks in 1862, 1863, and 1864 and opposed their redemption in 1873 and 1874, and then insisted on an unlimited issue of them in 1876 and 1878; for a party that violently opposed the adoption of the gold standard in 1896 and advocated the free and unlimited coinage of silver and gold at the rate of 16 to 1; for a party that denounced in unmeasured terms, both in Congress and out, the passage of the Vreeland emergency law in 1908 and exhausted the possibilities of the imagination in describing the unspeakable woes that would inevitably befall us in case we passed that act, and then within the last 18 months faced squarely about and took advantage of the provisions of this same law to save the country from the evil effects of their destructive revenue legislation; for a party that has always been regarded in the business world as unsafe on all monetary questions and unsound on all currency problems, they did very well, indeed, to pass the law to which the President so gleefully referred. But its entire failure or success depends upon the integrity and the patriotism of its administration, for, while it is true that most of its assuredly sound provisions were taken bodily from the Aldrich plan, yet it can not be denied that others were added that are not so surely wise; and it should be remembered, too, that this plan affords opportunities for the inflation of the currency that would gratify even the cheap-money whims of William Jennings Bryan himself; that it throws down the bars to the most inviting field for political exploitation ever opened up in this country; and that partisan politics entered more largely into the location of the various reserve banks and the appointment of the men to control the system than in any other matter of similar importance in the entire life of our Nation; and that, if we may judge the future by the past, no opportunity to take the fullest advantage of this stupendous system will be overlooked by those in charge of our governmental affairs at this time.

In discussing this question the President in his speech made this remark:

> I want to ask the business men here present if this is not the first January in their recollection that didn't bring a money stringency for the time being, because of the necessity of paying out great sums of money by way of dividends and other settlements which come due at the first of the year?

Now, in turn, I want to ask the President this question, Did you ever know of a January where less money was required to pay dividends than this one? Or where more dividends were passed than in this one? And is your statement after all an argument for the sufficiency of your new system or only what the lawyers call a self-serving declaration? For that system has yet to be tried.

Surely, though, the record of the Republican Party on this question can not be used by its enemies as an excuse for its destruction, as a pretext for its overthrow. And it is worthy of remark, too, that the lesson of honor impressed upon our country in its financial affairs was early communicated to other branches of government and now permeates our entire diplomatic system and characterizes our relations with the other nations of the earth.

How striking the contrast with the conduct of the Democratic Party, for, if that party had been permitted to enforce its policies at any time within the last 50 years, the great lessons of national honor we have given the world would have remained untaught and that lofty moral tone which to-day characterizes international thought, feeling, and action would have been an impossible dream. For with nations as with men, aye, more than with men, when honor is lost all is lost.

INTERNAL IMPROVEMENTS.

The second great Republican policy that has wrought so marvelously for this Republic is that of internal improvements at public expense.

The Democratic Party, until in recent years, always opposed the use of either public land or public money for the purposes of improvement and development, alleging, first, that the National Government had neither the right nor the power to enter the boundaries of any sovereign State for any such purposes; second, that the National Government exceeded its authority when it used the money of all the people to develop any section of the country; and, third, that such use of the public funds was radically wrong in principle for it justified the use of revenues that belonged to all the people to exploit special interests and to benefit a favored few.

But Abraham Lincoln believed, and the Republican Party has always maintained, that this was one common country for all the people who inhabit it; that its advantages and resources should be used for the benefit of all; and that whatever inured to the well-being of any portion of the Republic in the end inured to the well-being of the whole.

It was the inspiration of this belief that led to the enactment of the homestead law, a fruitful and far-reaching product of Republican statesmanship, that has dotted this western land all over with peaceful and happy homes that have become the very bulwark of our civilization; that has felled forests and subdued prairies and established the greatest granaries of the world and opened up exhaustless reservoirs of national wealth. And look where we may we see as a result of the uninterrupted enforcement of this policy for 50 years—railroad lines running across the land, largely built by grants from the public domain, lines that tie ocean to ocean, that knit our country more closely together and bring us into nearer relationship, socially, politically, commercially; harbors broadened and their facilities increased; rivers deepened and widened; the fertile acres along their borders protected by dykes and levees; denuded hills reforested; the mighty woods of primeval times rescued from vandal hands; the Department of Agriculture established; the utmost corners of the earth ransacked to find new plant life for exploitation on our soil; the farthermost portions of the world searched for "bird and bug" to feed upon the insects that destroy cotton and other products of the land; every disease that affects the plant life and every pest that assails the animal life of the farm destroyed outright or its further ravages prevented; public buildings erected for the public's use in every portion of the Union; millions of acres of arid land reclaimed for the actual tiller of the soil; vast irrigation schemes that transform untold acres of desert sands into fertile fields and productive farms; rural free delivery, by which we are adding to the diffusion of knowledge and making happier the lives of the people who dig our wealth out of the soil and lay the foundations of our prosperity; the parcel post; the postal savings bank; and that crowning engineering feat of the world's history, the construction of the Panama Canal; everywhere the fostering care of the Government, everywhere the protecting hand of the Republic, everywhere the open purse of the Nation. And practically all of this vast development has occurred within the 30 years in which our President charges that the Republican Party has never had a new idea. Well, this is not a new idea, but our party has always had the courage to apply this old idea to our internal affairs whenever occasion required; and it is worthy of remark, too, that we have always had wisdom enough to enact revenue laws that would enable us to carry on these mighty projects without borrowing money or levying a war tax to do so.

DEMOCRATIC EXTRAVAGANCE.

The wisdom displayed by these parties in river and harbor legislation can be shown by a single contrast in appropriations made under similar conditions.

In 1898, while in the conflict with Spain, the McKinley administration issued bonds to carry on the war.

In 1913, while at peace with all the world, the Wilson administration levied a "war tax" to carry on the Government.

During the War with Spain the Republican Party did not appropriate a dollar for river or harbor improvement, but used all its revenues, both ordinary and extraordinary, to promote the war and to run the Government; and it was not until the first session after the close of that war that the modest sum of $16,000,000 was appropriated for that purpose. Four years afterwards $30,000,000 more was appropriated for this object, and thus $46,000,000 was authorized for this development in six years. And in all that time the revenues were ample and the surplus large.

The Democratic Party appropriated $43,000,000 the first session of Congress that closed November 1, and $20,000,000 the second session, or a total of $63,000,000 in one Congress, with the balance of trade against us, with the revenue constantly decreasing, with the surplus exhausted, and levied a war tax in order to make possible this expenditure.

Never in its history has the Republican Party authorized two river and harbor appropriations in one Congress, and yet it always had ample revenue to meet all such expenditures had it seen fit to make them.

But the Democratic Party, being a "new convert" to this idea and, like all such converts, being exceedingly zealous, broke the record as well as the Treasury in order to make wholly unwarranted appropriations of this character.

Gentlemen, who can be heard to say, in the light of this masterful record, that we have proven false to Lincoln's theory of internal improvement under the public's control and by the public's treasure? And inasmuch as this has been the unvarying policy of the Republican Party from its birth to this hour, and inasmuch as it has expended more money for these purposes under its complete sway during the last 16 years of its administration than was expended for like purposes in all the previous history of the Republic, who is there so bold as to proclaim that we have proven recreant to his conception of internal development or that any other party can better carry forward this great work? And it should not be forgotten that the right to grant carries with it the right to withhold, and that the doctrine of conservation grows out of, and is corollary to, the right of the Government to use all the people's resources for all the people's benefit. The Government may either bestow or withhold; if it bestow it may prescribe the condition of the bestowal, and in utilizing our natural resources it is the duty of the Government to safeguard the rights of the people in this wealth and to obtain for all the people as great returns as is consistent with its fullest development, and this the Republicans have ever done.

THE TARIFF.

And what need be said in this presence as to the third principle announcing his platform? "I believe," he said, "in a high protective tariff," and every Republican platform ever adopted has reiterated that statement; and all those Republican statesmen, whose combined genius has illuminated the shining highway along which we have marched for 50 years, have echoed and reechoed that sentiment and voiced and revoiced that sentence until our past has been vocal with eloquent defense of this mighty thought.

Lincoln's first published speech on this topic was brief but unanswerable. "I am not versed in the technicalities of the tariff," said he, "but I do know that if I buy a ton of iron from England we have the iron but England has the money; whereas if I buy the iron in this country we have both the money and the iron," and innumerable are the instances in which that simple announcement of his belief in this principle has been repeated since then in order to convince people of Lincoln's faith in this great plan.

And from that day to this the Republican Party has stood steadfastly by this principle and clung tenaciously to this idea, for we know that by reason of its operation we have always stimulated our inventive genius, developed our natural resources, diversified our industries, more profitably invested our capital, more remuneratively employed our labor, maintained the highest wage levels of the world, and added immeasurably to the growth, the thrift, and the prosperity of the American people.

I confidently assert that this country would not be, could not be, what it is to-day had not the Republican Party, under the leadership of Abraham Lincoln, early adopted, and had it not, under the inspiration of his wisdom, always continued the policy of protection to American capital wheresoever invested and to American labor wheresoever employed.

President Wilson, in his recent speech, used this language, which shows that he utterly fails to appreciate the true benefits of protection:

Then there is something else. The Democrats have heard the Republicans talk about the scientific way in which to handle a tariff, though the Republicans have never given exhibition of a knowledge of how to handle it scientifically. If it is scientific to put additional profits into the hands of those who are already getting the greater part of the profits, then they have been exceedingly scientific. It has been a science of selfishness, it has been a science of privilege, but that kind of science I do not care to know anything about, except enough to stop it.

Well, he has stopped it all right. The punctuation mark he has inserted in our industrial production is not a comma or even a semicolon, but a period, representing a full stop. And he evidently fails utterly to grasp the real beneficence of this great policy.

RESULTS OF PROTECTION.

We challenge the judgment of the American people on the results of this policy under the administration of successive Republican Presidents from Abraham Lincoln to William Howard Taft, results so vast, so varied, that the human imagination fails utterly to grasp them.

When the Republican Party turned the Government over to the Democratic Party two years ago we boasted of a foreign trade beyond the dreams of our fathers; we enjoyed a domestic commerce whose value, volume, and variety made these States, if need be, well nigh self-supporting. We possessed one-third of all the railroads of the world, one-half of its telegraphs, and two-thirds of its telephones, while we did one-third of its mining, one-third of its manufacturing, one-fifth of its agriculture, and owned one-sixth of its wealth, and there was a more general distribution of the results of labor and the fruits of toil, and a more universal dissemination of happiness among the people than in any other nation in all the recorded history of the world.

Of course, we all realize now and always have that such physical progress as this might be dangerous to the present and menacing to the future were it not that the virtue and intelligence of the people are equal to the wise regulation of its uses and the stern prevention of its abuses, as all great wealth may be abused, and that side by side with our material progress we have developed those other and rarer qualities of mind and heart, so essential to a symmetrical nationality. It is true I know that the sky is rendered lurid by the perfervid declamation of those who are constantly dinning into our ears that we are ever placing the dollar above the man. But let our faith in American institutions be renewed by reflecting upon the fact that while in Lincoln's time but 5,000,000 of people out of a population of 30,000,000 acknowledged the authority of their various churches, to-day 33,000,000 of our 95,000,000 are followers of Him who first proclaimed equal rights for all, while each day sees the erection of five new churches in the land and each week finds 10,000 new adherents to the faith of the Divine Man of Nazareth.

Nor in education have we been remiss in our duties, and now 18,000,000 of children are in attendance upon our schools and colleges, costing the country $550,000,000 a year, or more than is spent for the same purpose in all Europe, thus giving fresh assurance of the education of the people, which is at once the hope of the patriot and the despair of the scoffer.

Is not this splendid record the very coronation of four decades of the wise administration of beneficent laws?

Is it conceivable that as great results could have been obtained had we for the last 50 years been upon a revenue-tariff basis? Is it a matter of wonder that with these results before our eyes we insist upon the same policy? Are not these surpassing triumphs sufficient justification for adhering to this principle of Lincoln?

THE REPUBLICAN PARTY STILL FOR PROTECTION.

I am well aware of the fact that, largely because of our belief in the doctrine of protection and our unwillingness to abate it one jot or tittle, we are dubbed as standpatters; but, singular though it may seem, yet it can not be denied that those who most loudly utter this charge proclaim themselves devout believers in this doctrine as announced by Lincoln and enforced by every succeeding Republican President.

Gentlemen, we realize that schedules change with changing conditions; that the rates fixed in the Morrill law of 1861 would be as inappropriate now as they would have been in Washington's day; that, while the principle of protection abides and must always remain a tenet of Republican faith, yet the application of the principle will vary just as rapidly as conditions change.

Protection, as defined by Alexander Hamilton, as defined by Daniel Webster, as defined by Abraham Lincoln, as defined by William McKinley and James G. Blaine, as defined by Republican national platforms, means the difference in the cost of production at home and abroad. Everyone must know that this difference will vary from time to time and that schedules should be adjusted to meet new conditions as rapidly as new conditions arise.

But the President says that protection means to give more profits to those who are already receiving the larger share of the profits. Now, the truth is that if everybody is prosperous and everybody is making money some bodies will make more money than other bodies, because they have the ability; they know how. And if we so legislate, if we so manage, if we so conduct our affairs that those who are peculiarly endowed with financial ability can not make money, then all the remainder of the people are out of labor and many of them in the soup line.

Therefore, the most we can do is to equalize conditions as nearly as possible, give everybody a fair chance, keep the competent man from unfairly overreaching his less competent neighbor or rival, see that no door of opportunity is closed in the face of any American citizen, that no barriers are built across the highway to success, and then permit every man to work out his salvation with fear and trembling to the best of his ability; and government can do no more, and government should attempt to do no more, for men can not undo by law what God has done by creation without perverting the natural order of things and doing far more harm than good.

But it is not true that the manufacturer receives the larger share of profits. From 80 to 85 per cent of the cost of all finished products is represented by the wages paid labor, and while it is true that the manufacturer receives greater profits than any one or any considerable number of his employees, certainly it will not be denied that the man who furnishes the capital and takes all the risk and plans all the organization and furnishes all the brain power behind his plant and is compelled to supervise buying and selling and is all the time endeavoring to improve his product so as to meet the more exacting demands of the market; in short, the man who assumes the initiative in his enterprise and is responsible for the success or failure of his venture, surely he is entitled to a fair share of the profits, and to deny him this means that a premium shall no longer be placed on capital and courage and capacity in this land of ours, and this would, indeed, spell dissolution and despair.

THE EQUALITY OF ALL MEN.

The Republican Party has another principle, the moral one, to which I alluded at the outset, one that may appeal to the idealistic faculty of President Wilson; one that, more largely than any other, accounts for its origin, and the one to which it has tenaciously clung throughout its long history. It is expressed in the simple statement, "All men are created equal," and it rang ever in the ears of Abraham Lincoln, absorbed ever his powerful intellect, and engaged ever his regnant soul.

I think—

He said, in speaking of the Declaration of Independence—

that the authors of that noble instrument intended to include all men. But they did not intend to declare all men equal in all respects. They did not mean to say that all were equal in color, size, intellect, moral development, or social capacity. They defined, with tolerable distinctness, with what respect they did consider all men created equal—equal, with certain inalienable rights, among which are life, liberty, and the pursuit of happiness. This they said and this they meant. They did not mean to assert the obvious untruth that all men were then actually enjoying that equality, nor that they were about to confer it immediately upon them.

In fact, they had no power to confer such a boon. They meant simply to declare the right, so that the enforcement of it should follow as fast as circumstances would permit. They meant to set up a standard maxim for free society which should be familiar to all and revered by all; constantly looked to, constantly labored for, and even though never perfectly attained, constantly approximated; thereby constantly spreading and deepening its influences and augmenting the value and happiness of life to all people everywhere.

Fellow citizens, here is the method and here is the object of our Government, stated with the unerring accuracy of a seer, with the final authority of a prophet, and from it we may never depart, and from it we will never depart so long as love sways the heart and reason rules the mind.

If I were asked to state Lincoln's theory of government in a single sentence, it would be this, "conservative progress," the final goal in view ever being the equality of men, and this to be attained, not at a single bound, but "just as fast as circumstances will permit."

How this wholesome yet profound truth should be filtered into the hearts and consciences of the American people to-day, being taught, as they are, new and fanciful processes of development and strange and unaccustomed methods of progress.

And permit me to say in passing that no document ever fashioned by the brain or formed by the hand of man permits, in strict keeping with its provisions, a more rapid progress or more carefully safeguards the interests of every man while he is on the march toward the final goal, and will more effectually secure him in every right he ever will acquire, than the Constitution of the United States.

REPUBLICAN PARTY FAITHFUL TO THE EQUALITY OF MEN.

Genlemen, has the Republican Party been untrue to the greatest of all the Lincolnian principles of government?

No; rather does the record of this party prove that it has neglected no opportunity to enforce Lincoln's theory and realize Lincoln's ideal in our national life. But we have done this not

contrary to, but in conformity with, his teachings. Lincoln realized that freedom is not a bequest, but a conquest. He knew that the ideal will not be attained by some spontaneous, all-powerful dispensation of Providence, but that man is to work for it, to fight for it, to struggle for it, to suffer for it, and thus when he acquires it he will be the better fitted to hold fast to it and forever retain it. And thus this ideal, which he called the "standard maxim," is ever before us for our constant contemplation.

Have we turned our backs upon this standard? Are we traitors to this lofty conception? No; notwithstanding the views of the President and the reckless purveyors of misinformation, the deathless Lincoln, with flaming torch in hand, still leads the hosts of the Republican Party on the way to progress.

And yet there are those among us who are discontented with our pace and who are dissatisfied unless we set fire to the chariot wheels of progress and scatter terror and dismay on every hand. They seek to destroy old methods of progress because they are old, to overturn old safeguards of liberty because they are old, and to force upon us new plans and policies simply because they are new.

I prefer the old Declaration of Independence with its ever new announcement of fundamental principles.

I prefer the old methods of development by which we have accomplished so much. I prefer Lincoln's conservative progress to any of the makeshifts of place hunters and self-seekers.

LINCOLN'S IDEAL MADE REAL.

The Republican Party has always favored such policies as to embody this ideal in our individual as well as in our national life. These policies have enabled us to build up an American civilization distinct from that of any other on earth, unique in all history. As the result of this conception of the royal worth of man we have worked out an American theory of government, an American scheme of civilization, an American ideal of the dignity of labor, and all the time we have been more nearly approximating Lincoln's standard maxim, the maxim of absolute equality. Lincoln believed and we maintain that economic questions are intimately interwoven with ethical questions and that neither the moral nor the commercial ideal can safely be dismissed in consideration of any of the political or moral problems that to-day demand our solution.

The application of this thought has resulted in the organization of the Departments of Commerce and Labor, through which have been developed those facts that have constituted the basis for all the laws since passed for the better control of large corporations and for the reform of unwholesome industrial conditions; the establishment of the Interstate Commerce Commission, and the subsequent enactment of the various amendments that have strengthened its power and augmented its authority; in the Sherman antitrust law, the most sweeping statute ever passed in this or any other land for the control of unlawful combinations of capital, and which is proving sufficient for the solutions of the mighty problems that have been so incessantly forced upon us in the last two decades; in all legislation to prevent rebates and unfair methods of dealing and all underground systems of finance; in every law that safeguards the interests of labor, that protects women and children, that restrains the exceeding competent man from overrunning the rights of his fellow man equally worthy but less capable of molding events and fashioning conditions to his own ends.

From this idea, practically realized, came the railway-rate law, the statute limiting the hours of continuous employment on all railroads doing an interstate business; every safety-appliance act ever passed by Congress, from Harrison to Taft, for the benefit of the laborer and the safety of the passenger as well; a workman's compensation act; an employer's liability law; an eight-hour rule for all national works; navigation laws which insure the maintenance of the American standard of wages and living on all American ships; a model child-labor law for the District of Columbia; and in the enactment of all these statutes designed to curb the strong and protect the weak and promote equality among our fellow men.

This Lincolnian doctrine carried into execution produced the pure-food law, the meat-inspection law, and a national health act, and a Bureau of Mines and Mining, to better protect the lives of those who labor away from sunlight and starlight and sky.

This theory has been applied abroad as well as at home, and "a whole chapter might be written about the progressive character of the administration that has been given to the territory acquired by the United States as the result of the Spanish-American War. The national good faith was vindicated in the release of Cuba. Unbelievable results for the betterment of millions have been accomplished in Porto Rico and the Philippines—in the construction of highways, in the pacification of savages, in the establishment of industries, in the improvement of agricultural methods, in the advancement of popular education. The influence exercised by the United States in China during the Boxer crisis is a memory to be proud of. Probably the influence of the United States prevented partition of at least a considerable part of the Empire. We turned back to China that portion of the indemnity which was unexpended for legitimate purposes, and with this money China has been sending students to American institutions of higher learning. Because of the impression progressive America has made in China a new republic has arisen in Asia, exercising sway over 400,000,000 people." Surely who will say, in the light of this unparalled record, that the Republican Party has not always been progressive, that it has ever been reactionary, and that it has not ever been mindful of the highest interests and the dearest concerns of all the people all the time? And practically every one of these great movements has been inaugurated and consummated in the last 30 years by the Republican Party, the very period in which our President asserts that that party has never felt the thrill of a new idea.

THE REPUBLICAN PARTY PROGRESSIVE.

It is but natural for the Republican Party to assume the initiative in all matters pertaining to legislation and administration. The very conception that ushered it into existence, the very thought that gave it birth, the very ingrained habit of thinking and acting along fixed lines for 50 years, make it the party of aggression, the party of progress.

The Republican Party has always maintained that the General Government was invested with all the power not specially prohibited by the Constitution, while the Democratic Party has always contended that the General Government had no power not specifically granted by that instrument. This inherent difference in fundamental belief has always made the Republican Party progressive, the Democratic Party reactionary, and that difference still exists.

Gentlemen, the millennium is not yet here. We all know full well that there are numerous evils yet to be dealt with, but we can not forget that the Republican Party proposes to remedy them by Lincoln's methods of conservatism; and yet, Lincoln's name is used to incite labor against capital. However, what does he say on this important question? "It is the acme of our civilization that men who are industrious and sober and honest in the pursuit of their own interest should, after a while, accumulate capital, and after that should be allowed to enjoy it." And again, "Labor is the superior of capital and deserves much higher consideration," but "capital has its rights, which are as worthy of protection as any other rights." These were Lincoln's ideas. Labor is as necessary as air; capital is as necessary as sunshine—nothing but hatred and no one but a demagogue could prejudice one againt the other.

The Republican Party proposes to remedy evils by the methods of conservative progress and not to annihilate the whole system by hatred and revenge.

Gentlemen, to-day destruction threatens and the methods of iconoclasm are everywhere advocated. Old ideas are being overturned, old principles are being abandoned, and it is time for the steady unwavering elements of the American people to recur again and again to the ideas of Abraham Lincoln, to review over and over his sublime advocacy of conservative progress. We need no new philosophy of society to-day, nor is any new theory of politics required. We need but to hold fast to eternal principles. We need but to cling to the old ideas applied to new conditions as new conditions demand. We need to regulate our conduct in accordance with the wise advice of Abraham Lincoln.

Gentlemen, in the light of this masterful record of progress and development it is evident that, when the President lightly says that the Republican Party has had no new idea in the last 30 years, he speaks as neither a philosopher, a statesman, a politician, nor a historian, but as merely a candidate for office making a stump speech and seeking to curry favor with his auditors by appealing to their bias, their prejudice, and their malice.

A nation can not advance without either originating new ideas or constantly reapplying old ones, and to say that the Republican Party has had no new idea in 30 years is to say that this Nation has made no progress in 30 years, for the history of the country during that time has been but the record of the Republican Party.

Up to the Federal reserve bank law, which is yet to be tried, what great act, either legislative or executive, has the Democratic Party originated in the last 50 years? Not one.

The Republican Party has been in power practically all the time since Lincoln's first inauguration, and every legislative

and executive act that has added to our commercial supremacy and our financial primacy is traceable directly to the genius, the wisdom, and the statesmanship of the Republican Party.

THE PRESIDENT INCONSISTENT.

And speaking of new men and new ideas, President Wilson used this choice bit of diction:

The Republican Party is still a cover and a refuge for those who are afraid, for those who want to consult their grandfathers about everything; and you will notice that most of the advice taken by the Republican Party is taken from gentlemen old enough to be grandfathers; and that when they claim that a reaction has taken place they react to the reelection of the oldest members of their party.

And then turned abruptly about to eulogize Senator KERN, 65 years old, and Senator SHIVELY, 60 years old, and tell what great men they were. And there is not a single member of his Cabinet who is not old enough to be a grandfather, and he takes most of his political orders, as he got his nomination, from Mr. Bryan, who is a grandfather. And this speech from Mr. Wilson, who is 58 and whose grandfatherly possibilities began a number of years ago, and who, since making this speech, has actually become a grandfather, which, according to his own logic, must certainly disqualify him for effective governmental service. "Old men for counsel and young men for action" is ancient, but true. Wisdom and experience and knowledge gained from actual trial will always be valuable in this world, and even the cloistered schoolmaster, who gets his wisdom from axioms and maxims and theoretical lore instead of learning it in the rugged school of hard knocks, will very often be brought face to face with problems for the sane solution of which it would be wonderfully wise, though equally rare, for him to seek the advice of some staid old philosopher who has been battered and bruised in the rough battle of life, but who has come out of it all serene and self-poised and sane.

A PARTY OF SHIFTING IDEAS.

And it may be that, in speaking of new ideas, President Wilson was in a measure ratifying the history of his party for the last 60 years, for in all that period it has not clung to any idea for any two successive campaigns, with the single exception of free trade, and at various times has even subordinated that doctrine to others that seemed more likely to catch votes.

In 1860 that party stood for slavery, for State sovereignty, for sesession. In 1864 it declared the war a failure, fought the sale of Government bonds, and opposed the issuance of greenbacks. In 1868 it demanded the repudiation of the public debt. In 1872 it nominated Horace Greeley and contented itself with a platform of general opposition to all the existing order of things. In 1876 it opposed the resumption of specie payment. In 1880 it conducted its first strong assault on the tariff, but made the most of its campaign noise on the force bill. In 1888 it was for tariff for revenue only. In 1892 it was for tariff only for revenue. In that campaign it advocated the conservatism of Cleveland, while in 1896 it vehemently espoused the radicalism of Bryan. In that campaign its principal issue was free silver.

In 1900 it "paramounted" imperialism and militarism. In 1904 its main complaint was that the Republican Party was building forts near large cities in which to place soldiers to coerce labor. In 1906 Bryan again took charge of his party, and, after a trip around the world, boldly announced his championship of the Government ownership of railroads; but, finding how unpopular it was, has never breathed it from that day to this. In 1908 they fought their battle on the Government guaranty of bank deposits. In 1912 they won on Republican discord and a divided opposition, and are in power now a minority party of 2,000,000 votes. Bryan, after strenuously advocating a primary for everything, was elected a delegate to that convention by a primary in his district, which instructed him by its vote for CHAMP CLARK, and yet he did not hesitate a moment to turn his back on his constituents and violate his instructions and force the nomination of Wilson; and now, to the utter disgust of all Americans and the utter amazement of all foreigners, is playing the shuttlecock between the Department of State and the Chautauqua platform, and is rattling around in the place heretofore illuminated by the genius of Webster and Clay and Seward and Blaine and Hay.

Surely, if changing ideas is what President Wilson wants, if playing a game of "now you see it and now you don't" with passed issues and present problems meets his conception of true party success, he has undoubtedly chosen the right organization with which to cast his lot.

EMPLOYMENT BUREAU.

The President in his recent remarkable utterance proposed an employment bureau to care for those out of labor. He says:

Don't you think it would be a pretty good idea for the Democratic Party to undertake a systematic method of helping the workingmen of America? There is a very simple way in which they could help the workingman. If we were simply to establish a great Federal employment bureau, it would be a great thing.

The laborer of this country needs to be guided from opportunity to opportunity. Just the other day we were told that in two States of the Union 30,000 men were needed to gather the crops. It was suggested in a Cabinet meeting that the Department of Labor should have printed information about this, in such form that it could be posted up in the post offices all over the United States, and that the Department of Labor should get in touch with the labor departments of States, so that the notice could go out from them. Well, what was the result? These 30,000 men were found and were sent to the places where they got profitable employment. I don't know of any one thing that has happened in my administration that made me feel happier than that—that the job and the man had been brought together.

And this, coming from the man who did more than any other to separate the man and the job, is indeed refreshing.

But how happened those 30,000 men to be idle? Were they thus in 1912? There is certainly no record of such a situation, for then every willing hand found work.

What kind of philanthropy is it to adopt a policy that loses a man his steady job and then establishes a bureau to give him unsteady employment?

Wouldn't it have been better to let him alone where he was? Who has been benefited by these policies that perpetually hammer business? The manufacturer? No; for his factory is either closed or running on half time, and he is sitting in the shadow of a great fear. The laborer? No; for he is out of work, his children are crying for bread, and he knows not where to look for relief.

It is one of the objects of government to make a people prosperous, and therefore an administration should adopt such policies as will foster trade and promote commerce and aid business and insure employment.

And, after harvest time, what became of those 30,000 men? Where are they now? The President's soul was made to rejoice because they were hauled from one part of the country to the other to find a 30-day job. Well, were they taken back again to their former places of residence? If so, at their own expense? Or at the cost of the Government? If the former, they spent a goodly portion of their 30-day pay in going to and fro. If the latter, the Government will soon have to levy another "war tax" to pay transportation charges. What sort of a situation are we in when the President of the United States waxes eloquent and pathetic over the fact that 30,000 idle men out of 3,000,000 in the same plight have temporary jobs, when every man of them was at work when he came into power?

Did any Republican President ever propose an employment bureau to give work to the idle? No; because nobody was ever in enforced idleness when our party was in power. Perhaps that is one of President Wilson's "new ideas." If so, we willingly assign him all the credit.

It is perhaps necessary now for something of that kind to be done, just as it is necessary for the ambulance to go over the field of battle after the conflict is over to pick up the mangled and the dying, but no such necessity ever existed while our party was in power.

GENUINE EMPLOYMENT.

Do you know how I would give work to the unemployed? I would have Congress place a protective-tariff law on the statute books, pass the necessary appropriation bills, and then adjourn and go home. I would say to the lawmakers, "Unshackle commerce; unfetter industry; unhamper capital; strike the gyves from the limbs of labor; give business a chance." I would drive the demagogues out of the temple and relegate to the rear those who fatten and batten on discontent and turmoil and who seek to mount to public place on the prostrate forms of capital and labor.

I would always and everywhere exhort the people to quit taking the newspaper that seeks to increase its circulation by inflaming the public to class hatred and unrest; and I would have the business man stop advertising in any publication that, in order to satisfy the sensation mongers of our day, are always making assaults on men of initiative and arousing popular fury against men of means. Capital and labor must work together in a spirit of mutual helpfulness or work not at all. They are both absolutely essential to our prosperity and our happiness; each must be taught to know and to keep within its legitimate sphere and constantly exhorted to a wholesome regard for the rights of the other.

I would have the people learn that very much depends upon the individual and that very little depends upon the Government.

We have literally gone to seed on Government interference and Government control in this country. Authority is being delegated by Congress to various commissions until power is farther and farther removed from the people every year.

One commission controls all the banking and currency of the country. Another has supervision of all the railroads of the land. Another has charge of all the interstate business of the Nation. Another is authorized to manage all the electrical power in the Nation. The people do not elect, nor can they directly remove, a single member of any of these commissions that control all the business of the world.

Is representative government a failure that these things should be done Are the representatives of the people, chosen from the people, by the people, either too ignorant or too unreliable to longer legislate directly for the interests of the people? Must everything the people have and do be regulated by the General Government, and must all this power be lodged in commissions, away from the direct control of the people?

No wonder business is affrighted at this situation. No wonder the genius of industry staggers with burdens being piled higher and higher upon her every day.

Let us give honest business a chance to do an honest business in this country. Because some men are bad all men are not to be condemned and placed under police surveillance. Because some business concerns have run counter to the best interests of all the people we should not overthrow it all, but let us be sane enough to punish the evil and protect the good, to preserve the honest and weed out the bad.

THE MEXICAN MUDDLE.

But what about Mexico? In his speech, the President said:

I want to say a word about Mexico—not so much about Mexico as our attitude toward Mexico. I hold it as a fundamental principle, and so do you, that every people has a right to determine its own form of government, and until this recent revolution in Mexico, until the end of the Diaz reign, 80 per cent of the people of Mexico never had a look-in in determining who should be their governors or what their government should be. Now, I am for the 80 per cent. It is none of my business and it is none of your business how long they take in determining it. It is none of my business and it is none of your business how they go about the business. The country is theirs, the Government is theirs, the liberty, if they can get it—and God speed them in getting it—is theirs; and, so far as my influence goes while I am President, nobody shall interfere with it.

Then, if all that be true, and it unquestionably is, what right had he to interfere to say that Huerta had not been fairly elected and that he must resign and vacate at once? What he says is diametrically opposed to what he did and what he says is right.

A simple recital of the events that occurred in that unfortunate country from the first outbreak of hostilities to the present time will serve to show the objectless drifting of "watchful waiting" and the entire absence of any policy whatever with reference to our neighbor on the south.

Madero revolted against Diaz in 1910. His revolution was successful. Diaz left Mexico in May, 1911, and Madero became President on the 6th day of November that year. President Taft formally recognized the Madero government.

In January, 1913, Felix Diaz organized a revolution against the Madero government in Mexico City, and at this juncture President Taft, taking advantage of a previous act of Congress, laid an embargo on all arms and munitions of war going from this country into Mexico.

Gen. Huerta, who had been in command of the Madero forces, deserted to Diaz and Madero was captured and his government overthrown.

On February 18 Lascurian was sworn in as Provisional President, and in a short time thereafter Madero was killed. Gen. Huerta then took command of the government and was sworn in as Provisional President in accordance with the forms prescribed by their constitution. Just at this time Mr. Wilson became President of the United States. Within a month a fresh revolution, headed by Carranza and Villa, broke out in northern Mexico, and then the troubles as well as the blunders of the administration began.

Not content with the reports of our then able ambassador to Mexico, our own distinguished fellow citizen, Henry Lane Wilson, whom we are proud to have known as a Hoosier, and who represented our country in Mexico with distinguished credit and honor for four eventful years—not content with his recommendations, and yet without having the courage to remove him and appoint one of his own ambassadors upon whose representations he was willing to rely, President Wilson selected Mr. John Lind as his special representative in Mexico, and, going over the head of our regular ambassador there, delivered through Mr. Lind a message to Huerta in the nature of an ultimatum demanding that he should forthwith resign and immediately vacate the office of President. And yet in his speech he says, "The country is theirs, the government is theirs, and, so far as I am concerned, nobody shall interfere with it."

President Wilson was right in his words, but wrong in his deeds. It was none of his business how Huerta was elected. That was the business of the people of Mexico. If they were willing to have that kind of a man for President, that was their right, and President Wilson should have recognized the Huertan government at once as the only one in existence in Mexico when he came into office.

If he had done this, and had kept the embargo on arms and munitions of war sent from this country into that, Huerta could have floated his bonds and obtained money with which to buy sufficient equipment to suppress the rebellion. But President Wilson took exactly the opposite position, and did it upon grounds wholly untenable. As if he were a sort of universal guardian over all peoples and governments, he at once ordered Huerta to abdicate, and when that gentleman declined to obey this order he lifted the embargo imposed by President Taft and became for all practical purposes an ally of Villa and an open enemy to Huerta. Talk about noninterference. He did interfere, not by open declaration, it is true, but by a system of furtive and officious meddling never before witnessed in American diplomacy.

Why did he refuse to recognize Huerta? Solely on the ground that he was a bad man. But was that any of our business? Is it the duty of our President to go nosing around all over the world in order to find out whether or not the rulers in the various countries of the earth measure up to the Princetonian standard of morality and then shape his foreign policy according to the ascertained results? What folly, and especially in view of the unspeakable character of the man with whom he allied himself, for if Huerta was a bad man Villa was infinitely worse. No more notorious and inhuman butcher, bandit, and brigand ever went unhung than this malignant monster of guilt, and yet, in order to carry out a feeling of personal animosity on the part of President Wilson against Huerta, a feeling he acquired by talking with the members of the Madero family in the Bermudas after his election and before his inauguration, he interfered in Mexican affairs in behalf of this blackened murderer and ran the risk of open war with a sister Republic.

But time went on, and while Bryan babbled on the chautauqua and bungled in the State Department, Wilson watchfully waited, and we got nowhere. And then occurred what is called the first Tampico incident.

A crew from one or our warships landed at that port for perfectly proper purposes, and yet they were arrested. They were taken to the town hall, where they were at once released, and Admiral Mayo contented himself with demanding a salute to the flag as a reparation for the insult. The entire matter might have been disposed of there without further complication, but our Government chose to make a national affair out of it and took it to the City of Mexico. They there placed themselves in the ridiculous and inconsistent position of declining to recognize Huerta as the head of the government and yet demanded that he, on the part of the Mexican Government, should salute the flag. Having demanded that he vacate, and having declined to recognize that he had any right whatever as President, they yet insisted on his saluting the flag, while at the same time they contended that he had no authority over any of the arms and munitions of Mexico with which to fire a salute.

The Huertan government declined to salute unless they were assured in advance that it would be returned, and it was on this point that the open rupture came. President Wilson delivered a message to Congress, and asked that he should be given power to take steps against Huerta; not against the Mexican Government, mark you, but against Huerta by name, thus showing that the only policy he had was against an individual. That resolution passed in the House, but failed in the Senate, because that body recognized that it would never do to pass a virtual declaration of war simply against an individual, but that some statement of policy should be made in order to justify such a serious step.

In the meantime our forces were ordered to Vera Cruz, though for what purpose is not apparent. The trouble was at Tampico. Why our vessels were not ordered there remains a mystery, and why they were ordered to Vera Cruz, where neither life nor property was in danger, is more than we have ever been told. In attempting to take possession of this port 19 of our men were killed and over a hundred wounded, while the casualties among the Mexicans were much greater.

VIRTUAL DECLARATION OF WAR.

Now, notwithstanding the declaration of the President that he had kept our country out of war, and notwithstanding that this fact was the main argument advanced by the Democratic orators last campaign, yet the incident at Vera Cruz was an open act of war. To claim that it was not because no declaration of war had been made is simply juggling words. Germany never formally declared war against Belgium, yet no one can

be heard to say that she has not been at war with that unfortunate country.

To seize the principal seaport of a nation by force of arms, and to retain it for several months in the same manner, is an open act of war, and it was because of those things that the President hurried into the so-called Niagara conference, which never even had the remotest chance of settling any question. However, it so delayed matters that we were not compelled to resort to the further use of arms and in this respect was most fortunate.

We sent our ships to Vera Cruz ostensibly to prevent the landing of a cargo of arms intended for Huerta. The ship was not permitted to land at Vera Cruz, but within a few days found uninterrupted passage into the harbor at Puerto Mexico, where the entire cargo was landed and turned over to the forces of Huerta. It is plain to be seen, therefore, that the very object for which we took Vera Cruz, and which cost so many precious American lives, was never accomplished. We further sent our ships there to force Huerta to salute the flag, and that was originally given forth as the sole object of the expedition. And yet the flag was never saluted and the whole incident was forgotten and lost sight of by the administration. There was never a more futile effort made, there was never a more objectless expedition attempted, there was never a more useless sacrifice of life and property, and yet all this bungling and inefficient maladministration was tolerated by the American people solely because of the appalling catastrophe that is being enacted in Europe.

At this time President Wilson lifted the embargo on arms. That was, and was intended to be, a real help to the rebels, for we had clearly made them our allies. Their difficulty was that they had no port and therefore could not bring arms into Mexico from the outside, but they could bring them over the border after the embargo was lifted, and that was why it was lifted. But the Secretary of War, being wiser and more courageous than the Secretary of State, issued an order that no arms should be carried across the border, and that left the matter in such a shape that Villa was compelled to have a port in order to secure foreign help.

The vessels we had at Tampico were compelled to stand out 9 miles away from the port. This was done on the excuse that if they remained there they might cause trouble. The simple truth is that had they remained there they would have prevented trouble, for there were a number of American citizens in that community and a vast amount of American property that was entitled to the protection of these American ships. After the withdrawal of our vessels Huerta still remained in command at Tampico, our citizens there were all threatened with massacre and their property was subject to confiscation and destruction, and they were left entirely without protection by reason of the withdrawal of our ships. The only thing that saved their lives was the action of the commanders of the German and British ships which were still lying in that port. Thirteen hundred American citizens were taken on those vessels, and thus saved from indiscriminate and helpless slaughter, while our vessels were compelled to remain 9 miles away from the port in order that Villa might have an opportunity to procure arms and munitions of war with which to carry on an insurrection against a regularly constituted government.

Because of our attitude the government of Huerta failed, and he was compelled to leave the country. The President accomplished the object of his interference in Mexico, but what was the final result? During this entire time the difficulty was that neither Mr. Wilson nor Mr. Bryan ever considered what would happen with Mexico in case Huerta was dislodged. Their one object was to drive him out of power and never for one moment did they pause to think what would become of the country after their object had been accomplished. Had they given the slightest study to the character of the Mexican people, had they taken into consideration the volatile and mercurial nature of that inflammable race, had they halted for mature reflection for one hour in their mad desire to overthrow an unfriendly individual they would have known that when Huerta was gone some other man equally bad or worse would take his place, and that, if Carranza came into power, Villa would revolt against him, and that one revolution would follow another in rapid succession for years to come. But these things apparently never occurred to them, or, if they did occur to them, they brushed them aside, being fiercely determined on the one proposition of overthrowing Huerta.

RESULTS OF "WATCHFUL WAITING."

Fifty per cent of the inhabitants of Mexico are pure-blood Indians, 30 per cent are half-breeds, 20 per cent are Spanish, and to imagine that a mixed population of that character, with the past history of Mexico, could establish and maintain a stable government, founded on fundamental principles, was an illusion that ought never to have deceived any man.

And what is the condition of Mexico to-day? The whole country is the helpless prey of banditti; a bushwhacking guerilla warfare is carried on in every portion of the land; there is no responsible government anywhere, no power to secure life or protect property or defend society, disorder and anarchy and chaos and riot everywhere, and the solemn truth is that we can not escape responsibility for our share in that miserable business and its dire results.

The truth is that over 200 American lives have been lost, and yet nothing done to prevent it; the truth is that 60 people have recently been killed by Mexican bullets from across the border, and yet not a word has been uttered in protest nor a finger been lifted to prevent it.

At this time the guillotine stands in the City of Mexico and victims are being daily murdered in the capital city of the country without there being any power strong enough to prevent it. And even worse than that, according to a flood of uncontradicted testimony, these murdering marauders have invaded the sacred precincts of the church, the cloister, and the nunnery, and have turned themselves in wild and reckless abandon upon the women, upon the priests, upon the nuns, and upon the children, until their helpless victims are numbered by the hundreds.

The truth is that two courses with reference to the Mexican matter lay open before Mr. Wilson when he assumed the Presidency. One was to exert all the moral power of the Government and to invoke the moral aid of all other Governments to protect property, to enforce laws, and maintain order in that country, and by every form of moral suasion known to the world to insist upon a righteous government for that unfortunate country.

The other course was to send arms into Mexico, to take possession of the Government, to establish a protectorate there as we did in Cuba, to preserve order and secure life and property, until such time as it was safe for us to withdraw and permit them to set up a Government of their own.

The truth is he did neither. He interfered, it is true, but only in a meddling and an ineffective way. He went in, indeed, but apparently without any object, and withdrew without having accomplished a single thing, and the present chaotic condition of affairs is largely a direct result of the reckless misnamed policy of watchful waiting.

WILSON A FAILURE.

On the whole it is safe to say that Mr. Wilson has not been a successful President.

He went into office on a platform pledged to economy, and yet has never lifted his voice against the unwarranted assaults upon the surplus committed by his party. He even advocated levying a war tax upon the people, in a time of adversity produced wholly by his mistaken policies, in order to make possible further raids upon the Treasury by southern Congressmen.

He was elected upon a platform pledging himself and his party to a single term in the Presidency, and yet right in the teeth of that pledge is an undoubted candidate for four years more.

He was chosen upon a platform demanding free tolls for American vessels carrying coastwise commerce through the Panama Canal, and the most vigorous speech he made in this campaign for election was in its support, and yet he turned his back upon his party pledge, ruthlessly broke his plighted faith, and literally forced through Congress a provision compelling American shipowners to pay the same tolls as are required of foreign shipowners for the privilege of sailing through our own canal.

He was elected upon a platform which declared that a protective tariff was unconstitutional, and in his speeches he declared this system to be vicious, un-American, and immoral, and yet signed a bill with many of its items providing for as high a protection as any Republican would require. And he did this because he was afraid to put his theories into practice by wholesale, for he knew that if he did it would create such havoc with our industries that his party would be swept out of power and kept out for the next generation.

Having all his life opposed ship subsidy, or any other form of aid or subvention for our own merchant marine, he yet flies to the opposite extreme and proposes to enter upon an untried scheme of Government ownership of merchant vessels which for every conceivable reason is far more to be deplored than any form of subsidy ever proposed.

LACKS EXECUTIVE TEMPERAMENT.

The President is too sectional in his views to always be national in his policies; he is too partisan in his conception of his duties to always be patriotic in their discharge; he is too theoretical in his knowledge to always be practical in its appli-

cation; he is too dictatorial in his conduct to always be generous to those who oppose his wish; he is too didactic in his methods to always be tolerant of those who assert their own views. He knows so many things that are so in the text-books, but are not so in the markets or in the mills, that he can not always forgive those who know the real relations of things.

And, apparently without pain of heart or qualm of conscience, he can descend from the high level, where he by nature and by training belongs, and on which we always like for our President to act, to a lower level than comports with his dignity or his scholarship; lower than we like for our Presidents to ever take. Witness this fling of his recent speech:

Being by profession a schoolmaster, I am glad to point that out to a class of uninstructed Republicans, though I had not always taught in the primary grades.

If he uttered that sentence in a jocular vein, it was beneath his dignity as President of the United States to do it. If he uttered it in a spirit of soberness, it displays an egotism and a malice and a disregard of the proprieties scarcely believable.

Millions of people believe in the Republican Party; millions think that to its policies and its management of our affairs is due the lofty place we occupy to-day among the nations of the world; millions worship the memory of its heroic and its sainted dead; millions feel the thrill of inspiration at the recollection of its deeds; millions find their patriotism renewed by a recital of the sacred traditions that cluster round its name; and millions anxiously look forward to the day of its restoration to power as the one hope of deliverance from the frightful conditions we find on every hand. And therefore when the President gives utterance to a sentence of this character, and takes an unlettered stumper's fling at a very great portion of the people over whom he presides, he casts aside the dignity of his high office and the charm of his scholarship and assumes a rôle unworthy of a man in so high a place.

But let us console ourselves with the comforting assurance that he has done about all the harm he ever can do as President, and that his services will be no longer required after the 4th of March, 1917. Then the Republican Party will be restored to power, and we shall enter upon a glad day in which we shall be prosperous at home and respected abroad, and our flag shall be known and honored around the world because of what it represents.

Aid its dawning, tongue and pen,
Aid it hopes of honest men;
Aid it paper, aid it type,
Aid it for the hour is ripe,
And our earnest must not slacken into play;
Men of thought and men of action, clear the way.

Ship-Purchase Bill.

EXTENSION OF REMARKS
OF
HON. KENNETH D. McKELLAR,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 17, 1915.

On the bill (S. 5259) to establish one or more United States Navy mail lines between the United States and South America and between the United States and the countries of Europe.

Mr. McKELLAR. Mr. Speaker, I never had very much sympathy for or confidence in a man who is afraid—afraid physically or afraid to take a position in the affairs of life as they are presented to him. I feel the same way about a political party or an administration. It makes a political party purely one of negation. It makes an administration a byword. There is one thing that can be said of the present administration—it is not afraid. Whatever might have been said about the Democratic Party during certain periods of the past it certainly can not be said under this administration that it is a party of negation or a party of fear.

In its last platform the Democratic Party declared for building up a merchant marine, but one without additional burdens upon the people and without bounties or subsidies from the Public Treasury. The administration has put forward a merchant marine bill, and for weeks it has been debated in the Senate, where it was favorably reported, and there is also a favorable report from the House Committee on the Merchant Marine and Fisheries. No bill that has been before Congress since I have been here has had greater consideration.

The opposition to the ship-purchase bill, as it appears from the expressions of those who have discussed it, whether Democrats or Republicans, Senators or Representatives, is an opposition of fear. Our Republican friends and their Democratic allies are afraid that it might be contrary to Democratic principles. They are afraid of the principle of Government ownership; they are afraid that it is not a wise departure; they are afraid we can not get the ships; they are afraid that if we get the ships that we might get some interned ships of belligerent nations and thereby get into trouble; they are afraid of international complications; they are afraid that the Government ought not to go into the business; they are afraid it will hurt the private interests of those already engaged in the business; they are afraid it is unconstitutional. Again, they are afraid the Government will lose money by it, though our Republican friends are perfectly willing for the Government to lose money by contributing subsidies to private interests already engaged in shipping. Some even are afraid the $10,000,000 appropriated from the Treasury will be too great a strain on the Treasury, though some of those same gentlemen have voted for $100,000,000 for the Army, $150,000,000 for the Navy, and some $200,000,000 for pensions this year. Some profess to be afraid that President Wilson—who has shown himself to be a jingo and was desirous of involving this country in war!—that if given the authority, as provided in this bill, he will take such steps in the purchase of ships that will involve us in war. Many of the very gentlemen who were abusing President Wilson some months ago because he would not declare war on Mexico are now vehemently abusing him because they see in this bill a trick by which he can get an opportunity to involve our country in war. Is it not absurd? This is but a sample of the various kinds of fear that the opponents of this bill are exhibiting.

It is quite remarkable that in the speeches of Mr. ROOT, Mr. GALLINGER, and other opponents of the bill in the Senate it is not even argued that the people of this country do not need a great number of ships to carry their wares. It is not even argued that a great emergency does not exist in this country by reason of the fact that many of the foreign ships that we formerly used are now out of commission. It is not disputed that there is a great scarcity of shipping facilities. It is not disputed that ocean freight rates have gone up from 100 to 1,000 per cent. It is not disputed that the rates are so high on certain commodities as to be prohibitive to the great loss and damage to those who produce those articles. The sole contention upon the part of those gentlemen is that they are afraid of the proposition.

Mr. Speaker, before the war between the States in 1861 came upon us and under the beneficent rule of the Democratic Party this Nation had built up what was in that day and generation a great merchant marine. The war came on and destroyed that merchant marine, and those ships that were not destroyed were interned and sold, and I am informed that England, for the most part, bought them. Since that time more than 93 per cent of our shipping has been done in foreign bottoms. The Republican Party has steadfastly in its long reign of power in this country refused to take any steps to build up our merchant marine. Even our mails have, for the most part, been carried in ships flying foreign flags, and we appropriate annually, year by year, enormous sums to those shipowners for carrying our mails.

At the outbreak of the war the United States, it has been claimed, carried in its own bottoms more than 85 per cent of our exports. Since the war it has carried never more than 7 per cent. During the war we sold ships to the allies as follows:

	Tonnage.
1861	26,649
1862	17,756
1863	222,199
1864	300,865
1865	133,832

It will thus be seen that we sold ships amounting to over 800,000 tons during this war period. It has been the desire of the Democratic Party for many decades to rebuild our merchant marine. This is shown in the Democratic platforms beginning with that of 1880.

PLATFORM PROVISIONS.

In the last Democratic platform at Baltimore the following statement is made:

We believe in fostering by constitutional regulation of commerce the growth of a merchant marine, which shall develop and strengthen the commercial ties which bind our sister Republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

For the benefit of my Democratic colleagues I wish to discuss this provision of the platform, with a view of ascertaining whether or not this bill is in accord therewith. In the first place, is the bill constitutional? I submit that it is. It is constitutional upon three separate provisions: (1) The Constitu-

tion of the United States gives Congress power, in terms, "to regulate commerce with foreign nations." Can it be questioned that this bill provides for the regulation of foreign commerce? It regulates by directing that the Government may buy ships and go into the shipping business and carry our products to foreign markets. It regulates it by giving to the Government power to establish rates at which this foreign tonnage will be carried. It regulates it by furnishing competition with foreign ships. It regulates it by furnishing ships in opposition to existing shipping monopolies. So that it will appear that beyond question, under this provision of the Constitution, Congress clearly has the constitutional right to establish a shipping corporation, in which the Government may own all or any portion of the stock, provided only that the law thus enacted, in the words of the Constitution, "is necessary and proper for carrying into execution the foregoing power."

Again, the bill is constitutional under the provisions of the Constitution which, in expressed terms, authorizes Congress "to provide and maintain a Navy." This bill provides in sections 8 and 9 that naval auxiliaries and vessels owned by the Panama Railroad Co. which are suitable for commercial use may be transferred to the ship corporation, and that the ships to be acquired by the board shall be, as far as possible, suitable for naval auxiliaries in the Naval Establishment of the United States, and the President shall have the right at any time, upon giving notice, to use them in this way.

It will be remembered that a few years ago, during the administration of President Roosevelt, our fleet of battleships took a trip around the world, and it will be remembered with mortification that the colliers and other auxiliaries attending the fleet were, for the most part, British vessels. This should never occur again. In a case of war our country would be handicapped because lacking the necessary auxiliaries. This bill will prevent any such situation from arising. Again, the Constitution authorized Congress "to establish post offices and post roads." For the fiscal year ending June 30, 1914, we paid to foreign steamship owners $1,429,434.25 for carrying our foreign mails. We have a perfect right, and I believe it is our duty, that wherever possible our mails should be carried in American vessels, and we ought to bend our every effort to utilize this provision of the Constitution for the benefit of our people. This money, or as much thereof as possible, should be paid to American ships. The Constitution further provides that Congress has the power "to make all laws which shall be necessary and proper for carrying into execution the foregoing power."

It will thus be seen that this bill is anchored on three separate provisions of the Constitution, and there can not be the slightest doubt about its being a constitutional regulation of commerce. Indeed, I want to ask those gentlemen who are opposed to the bill, in what manner would they go about regulating commerce so as to foster a growth of a merchant marine except by this method? I know it is claimed by some that if we repeal all navigation laws on the subject that this would help the matter, but surely if we did this this foreign commerce would not be regulated by Congress. It would be in a position where it could regulate itself, and our platform declares that Congress should regulate commerce so as to foster a growth of a merchant marine.

THE WISDOM OF THE MEASURE.

The next question that naturally arises is the wisdom of our Government embarking in the shipping business. The bill provides that the Government shall not go permanently into this business, but as soon as it is built up and becomes profitable it shall be sold to private shipping corporations or individuals, with the implication, of course, that the Government is to continue to regulate the business after it is built up.

Now, what are the conditions before us in this matter? By reason of the present foreign war not less than 14 per cent, it has been estimated, of our foreign shipping facilities have been put out of commission. The two German lines, the Hamburg-American and the North German Lloyd, alone, which have for the most part been engaged in American shipping, have a combined fleet of 306 ships, the Hamburg-American Line having 190 ships and the North German Lloyd having 116 ships. Under these circumstances can it be wondered that ocean vessels have raised their rates all the way from 100 to 1,000 per cent? The great body of ships now engaged in our trade belong to the group known as the allies. Naturally these ships take from our shores food products and war material first. By reason of the situation they take what is to their immediate interest or the immediate interest of their Government to take. Our people really have no option in the matter but to let them take such products as they will. Of course they do not tell us that they will not take any of our products, but they have absolute control of the rates and by raising these rates to prohibitive figures they prevent the shipping of certain of our products. The result is that some of our greatest and most important industries have been crippled and in many instances almost ruined because of our inability to obtain ocean transportation. Our cotton, largely because of this lack of shipping facilities, is selling at half price, at a loss to our people of several hundred millions of dollars. Our export lumber business is at a standstill because of this lack of shipping facilities. Our naval-stores industries are in the same condition. Our coal fields are being undeveloped for the same cause. Our tobacco industry is crippled for the same reason. These are merely the more important of our products for which we can find no proper market because of the high rates or lack of shipping facilities.

There never was a greater emergency for merchant vessels in the history of our country. There never was a greater opportunity for our Nation if we would but use it. The world's trade is ours if we would step out and get it. When the Baltimore platform was made it was thought that our only opportunity to build up our merchant marine would be by going into the South American trade. This war has made possible for us to get an immense trade with all the world. The opportunity may never come again. Certainly so great an opportunity will never come again.

POLICY OF THE GOVERNMENT OWNING SHIPS.

I think from what I have said heretofore that it must be apparent to any fair-minded person that there is a great emergency staring us in the face relative to our foreign shipping and trade; that Congress has the constitutional right to pass a bill for the protection of our people in this situation of great emergency. But it is claimed by the opponents of the bill that the principal of Government ownership is involved, as indeed it is, and that it is not wise for the Government to engage in business at all, and certainly not wise or democratic to engage in business in competition with private business. We are prohibited from giving subsidies by our platform, and certainly no fair-minded man should be in favor of building up our shipping by means of subsidies or bounties. Certainly no Democrat should be. Then, if this is true, how are we to accomplish it? Have our opponents pointed out a way? Can they suggest any way but the one that has been arranged for in this bill? In our own hearts we know that there is but one way. We know that the only way we can rebuild our merchant marine and the only way we can get back the foreign trade that we are entitled to and entitled to carry in our own bottoms is by the Government going into the shipping business. It is also claimed that it is a new departure. As to all these claims I wish to take issue. In the first place, the Government could not go into any business where there would be less competition with private business owned by our own citizens, as only 7 per cent of our products are shipped in American bottoms. When we established the parcel post we went into competition with all of the express companies, who had theretofore had entire control of the business, and I doubt if any Member would maintain to-day that we did an unwise act in providing that the Government should go into competition with the express companies. Certainly he could not maintain such a position.

PRECEDENTS FOR THIS ACTION.

In the first place, as to the policy of going into this business, the precedents that have been set for the National Government going into business, I wish to say a few words. At the very beginning of our Government—the second year thereof—this Government organized a banking corporation, and was for a period of half of a century engaged directly in the banking business under an even doubtful constitutional warrant. Indirectly it has been in the banking business ever since and controls it to-day. It went into that business under the constitutional warrant that Congress had the right to coin money, and there is no one in this House to-day who would say that the Government ought to withdraw from its control of the banking business. I think not.

The next notable embarkment of our Government in business was when it went into the canal and road business, during the administrations of Madison, Monroe, Adams, and Jackson, and, as a matter of fact, it is still in the canal business, having just completed a canal that is now one of the wonders of the world. Is it possible that anyone would contend that the Government was not justified in entering the canal business?

In the third place, the Government went into the railroad business when they first began to be built in this country. Our great transcontinental lines were practically built by the Government and for a long time controlled by the Government. For what purpose? Of course the only purpose was to control freight rates, to make the cost of transportation cheaper for the great body of our citizens, and is there anyone to-day who

would say the Government ought not to have gone into that business or aided therein? It has been our policy for more than three-quarters of a century. The Government is operating the Panama Railroad at a tremendous profit to-day and to the great advantage of the citizens of our country; and but recently this Democratic administration has passed a law giving it authority to build another great railroad in the Territory of Alaska. What for? To open up that country and furnish cheaper transportation for that portion of our people. It is identically the same principle invoked in this bill. Having passed that bill in a Democratic Congress, does it lie in the mouths of Democrats to oppose this bill on account of its being a departure from Democratic principles?

Fourth. But recently this Government under a Democratic administration has gone into the express business. It has been operating this business long enough for us to determine its value. We went into this business for the sole purpose of reducing rates on small packages to the American people. The bill was passed under the very clause of the Constitution which is invoked for this bill. The purpose of the two bills is exactly the same, except one is to reduce freight rates upon articles from one portion of our country to another, as provided for by the Constitution, and the proposed bill, if enacted into law, will reduce rates in shipments of goods from our country to foreign countries In one case the Post Office Department is given jurisdiction to carry out the terms of the act. In the other case three departments of the Government are given authority to carry out the terms of this act. Upon principle I can not see how any Member of Congress who voted for the parcel-post bill can refuse to vote for this bill.

Fifth. This Government under a Democratic administration has but recently embarked in the insurance business whereby we insure American ships and products going abroad in American bottoms. Surely, if we have the right to insure business going abroad in domestic bottoms, in order to lessen freight rates and to obtain shipping facilities, we have the unquestioned right to buy these shipping facilities.

But it is claimed that, though the Government may have the undoubted right, as it has, to go into this business, still as a matter of policy it should not go into the business for two reasons—(1) because it is likely to prove an unprofitable business, and (2) because it unduly interferes and comes into competition with private business. Neither of these positions is tenable, in my judgment. It may be remarked just here that the United States has never embarked in a business that has proved unprofitable. It has accomplished its purpose every time. Its banking business has not proved an unprofitable business. Its canal and railroad business has not proved unprofitable, but in the long run has proved of the greatest profit and benefit to all our citizens. Its express business is admittedly a success. It is not believed that its insurance business will be a failure, and if it goes into the shipping business there is no reason why it should not be the same kind of a success. As to the Government embarking in the business that will be hurtful to private business, there is no business that the Government could embark in that would be less hurtful to the great body of our citizens, because at the present time there are so few of them engaged in the shipping business. Comparatively speaking, our business is done by foreign companies.

Senator ROOT, admittedly one of the greatest lawyers this country ever produced, a great debater, and an honorable and patriotic official of our Government, has, I have no doubt, made the greatest argument that will be heard against the passage of this bill. He confines his argument to one point of attack, to wit: That if we pass the bill we could not get the ships. In the first place, he says that there are no ships that can be bought by the Government and put into use that are not now in use, except the interned ships of belligerents; and, second, that these interned ships can not be purchased and used by our Government, because to do so would be in violation of the London agreement of 1908 and 1909, and in violation of international law. He has made in the Senate an able argument along this line. He never discusses any question except in a way that carries great weight. One of his questions is a question of fact. The other question he raises is a question of law. Upon the question of fact—that is, our ability to buy ships other than interned ships—is absolutely and completely answered by Secretary McAdoo in a report submitted to the Senate and published in the RECORD of Tuesday, January 26, in which report the Secretary shows that he has been offered by one merchant-marine agency in Boston 22 ships. These ships may be purchased for the sum of $11,815,000. Some are under British registry and others under German registry, most of them being under British registry. Some of these ships are already completed, and some will be completed within a short time. (See Exhibit 67, p. 2503 of the RECORD.) There are a great many other ships that can be obtained, as shown in Exhibit 75c, on the same page. In addition to that, we have the Panama steamships that can be used. Doubtless we could get all the interned ships that we wanted, for the reason that they can not now be used, and inasmuch as the owners thereof are keeping them interned at great expense they will be glad to sell them at a small price. Under such circumstances, with our own trade and commerce so hampered, as it undeniably is, because of lack of vessels to carry our products to foreign shores, it looks as if it is the duty, not merely the right, to purchase these ships wherever possible.

But Senator ROOT says that it would involve us in grave international complications and would be contrary to the provisions of the London convention of 1908 and 1909. The distinguished Senator from Montana has so ably presented this view of the question, as shown in his speech in the RECORD of Thursday, January 28, on page 2661 and following, that there is no use of my going into this question at any length. In this speech Senator WALSH has greatly added to his reputation as one of the best-posted constitutional lawyers in Congress. He considered the question from the viewpoint of what the international law was before the London convention, what the London convention provided, what the law is to-day, what the various nations have asserted it to be, and his arguments are absolutely convincing that the position of Senator ROOT is wholly a mistaken one.

The London convention provides that—

> The transfer of an enemy vessel to a neutral flag effected before the outbreak of hostilities is valid unless it is proved that such transfer was made in order to evade the consequences to which the enemy vessel as such is exposed. * * * When the transfer was effected more than 30 days before the outbreak of hostilities there is an absolute presumption that it is valid if it is unconditional, complete, and in conformity with the laws of the countries concerned, and if its effect is such that neither the control or the profits arising from the employment of the vessel remain in the same hands as before the transfer. * * * The transfer of an enemy vessel to a neutral flag effected after the outbreak of hostilities is void unless it is proved that such transfer was not made in order to evade the consequences to which the enemy vessel as such is exposed.

It is under the last clause that the sale of interned vessels might be questioned. In the first place, as has been repeatedly held by the Admiralty and prize courts in this country and in England, there is no reason why a citizen of a belligerent owning a vessel interned in a neutral port may not sell such vessel in perfect good faith either to the neutral Government or to a citizen of the neutral Government, provided only that it is sold in good faith for a valuable consideration and without any reservations as to purchase after the war. It can not be considered for a moment, if authorized by this act, we would buy one of these vessels on any other terms than as above stated. In the next place, the London convention has never been agreed to by the contracting parties, and no principle of international law or any other kind of law is better stated than that unless the minds of all the contracting parties meet there is no contract.

The English Government has on at least two occasions itself departed from the London agreement. Under these circumstances, surely Great Britain can not invoke the London agreement against us. Our delegates did not agree to the London agreement, but our Government has since ratified it. On the other hand, the British delegates did seem to agree to it, but the British Government has never ratified it. So that clearly there has been no contract by which either Government is bound, except under the principles of international law as they existed before the London conference. Now, as is pointed out by Senator WALSH, and to which, in my judgment, no argument can be added, the principles of law, as established by the British and American Governments for over a hundred years, was to the effect that after war was declared ships belonging to a citizen of a belligerent interned in a neutral port may be sold to a citizen of a neutral or to a neutral Government if done in good faith for a valuable consideration, without reservations of any right to return the ships or any emoluments thereof to the owner after the war. In addition to all this, can we not trust our Government, if authority is given to it to purchase ships, to purchase only those that there will be no international complications about? What reason have we to believe that our Government will purchase interned ships of belligerents, the purchase of which will give us trouble? Why should we believe our officials will not look into each and all of these matters before the ships are purchased? For my part, I am content to believe that they will and that there is not the slightest chance of international complications.

Gentlemen of the House, President Wilson is right, as he usually is. There is a great emergency confronting us. The vast amount of American products are not being shipped abroad

and selling at excellent prices because we have not the shipping facilities to haul them abroad. We need ships as we never needed them before. For generations we have been wanting to build up our merchant marine. It never was so manifest in the history of our country that we need an adequate merchant marine as it does now, when the great foreign war has stripped the seas of the vessels that are usually employed in carrying our goods to foreign markets, thereby paralyzing our foreign trade. There never was such an opportunity for us to acquire foreign trade when all of the great nations are at war as they are now. We will wrong our country if we do not take advantage of this opportunity. It can not be done by giving subsidies to American shipping, because we have got practically no American shipping. It can only be done effectively under the control and direction of this great Government of ours, which does all things well.

As I stated at the outset, we ought not to be deterred from this great duty by fear. We are not a nation of cowards but a nation of red-blooded men. We have never been afraid when it was necessary to fight for our country's interest. We ought never to be afraid to fight when our country's trade and prosperity are at stake. We do not know what the result of this great foreign war is going to be. We do know that as a naval power Germany has already lost her second place and that we have dropped into it. Before the end of the war, it may be, no one can tell, that England will have lost enough ships to have made the United States the first naval power. It will do us no good unless we are in a position to reap the benefits. We ought to be prepared for this or any other emergency. If it is so we are to have the right to control the seas, then we should have the merchantmen to control its commerce. We should leave no stone unturned in this regard. For many years the English and German nations will be unable to add to their great naval establishments, because they will have exhausted themselves in this great war; while, on the other hand, our Government, following its traditional policy of peace, will be in a position to add to our naval armament as and when we please for the protection of our country and for the upbuilding and protection of our trade and commerce carried on in American ships in every port of the world.

WHAT $30,000,000 WILL BUY AND THE RESULT OF THE PURCHASE.

Judging from the number of clearances from our ports during the year, which is about 3,200, and this excludes the great passenger steamers, of course, it takes about 800 cargo steamers to do our business. Each of these cargo steamers makes on an average about four trips a year, but of course some of these ships make only one trip to the United States, with the result that it is estimated there are about 1,000 cargo steamers engaged in the United States trade. There are also 215 passenger steamers.

In a general way, the net tonnage carried by ships in the export trade is about as follows:

	Tons.
To Europe	18,000,000
To South America	2,000,000
To Asia	1,100,000
To Oceania or the Far East	700,000
To Africa	400,000

These are net tons. The gross tonnage is two and one-half times the net tonnage. The steamers required to do this business to Europe, 1,215; to South America, 300; Asia, Oceania, and Africa, 200, making in all about 1,715 steamers. Until August 18, 1914, practically all of these ships were under foreign flags. After the passage of the ship-registry act of that date 74 steamers, aggregating 328,000 gross tons, were transferred to the American flag. All but three or four of these steamers were owned by Americans for a long time before the war. The purchase price of these steamers was $22,232,000.

From the foregoing figures it can be seen what the probable effect of investing $30,000,000 in steamships would have on the American trade. It is probable that about 100 ships of various sizes suitable for trade and commerce could be bought with this sum. The figures given by Secretary McAdoo in Exhibit 76 would not indicate that that many ships could be purchased, but when it is known that the Government has the money to buy these ships they can probably be bought at a much less price than the list price. Of the 45,000,000 cargo tons of American exports about 3,000,000 are exported in American bottoms. This is about 7 per cent. It might be possible to add to this 7 per cent more if this ship-purchase bill goes through. It is estimated that the war has produced a loss of foreign ships doing our export trade of about 14 per cent. Even if we increased our shipping facilities 7 per cent by the passage of this bill, we would still lack a tremendous per cent of our usual shipping facilities.

Government Shipping Bill.

EXTENSION OF REMARKS
OF
HON. JAMES L. SLAYDEN,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 11, 1915.

Mr. SLAYDEN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to insert an address by Hon. EDWARD W. SAUNDERS before the Boston Chamber of Commerce.

The address is as follows:

ADDRESS BEFORE THE BOSTON CHAMBER OF COMMERCE ON THE GOVERNMENT SHIPPING BILL.

Mr. President, it was with much pleasure that I accepted the cordial invitation to be your guest on this delightful occasion. This is not my first visit to Boston. Something like 10 years ago, I spent about two weeks in your city, as a delegate to the general convention of the Episcopal Church, and I have never forgotten the gracious hospitality that was extended to us during every moment of our stay.

I am present to-night under somewhat different, but equally agreeable conditions. It was a happy thought of your chamber to extend your invitation to more than one speaker, and by confining our remarks to a prescribed theme, thus place in juxtaposition the opposing views relating to the solution of the problem of the restoration of the American merchant marine.

Confronting this magnificent, and critical audience, representative of the best thought, and the best business, in this seat of culture, refinement, and industry, I begin to realize the serious character of my rôle in the proceedings of to-night, and almost regret my temerity, in accepting the invitation to be one of the spokesmen in this symposium on the general subject of a merchant marine. The pending bill under consideration in Congress is the bill for Government-owned and Government-operated ships in the American foreign trade. As a Democrat I am opposed to this measure for the reason that it is in flat contravention of the following plank in the platform adopted at Baltimore:

> We believe in fostering by constitutional regulation of commerce, the growth of a merchant marine, which shall develop, and strengthen the commercial ties which bind us to our sister republics of the South, but without imposing additional burdens upon the people, and without bounties, or subsidies from the Public Treasury.

This plank plainly restricts our legislative activities to the exercise of our constitutional power to regulate commerce. The limited marine to be developed in this fashion, is to ply between this country, and South America, and must be self-supporting, since we are neither to impose additional burdens upon the people, nor to afford bounties, or subsidies from the Public Treasury, in furtherance of its development. There is no hint in the language used, of a world-wide Government-owned, and Government-operated marine. Subsidies and Government ownership, are alike excluded from contemplation. A scheme which requires an initial appropriation of $10,000,000, and an emission of bonds to an extent of a possible thirty millions, and in addition, contemplates large future appropriations, inevitably falls within the condemnation directed against measures, imposing additional burdens upon the people.

But I will not pursue a criticism which appeals solely to the affiliates of one particular faith. There are many objections to the measure, as well as to subsidy, that are based upon economic grounds, as well as grounds of large policy, unrelated to party considerations. The restoration of our merchant marine is a somewhat misleading phrase. It carries with it the implication that at present, there is no American merchant marine. Indeed the statement to this effect is often made in general terms. This is an extravagant misrepresentation, whether made in ignorance of the facts, or with a willful and vicious purpose to mislead. There are over 27,000, probably at this time 28,000 merchant ships flying the American flag, and aggregating something over 8,000,000 gross tons. Of course the major proportion of this tonnage is in the coastwise trade, but registered for the foreign trade, there are 2,360 vessels, gross. To these figures must be added over 100 vessels admitted to the American flag under the recent registry act, having a gross tonnage of over 375,000 tons, and constituting in themselves quite a respectable body of freighters. All of the latter vessels represent American capital in the foreign trade, that was driven to the purchase of foreign-built vessels, and the use of foreign flags, in order to escape the restrictions of our domestic laws.

In addition to the foregoing, the authorities at Washington estimate that coastwise vessels aggregating between 200,000 and 300,000 tons, are available for use in over-seas traffic. These figures ought to allay the apprehension so often expressed, that in time of war this country would be unable to procure sufficient American ships to serve as colliers for the fleet. Having in mind the recent declaration of President Wilson, that our Navy has always been regarded as a proper and natural means of defense, and that it has always been of defense that we have thought, never of aggression, or of conquest, a statement which I believe represents the attitude of the great bulk of the American people, we may feel assured that at any future time when occasion demands, there will be available to be taken over for naval purposes, not only a sufficient number of American ships for a defensive war, but for any kind of war. It does not follow, however, that they will be taken over, if other ships may be chartered on better terms. It was not an evidence of national weakness, as sometimes suggested, that foreign vessels were chartered as colliers on the memorable globe encircling trip of our fighting ships. The transaction was an ordinary business one, involving rates, and terms. If American ships had been insisted upon, with the same reckless disregard for expense that is such a feature of the Government shipping bill, American ships could have been procured. Another statement often made, is that there are no American sailors, that they have deserted the sea. The report of the commissioner of navigation shows that in 1908, the number of American and naturalized American sailors shipped, and reshipped on vessels of the United States, were as follows: Americans (born), 52,065, Americans naturalized 28,713. For the year 1914, the figures respectively were 63,247, and 31,417. The figures do not include seamen shipped abroad before consuls on American vessels. The explanation of the fact that there are not more merchant vessels engaged in the foreign trade under the American flag, may be found in the further fact that our laws have heretofore made such ventures unprofitable. The American capitalist, confronted with the problem of more expensive ships, and greater operating expenses, could not play the game under the American flag.

The conditions were too unequal. Hence he went to sea under foreign flags, for reasons that will be hereafter given. There was nothing unpatriotic in this action. It was due to precisely the same economic causes that impel American capital to establish factories abroad, when conditions at home forbid the operation of a like factory at a profit. In both cases the capitalist acts under compulsion. For many years we have discussed the subject of a merchant marine, and the plans for its rehabilitation. Of course the obvious thing to do, was to repeal the entire body of laws that handicapped our capital in this direction. But for a long time neither party apparently has been willing to do this. The Republican Party naturally turned to subsidies. This was an extension of the protective, or bounty principle, to the high seas, and if put into operation on a sufficiently comprehensive scale, would undoubtedly have established a merchant marine. A law providing sufficient bounties to overcome the handicaps imposed by law would have restored competitive conditions. For many years subsidy bills on a tentative scale were introduced in Congress, but for one reason, or another, they were never successful. The latest offering in the way of a remedy is the Government ownership bill.

This measure, like the subsidy scheme, proposes to use the Public Treasury to establish a merchant marine, but the ships are to be Government owned, and Government operated vessels. Individual enterprise, and initiative will be effectually eliminated. The same comment may be made on this project, as on the subsidy device, namely, that if a sufficient use is made of public money in this direction, a merchant marine will undoubtedly be afforded. This country is able to have any bauble that it craves, provided that it is willing to pay the price. But as compared with the subsidy remedy for a failing merchant marine, the Government ownership solution contemplates a much more lavish use of Treasury funds to attain the desired end. It is obvious that as between furnishing the capital required to purchase, equip and operate a fleet, and furnishing only a sum sufficient to overcome the handicaps, and guarantee a dividend, a given appropriation from the Treasury will call into being a far greater number of ships under the subsidy plan, than this money would afford, if applied in the direction of Government purchase, and operation. But while this comparison indicates one manifest superiority of subsidy over Government ownership, attaining as it does the same end, by a far more economical route, this does not mean that I would support the former, unless under the inexorable compulsion of circumstances, I would be driven to make an unwilling choice. Both projects are undesirable, unnecessary, and wasteful of public money.

One is not more desirable than the other. It is merely less undesirable. One argument often urged in behalf of Government ships, is that the Government will be able to fix the rates of these carriers. Undoubtedly this will be true, but substantially it would be equally true, with respect to the subsidized vessels. If a subsidy is required to enable the ordinary merchant ship operating under the American flag, to earn a stable, and satisfactory return on the money invested, then it is obvious that the authority which furnished the subsidy, would be able to fix the terms on which that aid will be extended. The Government-ownership scheme is neither so simple, nor so universally known as the subsidy plan, which has been before the country for a number of years. Various bills on this line have been introduced in Congress, and debated at great length, in a number of sessions. But Government ownership is a plant of recent growth, one that has never been the subject of party discussion, or found a lodgment in a party platform. This latest plan for rehabilitating the merchant marine, made its bow to the public a few months ago, in what is known as the Alexander bill. A brief description of the scope and intent of this measure, will be appropriate in this connection.

This bill is something more than a proposition to empower the Government to take stock in a private corporation, designed to operate merchant ships in the foreign trade. It goes much further. It is not near Government ownership. It is Government ownership in a transportation venture, or a series of such ventures, on the high seas. The title of the bill will best describe its intent and purpose. In its very language, it is a bill "to authorize the United States, acting through a shipping board, (and in this connection I may cite the familiar maxim, Qui facit per alium, facit per se) to subscribe to the capital stock of a corporation to be organized under the laws of the United States, or of a State thereof, or of the District of Columbia, to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes." There is no mistaking the plain meaning of the words used. The Government is empowered to secure its ships in anywise, and anywhere, and then equip, maintain, and operate them in the field of foreign trade.

It will be noted too that the Government may take stock in one, or in a number of corporations, but in any and all cases, the bill provides that the Government is to take not less than 51 per cent of the stock. The provision to this effect is that the United States shall subscribe to 51 per cent of the stock, and 51 per cent of each, and every increase of the same. Furthermore it is provided that when the Government has subscribed for 51 per cent of the stock, the remainder thereof shall be offered for public subscription. In the event it is not taken by private parties, the Government may further subscribe at par, for an amount of such stock, equal to that not taken by public subscription. The administration of the law will be in the hands of a shipping board, under the direction of the President. The initial appropriation is $10,000,000, and an emission of Panama bonds to a total amount not to exceed $30,000,000 is also provided for. It must be plain, even upon this bald statement, that sensible investors will not put their money into this enterprise. There is no guaranty of dividends on the stock reserved for the public, and no intimation given, that the enterprise is to be run with a view to making profits. Indeed the President in his message of December 8, 1914, seems to think that it is our national duty to afford the means of transportation, in advance of the development of our trade with our neighbor States of America. I quote his language:

> The routes of trade must be actually opened by many ships, and regular sailings, and moderate charges, before the streams of merchandise will flow freely and profitably. The Government must open these gates, and open them wide; open them before it is altogether profitable to open them, or altogether reasonable to ask private capital to open them at a venture. It should take action to make it certain that transportation at reasonable rates, will be promptly provided, even where the carriage is not at first profitable; and then when the carriage has become sufficiently profitable to attract, and engage private capital, and engage it in abundance, the Government ought to withdraw.

Confronted by this plain statement that ordinary business considerations of profit and loss, will not be regarded in the operation of the Government ships, as well expect the fly to enter the spider's parlor, or the bird to be entangled in the net that is spread in his sight, as to entertain the hope that private capital will take stock in this Government enterprise. When will these lines become profitable, and when will private capital find it to their interest to take them over? Conceding that in time the Government ships will develop a trade with South America that will furnish cargoes for merchant ships, is any assurance thereby given, that private capital will find any profit in the competitive conditions under which these cargoes will be transported? Neither to-day, nor in the past, has our private capital been unable to furnish ships, and secure cargoes in the

ocean carrying trade. The crux of the matter has been the ability of our competitors to underbid us at existing rates. There is nothing mysterious about the disappearance of our merchant marine from the high seas. That disappearance was due to very obvious and readily stated economic conditions. The would-be American shipowner, was hopelessly handicapped by restrictive legislation, that only recently, has been repealed in part. In the first place, as a result of this legislation, the prime cost of his ships was greater than that of the vessels of his competitors. In the second place, his operating costs were greater. Under these conditions competition was hopeless. Inasmuch as the imposition of the restrictions is responsible for the disappearance of our merchant marine, the obvious conclusion is that the restoration of that marine should be sought in the repeal of the legislation which imposed the restrictions.

In other words, the "way to restore our merchant marine is to equalize competitive conditions," by first repealing the laws that created the inequalities. The subsidists seek to attain the desired result of equality through subsidies. On the other hand, the advocates of Government ownership would fain establish a marine that would be able to defy competition and disregard losses, since supporting it, would the Treasury of the United States. The simple method, one that is obnoxious neither to the criticism that is directed against subsidy, nor to the still graver objections that may be urged against Government ownership, is to afford American capital a free field, and no favors, on the high seas.

This course will in no wise interfere with the status of labor in the United States. But the protective system can not be applied to the unlimited competition which prevails on the ocean. Hence at present the American shipowner can not sell "transportation at the market rates." The passage of the registry bill was a long step forward, and removed the main stumbling block in the way of the restoration of an American marine. The establishment of such a marine is not, as suggested by the advocates of direct subsidy, and of Government ownership, a task beyond the ability of American capital. On the contrary for many years, a large amount of American money has been invested in merchant ships, under foreign flags. Many of these ventures have been singularly successful. Indeed, "the foreign-built ships representing American capital, but under foreign ownership of record, have been nearly equal in tonnage to the ships registered under the American flag, for foreign trade, and in carrying power, have been even greater."

The explanation of this is very simple. American citizens have always enjoyed the right to own vessels built abroad, and to operate them under the American flag in the foreign trade. But under the registry law, these vessels could not enter the ports of the United States, save under heavy penalties.

For a third of a century this registry law has been "utterly impotent to promote the building in the United States of ships intended for the foreign trade." Hence American capitalists desiring to invest in ships for that trade, exclusive of the United States, bought their ships abroad. In the operation of these ships, they were in no wise hindered by our laws, until they attempted to enter the ports of the United States. There they were confronted with heavy penalties, whether they were in cargo, or in ballast. This state of things compelled the American capitalist to go one step further, in his efforts to enter the carrying trade of the world on terms of equality with his competitors. All nations require that the owner of merchant ships flying their flag, must be a citizen, or subject of that country; but a corporation created under its laws, is regarded as such a citizen, or subject.

Taking advantage of this ruling, and with a view to using their foreign-built ships to engage in trade with the United States, our capitalists have in many instances, organized corporations in foreign countries, retaining in their hands the control of the stock in these corporations. Thus in another name, and under another flag, American capitalists, driven to this course by the foolish restrictions of domestic laws, have entered the field of foreign trade, and prosecuted it with profit, and success. It is idle then to say, that this same capital under equal competitive conditions which can be afforded by the United States, is incapable of supplying and successfully operating merchant ships under the American flag. It may be admitted that subsidy universally applied, would equalize these conditions, but recourse to a subsidy is unnecessary, and undesirable. Not only in the past has the American capitalist seeking to fly the American flag on his vessels, been handicapped in the purchase of his ships for the ocean-going trade, but with respect to wages, berth accommodations, food, and other things costing money, he has been at a further disadvantage by reason of the positive requirements of our laws. In consequence of these handicaps, he has been driven from the use of our flag. There is nothing in Government ownership, that will operate to remove the handicaps falling within the latter class. Indeed, as these ships will not be operated with regard to considerations of ordinary commercial profit, it may be reasonably expected that in time the requirements in the above respect will be made more exacting, thus enlarging the effect of the handicaps, widening the gap between the operating expenses of American ships, and their foreign competitors, increasing thereby the advantage of the latter in the struggle for business, and in the result, magnifying the charge upon the Treasury, that Government operation, to accomplish the ends designed, will of necessity impose. Obviously the greater the loss at which these ships will be run, the greater the charge upon the Treasury.

So long as these handicaps exist, pray tell me when will the time arrive that private capital will be willing to assume them, take over the South American trade which the Government ships are intended to develop, and at the competitive rates then existing, pay the dividends that ordinary business sagacity would require to place the private venture on a paying basis? American capitalists would naturally prefer to operate under the American flag, but they can not afford to do so at a loss, being at a distinct disadvantage in this respect, with the Government ships. Until conditions are equalized, the Government lines which carry freight at a loss, will never be replaced by private lines. The hope that such will be the case, is an iridescent dream.

A plentiful supply of ships will not necessarily secure trade. Ships and rates and service are all required to attain this result. Will the Government ships be able to meet, or underbid the ships of their competitors, and at the same time be operated at a profit? This is a question no advocate of this bill has undertaken to answer in the affirmative. The President who will have paramount authority over the practical administration of the law, frankly suggests many ships, and lines to be run at a loss, until in some unfixed, and probably remote period of the future, the enterprise will become profitable. Then the Government is to withdraw. If it is agreed that Government ships under the conditions of open competition on the high seas, are to be operated at a loss, then to what extent, and for what length of time will the people of the United States be willing to support this loss? How long will they be willing to see domestic interests, and domestic development intimately related to the whole economic fiber of the country, starved and stunted to afford the means to maintain this fad of a Government marine, this costly toy that neither the farmers, nor the commercial interests of the country have demanded, but which they are asked to support, to the exclusion of legislation in which they are vitally interested, and upon which they are clamorously insisting?

Why is the legislation plainly demanded by our platform, neglected, disregarded, and set aside, in favor of a scheme that is in flat contravention of the unmistakable terms of that instrument?

The figures that are given of American commerce include imports as well as exports. Neither the American nor the foreign exporter will use the Government ships unless, as has been indicated, these ships as to rates, sailings, and facilities meet the ships of their competitors on equal terms. No amount of rhetoric over a waning merchant marine, no confusing mass of bewildering figures, should be allowed to becloud the fundamental factors of this problem which are that cheap ships, must be met with cheap ships, and moderate operating expenses, with operating expenses equally as favorable. If Government ships will be able to meet these requirements, then why not privately owned ships? The Commissioner of Navigation has pointed out that the vast expansion of the German merchant marine was due to cheap ships, and cheap labor. Cheap ships under recent legislation are within the reach alike of private capital, and of Government enterprise, but Government ships are not likely to furnish an illustration of economic operation, or cheap labor. The head of one branch of the present Government has recently indicated his ability to effect an annual saving of many millions in his department, without detriment to the public service, provided he is allowed to contract with private persons.

No, Government ships will not mean cheap labor, or reduced operating expenses. Hence they will not solve the problem of labor competition, and until that problem is solved, Government ships will be operated at an inevitable loss. Moreover should the foreign Governments subsidize their merchant ships, and thereby enable them to afford even lower rates than at present exist in the ocean-going trade, our Government ships must meet that competition with equal rates. This will mean a consequent increase of operating loss, and of burden on the Treasury. But if it is insisted that these ships may be, and will be, run at a profit, though the method of that process has not been indi-

cated, the reply is easy, that the way to such profitable operation, if it exists, is as open to private capital, as to public enterprise.

The argument that this enterprise is too great for private capital, using as an analogue, the construction of the Panama Canal, is singularly fallacious. The construction of the Panama Canal was placed on the ground of an alleged military necessity. It was a part of an alleged scheme of national defense. Considerations of commercial return have been totally disregarded in the prosecution and maintenance of that enterprise. Its construction was beyond the ability of private capital merely in the sense, that private capital would not have been available for a work that offered no inducement of return on the money invested. If dividends had been guaranteed, private capital would have been forthcoming. But it will be an ill day for the advocates of this new departure in Government activities if it is conceded that in a commercial sense, having in mind the money invested, and the possible returns on that investment, the Government ships will entail a greater, or even as great a charge on the Public Treasury, as that military enterprise known as the Panama Canal. But to return to the suggestion that this field is too vast to be occupied by private capital, a suggestion intended to support the argument that the one solution of the present problem, is Government ownership. Apparently this field has not been beyond the powers of foreign capital. Is this country so lacking in capital, and commercial ability, that in the United States the Government must undertake the tasks that are realized abroad by private enterprise? How many of the thousands of merchant ships flying the flags of Great Britain, Germany, France, Norway, Sweden, Russia, Japan, Spain, and other countries, are government ships? Practically none of them. Comparatively speaking a few of these vessels are under military contract, and the remainder, constituting the great bulk of the world's merchant fleet, are privately owned, and privately operated. If it is maintained that Government ships can be operated at a commmercial profit, it behooves the advocates of this enterprise to point out why the road to this result will be closed to private capital which, in the matter of securing ships, and operating the same, will certainly, to say the least, be on an equal footing with the Government. The total amount carried by this bill is $40,000,000. Having in mind the proportion of this amount that would be available for the direct purchase, or construction of ships, this sum would secure a fleet of from 40 to 60 ships of 10,000 tons each, gross tonnage.

Surely if the opportunity of profit is afforded, it is not beyond the ability of American capital to furnish a merchant fleet of this size, with which to enter the carrying trade of the world. This modest fleet would admittedly make but slight impression, under any circumstances, on a carrying trade, now conducted by over 20,000 vessels and amounting to over 49,000,000 tons. Even if these Government ships were now in service, they would to no perceptible degree improve conditions that are due to abnormal causes. If the expenditure in this direction is to be limited to the appropriation in the present bill, then the game will assuredly not be worth the candle. If, on the other hand, this is but the initial step under an ambitious scheme of indefinite development, how many hundreds of millions will be taken from the Treasury in furtherance of this project. Our party platform commits us in this connection to the use of our constitutional powers of regulation of commerce to foster a merchant marine which shall develop and strengthen the commercial ties that bind us to our sister Republics of the south, without imposing additional burdens upon the people, and without bounties or subsidies from the Treasury. Will the prodigious appropriations attendant on the development of this enterprise, be regarded as a constitutional regulation of commerce, free of burden for the people?

If we are to attack the trust monster on the high seas with a mobile array of ships, at least set down in black and white, what will be the probable ultimate cost of this enterprise?

That portion of the appropriation carried in this bill, which will be available for the purchase of ships, after providing for terminals, operating expenses, and other necessary incidental features of the enterprise, will afford but a trifling fleet with which to challenge our competitors for the carrying trade of the world. The effect of such a fleet upon general conditions would be entirely negligible. Additional ships would require additional appropriations on a large scale from the Public Treasury. The use of these ships will certainly not serve to aid the development of a private merchant marine. On the contrary, they will be a distinct check upon the development of such a marine.

One claim often made for these ships, is that they will be used to afford moderate charges in the ocean carrying trade. How will they be utilized to effect that end? Will privately owned ships which must earn enough to pay operating expenses, pay dividends on the investment, and provide a fund for replacement, be in a position to compete with ships that will be able to boldly disregard these considerations? Will the Government ships charge the rates established by their private competitors, or will they underbid them, without regard to the conditions which establish those rates? How can "Government ownership, combined with Government management," be to the advantage of investments already made in shipping, or how will they serve to induce further investments, when the conditions of competition between the two ownerships, will be so distinctly unequal? If rates are thought to be too high at a port, will Government ships be sent there to reduce them, and afford a lower carriage? Even under the theory of this bill the number of Government ships for many years to come would be comparatively small. Hence they would be inadequate to afford moderate rates to all of the American shippers seeking transportation. Moreover the advantage of the reduced rates thus afforded, will be at the cost of the general taxpayers, and to the distinct disadvantage of the shippers who will be unable to secure a place on the Government ships. How will the Government determine between the competing shippers, and ascertain who should be taken, and who should be left? All will be equally entitled to the service, and even should this policy be inaugurated, and vigorously maintained with lavish appropriations, it will be long ere the supply of Government ships will be sufficient to afford general service, or affect the general average of rates to any perceptible degree. How will the meager supply of ships that the initial appropriation will afford, be used to effect the double purpose of securing trade with South America, and steadying rates in the trans-Atlantic, and trans-Pacific fields? Should abnormal and unreasonable rates prevail at any port, or ports, on either seaboard, will the Government ships be withdrawn from their regular sailings on the South American lines, and hastened to these ports to reduce, so far as possible, the excessive rates? Otherwise, how will these vessels be used to steady conditions, and maintain regular and moderate rates at the various ports of the United States?

It is the fond dream of some of the advocates of this bill, that Government ships will protect them, and all future American shippers, against those fluctuations in rates which proceed in most cases from sufficient natural, and economic causes. With this end in view, as the goal to be obtained through Government ownership, it is apparent that we are but at the threshold of our appropriations under this head. To attain this result, conceding that it is feasible, a gigantic fleet will be required, calling for vast appropriations to provide both the original ships, and furnish replacements from time to time. The opponents of ship subsidy, who are supporting the Government-ownership bill, seek in vain to establish the consistency of their attitude. With uplifted hands they declare their eternal and unshakable opposition to subsidy in any form, and almost in the same breath commit themselves unreservedly, to a measure which combines the fundamental principle of Government aid, with other and far more objectionable features. Ship subsidy was an endeavor to apply the principle of the protective tariff to the ocean carrying trade. It frankly announced its purpose to use the Public Treasury to secure in the ultimate, certain alleged large results of public welfare, and national prosperity. The justification of this use of public funds was the end to be obtained. The alleged public benefit, was to be of so universal and comprehensive a character, that the advantage to be given to the private shipowner in the conduct of his enterprise, was regarded as a negligible incident of the entire scheme. These same results of public benefit on a nation-wide scale, are claimed for the Government-ownership bill, which proposes to maintain steamship lines out of the Public Treasury, and charge the inevitable attendant losses upon the whole people.

One basic principle common to both projects, is that in consideration of the public gain from the stimulus to be afforded to industrial enterprise, and the ultimate reestablishment of a merchant marine, the General Treasury should be utilized to secure these results. Hence inevitably the advocates of Government ownership, can not in principle, and good logic, justify their antagonism to subsidy, though the subsidists may consistently oppose Government ownership, since the latter scheme superadds to the principle of Government aid, other and far more dubious and undesirable features. I am aware of the hair-splitting distinction presented by the advocates of Government ownership, in their efforts to distinguish the two propositions, but the defense is purely technical, and ignores the real merits. Both schemes contemplate the use of public money in a commercial enterprise, upon the alleged ground of far-reaching

public benefit. In both cases, the public is to pay the bill. Neither enterprise will yield any return to the Public Treasury directly, or indirectly.

It is frankly claimed in support of both propositions that the Government ought to utilize its resources, that is to say the Public Treasury, in such manner as will inure to the benefit of all the people. Having in mind then that the fundamental appeal in behalf of both propositions is the same, it follows that the efforts of the antisubsidists to maintain their position that subsidy is vicious and unsound, while Government ownership is a proper and desirable exercise of Federal authority, requires a power of subtle analysis, and acute differentiation, exceeding that of the scientist who "could distinguish and divide, a hair 'twixt south, and southwest side."

Moreover it will be noted that the ground now taken in behalf of this measure, is in conflict with the attitude of the President as expressed by him in his message on the Panama Canal tolls. In his message of March 5, 1914, urging the repeal of that provision of the Panama Canal act of August, 1912, which exempted vessels engaged in the coastwise trade of the United States, from the payment of tolls, the President stated, among other things, that in his mature judgment, the exemption constituted a mistaken economic policy, from every point of view. The argument, briefly stated, for the remission of tolls on coastwise traffic, was that such a policy would stimulate enterprise in our coastwise trade, would develop business in our coastal cities along many lines of profitable industry, and would furnish to consumers generally, the benefit of low rates on all merchandise passing through the canal, and related to our immense internal commerce. In view of these extensive results of public advantage, it was urged that as to coastwise traffic, the general public should carry the burden entailed by a remission of the tolls upon this traffic. The advocates of repeal assailed and rejected this argument, though it is identical in substance, with the one now advanced in support of the present scheme of Government purchase, and operation of merchant ships. Concede that under our present laws, American capital can not profitably operate merchant ships on the high seas, and it will be apparent that the Government, owning and operating such ships under the same laws, and the same conditions, will confront an inevitable pecuniary loss, so that the enterprise will be, in essence, a charge on the Public Treasury. Hence the argument for this project, and the argument for the remission of tolls on coastwise traffic, are precisely the same, namely, that the Public Treasury should carry the burden of an enterprise which, in the larger view, is alleged to be for the benefit of all the people.

But if this be true as to this enterprise, there are many others, ready and waiting, to be taken over by the General Government. Concede that the Government is justified in conducting a failing enterprise of a public character, on the ground that the lower rates afforded, will not only benefit that portion of the public which pays those rates, but in the result, will stimulate the general welfare and prosperity of the country at large, and you have conceded a fundamental tenet of socialism.

There are many projects of government ownership that may be tried out, if it is once admitted that it is a sound economic policy for the Government to conduct public service enterprises, without regard to the usual considerations of profit and loss, the one determining question being to afford the public lower rates than can be afforded by private capital engaged in a like enterprise. Of course an agency that can saddle its losses on the Public Treasury, has an enormous advantage over a competitor that must seek to attract capital, by offering a reasonable return on the money invested.

The question of the constitutionality of this scheme might well be raised, if time admitted, since the major portion of the ships that this bill is intended to provide, are not for the purposes of national defense, but for use in the ordinary course of foreign trade. As a counter to the objection that the Government will furnish this service at a loss, the reply is sometimes made, that the operations of the Post Office Department are not conducted at a profit. But the cases are not analogous. To conduct and maintain a postal service, is an express government function. It is not a function of the Federal Government to take stock in a chartered corporation, and conduct a competitive transportation enterprise on the high seas.

A Government marine will inevitably become a Government monopoly, and as it waxes in the domain of foreign trade, the private marine will wane. It is secure against competition, and once in possession of a field, it will hold it to the exclusion of private capital, which is unable to disregard the element of loss in its ventures.

The mission of the Government ship, according to the forecast given of its purpose, is to open up trade, even if unprofitable rates are to be charged, and as a sort of knight errant, to reduce all rates deemed to be unreasonable. Such a ship is not engaged in a mercantile venture, in the usual acceptation of the words. It is neither purchased, nor operated with a view to a profit on the money invested. Between such a vessel, and one that must have in mind a return on the prime investment, the conditions of competition are decidedly unequal. Indeed it may be fairly said, that competition between such vessels, will be impossible. Conceding that the Government ships, in the public interest, should afford reasonable rates, even at a loss, it would seem to follow that the minimum rates would afford the maximum public service. Hence a constant pressure will be exerted by the exporters, the importers, and the consumers generally, under the specious plea of the general interest, to reduce the rates for service on the Government vessels. The exporters of a nation which affords cheap carriage, will certainly be able to underbid their competitors for the trade of the world. Hysteria, misinformation, and hasty judgment, are responsible for much of the local sentiment in favor of Government ships. For instance at this time the rate is very high on cotton for Bremen. Straightway the specious argument is advanced that Government ships would reduce those rates, and advance the price of cotton. How, and in what way? These ships would operate under the same conditions, and incur the same risks as private ships. The rates to Bremen are high for the manifest reason, that the dangers of the voyage are very great, and the risks to be incurred are unusual. For one thing, the North Sea is full of floating mines, and within the last few days neutral ships carrying cotton, have been destroyed by collision with these mines. Private owners are unwilling, and reasonably so, to take these risks, as well as the additional risks of search and detention, for the rates prevailing before war was declared. Under these circumstances high rates are inevitable. Would a Government ship ignore these risks, and without regard to mines, search, or detention, carry her cargo at the ante bellum rates? Ordinary business foresight should not be disregarded, even in the management of a Government ship, and in the exercise of this foresight, such rates should be charged as will be reasonably commensurate with the risks to be incurred.

There is no sufficient evidence to show that the high rates to Bremen are due to any shortage of ships, or to any other cause than the dangers attendant upon a present trip to that port. If the ocean rates are high to-day, they are due to abnormal causes. "A high level in rates is always coexistent with a general war, and can never be covered by the building of new tonnage during the war." Having in mind the aggregate number of neutral ships in the world now engaged in the ocean-going trade, and the number of ships of the allies that are free to ply the ocean routes, the ships that could be purchased under the appropriation provided by the Alexander bill, would make no impression either on rates, or on general conditions. The total number of ocean-going steamships in the world of over 100 tons, is over 23,800. Deduct from these the German and Austrian ships (2,523), and the remainder is 21,277. Deduct from this an estimated number of 1,000 English, French, and Russian ships destroyed, or withdrawn from commercial work, and there will still be available for cargo carrying purposes, 20,277 ships. "The destruction of practically all of the hostile ships lately preying on nonneutral tonnage will also tend to restore to regular service ships that were temporarily withdrawn from that service," and thus aid the tendency to a lower basis of freight rates. If a proportion of ships have been withdrawn from trade, it must not be forgotten that a simultaneous withdrawal of cargoes also occurred. If there are fewer ships to-day, there are fewer cargoes to be served. Hence in view of this shrinkage in business, I feel well assured that there is no real shortage of ships on the whole, and that so far as numbers are concerned, the present ships are adequate to handle the present traffic, when cargoes and rates are assured. Prior to the war there were more ships, than are at present in service, but the traffic was far greater.

One potent cause of the temporary accumulation of export cargoes, in certain American ports, has been the difficulties and delays with which cargo ships seeking to unload in foreign ports, have been confronted. The congestion of traffic in those ports has been largely due to a shortage in dock laborers, and to the requirement that ordinary commercial traffic must yield to traffic related to the military situation. Government cargo ships would not meet, or rectify this situation, since they would be compelled to wait their turn at the docks.

The high rates to Bremen from Galveston, and other American ports have been due not to lack of ships but to danger to ships on the voyage, due largely to floating mines, a menace that has caused Dutch pilots to refuse to take neutral ships

into German ports. Indeed several neutral ships carrying cotton to Bremen have been destroyed by these mines. Remove these dangers, and the rates would decline to the present level of ocean rates. Once make it as easy for cotton to reach Germany, as England, France, or Italy, and the price of cotton in Germany would fall to the level of prices prevailing in those countries, and in the world generally. Hence Government ships to Bremen would not increase the prices of cotton to the cotton producer in the South. If the rates to Bremen were not anomalous rates, due to abnormal causes, and commensurate with the risks to be incurred, there would be a rush of cargo ships from every portion of the globe, to take advantage of this peculiar and unusual get-rich-quick opportunity. But the foundation for this misleading and fallacious cotton argument will soon disappear, for the price of cotton is advancing, while cargo rates for this particular product will gradually become normal.

Cotton was more severely affected by the war than any other American product, and its recovery has been proportionately slow. Hence the appeal that has been made to the cotton producers to support this Government-ownership proposition.

Information as to the alleged shortage of ships at Galveston for export cotton, is to the effect that various steamers left that port in ballast, for lack of cargoes. One ship seeking cargo freight left Galveston in ballast for Portland, to take on a cargo of wheat for Europe. The truth is that cotton exportation was demoralized through the falling prices, and the disorganization in financial channels. The immediate decline in cotton upon the outbreak of the war was due to very obvious facts, the two main facts being that the German and Austrian markets were closed, while the English spinners agreed not to purchase for the time being, for the manifest reason that they could not afford to purchase on a declining market. Of course this action accelerated the decline until bottom was touched. Since then under improved conditions, and renewed purchasing, cotton has steadily advanced. It is now 9 cents in New York. Naturally, however, the cotton planters, and cotton dealers under the pressure of exasperating conditions due to causes beyond their control, have been disposed to listen to any alluring scheme that confidently promised relief.

It is a significant fact that the industries that have been stimulated by the hostilities abroad, have not been clamoring for Government ships, or complaining of a lack of transportation facilities. Since the outbreak of hostilities the sale of automobiles for war purposes has been over $9,000,000, while the total of war business in iron and steel is estimated at $41,000,000 to date. Exports of woolen goods to supply war orders began at $296,940 in August, and reached the sum of $3,047,000 in November, the aggregate to January 1, 1915 being probably $8,500,000. The export of leather products for military purposes totals to January 1, about $33,000,000. Sugar exports have also been active, totaling probably to date about $17,000,000.

Wheat exports totaled in December 1914, 28,875,470 bushels, or five times the quantity in December 1913, the average export price being $1.25 in December of this year, as against 98 cents one year ago. Are the wheat farmers complaining of prices, or asking for Government ships. The flour exports for December 1914 were $9,473,660, as against $4,903,223 in December 1913. Oats showed a larger total in December than during the entire calendar year of 1913, being 5,203,431 bushels, as against 30,798 bushels in December 1913.

The corn exports for December 1914 were 4,582,006 bushels, valued at $3,554,592 as against 749,124 bushels valued at $560,165 exported in December of the year before.

There are no marching armies of corn farmers, knocking at the doors of Congress, and demanding Government ships.

The figures for fresh beef exported in December of last year are 6,594,348 pounds, as against 524,430 pounds in December 1913, and 6,618,831 during that entire year. In view of the phenomenal gains in our export trade, the Department of Commerce has announced that during the month of December this trade attained regained the high level of the period preceding the war. Some ships from somewhere, American or otherwise, must have transported these huge freights. Government ships purchased from neutral nations would not add a ship to the world's supply of cargo carriers, available for present purposes.

Zinc exports have also advanced, while the advance in the exports of mineral oil has been phenomenal. The figures for the latter from August to January 1 are about $52,000,000. A gigantic trade in breadstuffs has also marked the last five months, the total being not much short of $200,000,000. The larger portion of this trade was wheat, the value of which amounted to something like $120,000,000. Two other trades that have been immensely stimulated, are the trade in horses and in munitions of war, the figures for the former being about $8,000,000. All of this vast commerce has been successfully moved, in spite of the clamor about a lack of ships. Neither the wheat farmers, the horse raisers, the steel producers, the shoe manufacturers, nor any of the other trades which have benefited by the war, have joined in the outcry for a Government marine, either to move their products, or to attack the alleged trust in the ocean carrying business.

The immense mass of undigested and unrelated figures, and statistics relating to our foreign commerce, and to conditions in the ocean carrying trade that have been adduced by the advocates of this measure, serve for the most part merely to mislead and confuse. Of what avail are attacks upon the alleged trust in the trans-Atlantic lines, when it is not proposed to attack this monopoly through competing lines of Government ships? The only one who can speak with authority as to the purpose of this bill, (for the action of the shipping board is subject to his approval), is the President of the United States. The prodigious scope now sought to be imputed to the measure finds no support in his message of December last. After a general reference to the empty markets which we should undertake to supply, and this reference would not apply to the markets of Europe served by the great ocean-going lines, he descends to details, and suggests that the routes of trade must be opened between this country, and South America, by many ships, and regular sailings, and moderate charges, in advance of any hope of present profit. When the profit accrues, the Government is to retire. This then, in the view of the President, is the task to be discharged under the authority of the Alexander bill. There is no suggestion of an attack upon the trust octopus in the North Atlantic, or that the Government ships, if they were available, would be used to brave the terrors of the mines in the North Sea, in order to reduce the cotton rates to Bremen for the benefit of the cotton producers of the South, or to reduce the rates elsewhere, for the benefit of the naval stores of Florida, or the lumber manufacturers of the country generally.

I do not know in what form the alleged opposition of the railroads and trusts to the Alexander bill, has been manifested. Certainly no protest emanating from them, or from any interest affiliated with them, has been lodged with our committee. But I do know that the chambers of commerce of city after city on the Atlantic seaboard, composed of the foremost men concerned in the industrial activities of those cities, have protested in the most vehement and emphatic terms against this measure. The great journals of trade are against it, as well as the great bulk of the independent and dispassionate papers. In this connection I cite the Journal of Commerce published in New York, and the Manufacturer's Record, published in Baltimore. Surely if this bill had a tithe of the merit claimed for it by its advocates, the benefits flowing from its passage would descend in the very largest measure upon the port cities of the country. Yet the representative bodies, and the representative thought of these marts of trade, and commerce, seem to regard this measure as a Trojan horse that will bring mischiefs, not benefits, to their communities. Recent figures show that in spite of the tie-up of ocean shipping during the early period of the war, and despite the reduced purchasing power of the nations that are affected both directly and indirectly by the war, in their ability to take our exports, the volume of trade of this country for the year 1914 was astonishingly large. Our imports for 1914 were $1,789,022,426, as against $1,792,596,480 in 1913. Surely the ships that brought to this country the goods representing this gigantic sum, have been available for the return traffic which fell far short of the figures of 1913, due to the reduced purchasing power of our foreign customers!

Every carrier is on the lookout for a return cargo, and the ships that handle our imports do not return by choice in ballast. Evidently the ocean has not been bereft of carriers during the last 12 months, since in addition to their other activities they have brought to this country goods to a value exceeding one and three-quarters billion of dollars.

As far back as August 20, 1914, a leading ship broker of New York, Mr. L. L. Richards, in a letter to President Wilson, which is filed with the minority report, stated that the claim then preferred that transportation for the products of the United States could not be procured, was unquestionably contrary to the facts. He affirmed that transportation was available, and plenty of it, but that the difficulty in the way of the merchants, was one of credits and exchange, with only a limited amount of buying orders. Mr. Richards added: "The practical situation at present is that there are more steamers offering, than cargoes available. We have great difficulty in getting any definite proposals at all for boats, especially for shipments to South American business, but at this moment, one can count on his fingers, the actual definite orders which merchants hold for steamers." Since that time the situation has steadily improved. The menace of German cruisers has definitely disappeared,

and the volume of available steamers is fully equal to handling the reduced volume of the world's commerce.

In support of this contention that ships and cargoes are in the same relation of proportion as before the outbreak of the war, that a shortage in the one, has been paralleled by a corresponding decline in the volume of the other, I wish to call attention to the fact that a statement recently issued by the custom's administration of the French Government, shows that the exports of that country have diminished in value to the extent of $400,000,000, in 10 months of 1914, as compared with the same period of 1913. The volume of commerce throughout the world has been affected in the same harmful way. Evidently in Germany, and Austria, the decline has been more violent, and extensive than in France, though the figures are not available.

There are many misconceptions relating to the effect and extent of subsidies upon the merchant marine of foreign countries. The latest available figures show that the United States pays subsidies in the way of mail pay, $2,695,287. These payments are made under the ocean mail act of 1891.

It is often said that the merchant marine of Great Britain is maintained by subsidies. Nothing can be further from the fact. The subsidies paid by that country are chiefly under the head of mail pay, and are designed to make the ships to which they are paid, parts of the British Navy in the event of war. The ordinary merchant carrier receives nothing from the parent Government, and is dependent upon its own exertions to find business, and pay dividends. Military features are contained in practically all of the great ocean mail contracts of foreign countries. France and Spain pay the largest navigation bounties, and in the matter of merchant marine, they are inferior to a number of their European competitors. England has 11,328 ocean-going vessels of all sorts, of 100 tons and over, and in subsidies and mail pay, for the parent country, and all the colonies, she expends the sum of $9,689,384, or something over three times the amount paid by the United States for mail pay. By far the larger proportion of the payments made by Great Britain are for mail pay, under military contracts. In the same year for which the above figures are given, Germany paid for mail subsidies only $1,706,460, or less than that paid by the United States. Yet the German merchant marine is second to that of Great Britain. France which has a merchant marine inferior to that of England, Germany, Japan, Norway, and Sweden, pays more in the way of subsidies than any other nation in the world. Her payments on that account being $13,423,737. These figures reveal the utter hollowness of the contention that the great carrier nations have built up their merchant marine through a system of universal subsidies. Enterprising men in those countries have built cheap ships, reduced their operating expenses to a minimum, and thus equipped, have gone on the hunt for ocean freights.

The statement that the Government must grapple with this problem as being one beyond the ability of private enterprise, is a trifle ludicrous in the light of the facts. Of course any enterprise that is made impossible of profit by destructive legislation is, in a sense, beyond the reach of private enterprise, since private capital will not be invested under such conditions, but there is no profit bearing enterprise that presents a problem incapable of solution by American capital. Some years ago a single capitalist in Chicago offered to take over the entire operations of the Post Office Department. No one ever doubted that he would afford a service fully equal to that rendered by the Government, at a handsome profit to himself, and an annual saving of many millions to the Public Treasury. This is the richest country in the world, as shown by the following table of the estimated wealth of the great nations, for the year 1914:

United States	$150,000,000,000
Great Britain and Ireland	85,000,000,000
Germany	80,000,000,000
France	50,000,000,000
Russia	40,000,000,000
Italy	20,000,000,000
Spain	5,400,000,000
Netherlands	5,000,000,000

In view of these prodigious figures, in contemplation of a wealth that exceeds that of Great Britain, and Ireland by $65,000,000, who will undertake to say that any enterprise in which England has succeeded, is beyond the powers of private capital in the United States? Just as in war the weight of the greater mass, properly directed, will tell against an inferior opposing force, so in any field of competition, under equal conditions, will our excess wealth of $65,000,000, over that of the richest nation of Europe, assure success. What England has done with $85,000,000,000, we can do with $150,000,000,000, now that the bars are down, and our capital is free to buy its ships where it will. If further aid is needed to equalize conditions, that aid must be afforded in the exercise of our power of constitutional regulation. Why say that private capital in the richest nation in the world is unequal to the task of furnishing a merchant marine, when little Holland with a wealth of $5,000,000,000, has 806 merchant ships, with a tonnage of 1,500,000 gross tons?

So far as this country is concerned, our competitors have simply underbid us, by using modern steamships which have been built more cheaply abroad than in the United States. Our domestic laws have hitherto precluded American capital from the use of these vessels in the American trade.

The recent registry law has removed the handicap of cheap vessels, but the other handicaps still remain to confront private capital, as well as Government ships. As has been pointed out, the operating expenses of Government vessels are likely to be much greater than those of privately owned ships. Congress would soon be called upon to fix the wages, establish the hours, and improve the accommodations of every employee on these ships. We will be compelled to legislate in relation to them, just as we are legislating to-day with respect to rural carriers, city carriers, naval and military employees, and many thousands of other servants of the General Government. One main purpose of Government ships is avowed to be to maintain moderate rates. This being so, such ships will not be in a position to take advantage of advancing rates, to meet an increase in their operating expenses. Should they charge rates not deemed moderate, they will fail to accomplish the purpose for which they are intended, namely, to furnish carriage, and steady rates, in the whole ocean-going trade.

The most incredible claims, and extravagant statements have been advanced by the various advocates of the Government-ownership bill. For instance in a document included in the Senate report on the shipping bill, I find that the assertion is made—

> that the $40,000,000 carried in the bill, will not be an expense, but will be an investment of the first class, without considering the enormous advantage to the whole people of the United States, in having an American merchant marine under Government control, and the great reduction in rates that will be possible, as the Government will not desire net earnings of from 30 to 40 per cent on its investment, but will be content with only a fair return.

If it be true that there are from 30 to 40 per cent net earnings to be secured from an investment in merchant ships to ply the high seas, I wonder that any portion of the abundant surplus of American capital that has been eagerly seeking investment in every direction, has been content with the modest returns that investments on land have yielded during many years past.

The field of the sea has been freely open to the shrewd and able men who handle that capital, and it is a reflection upon their intelligence, that they have allowed such golden opportunities to escape them. With such profits in sight, capital operating even under the handicaps of the American flag would have secured a highly satisfactory return. But against the foregoing contention, of possible profit for the Government ships, I set the statement of the President's message, to the effect that the Government ships must open the gates, and open them wide; open them before it is altogether profitable to open them, or altogether reasonable to ask private capital to open them at a venture. And his further statement that the Government should take action to make it certain that transportation at reasonable rates will be promptly provided, even when the carriage is not at first profitable; and then when the carriage has become sufficiently profitable to attract and engage private capital, and engage it in abundance, the Government ought to withdraw. The plain intimations of the message are that the Government ships are neither to enter upon the routes which are presently profitable, nor to remain upon the routes that become sufficiently profitable to attract private capital. But if the Government ships are to be engaged in affording transportation for prospective and problematic cargoes, how will they be able to serve the purpose of reducing rates on established routes, and in addition, affording that steadiness of control which the Senate report alleges will furnish an element of aid to the privately owned transportation lines? How shall we reconcile the conflicting claims that are made for this measure, in the hope of securing support in a variety of quarters. For instance the Senate report declares that the bill will "create work for our shipyards in the construction of ships." This is a bid for the support of the shipyards. But it is a well recognized fact, indeed a postulate in this whole discussion, that the chief agency in the destruction of our merchant marine has been the requirements of our registry laws, which have barred the way to the purchase of the cheap ships built and operated by our foreign competitors. The legislation of August, 1914, was designed to remove this handicap, and permit American capital to purchase its ships abroad, and with these ships to enter American ports, and par-

ticipate in American trade without let or hindrance. The Commissioner of Navigation pointed out some time ago, that German capital without subsidy, by means of cheap ships, and cheap labor, has built up the second largest merchant marine in the world. Now should the shipping board purchase their ships abroad in order to secure the advantage of cheaper vessels, obviously no construction work will be afforded to American yards.

On the other hand, should they cause these ships to be constructed at home, they will voluntarily assume the handicap removed by the legislation of August, 1914, and thereby increase the losses attendant upon this enterprise, with inevitable consequent demands on the Public Treasury. Again while the claim is frequently made for this bill, that it is an emergency measure, the chairman of the Committee on Merchant Marine insists that it should not be so called.

Another pretension stoutly made in certain quarters, with a view to enlisting the support of the uninformed through an appeal to their prejudices, is that this bill is a movement against monopoly in the carrying trade, and an attack upon an alleged shipping trust. If the proponents of this measure are tilting against monopoly in deadly earnest, if they really wish to serve the public by attacking a real trust, why not agree to admit the Government ships to the coastwise trade, and before sending tramp ships to the uttermost seas, demonstrate the feasibility of this scheme before our very eyes, by a reduction of domestic rates? It has been fully proved, so far as such a fact can be established, that over 90 per cent of the regular coastwise lines, are allied through interlocking directorates, with certain powerful moneyed interests. Why not admit the Government ships to this field, and permit them to ravage and destroy in this arena of private monopoly, until not a vestige of a domestic trust remains, and the people are entirely relieved from the thraldom and oppression of these monsters of horrid mien? As a matter of fact, an enormous amount of ocean-going traffic is carried by tramp steamers, which can not effect any working agreement or understanding, and while it is true that a number of established lines operating in various quarters of the globe, and handling the traffic of this, and other countries, operate under an understanding with each other, it has never been suggested that the Government of the United States should acquire and operate sufficient ships in competition with these lines, to compel a reduction in their rates.

It would take many ships, and many sailings, to make the slightest impression upon the present aggregate of ocean-going vessels. Should the Government undertake this enterprise, the mind is staggered with the contemplation of the hundreds of millions of dollars that will be required to finance the project. And until the Government ships can furnish a service as good, and rates as low, or lower than their competitors, not a pound of exports, much less of imports, will be carried in these vessels. That an attack upon the rates of the trans-Atlantic lines that handle both passengers and freight, (and if there is a trust, these are the serious offenders), is not meditated in sober earnest, is revealed by the amount of the appropriation carried in the bill. If this appropriation is expended upon the ordinary cargo-carrying type of vessel, these ships would not come in competition with the lines mentioned. On the other hand, if it is expended upon such vessels as are now being constructed for the great trans-Atlantic steamship lines, the Cunard Co., the White Star Line, and others, the amount appropriated would not secure a baker's dozen of such ships, an attacking force that if directed against the hosts of monopoly, would provoke derision.

Both the Senate and the House committees might very profitably have taken testimony to support the claims respectively advanced in their reports. Moreover if the Government ships are to retire in favor of private capital, when the carriage on the lines served by them has become sufficiently profitable to attract, and engage abundant capital, it may well be asked, what extent of profits will attract this capital? If the alleged net profits of from 30, to 50 per cent have not tempted American capitalists to take a mercantile venture under the flag of the United States, what amount of profits will tempt them? In this connection, and as touching on the question of profits in the ocean carrying trade, I will insert a quotation from a report of the Commissioner of Navigation:

> The profits of the ocean transportation business, as a rule, are moderate, the competition keen, and the risks considerable.

This scheme of a Government-owned, and Government-operated merchant marine is a new venture on an unknown and uncharted sea. There are no precedents to be consulted, no signposts to point the way. It is a dash into the unknown. Once entered upon, it will constitute a distinct movement toward general Government ownership, and operation, and cause a multiplicity of demands upon the Government to take over, and operate in the public interests, a variety of industries of a public service character. Undoubtedly the present interruptions in our commerce, the partial derangement in our trade routes, the decline of prices, and of orders, the stagnation in certain industries, and the general disturbance due to the disorders attendant upon a gigantic war, are responsible for much loose thinking upon this subject. An individual conducting, or interested in an industry which is in trouble, is easily led to the support of a project which he fondly hopes will afford some immediate relief? It is hardly necessary to say that in this instance these hopes will be blasted, and the effect of this bill upon our general trade, or the interests most injuriously affected by present conditions, will be insignificant.

From the best figures available, the price of a steel cargo ship of 10,000 tons, gross tonnage, would be about $750,000 in the American yards, but put it at $700,000. The same ship in England would cost approximately $500,000. Upon this basis, for the purposes of comparison, the expenditure of $30,000,000 carried in the bill, would secure 43 ships in America, and 60 ships in England, according to prices prevailing in both countries before the war. Should the vessels be constructed in American yards the loss incident to an expenditure of $30,000,000, would be $8,500,000. The purpose of the act of August 18, 1914, was to open the sea to American capital, by affording the opportunity to this capital to secure cheap ships. Yet the Senate report states that this bill will create work for our shipyards, in the construction of ships. Is it a part of this scheme, for the Government to buy dear ships? If it is, then this measure, if not a subsidy to American ships, certainly carries a prodigious subsidy for American shipyards. If on the other hand, the Government proposes to buy its ships abroad, then the alluring reference of the Senate report to construction in American yards, is merely words of promise intended for the ear. They will be broken to the hope.

There are to-day interned in American ports 55 German and 11 Austrian ships, or 66 in all. Many of these vessels are great passenger liners by no means suitable for use as ordinary cargo carriers. These vessels may therefore be excluded from contemplation. The remaining ships after some overhauling could doubtless be used for bulk freights. But even if purchased, the effort to use them would lead to undesirable complications with the belligerent powers, so that the war would probably be ended, before these controversies were settled, and the ships put to the use for which they were purchased. Hence a purchase in this quarter would not afford even partial present relief.

The relatively insignificant number of freighters that the present appropriation in this bill will serve to provide, would be a scant supply for the South American lines referred to by the President. Even should their initial service be in the waters of the North Atlantic, including the dangerous area of the North Sea, they would not afford the results so longingly desired in certain interested, and suffering sections of our country. The genesis of this idea of Government ownership is found in the contention often advanced, that ships are needed to enable the United States to capture the trade of South America. There is no subject upon which there is more misapprehension, than this subject of South American trade, and while I believe that an opportunity has existed for many years, and exists now in greater measure than ever before, to extend our trade in that continent, yet the possible extent of our achievements in that direction, have been greatly exaggerated. The acquisition of that trade is not dependent upon Government ships. What is primarily needed, are cheaper goods, better-packed goods, and longer credits. Our exporters will not displace the established trade of their competitors, until they are prepared to meet these essential requirements.

In the matter of transportation to South America, we are better supplied with American bottoms, than for trade with any other quarter of the globe. To-day there are registered for foreign trade in the United States 868 steam vessels, the great bulk of which are for traffic with South America, West Indies, and Central America. In an address recently made before the New Orleans Association of Commerce by Fairfax Harrison, president of the Southern Railway Co., I find the following statement:

> There has been ample shipping facilities for all of the trade between the United States, and Central and South America.

Three weeks ago one of the officers of French, Edye & Co., explained that no barrier remained in the way of freight business between the United States, and South America, so far as the steamships were concerned. All we need, he added, is for the American manufacturers to increase the sale of their goods. When we get the freight, we can supply the bottoms to

carry it. At that very time 40 steamers were expected in New York from South America. Hence the fallacy of the argument that our failure to secure a larger portion of the trade of those countries, has been due to a lack of transportation. Much of that trade has been, and will continue to be, in agricultural products that would not be taken by this country. The insistent suggestion is made that we must operate Government ships, in order to occupy the void left by the withdrawal of German ships from, and the cessation of German activities in, the continent of South America. But other nations are better prepared to secure that trade than the United States, by reason of their established connections, knowledge of the people to be served, and cheaper goods. These nations are already on the ground, and whatever we may do, they will capture a large proportion of the orders that formerly went to Germany. The countries of Italy, Spain, Holland, Sweden and Norway, are as well able as ever to maintain and extend their trade in that continent. While it is true that England and France are engaged in war, they have not abandoned their commercial activities in any direction, much less in South America, where the enforced retirement of their enemy has offered opportunities to them, as well as to this country. The possibilities in South America, for this country, have been greatly exaggerated, and in no wise justify the immediate establishment of a Government marine. There is no El Dorado for the United States in the trade of that continent, and while we will no doubt in time profitably extend our connections in that quarter, the results will not be dazzling. Success will depend upon agencies, and activities other than Government ships.

Criticism directed against American capital by the advocates of this preposterous scheme of Government ownership, creates an erroneous impression both as to the ability and the disposition of this capital to establish a privately owned marine, such as is found in every other maritime nation in the world. American capital has failed to enter this field for the simple, oft-repeated, and obvious reason, that our domestic legislation has rendered the conditions of entry impossible. Now that these conditions of inequality have in large part been removed, and before the opportunity even is afforded to ascertain whether private capital is willing, or able, to meet foreign competition under the new conditions, this measure of discouragement and antagonism to private ownership is put forward with a comment that in itself, is an unjust criticism, that as "private enterprise has failed to respond to the demands of our over-sea commerce, how much longer shall we wait on it."

It ill becomes the spokesmen of a Government which has destroyed private enterprise by the character of its legislation, to criticize the victims of its own blundering, or to seek to justify a venture of this unusual and anomalous character, without precedent in the shipping world, on the ground that private capital has failed to occupy a field that has been carefully locked and barred against it. As well criticize the State banks of issue for not continuing in business, after the imposition of the Federal tax of 10 per cent. I have said this venture is without precedent in the commercial world. I am mistaken. There are two precedents. For some years the government of western Australia operated a small coastwise steamship line. In the first year the losses were $114,000, in the second, $96,000. The enterprise has been abandoned. The United States has operated a few ships in connection with the construction of the Panama Canal. This construction afforded a steady volume of traffic. The reports show a small profit, disregarding insurance, depreciation, and interest, imperative considerations in a private enterprise. Take these elements into consideration, and the small profit on the operation of these vessels will become a deficit. We have not waited on private enterprise a moment, and even now, in spite of the declaration that accompanies this bill that "it is better, whenever it is practicable, for the Government to avoid engaging in any business that can be conducted as a private enterprise," no opportunity is to be afforded to determine whether it is practicable for the Government to avoid engaging in this particular enterprise. Good faith requires that the opportunity at least, should be afforded to private capital to essay the task under tolerable, if not equal conditions, before reaching the conclusion that the task is beyond its capacity. This much, to say the least, would be becoming, in view of the depreciation of Government ownership advanced by all the advocates of this scheme.

Another reason why we should not be hurried into hasty action in this matter, is that as soon as this war is over, the merchant ships of the warring countries will be hungry for cargoes on almost any terms. Inasmuch as our Government ships will have to underbid them, in order to secure any portion of the carrying trade, we will be confronted with a competition that will of necessity increase the losses that will attend the operation of this enterprise under the most favorable circumstances. It is estimated that the closing of the war will liberate probably 5,000,000 tons of shipping, "for ordinary over-sea freighting, which will result in an immediate drop in rates to the basis, if not much lower, of the rates prevailing before the war."

I am entirely satisfied that whatever shortage of ships may have existed at any ports of this country, has been due to other causes than a lack in the general supply of ships. The Boston Maritime Association has stated within the last few weeks, that repeated offers of sail tonnage for coal to South America, at equitable rates, have had no results, and that four steel ships were tied up in Boston for which no paying business could be obtained. In addition, the association furnished the Secretary of Commerce, "a list of Boston-owned tonnage representing over 200,000 tons dead-weight capacity, which could be chartered foreign, if rates could be obtained that would pay for round."

It is certainly a little singular that if the present rates are unreasonably high, due to a shortage in ships, and that foreign shipowners are reaping rich harvests of profits, no portion of the above tonnage can secure paying business. It is particularly strange that if the rates on cotton to Bremen are so exorbitant, that Government ships must be provided to furnish transportation at reasonable rates, the four steel ships now idle at Boston, do not betake themselves to Galveston, or to other ports, in order to secure the cargoes and reap the rich profits on those cargoes, represented by the alleged unreasonable rates.

The following citations from the statement of the Maritime Association are of peculiar value in this connection, and rest in my judgment upon solid ground of fact:

> The apparent inability of shippers to secure tonnage is due rather to inability on their part to obtain marine insurance on cargoes, and on the part of owners to properly cover insurance on their vessels, coupled with their refusal to send tonnage to mined, and dangerous territory.
>
> The large amount of American sail tonnage suitable for foreign trade, can not now be considered, as shippers refuse to consider them for charter at present.
>
> The absence of return cargoes, except in a few favored trades, tends to increase outward rates, as any ships required to return in ballast, must of necessity require a higher rate outward, to cover a profitless return trip.
>
> Extraordinary high rates do not exist, except to ports within the mined districts, or to German ports, for noncontraband cargo, tonnage so destined, being in great danger of total loss.

That this danger is very real, and sufficient to justify extremely high rates is shown by the fact that 48 neutral vessels have been lost within the war zone, since the breaking out of hostilities. Among these vessels were several ships carrying cotton to Germany.

The belligerent right of search is well understood in theory. On the other hand in practice, however prudently the right may be exercised, it provokes heat, irritation, misunderstanding, and angry discussion that frequently brings otherwise friendly nations to the verge of war. Note the violent protests already submitted by interested shipowners, and shipmasters, against the alleged improper exercise of this right by the belligerent nations in the present contest.

The profits in contraband material offer a great temptation to ship them to a blockaded country. Looking to the figures of exports from this country during the last few months, one can easily read between the lines, that a great amount of contraband material has been forwarded from this country. In the effort to stop this traffic by the exercise of the belligerent right of search the nations at war touch the pocket nerve of the shippers. When this is done, violent contortions, and loud outcries invariably ensue. "The embarrassment to the dignity of the United States, of having a ship owned by the Government held up, searched, convoyed into port, and tried, on any one of many questions that might arise, is apparent." The exercise of the right of search by belligerent powers invariably provokes controversy with neutral powers, and begets international correspondence. Such a correspondence is in progress at this time between this country, and Great Britain. Government ships conveying cargoes to countries at war, that is Government merchant ships operated in commerce, would be liable to search, and detention, "in precisely the same degree, and on precisely the same terms," as privately owned neutral vessels. Doubtless the shippers who are chafing under the exercise of this right of search by the belligerent powers, conceive that in some fashion a Government marine would provide ships that under conditions like the present, could prosecute their voyage without danger of interruption, search, or detention. But they are mistaken. Government ships would enjoy no such exemption. Moreover the use of these ships at such times, would increase the difficulties of a neutral nation. No nation can exercise its belligerent right of search and detention, no nation

has ever exercised it, in a manner acceptable to the interests involved. These interests have invariably filed the most vigorous protests, and lodged the most grievous complaints with the authorities of their respective countries, insisting upon protection even to the extent of using armed force against the infliction of the alleged wrongs. The most difficult and troublesome complaints are thus presented at the most perilous times, demanding instant action, when above all things, action should be delayed to allow the heat of the contending parties to abate. At such times the Government should not be a directly interested party, as would be the case, if the ship seized, or detained, was a Government ship. "The business of ocean transportation, particularly in times of widespread war, involves certain hazards of an international and political character, with which the Government should keep itself absolutely free to deal, and in which all needless entanglement, and complication, is the gravest possible error."

This impartial attitude by the Government, or even a measurably impartial attitude, would be difficult of maintenance in a case in which a Government ship, or ships, were seized, and taken before a foreign prize court for disposition. In such a case, particularly if any considerable portion of the public was already in an angry and inflamed state of mind, the action of the foreign Government would not in all likelihood be treated as the proper exercise of an accepted belligerent right, but as an attack upon the national sovereignty, an insult to our honor, and our flag. Under these circumstances, a flame of indignation starting in misapprehension, could be easily kindled, and a state of public mind created, that would seriously embarrass a Government anxious to preserve its neutrality, but forced to unwise action by the pressure of an excited public opinion. Remember the *Maine*.

It has been noted that a Government ship pursuing the rôle of carrier, would be subject to precisely the same risks of capture, and detention, as the ship of the private capitalist. In the event moreover that the Government ship is taken before a foreign prize court, the Government itself would become the aggrieved and injured party. "This would be a peculiarly delicate, difficult, embarrassing, and dangerous rôle for the Government to assume."
